telekinesis (tel''e-kin-e'sis) [Gr. *τῆλε* afar + *κίνησις* movement]. The power claimed by certain persons of moving objects without contact with

the object moved; also motion produced without contact with a moving body.

telekinetic (tel-e-kin-et'ik). Pertaining to telekinesis.

telectrocardiogram (tel-e-lek''tro-kar'de-o-gram). Telecardiogram.

telemnemonike (tel''e-mne-mon'ik-e) [Gr. *τῆλε* afar + *μνημονικός* pertaining to memory]. The gaining of consciousness of things in the memory of another person.

telencephal (tel-en'sef-al). Same as *telencephalon*.

telencephalic (tel'en-sef-al'ik). Pertaining to the telencephalon.

telencephalization (tel-en-sef''al-iz-a'shun). The transfer to the telencephalon, during the process of evolution, of the direction of the more complex nerve reactions.

telencephalon (tel-en-sef'al-on) [Gr. *τέλος* end + *ἐγκέφαλος* brain]. [B N A] The anterior end of the embryonic neural tube and its adult derivatives, comprising chiefly the cerebral hemispheres and the lamina terminalis. Called also *end-brain*.

teleneurite (tel-e-nu'rit). The end expansion of an axis-cylinder.

teleneuron (tel-e-nu'ron) [Gr. *τέλος* end + *νεῦρον* nerve]. A nerve-ending.

teleology (tel-e-ol'o-je) [Gr. *τέλος* completion + *λόγος* treatise]. The doctrine of final causes, or of adaptation to a definite purpose.

teleomitosiis (tel''e-o-mi-to'sis). Completed mitosis.

teleorganic (tel-e-or-gan'ik). Necessary to life.

teleoroentgenogram (tel''e-o-rent-gen'o-gram). An x-ray picture taken from a distance of 6 feet.

teleoroentgenography. See *teleoroentgenography*.

teleost (tel'e-ost). One of an order of fish known as the bony fish.

teleotherapeutics (tel''e-o-ther-ap-u'tiks) [Gr. *τῆλε* far + *therapeutics*]. Suggestive therapeutics.

telepathist (tel-ep'ath-ist). A professed mind-reader.

telepathize (tel'ep-ath-iz). To affect by sympathetic or other subtle means.

telepathy (tel-ep'ath-e) [Gr. *τῆλε* far + *πάθος* feeling]. The alleged transfer of thought; mind-reading.

telephium (tel-ef'e-um). An intractable ulcer.

telerradiography (tel''e-ra-de-og'raf-e) [Gr. *τῆλε* far off + *radiography*]. Radiography with the tube at a distance from the body in order more nearly to secure parallelism of the rays.

telergic (tel-er'jik). Acting at a distance.

telergy (tel'er-je) [Gr. *τῆλε* far off + *ἔργον* work]. 1. Automatism. 2. A hypothetical action of one brain on another at a distance.

teleoroentgenography (tel''e-rent-gen-og'raf-e). Telerradiography.

telesthesia, telæsthesia (tel-es-the'ze-ah) [Gr. *τῆλε* far off + *αἴσθησις* perception]. Telepathy; perception at a distance.

telesyphilis (te-le-sif'il-is) [Gr. *τῆλε* far away + *syphilis*]. Metasyphilis.

telesystolic (tel''e-sis-to'lik) [Gr. *τέλος* end + *systole*]. Pertaining to the end of the systole.

teletherapy (tel-e-ther'ap-e) [Gr. *τῆλε* far off + *θεραπεία* treatment]. Absent treatment.

tellurate (tel'u-rāt). Any salt of telluric acid.

telluric acid (tel-u'rik). See under *acid*.

tellurism (tel'u-rizm) [L. *tellus* earth]. The disease-producing influence of the earth or soil.

tellurium (tel-u're-um) [L. *tellus* earth]. A non-metallic or metalloïd element; symbol, Te; specific gravity, 6.24; atomic weight, 127.5. Tellurium compounds possess germicidal properties.

Tellyesniczky's fluid (tel-yets-nits'kez) [Kálmár *Tellyesniczky*, contemporary Hungarian histologist]. See *fluid*.

teloblast (tel'o-blast) [Gr. τέλος end + βλαστός germ]. A segmentation-sphere at the end of a germinal band.

teloblastic (tel-o-blas'tik). Pertaining to a teloblast.

telocinesis, telocinesis (tel-o-sin-e'se-ah, -sin-e'sis). Telophase.

telodendrion (tel-o-den'dre-on) [Gr. τέλος end + δένδρον tree]. A motor end-plate or other terminal part of a dendron.

telodendron (tel-o-den'dron) [Gr. τέλος end + δένδρον tree]. A brush-like expansion or arborization at the end of an axis-cylinder process or of a paraxon.

telokinesis (tel-o-kin-e'sis) [Gr. τέλος end + κίνησις motion]. Same as *telophase*.

teleleicial (tel-o-les'ith-al) [Gr. τέλος end + λέκυθος yolk]. Having a yolk concentrated at one of the poles: said of an ovum.

telelemma (tel-o-lem'ah) [Gr. τέλος end + λέμμα rind]. The twofold covering of a motorial end-plate, made up of sarcolemma and an extension of Henle's sheath.

telophase (tel'o-fáz) [Gr. τέλος end + φάσις phase]. The last of the four stages of mitosis. See *mitosis*.

telophragma (tel-o-frag'mah) [Gr. τέλος end + φραγμός inclosure] Krause's membranes. See *membrane*.

Telosporidia (tel'o-spo-rid'e-ah) [Gr. τέλος end + σπόρα spore]. A class of Sporozoa including those forms wherein sporulation ends the life of the individual. The term includes Coccidium, Plasmodium, and Babesia.

telosynapsis (tel-o-sin-ap'sis) [Gr. τέλος end + σύναψις conjunction]. The conjunction of chromosomes end to end. Cf. *parasygnapsis*.

telotism (tel'o-tizm) [Gr. τέλος end]. The complete performance of a function.

telson (tel'son). A scorpion's sting.

temp. dext. Abbreviation for *L. tem'pori dex'tro*, to the right temple.

temperament (tem'per-am-ent) [*L. temperamentum* mixture]. The peculiar physical character and mental cast of an individual. **atrabilious t.** Same as *melancholic t.* **bilious t.**, that characterized by a dark or sallow complexion, black hair, and a slow or moderate circulation of the blood. **choleric t.** Same as *bilious t.* **lymphatic t., phlegmatic t.**, results, according to the old physiologists, from the predominance of lymph or phlegm in the system. It is characterized by a fair but not ruddy complexion, light hair, and a general softness or laxity of the tissues. **melancholic t.**, one characterized by a predominance of *black bile* (which was supposed to be secreted by the spleen), rendering the disposition melancholy and morose, and, when in great excess, producing hypochondriasis. **nervous t.**, one characterized by the predominance of the nervous element, and by great activity or susceptibility of the great nervous center, the brain. **sanguineous t., sanguine t.**, one characterized by a fair and ruddy complexion, yellow, red, or light auburn hair, a full, muscular development, large, full veins, and an active pulse, all indicating an abundant supply of blood.

temperature (tem'per-at-ūr) [*L. temperatūra*]. The degree of sensible heat or cold. **absolute t.**, that which is reckoned from the absolute zero of -273° C. **body-t.**, the temperature of the body. **critical t.**, a temperature below which a gas may be reduced to liquid form by pressure. **t.-curve**, a curved or broken line exhibiting the variations of the bodily temperature in a given period. **maximum t.**, in bacteriology, the temperature above which growth does not take

place. **mean t.**, the average temperature in a locality for a given period of time. **minimum t.**, in bacteriology, temperature below which growth does not take place. **normal t.**, that of the human body in health, or 98.6° F. This is maintained in health by the thermotoxic nerve-mechanism, which keeps up a balance between the thermogenetic, or heat-producing, and the thermolytic, or heat-dispelling, processes. **optimum t.**, the temperature most favorable to the development of cultures of a given species of microörganism. **room t.**, the ordinary temperature of a room, 65° – 80° F. **t.-sense**. See *sense*. **subnormal t.**, temperature below the normal. **zero-t.**, that state in which there is in an end-organ no sensation of either warmth or cold.

temple (tem'pl) [*L. iem'pus*; pl. *tem'pora*]. The lateral region of the head above the zygoma.

Templin oil (tem'plin) [*Templin* in Prussia]. A volatile oil distilled from the cones of *Pinus pumilio*.

tempolabile (tem-po-la'bíl) [*L. tem'pus* time + *labilis* unstable]. Becoming altered in course of time so as to lose hemolyzing power: said of sera.

tempora (tem'po-rah) [L.]. The temples.

temporal (tem'por-al) [*L. tempora'lis*]. Pertaining to a temple.

temporalis (tem-por-a'lis) [L.]. See *muscles*, *table of*.

temporo-auricular (tem'po-ro-aw-rik'u-lar). Pertaining to the temporal and auricular regions.

temporocephalic tract (tem'po-ro-sen'tral). See *tract*.

temporocerebellar tract (tem'po-ro-ser-e-bel'ar). See *tract*.

temporofacial (tem'po-ro-fa'she-al). Pertaining to a temple and the face. See *nerves*, *table of*.

temporofrontal tract (tem'po-ro-fron'tal). See *tract*.

temporohyoid (tem'po-ro-hi'oid). Pertaining to the temporal and hyoid bones.

temporomalar (tem'po-ro-ma'lar). Pertaining to the temporal and malar bones.

temporomandibular (tem'po-ro-man-dib'u-lar). Pertaining to the temporal bone and the mandible.

temporomaxillary (tem'po-ro-maks'il-a-re). Pertaining to the temporal bone, or region, and a maxilla (usually the upper).

temporo-occipital (tem'po-ro-ok-sip'it-al). Pertaining to the temporal and occipital bones or regions.

temporoparietal (tem'po-ro-par-i'et-al). Pertaining to the temporal and parietal bones or regions.

temporopontile (tem'po-ro-pon'tél). Pertaining to the temporal lobe and the pons.

temporosphenoid (tem'po-ro-sfe'noid). Pertaining to the temporal and sphenoid bones.

temporozygomatic (tem'po-ro-zi-go-mat'ik). Pertaining to a temple and a zygoma.

tempostabile (tem-po-sta'bíl) [*L. tem'pus* time + *stabilis* stable]. Not changing chemically in the course of time.

Temp. sinist. Abbreviation for *L. tem'pori sinis'tro*, to the left temple.

temulence (tem'u-lens) [*L. temulen'tia*]. Drunkenness; intoxication.

tenacious (te'na-shus) [*L. tenax*]. Holding fast; adhesive.

tenacity (te-nas'it-e). Toughness; the condition of being tough. **cellular t.**, the inherent tendency of all cells to persist in a given form or direction of activity.

tenaculum (ten-ak'u-lum) [L.]. 1. A hook-like instrument for seizing and holding parts. 2. Any

fibrous band for holding parts in their places. **t. ten'dinum**. Same as *vinculum tendinum*.

Tenaculum (DaCosta).

tenalgia (ten-al'je-ah) [Gr. *τένον* tendon + *ἄλγος* pain]. Pain in a tendon.

tenalgin (ten-al'jin). A proprietary tapeworm remedy prepared from the areca-nut.

tenalin (ten'al-in). A powerful and highly toxic vermifuge derived from the areca-nut.

tenax (te'naks) [L. *tena'cius*]. An oakum specially prepared for surgical dressings.

tenderness (ten'der-nes). Abnormal cutaneous sensitiveness to the touch. **pencil t.**, local tenderness on pressure with the rubber tip of a pencil.

tendinitis (ten-din-í'tis). Same as *tenonitis*. **t. of horse**, inflammation of the flexor tendons, due to strain or wrenching, and causing great tenderness and lameness.

tendinoplasty (ten'din-o-plas-te) [L. *ten'do* tendon + Gr. *πλάσσειν* to mold]. The plastic surgery of the tendons.

tendinosus (ten-din-o'sus) [L.]. The semitendinosus muscle.

tendinosuture (ten'din-o-su'tūr) [L. *ten'do* tendon + *sutū'ra* sewing]. The saturation of a tendon.

tendinotrochanteric ligament (ten'din-o-trokan-ter'ik). See *ligament*.

tendinous (ten'din-us) [L. *tendinosus*]. Pertaining to, resembling, or of the nature of a tendon. **t. spot**. See *milk-spot*, under *spot*.

tendo (ten'do). Latin for *tendon*. **t. achil'lis**, the tendon of the soleus and gastrocnemius muscles, at the back of the heel. **t. calca'neus** [B N A]. Same as *t. achillis*. **t. cordifor'mis**. See *cordiform tendon*, under *tendon*. **t. oc'uli**, **t. palpebra'rum**, the internal palpebral ligament; a structure which gives origin to the orbicularis palpebrarum muscles.

tendolysis (ten-dol'is-is) [L. *ten'do* tendon + Gr. *λύσις* loosening]. The operation of freeing a tendon from adhesions.

tendomucin (ten-do-mu'sin). A mucin derivable from tendons and nearly related to submaxillary mucin and to the colloid of cancers.

tendomucoid (ten-do-mu'koid). Tendomucin.

tendon (ten'dun) [L. *ten'do*]. The fibrous cord of connective tissue in which the fibers of a muscle end and by which a muscle is attached to a bone or other structure. **Achilles' t.**, the tendo achillis. **back t.** See *back sineu*, under *sineu*. **t.-cartilage**, the embryonic cartilage uniting tendons and bones. **t.-cells**, **t.-corpuscles**, flattened cells of connective tissue lying between the primary bundles of tendons. **central t.**, **conjoined t.**, the united tendons of the transversalis and internal oblique muscles going to the linea alba and pectineal line of the os pubis. **Cooper's t.**, a semilunar extension of the anterior aponeurosis of the transversalis abdominis muscle, often extending to the deep crural arch. **cordiform t. of the diaphragm**, a thin, tendinous aponeurosis of trefoil shape at the center of the vault of the diaphragm, just below the pericardium, with which it is blended. **coronary t.'s**, the fibrous rings which surround the arterial orifices of the heart. **t.-grafting**. 1. The operation of supplying a defect in a tendon by grafting a piece taken from another tendon. 2. The operation of implanting a slip from the tendon of an unparalyzed muscle into that of a paralyzed muscle, so that the former may serve to move the latter. **hamstring t.** See *hamstring*. **heel-t.**, the tendo achil-

lis. **t.-jerk**. See *t.-reaction*. **kangaroo-t.**, the prepared tendon from the tail of certain species of kangaroo: employed in surgery for a thread in suturing and ligating parts. **t.-ligature**, a ligature consisting of strips of tendon of various animals. **t.-reaction**, **t.-reflex**, reflex contraction of a muscle induced by percussing its tendon. Called also *tendon-jerk*. **riders' t.**, rupture of the adductor tendons of the thigh. **t.-spindle**, a variety of nerve-ending in tendons, consisting of an elongated, elliptic mass in the region of the junction of tendon and muscle, and pierced by two or more medullated nerve-fibers. Called also *Golgi's corpuscle*. **superior t.**, a structure which gives origin to the superior rectus, external rectus, and the upper part of the internal rectus of the eye. **t.-suture**, the suturing together of divided ends of tendons. **trefoil t.**, cordiform tendon. **t. of Zinn**. Same as *zonule of Zinn*.

tendophony (ten-dof'o-ne). See *tenophony*.

tendoplasty (ten'do-plas-te) [L. *ten'do* tendon + Gr. *πλάσσειν* to mold]. Plastic surgery of the tendons.

tendosynovitis (ten'do-sin-o-vi'tis). Same as *tendovaginitis*.

tendotome (ten'do-tōm). Same as *tenolome*.

tendotomy (ten-dot'o-me). Same as *tenotomy*.

tendovaginal (ten-do-vaj'in-al) [L. *ten'do* tendon + *vagi'na* sheath]. Pertaining to a tendon and its sheath.

tendovaginitis (ten'do-vaj-in-í'tis). 1. Inflammation of a tendon and its sheath. 2. Inflammation of a tendon sheath. **t. acu'ta purulen'ta**, tendovaginitis with pus formation. **t. crep- itans**, a form accompanied by a crackling sound or movement. **t. granulo'sa**, tuberculosis of tendon-sheaths, which become filled with granulation tissue. **t. hypertroph'ica**, a condition marked by swellings along the tendons and their sheaths. **t. sero'sa chron'ica**, tendovaginitis with serous effusion. **t. sten'osans**, a painful condition of the wrist, marked by thickening and narrowing of the tendon sheath of the extensor brevis and abductor longus pollicis (De Quervain).

tenectomy (ten-ek'to-me). Same as *tenonectomy*.

tenesmic (ten-ez'mik). Pertaining to or of the nature of tenesmus.

tenesmus (ten-es'mus) [L.; Gr. *τενεσμός*]. Straining; especially ineffectual and painful straining at stool or in urination. **rectal t.**, painful, long-continued, and ineffectual straining at stool. **vesical t.**, that which sometimes accompanies urination.

Ten Horn's sign (ten-hornz'). See under *sign*.

tenia (te'ne-ah). See *Tenia*.

teniicide (te'ne-as-id) [L. *te'nia* tapeworm + *ca'dere* to kill]. 1. An agent that destroys tapeworms. 2. Destructive to tapeworms.

teniafuge (te'ne-af-ū) [L. *te'nia* tapeworm + *fuga're* to expell]. 1. Expelling tapeworms. 2. An agent that expels tapeworms.

tenial (te'ne-al). Pertaining to a tenia.

teniasis, tæniasis (te-ni'as-is). The presence of tapeworms in the body. **intestinal t.**, presence of tapeworms in the intestine. **somatic t.**, the presence of the larvæ of tapeworms in the muscles or organs of the body.

tenicide (ten'is-id). Destructive to tapeworms.

tenide (ten'id). A proprietary remedy for diabetes.

teniform (ten'if-orm). Tenioid.

tenifugal (te-nif'u-gal). Expelling tapeworms.

tenifuge (ten'if-ū). Teniafuge.

tenioid (te'ne-oid). Resembling a tenia, or tapeworm.

teniol (te'ne-ol). A proprietary vermifuge and parasiticide containing sebrol, dithymol salicylate, oil of turpentine, and castor oil.

teniola (te-ne'o-lah) [L. *teni'ola* ribbon]. A thin, grayish ridge which separates the striæ of the floor of the fourth ventricle from the cochlear part of the acoustic nerve. Called also *teni'ola cin'e'ra*.

teniotoxin (te''ne-o-toks'in). A poisonous principle occurring in tapeworms.

tennis-elbow (ten''is-el'bo). Lameness of the elbow due to a strain incurred in playing lawn-tennis.

tennysin (ten'is-in). An alkaloid or leukomatin derivable from the brain substance.

tено- [Gr. *τένων* tendon]. A prefix denoting some relation to a tendon.

tenodesis (ten-od'e-sis) [Gr. *τένων* tendon + *δέσις* fixation]. Tendon fixation; suturing of the proximal end of a tendon to the bone.

tenodynia (ten-o-din'e-ah) [Gr. *τένων* tendon + *δόννη* pain]. Pain in a tendon.

tenomyoplasty (ten''o-mi'o-plas-te) [Gr. *τένων* tendon + *μῦς* muscle + *πλάσσειν* to form]. A plastic operation involving tendon and muscle; applied especially to an operation for inguinal hernia.

tenomyotomy (ten''o-mi-ot'o-me) [Gr. *τένων* tendon + *μῦς* muscle + *τομή* a cut]. Excision of a portion of tendon and muscle.

Tenon's capsule, space, etc. (te'nonz) [Jacques René Tenon, French surgeon, 1724-1816]. See *capsule, space*, etc.

tenonectomy (ten-on-ek'io-me) [Gr. *τένων* tendon + *ἐκτομή* excision]. Excision of a part of a tendon for the purpose of shortening it.

tenonitis (ten-on-i'tis). 1. Same as *tenonitis*. 2. Inflammation of Tenon's capsule.

tenonometer (ten-o-nom'et-er) [Gr. *τείνειν* to stretch + *μέτρον* measure]. An apparatus for measuring intra-ocular tension.

tenonostosis (ten''on-os-to'sis). Same as *tenos-losis*.

tenontagra (ten-on-ta'grab, ten-on'tag-rah) [Gr. *τένων* tendon + *ἄγρα* seizure]. A gouty affection of the tendons.

tenontitis (ten-on-ti'tis) [Gr. *τένων* tendon + *-ιτις* inflammation]. Inflammation of a tendon. **t. proliferata calca'rea**, inflammation of a tendon, with degeneration and the formation of calcareous matter.

tenontodynia (ten''on-to-din'e-ah) [Gr. *τένων* tendon + *δόννη* pain]. Pain in the tendons.

tenontography (ten-on-tog-ra-fe) [Gr. *τένων* tendon + *γράφειν* to record]. A written description or delineation of the tendons.

tenontolemmittis (ten-on''to-lem-i'tis) [Gr. *τένων* tendon + *λέμμα* rind]. Same as *tenosynovitis*.

tenontology (ten-on-to'l'o-je) [Gr. *τένων* tendon + *λόγος* discourse]. The sum of what is known regarding the tendons.

tenontomyoplasty (ten-on''to-mi'o-plas-te). Tenomyoplasty.

tenontomyotomy (ten-on''to-mi-ot'o-me). Tenomyotomy.

tenontophyma (ten-on-to-fí'mah) [Gr. *τένων* tendon + *φύμα* growth]. A tumorous growth in a tendon.

tenontoplasty (ten-on-to-plas-te). Same as *tenoplasty*.

tenontothecitis (ten-on''to-the-si'tis) [Gr. *τένων* tendon + *θήκη* sheath + *-ιτις* inflammation]. Inflammation of a tendon-sheath.

tenontotomy (ten-on-to't'o-me). Same as *tenotomy*.

tenophony (ten-o'f'o-ne) [Gr. *τένων* tendon + *φωνή* sound]. An auscultatory sound supposed to be produced by the chordæ tendinæ.

tenophyte (ten'o-fit) [Gr. *τένων* tendon + *φυτόν* growth]. A growth or concretion in a tendon.

tenoplastic (ten-o-plas'tic). Of or relating to tenoplasty.

tenoplasty (ten'o-plas-te) [Gr. *τένων* tendon + *πλάσσειν* to shape]. Plastic surgery of the tendons; operative repair of a defect in a tendon.

tenorrhaphy (ten-or'a-fe) [Gr. *τένων* tendon + *ραφή* suture]. The union of a divided tendon by a suture.

tenositis (ten-o-si'tis) [Gr. *τένων* tendon + *-ιτις* inflammation]. Inflammation of a tendon.

tenostosis (ten-os-to'sis) [Gr. *τένων* tendon + *δστίον* bone]. Ossification of a tendon.

tenosuture (ten-o-su'tür) [Gr. *τένων* tendon + L. *sulu'ra* suture]. Same as *tenorrhaphy*.

tenosynitis (ten''o-sin-i'tis). Same as *tenosynovitis*.

tenosynovitis (ten''o-sin-o-vi'tis) [Gr. *τένων* tendon + *synovia* + Gr. *-ιτις* inflammation]. Same as *tendovaginitis*.

tenotomania (ten''ot-o-ma'ne-ah) [*tenotomy* + Gr. *μανία* mania]. An unreasonable propensity to perform tenotomy.

tenotome (ten'o-töm) [Gr. *τένων* tendon + *τέμνειν* to cut]. A cutting instrument used in performing tenotomy.

tenotomist (ten-ot'o-mist). An expert in performing tenotomy.

tenotomize (ten-ot'o-miz). To perform tenotomy.

tenotomy (ten-ot'o-me) [Gr. *τένων* tendon + *τέμνειν* to cut]. The cutting of a tendon as for strabismus or club-foot. **curb t.**, the operation of cutting the muscle in squint and insertion of it further back on the globe of the eye. **graduated t.**, the incomplete division of a tendon.

tenovaginitis (ten''o-vaj-in-i'tis). Inflammation of a tendon-sheath.

tense (tentz). Drawn tight; rigid.

tensiometer (ten-se-om'et-er) [*tension* + Gr. *μέτρον* measure]. An apparatus for measuring the surface tension of liquids.

tension (ten'shun) [L. *ten'sio*]. 1. The act of stretching. 2. The condition of being stretched or strained; the amount to which anything is stretched or strained. **arterial t.**, the strain on an artery at full pulse. **electric t.**, electromotive force; that property of a gas by which it is enabled to overcome resistance. **gaseous t.**, the elasticity of a gas, or its tendency to expand. **intra-ocular t.**, the pressure of the fluids of the eye against the tunics. It is produced by the continual renewal of the fluids within the interior of the eye. Normal tension is indicated by the symbol Th; and the signs T + 1, T + 2, T - 1, T - 2, etc., indicate degrees of increased or diminished resistance. **intravenous t.**, the strain of the blood-current upon the coats of a vein. **muscular t.**, the condition of moderate contraction produced by stretching a muscle. **normal t.**, the intra-ocular tension in a state of health and normal exercise. **surface t.**, the tension of strain upon the surface of a substance in contact with another substance with which it does not mix; the tension or resistance to rupture possessed by the surface film of a liquid. **t.-suture**. See under *suture*. **tissue-t.**, a state of equilibrium between tissues and cells which prevents overaction of any part.

tensor (ten'sor) [L., stretcher or puller]. Any muscle that stretches or makes tense. See *muscles, table of*.

tent (tent) [L. *ten'ta, tenta're* to test or probe]. A conic and expansible plug of soft material, as lint, gauze, etc., for dilating an orifice or for keeping a wound open, so as to prevent its healing except at the bottom. **laminaria t.**, a tent made of sea-tangle, or laminaria. **sponge t.**, a slender, cone-shaped piece of compressed sponge; used for dilating the os uteri. **tupelo-t.**, one made of the wood of the root of the water-tupelo, a tree (*Nys'sa uni'lo'ra*) of North America.

tentacle (ten'tak-el). A slender whip-like organ in invertebrates for feeling or motion.

tentative (ten'tat-iv). Experimental and subject to change. See under *diagnosis*.

tenth-meter (tenth-me'ter). One ten-millionth of a millimeter.

tenth nerve (tenth). The vagus, or pneumogastric, nerve. See *nerves*, *table of*.

tentiginous (ten-tij'in-us). Characterized by maniacal lust.

tentigo (ten-ti'go) [L.]. Morbid or insane lasciviousness.

tentorial (ten-to're-al). Pertaining to the tentorium. **t. sinus**, the straight sinus.

tentorium (ten-to're-um) [L. *tenu*]. The process of dura mater forming a partition between the cerebrum and cerebellum, and covering the upper surface of the cerebellum. Called also *t. cerebelli* [B N A]. **t. of the hypophysis**, the double fold of dura mater covering the hypophysis.

tentum (ten'tum). The penis.

tephromalacia (tef'ro-mal-a'se-ah) [Gr. *τεφρός* gray + *μαλακία* softening]. Softening of the gray matter of the brain or cord.

tephromyelitis (tef'ro-mi-el-i'tis) [Gr. *τεφρός* gray + *μυελός* marrow + *-itis* inflammation]. Inflammation of the gray substance of the spinal cord.

tephrosis (tef-ro'sis) [Gr. *τέφρωσις*]. Incineration or incremation.

tephrylometer (tef-ril-om'et-er) [Gr. *τέφρα* ashes + *ὑλη* matter + *μέτρον* measure]. A graduated glass tube for measuring the thickness of the gray matter of the brain.

tepidarium (tep-id-a're-um) [L., from *tepidus* lukewarm]. A warm bath: more correctly, a place for a warm bath.

tepid bath (tep'id). See *bath*.

tepopote (tep-o-po'ta) [Amer. Ind.]. See *teamster's tea*, under *tea*.

tepor (te'por) [L.]. Gentle heat.

ter- [L. *ter* thrice]. A prefix meaning *thrice*, or *threefold*.

terabdella (ter-ab-del'ah) [Gr. *τερεῖν* to bore + *βδέλλα* leech]. A form of mechanich leech.

teras (ter'as), pl. *ter'ata* [L.; Gr. *τέρας*]. A monster; a congenitally malformed fetus.

terata (ter-at-ah). Plural of *teras*.

teratic (ter-at'ik) [Gr. *τερατικός*]. Monstrous; having the characters of a monster.

teratism (ter-at-izm) [Gr. *τεράτισμα*]. 1. A monstrosity; any anomaly of formation. 2. A fetal monstrosity. **acquired t.**, deformity resulting from accident or disease (not usually classed among true teratisms). **anacatadidymous t.**, teratic union of two fetuses at or near the waists and hips, there being two heads, four legs, and two sets of genital organs. **anadidymous t.**, teratic fusion of two fetuses in such a manner that the monstrosity is single above and double in the lower parts. **atresic t.**, a closed or imperforate state of one or more natural openings. **catadidymous t.**, teratic union of two fetuses in the lower parts of the body, there being two heads, four arms, and two legs. **caesmic t.**, the persistence after birth of embryonic fissures. **ectogenic t.**, congenital absence or defect of parts. **ectopic t.**, the abnormal placement of parts or organs. **hypergenetic t.**, congenitally excessive size of particular organisms or parts. **sympysic t.**, the abnormal fusion of adjacent or contiguous parts.

teratoblastoma (ter'at-o-blas-to'mah). A neoplasm containing embryonic elements and differing from a teratoma in that its tissue does not represent all the germinal layers.

teratogenesis (ter'at-o-jen'is-is) [Gr. *τέρας* monster + *γένεσις* production]. The development of a fetal monstrosity.

teratogenic (ter'at-o-jen'ik). Tending to produce fetal monstrosity.

teratogenous (ter-at-oj'en-us). Developed from fetal remains.

teratogeny (ter-at-oj'en-e). Same as *teratogenesis*.

teratoid (ter'at-oid) [Gr. *τέρας* monster + *εἶδος* form]. Resembling a monster.

teratologic, teratological (ter'at-o-loj'ik, ter'at-o-loj'ik-al). Pertaining to teratology.

teratology (ter-at-ol'o-je) [Gr. *τέρας* monster + *λόγος* discourse]. The sum of what is known regarding monsters; the science of monsters.

teratoma (ter-at-o'mah), pl. *terat'omata* [Gr. *τέρας* monster + *-ωμα* tumor]. A tumor containing fetal remains congenitally derived, such as teeth, hair, etc. It is supposed to be due to the inclusion of an abortive fetus within one which develops normally. **autochthonous t.**, a teratoma whose tissues do not necessarily imply that they were formed by the inclusion of another individual.

teratomatous (ter-at'o-mat-us). Pertaining to, or of the nature of, teratoma.

teratophobia (ter'at-o-fō-be-ah) [Gr. *τέρας* monster + *φόβος* fear]. Morbid fear or aversion to monsters; a morbid expectation of giving birth to a teratism.

teratosis (ter-at-o'sis) [Gr. *τέρας* monster]. Same as *teratism*.

terbium (ter-be-um). A rare metallic element; symbol, Tb; atomic weight, 159.2.

terchlorid (ter-klo'rid). A trichlorid; a compound containing three atoms of chlorine with one of another element.

tere (te're). Latin for *rub*.

terebene (ter'eb-ēn) [L. *terebēnum*, from *terebinthus* turpentine]. A thin, yellowish, fragrant, liquid hydrocarbon, $C_{10}H_{16}$, soluble in alcohol, ether, etc., but only slightly soluble in water, obtained from oil of turpentine by the action of sulphuric acid. It is antiseptic and expectorant, and is used in catarrh, bronchitis, cystitis, fermentative dyspepsia, genito-urinary disease, and as an application to gangrenous wounds, etc. Dose, 5-20 min. (0.33-1.33 c.c.). **t.-glycerin**, a mixture of 4 parts of terebene, 7 parts of glycerin, and 1 part of water; used as an application for purulent wounds.

terebenthene (ter-e-ben'thēn). Oil of turpentine.

terebenthine (ter'e-binth) [L. *terebinthus*]. 1. The tree *Pistacia terebinthus*, which affords Chian turpentine. 2. Same as *terebinthina*.

terebinthina (ter-e-bin'thin-ah). Latin for *turpentine*.

terebinthinate (ter-e-bin'thin-āt). Resembling or containing turpentine.

terebinthinism (ter-e-bin'thin-izm). Poisoning with oil of turpentine.

terebrachesis (ter-e-bra-ke'sis). The operation of shortening the round ligament.

terebant, terebrating (ter'e-brant, ter'e-brating) [L. *terebrens* boring]. Of a boring or piercing quality.

tereboration (ter-e-bra'shun) [L. *terebra'tio*]. An act of boring or trephining.

teres (te'rēz) [L. for "long and round"]. 1. Round. 2. A cylindrical muscle. **t. major, t. minor**. See *muscles*, *table of*.

teretipronator (ter're-te-pro-na'tor). The pronator radii teres muscle.

teretiscapularis (ter're-te-skap-u-la'ris). The teres major muscle.

tergal (ter'gal) [L. *ter'gum* back]. Pertaining to the back or the dorsal surface.

ter in die (ter in de'a). Latin for *thrice in a day*.

tergolateral (ter-go-lat'er-al) [L. *ter'gum* back + *la'tus* side]. Dorsolateral.

term (term) [L. *ter'minus*, from Gr. *τέρμα*]. 1. A

limit or boundary. 2. A definite period. 3. Gestation at nine months.

terma (ter'mah) [Gr. *τέρμα* limit]. The lamina terminalis of the cerebrum.

termatic (ter-mat'ik). Pertaining to the terma. See *arteries*, *table of*.

terminad (ter'min-ad) [Gr. *τέρμα* limit + L. *ad* to]. In or toward a terminal situation.

terminal (ter'min-al) [L. *termina'tio*]. Forming or pertaining to an end; placed at the end.

Terminalia (ter-min-a'le-ah). See *myrobalan*.

termination (ter-min-a'shun) [L. *termina'tio*]. A limit; a terminus; a distal end; a cessation.

terminol (ter'min-ol). A 5 per cent. copper citrate ointment: used in trachoma and other eye diseases.

terminology (ter-min-ol'o-je) [L. *terminus* term + Gr. *λόγος* discourse]. Nomenclature; a system of scientific or technic appellations; the science which deals with the investigation, arrangement, and construction of terms.

terminus (ter'min-us). The end.

terms (termz). An old name for *menses*.

ternary (ter'na-re) [L. *ternarius*]. 1. Third in order. 2. Made up of three distinct elements or radicals.

Terni and Bandi's vaccine [*Terni*; I. Bandi, Naples pathologist, 1867-1926]. See under *vaccine*.

Ter'nidens diminut'us. A nematode worm found in the large intestine of man in Africa.

ternitrate (ter-ni'trat). A trinitrate.

teroxid (ter-oks'id) [L. *ter* thrice + *oxid*]. Same as *trioxid*.

terpene (ter'pēn). Any hydrocarbon of the formula C_nH_{2n} . They are chiefly derivable from essential oils and resins, and differ somewhat in their physical properties.

terpenism (ter'pen-izm). Poisoning with terpene.

terpestrol (ter-pes'trol). An ointment containing the active constituent of turpentine and hexamethylenetetramin, for use on ulcers.

terpichin (ter'pi-kin). A purified turpentine free from rosins and oxids and combined with quinin. It is injected intramuscularly as a non-specific stimulant.

terpin (ter'pin) [L. *terpi'num*]. A product, $C_{10}H_{18}(OH)_2$, obtained by the action of nitric acid on oil of turpentine and alcohol; turpentine camphor.

t. hydrate, a bitter, colorless, crystalline compound, $C_{10}H_{18}(HO)_2 + H_2O$, soluble in 32 parts of hot or 250 parts of cold water, and in 10 parts of cold or 2 parts of boiling alcohol. It is used in hay-fever and whooping-cough. Dose, 20-30 gr. (0.13-2 gm.). **t. iodohydrate**, chroato. **t. resorcinate**. See *odylis*.

terpineol (ter-pin'e-ol). A menthene alcohol, $C_{10}H_{17}OH$, derived from terpin hydrate.

terpinol (ter'pin-ol). An oily, fragrant liquid, $(C_{10}H_{18})_2H_2O$, prepared by distilling terpene hydrate with dilute sulphuric acid. It is soluble in ether and alcohol, but insoluble in water. Used in bronchial affections and as a perfume. Dose, 3-5 gr. (0.194-0.333 gm.).

terra (ter'ah). Latin for *earth*. **t. al'ba**, white clay: used as an absorbent. **t. japon'ica** [L. for "Japanese earth"], pale catechu, or gambir. **t. lem'nia**, Lemnian bole; a yellowish, ferruginous clay. **t. mer'ita**, an old name for *lurmeric*. **t. pondero'sa**, barium sulphate, or baryta. **t. sigilla'ta** [L. for "sealed earth"] of ancient Lemnos]. Armenian bole, sold in masses stamped with a seal. **t. silic'ea purifica'ta**, purified silicious or infusorial earth; silicious earth, boiled, washed, and calcined. It is a fine gray powder and is used in certain pharmaceutical operations.

terracing (ter'as-ing). Suturing in several rows or layers.

terrain-cure (ter-ahn'kür). Treatment by mountain-climbing, regulation of diet, etc., for corpulence, neurasthenia, anemia, etc.

terraline (ter'al-in). A proprietary preparation of petroleum: used like vaselin, and a proposed substitute for cod-liver oil.

Terrillon's operation (ter-e-yawnz') [Octave Roch Terrillon, French surgeon, born 1844]. See *operation*.

terrol (ter'ol). A petroleum-like substance, consisting of a mixture of hydrocarbons, derived from the residue of petroleum distillation. It is used like cod-liver oil.

terrole (ter'öl). A proprietary mineral-oil preparation for use in eye, ear, nose, and throat diseases.

tersul (ter'sul). A preparation of salicic acid with soluble calcium salts for the treatment of pulmonary tuberculosis, rickets, etc.

tersulphate (ter-sul'fat) [L. *ter* thrice + *sulphate*]. A sulphate that contains three molecules of sulphuric acid.

tersulphid (ter-sul'fid). See *trisulphid*.

tertian (ter'shun) [L. *tertia'nus*]. Recurring every second (third, fifth, seventh, etc.) day; noting a form of intermittent fever. Special forms of the malarial parasite characterize this fever. **double t.**, an intermittent fever in which there are two sets of recurrences, each tertian, but differing somewhat in character.

tertianism (ter'she-a-rizm). The combined symptoms of tertiary syphilis.

tertiary (ter'she-a-re) [L. *tertia'rius*]. Third in order. **t. syphilis**. See *syphilis*.

tertipara (ter-tip'ar-ah) [L. *ter'tius* third + *par'ere* to bear]. A woman who has borne three children.

teslaization (tes-la-iz-a'shun) [Nikola Tesla, a Serbian electrician in New York, born 1857]. Treatment by Tesla's currents: arsonvalization.

tessellated (tes'el-a-ted) [L. *tessella'tus*; *tessel'la* a square]. Divided into squares like a checkerboard.

test (test) [L. *tes'tum* crucible]. 1. An examination or trial. 2. A significant chemical reaction. 3. A reagent. **t.-glass**, a small vessel of glass resembling a beaker: used in the chemic laboratory. **t.-meal**, a meal given for the purpose of testing the digestive powers. *Leube's t.-meal* consists of 12 ounces of soup, 3 to 6 ounces of minced steak, 2 ounces of white bread, and 6 ounces of water. *Riegel's t.-meal* consists of a plate of soup, 200 gm. of beefsteak, 50 gm. of mashed potatoes, and one roll. *Salzer's t.-meals* are two meals given four hours apart, the stomach contents being removed one hour after the last meal, when, if the stomach is normal, no remains of the first meal should be found. The first meal consists of soft-boiled eggs, cold roast beef, rice, and milk; the second, of stale bread and water. **t.-object**, a minute object for testing the power of a microscope. **t.-paper**, paper impregnated with litmus or other indicator, which is used to determine the presence or absence of certain substances in solutions. **t.-solution**, a standard solution of some chemic substance used in testing. **t.-spoon**, a small spoon with a spatula-like handle for taking up small quantities of a powder, etc., in chemic experiments. **t.-tube**, a tube of thin glass closed at one end: used for performing reactions in chemistry with a small quantity of the reagent. **t.-types**, printed words or letters in types of various sizes, employed by oculists to ascertain the acuteness of a person's vision.

A TABLE OF TESTS

(For quantitative tests see under *method*.)

- Abderhalden's t.** See *Abderhalden's reaction*, under *reaction*.
- Abelen's t.** (for *salvarsan*). See *Abelen's reaction*, under *reaction*.
- abortion t.:** A reaction marked by rise of temperature, loss of appetite, and diarrhea on the injection into animals infected with Bang's disease of abortion, an extract of *Bacterium abortum*.
- Abrams's t.** (for *lead in the urine*): Add ammonium oxalate to urine (1:150) and introduce metallic magnesium (wire or rod). Lead is precipitated on the magnesium, and can be identified by warming with a fragment of iodine (yellow lead iodide), or dissolving in nitric acid and applying other reagents.
- acetanilid t.** See *Yvon's t.*
- acetic acid t.** (for *albumin in urine*): A few drops of acetic acid are added to the boiled urine, when a white precipitate is formed.
- acetic acid and potassium ferrocyanid t.** (for *proteins*): Acidify the unknown with acetic acid and add a few drops of potassium ferrocyanid. Protein produces a white flocculent precipitate.
- aceto-acetic t.** See *Arnold's t.*, *Harding and Rutan's t.*, *Hurtley's t.*, *Lindeman's t.*, and *Nobel's t.*
- acetone t.:** A test for the presence of acetone in the urine made by adding a few drops of sodium nitroprusside, shaking, and pouring over the mixture stronger ammonia-water: a magenta-colored line is formed over the area of contact if acetone is present. See *Bayer's t.*, *Braun's t.*, *Chaulard's t.*, *Deniges's t.*, *Frommer's t.*, *Gerhardt's t.*, *Gunning's t.*, *Gunning-Lieben's t.*, *iodoform t.*, *Lange's t.*, *Legal's t.*, *Lieben's t.*, *Lieben-Ralfe's t.*, *Malerba's t.*, *Nobel's t.*, *Pensold's t.*, *Ralfe's t.*, *Reynold's t.*, *Rothera's t.*, *salicylaldehyd t.*, *Stock's t.*
- acetonitril t.** (for *hyperthyroidism*): The blood of such patients increases the resistance of mice to poisoning by acetonitril and morphin.
- Achard and Castaigne's t.** See *methylene-blue t.*
- Acree-Rosenheim t.** (for *proteins*): A few drops of formaldehyd solution (1:5000) are placed in a solution of the suspected matter. A little concentrated sulphuric acid is slowly placed in the test-tube so that the solutions do not mix. At the line of contact a violet color appears if proteins are present.
- acrolein t.** (for *glycerol and fats*): Heat the substance with an equal quantity of potassium acid sulphate and note the peculiar penetrating odor of acrolein.
- Adamkiewicz's t.** (for *proteins*): Add the substance to a mixture of 1 volume of strong sulphuric acid and 2 volumes of glacial acetic acid and heat it. A reddish-violet color shows the presence of proteins.
- Adams's t.** (for *fat in milk*): Dry a known quantity of milk on filter-paper, extract in Soxhlet's apparatus, dry to constant weight, and weigh.
- Adler's benzidin t.** See *benzidin t.*
- adrenalin t.** See *Comessati's t.*, *Meyer's t.*, *Vulpeau's t.*
- agglutination t.:** A test based on the fact that specific agglutinins are formed in the blood-serum of infected individuals, which will produce agglutination of the specific bacteria of the infection. Cf. *Widal's test*, under *tests*, and *serum-diagnosis*, under *diagnosis*.
- Agostini's t.** (for *glucose*): Mix 5 drops of the urine with 5 drops of a 0.5 per cent. solution of gold chlorid and 3 drops of a 20 per cent. solution of potassa, and warm the mixture; glucose will give a red tint.
- Albarran's t.** (for *renal inadequacy*): A test for the renal function based upon the principle that the greater the destruction of epithelium in the kidney, the less likely is that organ to respond by an increase in secretion after the administration of quantities of water. Called also *polyuria t.*
- albumin t.** See *acetic acid t.*, *Almén's t.*, *Alper's t.*, *Axenfeld's t.*, *Barrel's t.*, *Blum's t.*, *Boedeker's t.*, *Boston's t.*, *Carrez's t.*, *Cohen's t.*, *Esbach's t.*, *Exton's t.*, *Fürbringer's t.*, *Geissler's t.*, *Heller's t.*, *Heynsius's t.*, *Hindenlang's t.*, *Ilmow's t.*, *Johnson's t.*, *Lessilur-Priley's t.*, *MacWilliams's t.*, *Méhu's t.*, *Millard's t.*, *nitric acid t.*, *Oliver's t.*, *Parnum's t.*, *Polacci's t.*, *Posner's t.*, *protein t.*, *Rudbe's t.*, *Rees's t.*, *Reoch's t.*, *Riegler's t.*, *Roberts's t.*, *Spiegler's t.*, *Tanret's t.*, *Tidy's t.*, *Ulrich's t.*, *Zouchlos's t.*
- alcohol t.** See *Anstie's t.*, *iodoform t.*, *Woodbury's t.*
- aldehyd t.** See *Tollen's t.*
- Alfraise's t.** (for *iodin*): A reagent consisting of 1 drop of hydrochloric acid in 100 parts of water, 1 of starch, and 1 of potassium nitrate. This is boiled, and 1 drop of the reagent is added to the liquid that is being tested, when a blue color will be produced if iodine be present.
- alkali t.** See *Bachmeier's t.*, *Degner's t.*
- alkaloid t.** See *Arnold's t.*, *Bouchardat's t.*, *Erdman's t.*, *Frøehde's t.*, *Frohn's t.*, *Mayer's t.*, *Bitali's t.*, *Winkler's t.*
- Allen's t.:** 1. (for *glucose in the urine*.) Made by adding urine to boiling Fehling's solution, and allowing it to cool, when turbidity will be seen if glucose be present. 2. (for *phenol*.) To 2 drops of the suspected liquid add 5 drops of hydrochloric acid and 1 of nitric acid. Phenol, if present, will produce a cherry-red color. 3. (for *strychnin*.) Extract with ether, concentrate by letting fall drops into a warmed porcelain capsule, cool the residue, and treat with sulphuric acid and manganese peroxid. Strychnin gives a violet color. 4. (for *linea versicolor*.) Lugol's solution of iodine is applied to the suspected eruption: a dark mahogany stain will be produced if the eruption is *linea*.
- allergic t.** See *cutaneous reaction* (2d def.), under *reaction*.
- Allesandri-Guaceni t.** (for *nitric acid; nitrates*): Dissolve a few drops of phenol in hydrochloric acid by heating twelve hours on a water-bath. Heat 10 drops of the reagent with the dry residue of suspected liquid on the water-bath. Nitric acid or nitrates give an intense violet color, changed by ammonia to green.
- Almén's t.:** 1. (for *albumin in urine*.) One part of a reagent consisting of a 2 per cent. solution of tannin in dilute alcohol is added to 6 parts of the urine: a cloudiness is produced when albumin is present. 2. (for *blood or blood-pigment*.) Shake the suspected liquid with a mixture of equal parts of tincture of guaiacum and oil of turpentine: blood-pigment, if present, will turn the mixture blue. 3. (for *glucose*.) Heat the liquid with bismuth subnitrate dissolved in caustic soda and Rochelle salt: glucose will cause the mixture to become dark brown or nearly black, and to deposit a black precipitate.
- aloïn t.** See *Rossel's aloïn t.*
- Alper's t.** (for *albumin in the urine*): Acidulate the urine with hydrochloric acid, and add equal volumes of a 1 per cent. mercury succinimid solution: a white cloudiness forms.
- alpha t.:** A psychologic test designed to determine the mental capacity of persons able to read English.
- alphanaphthol t.** See *Molisch's t.* (2).
- Amann's t.** (for *indican in urine*): To 20 c.c. of urine are added a few drops of pure sulphuric acid, 5 c.c. of chloroform, and then 5 c.c. of a 10 per cent. solution of sodium pyrosulphate. They are mixed

- gently for several minutes. The chloroform is then allowed to settle and will be colored blue by the indigo.
- amino-acid nitrogen t.** See *Harding and McLean's t.*, *ninhydrin t.*, *triketohydrindene hydrate t.*
- ammonia t.** See *Brown's t.*, *Nessler's t.*, *Ronchesi's t.*
- amylase t.** See *Hawk's t.*
- Anderson's t.** (to distinguish pyridin chloroplatinate from quinolin chloroplatinate): Boil the salt in water; the pyridin salt becomes an insoluble double salt, and gives off hydrogen chlorid; but the pyridin salt remains in solution.
- Anderson and Goldberger's t.** (for typhus fever): The patient's blood is injected into the peritoneal cavity of guinea-pigs, when, if the disease be typhus, a typical temperature curve will be obtained.
- André's t.** (for quinin): Chlorin and ammonia produce a green color, changing to blue on saturation with acid. Excess of acid changes the color to violet or bright red, but ammonia again turns it green.
- Andreash's t.** (for cystein): Dissolve the substance in hydrochloric acid, and add a few drops of a dilute solution of ferric chlorid and a little ammonia. Cystein causes the liquid to assume a dark purplish tint.
- Anstie's t.** (for alcohol in the urine): A reagent consisting of a solution of potassium dichromate, 1, in concentrated sulphuric acid, 300, is added by drops. An emerald-green color signifies the presence of alcohol in toxic quantity.
- antiformin t.** See *antiformin*.
- antimony t.** See *Marsch's t.*
- antipyrin t.** See *Fioux's t.*
- antitrypsin t.**: A test based on the power of the blood-serum to inhibit the action of trypsin. The antitryptic power of the blood-serum is increased in carcinoma, nephritis, pregnancy, etc. Called *Bergmann-Meyer t.*, *Mueller-Jockmann t.*, and *Fuld-Goss t.*
- apomorphin t.** See *Bedson's t.*
- Archetti's t.** (for caffeine): Heat a solution of potassioferric cyanid with half its volume of nitric acid to boiling, then dilute with water. The reagent gives a precipitate of Prussian blue with caffeine (uric acid does also).
- Arnold's t.**: 1. (For aceto-acetic acid in urine.) a. Dissolve 1 gm. of para-amido-acetophenone in 80 to 100 c.c. water by shaking and adding hydrochloric acid by drops, then add more concentrated acid until the solution is colorless. b. Dissolve 1 gm. sodium nitrite in 100 c.c. distilled water. Just before using mix 2 parts a with 1 part b, add an equal volume of urine, and 2 or 3 drops concentrated ammonia water: an intense brownish-red color develops. Now add 1 volume of this colored urine to 10 to 12 volumes of concentrated hydrochloric acid, 2 to 4 drops of ferric chlorid, and 3 c.c. of chloroform, a beautiful purplish-violet color develops in the chloroform if aceto-acetic acid be present. Strongly colored urine should first be decolorized with animal charcoal. 2. (Alkaloidal tests.) a. Some alkaloids heated on the water-bath with syrupy phosphoric acid obtained by dissolving metaphosphoric acid or phosphoric acid anhydrid in phosphoric acid yield characteristic color reactions: aconitin, violet; nicotin, yellow; coniin, green. b. Triturated with concentrated sulphuric acid, many alkaloids yield characteristic color reactions upon adding 30 to 40 per cent. alcoholic (in some instances aqueous) potassa solution.
- arsenic t.** See *Bellendorff's t.*, *Bellmann's t.*, *Fleitmann's t.*, *Gutzeit's t.*, *Marsh's t.*, *Reinsch's t.*
- Aschner's t.** See *Aschner's phenomenon*, under *phenomenon*.
- Ascoli's t.** See *miostagmin reaction*, under *reaction*.
- association t.**: A test based on associative reaction. It is usually performed by mentioning words to a patient and noting what other words the patient will give as the ones called up in his mind. The reaction time consumed is also noted.
- Atkinson and Kendall's t.** (for blood): A modified form of Teichmann's test.
- atropin t.**: 1. See *Dehio's t.* and *Reuss's t.* 2. (For typhoid infections.) The patient is given atropin $\frac{3}{16}$ gr. (0.002 gm.) hypodermically at least one hour after eating and while in the prone position. The pulse is counted minute by minute one-half hour after the injection. Normally there should be a rise of at least 15 beats per minute over the rate preceding the administration of the drug. This increased rate is absent in typhoid infection. Called also *Norris's t.*
- auto-urine t.** (for tuberculosis): Into the superficial layers of the patient's skin is injected 0.05 c.c. of the patient's own urine. If the patient is actively tuberculous a local reaction develops which consists of a palpable lump of infiltration. Called also *Widbolz's t.*
- Axenfeld's t.** (for albumin in urine): Acidulate the urine with formic acid, and drop by drop add a 0.1 per cent. solution of gold chlorid. On warming, albumin, if present, will produce a red tint, which more of the gold chlorid will turn to a blue. Many other substances will produce the blue tint, but not the red.
- azorubin t.** (for liver function): 4 c.c. of a 1 per cent. solution of azorubin S are injected intravenously. In healthy subjects 95 per cent. of the dye is excreted by the liver and 5 per cent. by the urine. In liver disturbance the dye increases in the urine.
- Babcock's t.** (for fat in milk): To 10 c.c. of milk add 2 c.c. of a mixture of amyl alcohol 37 parts, methyl alcohol, 13 parts, and hydrochloric acid 50 parts; fill to the neck with concentrated sulphuric acid, centrifugalize, and read the amount of separated fat on the neck.
- Babinski's t.** See *Babinski's sign*, under *sign*.
- Babinski-Weil t.**: The patient is made to walk with his eyes shut forward and backward ten times in a clear space. A person with labyrinthine disease deviates from the straight path, bends to one side when walking forward and to the other side when walking backward.
- Bachmeier's t.** (for alkalis): Tannin solution produces a red to reddish-brown color, changing to dirty green.
- bactericidal t.** See *Neisser and Wechberg's t.* See *Wright's method*, under *method*.
- bacteriolytic t.** See *Pfeiffer's phenomenon*, under *phenomenon*.
- Baeyer's t.**: 1. (For glucose.) Boil the liquid with orthonitrophenylpropionic acid and sodium carbonate; if glucose is present, indigo is formed; but an excess of glucose will destroy the blue tint by forming white indigo. 2. (For indol.) The suspected substance is dissolved in water, acidulated with 2 or 3 drops of fuming nitric acid; a 2 per cent. solution added drop by drop produces a red color and then a red deposit of nitrosoindol nitrate.
- Balfour's t.**: The ascertainment of whether the heart is still active in cases of apparent death by inserting pins bearing paper streamers into the skin over the heart. Movement of the heart muscles will be shown by movement of the papers.
- Bárány's t.** See *Bárány's symptom*, under *symptom*.
- Bárány's pointing t.**: "Barany believes that in the cerebellar cortex there exists definite centers, the functional preservation of which has to do with the individual's ability to move the various joints correctly in certain places without the aid of sight. For each joint there are separate centers exerting stimuli in different directions. When one of these

centers is destroyed or its function suppressed, the joint involved falls under the control of the opposing intact center, and when the patient is blind-folded and the pointing accuracy tested, the affected limb deviates in the direction opposite to that of the tonus of the destroyed or suppressed center. This is called spontaneous deviation. Normally, irritation of either vestibular apparatus—for instance, by the caloric test—causes deviation of both arms in the direction opposite to the induced vestibular nystagmus. This is called the normal vestibular reaction. In the case of a cerebellar lesion giving rise to a spontaneous outward deviation, as of shoulder- or wrist-joint, appropriate vestibular irritation results in the normal deviation, or reaction, in the arm or wrist corresponding to the sound cerebellar hemisphere, but is without influence on the arm or wrist corresponding to the cerebellar lesion" (J. A. M. A.).

Barberio's t. (for semen): To a drop of seminal fluid on a glass slide $\frac{1}{2}$ drop of saturated aqueous solution of picric acid is added, when a precipitate of yellow, strongly refractive, needle-shaped crystals is formed.

Bardach's t. (for protein): A test dependent on the fact that, in the presence of protein, acetone and iodopotassium iodid and alkali react to yield canary-yellow needles instead of the usual hexagonal crystals of iodoform.

Bareggi's t. (for typhoid fever): The clot formed in the blood of typhoid patients after twenty-four hours is watery and soft, with only a small amount of separated serum.

Barfoed's t. (for monosaccharids): Boil 5 c.c. of Barfoed's solution (dissolve 4.5 gm. of neutral crystallized copper acetate and 1.2 c.c. of 50 per cent. acetic acid in 100 c.c. of water) and add the unknown slowly and with boiling. Monosaccharids reduce this mixture (formation of a red precipitate), while disaccharids do so only very slowly if at all, and so can be distinguished from the former.

Barral's t. (for albumin and biliary pigments): Overlay the urine with a 20 per cent. solution of zoölic acid; a white ring develops at the contact-point if albumin be present; a green ring if biliary pigments be present.

Basham's t. (for bile-pigment): The liquid is shaken with chloroform, evaporated, and a drop of nitric acid added, when a play of bright colors is produced, finally becoming a fine red.

Bass-Watkin t. (for agglutination): A form of the Widal test so modified that it can be performed at the bedside in about five minutes. Place $\frac{1}{4}$ drop of the patient's blood on a glass slide, dissolve in 1 drop of water, add 1 drop of a rather heavy killed suspension of typhoid bacilli, and mix by tilting the slide from side to side. In a positive case small grayish clumps and a fine granular sediment form within two minutes.

Bauer's t.: 1. A modification of the Wassermann test by relying entirely on the antisheep amboceptor present in the patient's serum. 2. A test of carbohydrate tolerance of the liver, performed by administering 30 gm. of galactose, the urine being tested later for galactose by means of Fehling's solution. 3. (For milk.) To 2 c.c. of milk add 1 drop of 0.25 per cent. aqueous solution of Nile-blue sulphate. The blue color can be extracted from human milk, but not from cow's milk by means of ether.

Baumann's t. (for dextrose): To a watery solution of the substance add benzoyl chlorid and an excess of sodium hydroxid, and shake until the odor of benzoyl chlorid disappears and a precipitate of the benzoic-acid ester of dextrose is formed.

Baumann and Goldmann's t. (for cystin): A solution containing the cystin is shaken with caustic soda and benzoyl chlorid; a voluminous precipitate is formed, composed of benzoyl cystin.

Bayer's t. (for acetone in the urine): Equal volumes of urine and nitrobenzaldehyd are mixed with alkaline water: acetone turns it to an indigo-blue tint.

Bayrac's t. (for uric acid in urine): Evaporate 50 c.c. urine to dryness on the water-bath, treat residue with hydrochloric acid (1:5), wash with alcohol, dissolve in 20 drops of sodium-hydroxid solution heated to 90° or 100° C. on water-bath, and decompose with sodium hypobromite in the apparatus for determining urea. Each 1 c.c. of nitrogen at ordinary temperature equals 0.00357 gm. uric acid.

bead t. (for digestive function): In a gelatinous capsule the patient is given beads with various food-substances attached. The feces are examined until all the beads are recovered, and the condition of the digestion is determined by the rapidity with which the beads are passed and by whether or not the attached food has been properly digested.

Becker's t.: 1. (For *picrololin*.) Fehling's solution is added and the mixture is warmed: if the alkaloid be present, the solution is reduced. 2. (For *astigmatism*.) The patient looks at a test card containing lines radiating in sets of three and points out which seem blurred.

Bedson's t. (for apomorphin): On boiling morphin solution containing apomorphin with potassium hydroxid a brown color develops.

Bell's t.: 1. (For percentage of free hydrochloric acid in stomach contents.) Filter the contents, and to 4 c.c. add drop by drop a solution of dimethyl-amido-azobenzol until the pink color ceases to grow darker. Compare with Bell's color scale for percentage. 2. (For *alum in flour or bread*.) Fresh 5 per cent. logwood tincture in methylated spirit. Moisten 10 gm. flour with water, then add 1 c.c. tincture and an equal quantity saturated ammonium-carbonate solution. Sample, if pure, gives pinkish color, gradually fading to buff or brown. If alum is present, a lavender or bluish tint is formed, becoming more marked on drying.

belt t. (for enteropneosis): The lower abdomen of the patient is encircled by both hands and lifted up. The patient will experience a sensation of relief if enteropneosis is present.

Benedict's t.: 1. (For *glucose*.) 173 gr. of sodium or potassium citrate and 100 gr. crystallized sodium carbonate are dissolved in 800 c.c. of boiling water. This is cooled and filtered and 17.3 gr. copper sulphate dissolved in 100 c.c. of water are added and the whole diluted to make 1 liter. To 5 c.c. of this reagent, in a test-tube, 8 or 10 drops of the solution to be tested are added. Boil for one or two minutes and allow to cool slowly. If glucose is present the solution will be filled with a precipitate red, yellow, or green in color. 2. (For *urea*.) The urea is hydrolyzed to ammonium carbonate by KHSO_4 and ZnSO_4 , made alkaline and distilled as usual.

Benedict and Denis's t. (for total sulphur in urine). See Benedict and Denis's method, under *method*.

Benedict and Murlin's t. (for amino-acid nitrogen in urine). See Benedict and Murlin's method, under *method*.

benzidin t. (for blood): To a saturated solution of benzidin in glacial acetic acid add an equal volume of 3 per cent. hydrogen peroxid and 1 c.c. of the unknown. A blue color indicates blood.

benzidin peroxidase t. (for raw milk): To 10 c.c. of the milk add 2 c.c. of a 4 per cent. alcoholic solution of benzidin and sufficient acetic acid to coagulate the milk. Mix and allow 2 c.c. of a 3 per cent. solution of hydrogen peroxid to flow slowly down the wall of the tube. An immediate blue color indicates raw milk (not heated to 78° C.).

benzoin t. (for cerebrospinal syphilis): When a colloidal solution of benzoin resin is added to syphilitic cerebrospinal fluid, flocculation or precipitation occurs

Bergmann-Meyer t. Same as *antitrypsin t.*

Berthelot's t. (for phenol): An ammoniacal solution of phenol treated with sodium hypochlorite takes on a fine blue color.

Bertoni-Raymondi t. (for nitrous acid in blood): Dialyze, evaporate the dialysate to dryness, take up with hot alcohol, and add starch paste and potassium iodid: a blue color develops.

Bertrand's t. (for glucose): Boil the unknown with an excess of Fehling's solution, filter out the cuprous oxid, dissolve in an acid solution of ferric sulphate, and titrate with potassium permanganate.

beta t.: A psychologic test for intelligence to be used instead of the alpha test on foreigners unacquainted with English.

beta-hydroxybutyric acid t. See *Black's t.*, *Hart's t.*, *Kultz's t.*

Bettendorff's t. (for arsenic): The liquid to be tested is mixed with hydrochloric acid; a freshly prepared solution of stannous chlorid is added, and a bit of tinfoil is put into it, when a brown color or precipitate is formed.

Bettmann's t. Same as *Bettendorff's t.*

Bial's t. (for pentose in urine): Make a reagent consisting of 500 c.c. of 30 per cent. hydrochloric acid, 1 gm. of orcin, and 25 drops liquor ferri sesquichloratis (G. Ph.). Five c.c. of this reagent are boiled in a test-tube, and after removal from the flame, several drops of urine are added. A green color appearing at once indicates pentose.

bicarbonate tolerance t. See *Sellards's t.*

bile acid t. See *Bischoff's t.*, *Preschsel's t.*, *Francis's t.*, *Hay's t.*, *Mylius's t.*, *Neukomm's t.*, *Oliver's t.* (A), *Pellenkoffer's t.*, *Strassburg's t.*, *Tyson's t.*, *Udranský's t.*

bile pigment t. See *Barral's t.*, *Basham's t.*, *Bonanno's t.*, *Capranica's t.*, *Cunisset's t.*, *Dragendorff's t.*, *Dumontpallier's t.*, *Fleischl's t.*, *Gerhardt's t.*, *Gluzinski's t.*, *Gmelin's t.*, *Hammarstein's t.*, *Huppert's t.*, *Huppert-Cole's t.*, *Jolles's t.*, *Kapsinow's t.*, *Krokiewicz's t.*, *Le Noble's t.*, *Marchal's t.*, *Masset's t.*, *Nobel's t.*, *Quinlan's t.*, *Rosenbach-Gmelin's t.*, *Salkowski and Schipper's t.*, *Schmidt's t.*, *sand t.*, *Smith's t.*, *Stokvis's t.*, *Trousseau's t.*, *Ullmann's t.*, *Vitali's t.*

bilirubin t. See *Schmidt's t.*

Binet's t.: A method of testing the mental capacity of children and youth by asking a series of questions adapted to the capacity of normal children at various ages. According to the answers given the mental capacity of the subject is ascertained.

Binet-Simon t. Same as *Binet's t.*

Bing's entotic t.: When words are not audible through an ear trumpet as ordinarily applied, but may be heard when spoken into a trumpet joined to a catheter in the eustachian tube, it is probable that there is a lesion of the incus or malleus.

Binz's t. (for quinin in urine): The reagent consists of 2 parts iodine, 1 part potassium iodid, and 40 parts water.

biologic t. See *serum t.*

Bischoff's t. (for biliary acids): Heated with diluted sulphuric acid and cane-sugar these yield a red color.

bismuth t. See *Nylander's t.*

biuret t.: 1. (For proteins.) To the unknown solution add strong potassium hydroxid solution and then a few drops of very dilute copper sulphate solution. A pinkish-violet color indicates proteins. 2. (For urea.) Melt the substance in a dry test-tube and heat it, then cool, and dissolve in water; add caustic soda, and mix drop by drop a dilute solution of copper sulphate: a pink and finally a bluish color is produced.

Black's t. (for beta-oxybutyric acid): Evaporate 50 c.c. of urine in a small dish to about one-fourth; acidify with a few drops of hydrochloric acid and add plaster of Paris to a thick paste. When the mass begins to harden, break it up into a meal;

add 30 c.c. of ether and mix. Draw the clear ether into an evaporating dish; evaporate over a water-bath and dissolve the residue in 10 c.c. of water. Neutralize with an excess of dry barium carbonate; pour into a test-tube, add a few drops of hydrogen peroxid and 5 drops of 10 per cent. ferric chlorid. A red color indicates beta-oxybutyric acid.

blister t. (for infectious disease): A blister is raised on the skin and its contents examined. If the proportion of eosinophils present is less than 25 per cent., infectious disease is probable. Called also *Roger-Josué t.*

Block-Steiger t.: A test for simulated deafness based on the fact that if two tuning-forks, vibrating in unison, but one struck stronger than the other, be held before the two ears of a person with normal hearing, the louder fork only will be heard.

blood t. See *Adler's t.*, *Almén's t.*, *aloïn t.*, *aloin-turpentine t.*, *Atkinson and Kendall's t.*, *benzidin t.*, *Bremer's t.*, *Cowie's t.*, *Day's t.*, *Deen's t.*, *Donagony's t.*, *Einhorn's t.*, *Fleig's t.*, *Gregerson and Boas's t.*, *Heller's t.*, *hemalein t.*, *hydrogen dioxide t.*, *Kobert's t.*, *Lodendorff's t.*, *Lyle and Curman's t.*, *Meyer's t.*, *Nippe's t.*, *ortholoidin t.*, *phenolphthalcin t.*, *pineapple t.*, *Rose's t.*, *Rosenthal's t.*, *Rossel's t.*, *Ruttan and Hardisty's t.*, *sand t.*, *Schaffjew's t.*, *Schoenbein's t.*, *Schumm's t.*, *serum t.*, *Stake's t.*, *Strawe's t.*, *Taylor's t.*, *Teichman's t.*, *Weber's t.*, *Williamson's t.*, *Valenta's t.*, *von Zeynek and Nencki's t.*

blood-cholesterol t.: Increase of the cholesterol content of the blood indicates deficiency of the cholaligenic power of the liver.

Bloor's t. (for fat): The protein is precipitated, the fat is saponified, and the amount determined nephelometrically.

Bloxham's t. (for urea): If a nitrate is present, add a few drops of an ammonium-chlorid solution; if absent, acidulate with hydrochloric acid. Evaporate to dryness in a watch-glass, and heat cautiously as long as thick, white fumes evolve. Dissolve the residue in a drop or two of ammonia, add a drop of barium-chlorid solution, and stir. If urea is present, a crystalline streak of barium cyanurate will form in the track of the rod.

Blum's t. (for albumin): Dissolve 0.03 to 0.05 gm. manganous chlorid in a little water; acidulate with hydrochloric acid, and treat with 100 c.c. 10 per cent. solution sodium metaphosphate. Then add lead oxid a little at a time; let the liquid settle, and filter. Resulting pink solution of manganic metaphosphate detects albumin in urine. Place reagent in a test-tube and filter urine into it.

Blythe's t. (for lead in drinking-water): A little alcoholic tincture of cochineal makes a precipitate with it.

Boas's t.: 1. (For atony of the bowels.) The colon is unloaded and injected with water; the quantity of water necessary to elicit a splashing sound on succussion is noted as a measure of the degree of atony. 2. (For hydrochloric acid in the stomach contents.) Dissolve 5 gm. of resorcinol and 5 gm. of sugar in 100 c.c. of dilute alcohol. A thin layer of this reagent is warmed upon a porcelain dish. If a glass rod is dipped in this layer and touched to a drop of the filtered stomach-liquid, a scarlet streak is formed. Called also *resorcinol t.* 3. (For free hydrochloric acid in the stomach contents.) Resublimed resorcinol, 5 parts; cane-sugar, 3 parts; 94 per cent. alcohol, to make 100 parts; boil the fluid with the reagent: free hydrochloric acid will give a transient rose-red mirror. 4. (For lactic acid.) Test for lactic acid in gastric juice depends on oxidation of the acid to aldehyd and formic acid by action of sulphuric acid and manganese. The aldehyd is detected by addition of Nessler's reagent or by formation of iodoform when iodine solution is added. 5. Same as *chlorophyl t.*

Bodal's t.: Test of color perception by the use of colored blocks.

Boedeker's t. (for albumin): The liquid is treated with acetic acid, and potassium ferrocyanid in solution is added drop by drop: albumin will form a white precipitate.

Bohmannson's t. (for glucose): To 10 c.c. of the urine add 2 c.c. of 25 per cent. hydrochloric acid and 5 c.c. of bone black. Shake well, filter, and make Nylander's test on the filtrate.

Boltz's t. (for diagnosis of general paralysis): Place 1 c.c. of fresh cerebrospinal fluid in a small glass test-tube and to it add 0.3 c.c. of acetic anhydrid. Shake the mixture well and then add, drop by drop, 0.8 c.c. of concentrated sulphuric acid. Shake the mixture gently once more. Then hold the test-tube against a white background. The presence of a lilac tint indicates a positive reaction; a brown yellow, red yellow, or clear fluid is noted if the reaction is a negative one.

Bonanno's t. (for bile pigments): To 5 c.c. of the unknown add a few drops of concentrated hydrochloric acid containing 2 per cent. of sodium nitrite. An emerald green color indicates bile pigments.

borates and boric acid t.: Dry the milk and ash the residue. Add 1 c.c. of water and 2 drops of hydrochloric acid. Soak a strip of turmeric paper in the solution one minute and allow it to dry in the air. A deep red color which changes to green or blue on treatment with dilute alkali indicates boric acid.

Borchardt's t. (for levulose in urine): A few cubic centimeters of a mixture of equal parts of water and concentrated hydrochloric acid are heated for one and one-half minutes with an equal amount of urine and a few crystals of resorcin. The mixture is allowed to cool and is made alkaline with sodium carbonate; then poured into a test-tube and shaken with acetic ether: a yellow color in the ether indicates the presence of levulose.

Borden's t. (for typhoid fever): A modification of the Widal test. The patient's blood-serum is mixed with salt solution and then with a suspension of killed typhoid bacilli, so as to bring the dilution up to 1 to 50. The positive reaction consists in the sinking of the clump of bacteria to the bottom of the test-tube, leaving a clear fluid above a small white mass of agglutinated bacilli.

Bordet's t. See serum t.

Boston's t.: A method of performing the ring tests for albumin in which the fluids are brought into contact in a glass pipet.

Botelho's t. (for cancer): To centrifugated suspect blood-serum dilute nitric acid and an iodine reagent are added in several small amounts at short intervals, the test-tube being shaken after each addition. Normal serum remains clear, that of cancer patients continues clouded.

Böttger's t.: 1. (For glucose in the urine.) The urine is treated with sodium hydroxid and then boiled with a very small amount of bismuth subnitrate; if glucose is present the precipitate is black. 2. Paper moistened with palladium chlorid solution (0.0002 gm. in 100 c.c.) becomes darkened in the presence of carbon monoxid.

Bottu's t. (for glucose): To 8 c.c. of Bottu's reagent (3.5 gm. of orthonitro-phenyl-propionic acid and 5 c.c. of freshly prepared 10 per cent. solution of sodium hydroxid per liter) in a test-tube add 1 c.c. of the urine and mix. Boil the upper portion, add one more c.c. of the mixture, and heat again. A blue color accompanied by the precipitation of small particles of indigo indicates glucose.

Bouchardat's t. (for alkaloids): Potassium triiodid as a test for alkaloids gives a brown precipitate, soluble in alcohol.

Bourdon's t. (for mental disease): A test based on the accuracy and time required for a patient to strike out certain recurring letters on a page.

Bourget's t. (for iodids in urine and saliva): Impregnate a filter-paper with a 5 per cent. starch solution, dry, and cut into squares 5 cm. each. Then drop 2 or 3 drops of a 5 per cent. ammonium persulphate solution in the center of each square, and dry the pieces in the dark. Even with traces of iodine the prepared paper gives an intensely blue color.

Boveri's t. (for excess of globulin in cerebrospinal fluid): Over 1 c.c. of cerebrospinal fluid in a test-tube is poured an equal quantity of a 1 : 1000 solution of potassium permanganate. If there is excess of globulin a yellow ring will form at the line of junction, and on shaking, the entire contents of the tube will become bright yellow.

Boyksen's t. (for cancer): Serum from animals immunized with cancer material is injected intracutaneously. The resulting reaction is said to be more frequently positive in cancer patients than in controls.

Brahmachari's t.: A test for leishmaniasis based on the degree of opacity produced on diluting the serum with water, on the theory that the serum is characterized by an excess of globulin.

Bram's t.: Persons with exophthalmic goiter are more tolerant of quinin hydrobromid than normal persons.

Brande's t. (for quinin): When a solution of quinin is treated with chlorin water and ammonia, a green color is produced.

Braun's t. (for glucose in urine): The urine is alkalized with sodium hydroxid and boiled with a solution of picric acid: if glucose is present, a deep-red color is produced. Acetone gives the same reaction, though less decidedly; while creatin will give it even in a cold solution.

Bremer's t. (for diabetic blood): The blood is prepared for staining, dried in a hot-air sterilizer, and stained with methylene-blue and eosin. The red corpuscles of normal blood become brownish; but those of diabetic blood take on a greenish-yellow tint.

Brieger's t.: 1. (For pyrocatechin.) Add 1 drop of urine to 1 drop of very dilute ferric chlorid solution on a watch-glass—pyrocatechin causes an emerald-green color; on adding now a dilute solution of sodium bicarbonate or ammonium carbonate, the fluid becomes violet, changing back to green with acetic acid. 2. (For strychnin.) Pure chromic acid is added, and a violet color is produced. 3. See Brieger's reaction, under reaction.

bromin t.: 1. (For melanin.) See Zeller's t. 2. (For tryptophan.) See tryptophan t.

bromsulphthalein t. See bromsulphthalein.

Brown's t. (for quantitative estimation of ammonia in urine): Heat 60 c.c. of urine with 3 gm. of basic lead acetate, stir well, let stand for a few minutes, and filter. This removes nitrogenous substances. Heat the filtrate with 2 gm. neutral potassium oxalate, stir well, and filter. Take 10 c.c. of the filtrate, add 50 c.c. of water and 15 gm. of neutral potassium oxalate, and estimate the ammonia.

Bruck's serochemical t. (for syphilis): Nitric acid when added to syphilitic blood-serum causes a precipitate to form. Bruck's technic is based on an acid containing, per hundred gm., 24.77 gm. of nitric acid, or, per hundred c.c., 28.48 c.c. of nitric acid with a specific gravity of 1.149. He uses 0.3 c.c. To 0.5 c.c. of clear serum 2 c.c. of distilled water are added. This is shaken, and then 0.3 c.c. of nitric acid is added with a standardized pipet. This is shaken and permitted to stand at room temperature for ten minutes. Then 16 c.c. of distilled water at 15° C. are added and shaken slowly three or four times so as not to foam. This shaking is repeated ten minutes later, and then the tube is set aside for one-half hour. If the serum is syphilitic, it shows a distinct flocculent turbidity. In twelve hours a precipitate is piled up on the floor of the test-tube. If the

serum is non-syphilitic, there is no precipitate at any time.

Brücke's t.: 1. (*For bile-pigments in urine.*) It is made by shaking with nitric acid, and then slowly adding sulphuric acid, when color-reactions follow. 2. (*For proteins.*) The suspected liquid is acidulated with hydrochloric acid and treated with potassic iodid, when the proteins will be precipitated. 3. (*For urea.*) The suspected liquid is heated with an alcoholic solution of fusel oil, filtered, and treated with a solution of oxalic acid in fusel oil, when a crystalline deposit is formed.

Bryce's t.: The determination of a degree of immunity against small-pox conferred by vaccination by repeating the inoculation after the lapse of several days: if the first is successful, the second will rapidly overtake it.

Burchard-Liebermann t. See *Liebermann's t.*

Burnam's t. (*for formaldehyd in urine*): To 10 c.c. of urine in a test-tube is added 3 drops of a 5 per cent. solution of phenylhydrazin hydrochlorid, 3 drops of a 5 per cent. solution of sodium nitroprussid, and then a few drops of sodium hydrate are poured down the side of the test-tube. If formaldehyd is present, a deep purplish color is seen, changing to dark green, and then to pale yellow.

Busacca's t.: One c.c. of sterilized gelatin is rendered fluid by heating and is then injected intracutaneously. In syphilitic subjects this injection is followed within six hours by a reddened infiltrated area.

butter t.: A test for pancreatic insufficiency based on the fact that in deficiency of the external secretion of the pancreas so much fat may be present in the stool after the ingestion of butter that the stool looks like butter.

butyric-acid t. See *Noguchi reaction*, under *reaction*.

Bychowski's t. (*for albumin in urine*): Two drops of urine are placed in a test-tube of hot water and shaken: the water becomes cloudy if albumin is present.

cafein t. See *Archetti's t.*, *Delf's t.*

Caillan's t. (*for glucose in urine*): Shake 2 parts of urine with 1 part of chloroform: on settling, glucose will be present in the upper layer.

Callaway's t.: A test for dislocation of the humerus, consisting in the fact that the circumference of the affected shoulder, measured over the acromion and through the axilla, is greater than that on the unaffected side.

Calmette's t. See *Calmette's reaction*, under *reaction*.

caloric t. See *Bárdny's symptom*, under *symptom*.

Cambridge's t. See *Cambridge's reaction*, under *reaction*.

Campani's t. (*for glucose*): A mixture of a concentrated solution of lead subacetate and a dilute solution of copper acetate is productive of a yellow or red color.

camphor t.: If $7\frac{1}{2}$ gr. of camphor are given by the mouth it should cause glycuronic acid to appear in the urine. This will not occur in liver disease.

cancer t. See *edestin t.*, *Friedman-Hamburger t.*, *glycyl-tryptophan t.*, *Newbauer and Fischer's t.*, *tryptophan t.*, *Weinstein's t.*, *Wolff and Junghans's t.*

cane-sugar t. See *Nichles' t.*

Cappagnoli's t. (*for glucose*): A solution of copper hydroxid and potassium hydroxid is added, when a blue color is produced.

Capranica's t.: 1. (*For bile-pigments.*) Shake the liquid with chloroform containing bromin: it turns green, blue, violet, yellowish-red, and then becomes nearly colorless. 2. (*For guanin.*) A warm solution of guanin hydrochlorid gives a yellow precipitate in silky needles with a cold saturated solution of picric acid. 3. (*For guanin.*) Mix the solution with a concentrated solution of potassium ferrocyanid: a yellowish-brown precipitate in

prisms appears. 4. (*For guanin.*) Add to the suspected solution a concentrated solution of potassium dichromate: guanin will cause an orange-red precipitate in crystals.

carbohydrate t. See *Moore's t.*, *Schiff's t.*

carbohydrate tolerance t. See *Killian's t.*

carbon monoxid t. See *Boetger's t.*, *Dejuss's t.*, *Hoppe-Seyler t.*, *Katayama's t.*, *Rubner's t.*, *Salkowski's t.*, *Wetzel's t.*, *Zaleski's t.*

carbon monoxid hemoglobin t. See *tannin t.*

Carnot's t. (*for atonic dilatation of the stomach*): The patient's stomach is emptied by the stomach-pump and 500 c.c. of water introduced. The patient remains in an erect posture for an hour, after which the water is withdrawn and measured. Then 500 c.c. of water are introduced and the patient placed on his right side for an hour. In this position the stomach should be nearly empty in an hour.

Carrez's t. (*for albumin*): One gram of resorcinol is dissolved in 2 c.c. of distilled water in a test-tube and the urine is poured upon the surface. A white ring shows albumin.

Casamajor's t. (*for glucose*): The suspected liquid is shaken with methyl alcohol; glucose makes the mixture cloudy.

casein t. See *Leiner's t.*

Castellani's t.: An agglutination test for ascertaining the existence of a mixed infection with allied species of organisms.

catoptric t.: A test for cataract made by observing the reflections from the cornea and from the surfaces of the crystalline lens.

cellulose t. See *Schultz's t.*

Chautard's t. (*for acetone in the urine*): A drop of aqueous solution of magenta is dissolved with sulphurous acid and added to the urine, when a violet color is produced.

chlorophyl t. (*for gastric motility*): On a fasting stomach the patient drinks 400 c.c. of water which has been colored green by the addition of 20 drops of chlorophyl solution. After half an hour the residue is aspirated from the stomach, and the amount that has passed out of the stomach in one-half hour is ascertained.

cholera red t. (*for indole*): To the unknown add one-tenth its volume of a 0.02 per cent. solution of potassium nitrite and mix. Underlay with sulphuric acid. The purple color will change to bluish green on neutralization with potassium hydroxid.

cholesterol t. See *Lieberman and Burchard's t.*, *Oberrüller's t.*, *Salkowski's t.*, and *Schultz's t.*

cholin t. See *Rosenheim's t.*

Ciamician and Magnanini's t. (*for skatol*): Warm the solution with sulphuric acid: skatol produces a purple-red tint.

Cipollina's t. (*for dextrose or levulose in urine*): Four c.c. of urine, 5 drops of pure phenylhydrazin, and 0.5 c.c. of glacial acetic acid are boiled for one minute. Four or 5 drops of potassium hydrate solution are added and the mixture boiled again for a few seconds. Cool and examine for crystals of phenyl-levulosazone or phenyl-dextrosazone.

coagulation t. (*for proteins in urine*): Acidify the urine with acetic acid and boil. A white coagulum or a white precipitate or a cloudiness indicates protein.

cobra-venom t. See *Weil's t.*

cockscornb t.: A test for the activity of the ergot preparations, based on the fact that ergot, when administered to a cock, produces a blue coloration of its comb.

Cohen's t. (*for albumin*): To the acidulated solution add a solution of potassium bismuthic iodid and potassium iodid: albumin is precipitated.

Cohn's t.: A test for color perception by the use of variously colored embroidery patterns.

coin-t.: A test for pneumothorax made by auscultating the chest while a silver coin laid against the chest is struck with another coin. A metallic, ringing sound is produced over a cavity containing air.

colchicin t. See *Zeissel's t.*

Cole's t.: 1. (*For glucose.*) Add acetic acid to the urine and filter through blood charcoal to remove other reducing substances. Then make a modified Fehling's test. 2. (*For lactose.*) Absorb the lactose on to blood charcoal, extract it again with hot dilute acetic acid and make an osazone test. 3. (*For uric acid.*) Add 2 drops of ammonium hydroxid to 5 c.c. of urine and then saturate with ammonium chlorid. Pour off the supernatant fluid, filter, evaporate residue, and make murexid test.

colloidal benzoïn t. See *benzoïn t.*

colloidal gold t. See *Lange's t.*

Comessatti's t. (for adrenalin): To 5 c.c. of the unknown solution add an equal volume of 1 per cent. sodium acetate solution and 1 c.c. of 0.1 per cent. mercuric chlorid solution. A rose color indicates adrenalin.

Congo-red t. See *Riegel's t. (2).*

conjugate glycuronates t. See *Tollens's t.*

conjunctival t. See *ophthalmic reaction*, under *reaction*.

connective-tissue t. See *Schmidt's t. (5).*

Cook's t. (for purin bodies in urine): In a centrifuge tube take 10 c.c. urine and add 1 gm. sodium carbonate and 1 or 2 c.c. strong ammonia. Shake until the soda is dissolved. The earthy phosphates will be precipitated. Centrifuge and pour off clear fluid. Add 2 c.c. ammonia and 2 c.c. ammoniated silver nitrate solution. Centrifuge again. Each $\frac{1}{10}$ c.c. of sediment represents 0.001176 gm. of purin bodies.

copper soap t. (for lipase): Make up a hydrogel with 1 per cent. of agar-agar, $2\frac{1}{2}$ per cent. of starch, and $2\frac{1}{2}$ per cent. of a neutral fat; pour into Petri dishes, cool, and place drops of the unknown on its surface. Incubate at 38° C. one hour and pour over the surface a saturated solution of copper sulphate. Bluish-green spots of copper soap where the drops were indicate lipase action.

cover t.: A test for imbalance of ocular muscles, made by covering one eye and noting its movement while uncovering it again.

Cowie's guaiac t. (for blood in feces): Add glacial acetic acid to the feces and extract with ether. To the filtrate add an equal volume of water, some powdered guaiac resin, and old turpentine or hydrogen peroxid. A blue color indicates blood.

Craft's t.: In organic disease of the pyramidal tract, stroking with a blunt point upward over the dorsal surface of the ankle, the leg being extended and the muscles relaxed, produces dorsal extension of the great toe.

Craig's t.: 1. (*For tuberculosis.*) A complement-fixation test for tuberculosis in which the antigen is made by growing several strains of bacilli on an alkaline bouillon containing a teaspoonful of aseptically removed egg-white and egg-yolk for each 250 c.c. of bouillon. 2. A modification of the Wassermann test using a human hemolytic serum instead of a sheep hemolytic serum.

Cramer's t. (for glucose): Place 3 c.c. of Cramer's "2.5 reagent" (0.4 gm. of mercuric iodide and 6 gm. of potassium iodide dissolved in 100 c.c. of water and the reaction so adjusted that 10 c.c. will be neutralized to phenolphthalein by 2.5 c.c. of N/10 acid) in a test-tube and boil. Add 3 c.c. of the urine and again boil. If positive the mixture becomes turbid, darkens, and a precipitate of finely divided mercury settles out.

creatinin t. See *Braun's t.*, *Jaffé's t.*, *Kerner's t.*, *Maschke's t.*, *Salkowski's t.*, *Thudichum's t.*, *Weyl's t.*

Crismier's t. (for glucose): The solution is made alkaline, and is boiled with 1 part of safranin in

1000 parts of water: if glucose is present, the mixture is decolorized or turned to a pale yellow.

Cunisset's t. (for bile in the urine): The urine is shaken with chloroform: if biliary matter is present, a yellow color is produced.

currant t.: If, after a meal of currants, the seeds do not appear in the stools in twenty-four hours, there is defective motility of the stomach.

cystein t. See *Andreassch's t.*, *Baummann and Goldmann's t.*, *Liebig's t.*, *Sullivan's t.*

cytosin t. See *Wheeler and Johnson's t.*

Davy's t. (for phenol): To a drop or two of the suspected solution add 3 or 4 drops of a solution of 1 part of molybdic acid in 10 or 15 parts of concentrated sulphuric acid: if phenol is present, a pale yellow-brown tint is produced, changing to a red-dish-brown and then to a fine purple.

Day's t. (for blood): The suspected substance is treated with fresh guaiacum tincture and then with hydrogen dioxid: if blood is present, a blue tint is produced.

Dedichen's t. (for liver function): A test based on the assumption that urobilinuria is a sign of absolute liver insufficiency. Tincture of iodine is added to the urine, drop by drop, and then an equal amount of Schlesinger's reagent. The mixture is filtered. If urobilin is present, fluorescence takes place.

Deen's t. (for blood in gastric juice): To the gastric juice is added 1 c.c. of a fresh tincture of guaiac and 1 c.c. of Hühnerfeld's solution (2 c.c. of glacial acetic acid, 1 c.c. of distilled water, and 100 c.c. each of oil of turpentine and alcohol). On shaking, the fluid turns blue if blood is present. Iron compounds give the same reaction as blood.

Degener's t. (for alkalis): Phenacetolin is turned red by alkalis.

Dehio's t.: If bradycardia is relieved by injections of atropin, the condition is caused by irritation of the vagus; but if the bradycardia is not relieved, the cause is some affection of the heart muscle.

Dejust's t. (for carbon monoxid): If air containing carbon monoxid is passed through an ammoniacal silver solution, metallic silver will be deposited and the solution will take on a brown or black color.

Delff's t. (for caffeine): A solution of red mercuric oxid and potassium iodid: used as a test for caffeine, which it throws down as a crystalline precipitate.

Deniges's t.: 1. (*For uric acid.*) Add nitric acid, which changes uric acid into alloxan, heat gently so as to drive off free nitric acid; add a few drops of sulphuric acid and of commercial benzol, which contains thiophen. This gives a blue color if alloxan has been formed. 2. (*For acetone in urine.*) About 1 inch of the distillate in a test-tube is mixed with an equal amount of a solution of the subsulphate of mercury (mercuric oxid 50, sulphuric acid 200, water up to 1000) and the mixture allowed to simmer in a stoppered flask for about five minutes. A white crystalline precipitate occurs on cooling, which is very distinctive in appearance. If acetone is present in excess, the test is less distinct. If but a trace is present, a trace of sodium chlorid will aid the precipitation. The precipitate is not soluble in dilute hydrochloric acid.

desmoid t. See *desmoid reaction*, under *reaction*.

diacetic acid t. See *aceto-acetic acid t.*

Dick t. (for susceptibility or immunity to scarlet fever): The development of a local redness of the skin following the intracutaneous injection of 0.1 c.c. of a diluted filtrate of cultures of hemolytic streptococci from scarlet fever patients. The occurrence of such a skin reaction indicates susceptibility, its absence immunity, to scarlet fever.

digestive function t. See *Einhorn's t.*

digitalin t. See *Grandeau's t.*

dimethylamino-azobenzol t. (for free hydrochloric acid): To a little of the filtered gastric juice

in a test-tube add a drop of 0.5 per cent. alcoholic solution of dimethylamido-azobenzol; in the presence of free hydrochloric acid there will at once appear a cherry-red color.

dirt t. (*for milk*): Filter a pint of milk through a little disk of absorbent cotton and note the stain produced.

Dold's t.: A flocculation test for syphilis.

Donaldson's t. (*for sugar*): Add to a suspected fluid a few drops of a solution of 5 parts of sodium carbonate, 5 of caustic potash, 6 of potassium bitartrate, 4 of copper sulphate, and 32 of water; heat it, and if sugar is present, a yellow-green color will be produced.

Donder's t.: A color-vision test performed by lanterns with sides of colored glass.

Donné's t. (*for pus in the urine*): Separate the pus from the urine, add to it a piece of solid potassium hydroxid, and stir. If pus be present the sediment will become slimy and tough, while mucus will pass into solution.

Donogany's t. (*for blood in urine*): One c.c. of ammonium sulphid solution and 1 c.c. of pyridin solution are added to 10 c.c. of urine: an orange color forms if blood is present.

Dragendorff's t. (*for bile-pigments*): Wet an unglazed porcelain plate with the suspected urine, which is soon absorbed; add a drop or more of nitric acid: if bile-pigments are present, colored rings are formed.

Drechsel's t.: 1. (*For bile*). On heating the liquid on a water-bath with phosphoric acid and cane-sugar, a reddish-brown color will be produced if bile is present. 2. (*For xanthin*). Made by adding copper chlorid to an ammoniacal solution of the substance: xanthin, if present, causes a muddy precipitate.

Dreyer's t.: An agglutination test for the differentiation of typhoid and paratyphoid infections from other infections in persons vaccinated against typhoid-paratyphoid infection.

Duane's t.: The employment of a candle-blaze and prisms to measure the degree of ocular heterophoria.

Dugas's t.: A test for the existence of dislocation of the shoulder, made by placing the hand of the affected side on the opposite shoulder and bringing the elbow to the side of the chest. If this cannot be accomplished, dislocation exists.

Dumontpallier's t. (*for bile-pigments*): Over the liquid to be tested pour carefully iodine tincture: if bile-pigment is present, a green ring is seen between the two liquids.

Dungern's t. See *von Dungern's t.*

Dupont's t. (*for death*): The action of a drop of atropin in the pupil is observed.

Dwight-Frost t.: Strain applied to the heart muscle by marked variation in intrathoracic pressure will cause the tonicity of the heart muscle to vary as recorded by the systolic pressure.

Ebbinghaus's t. (*for mental disease*): The examiner gives the patient sentences from which several words have been omitted, and asks him to complete them.

edestin t. (*for gastric cancer based on the presence of peptid-splitting ferment*): The gastric juice is filtered, neutralized with normal Na_2CO_3 solution, using phenolphthalein as indicator, and then brought to an alkalinity equal to $\frac{N}{100} \text{Na}_2\text{CO}_3$, in order to inactivate pepsin. Place 2 c.c. of a 0.1 per cent. solution of edestin in 0.1 per cent. Na_2CO_3 in each of four test-tubes. To three tubes add 2 c.c., 1 c.c., and 0.5 c.c. of the faintly alkalinized gastric fluid, reserving the fourth tube as a control and adding to it only a drop of phenolphthalein solution. Place the four tubes in an incubator at 37°C . At the end of four hours exactly neutralize the contents of each of the tubes with 5 per cent. acetic acid.

When the neutral point is reached all the undigested edestin will be precipitated. The degree of digestion is indicated by the amount of turbidity compared with that in the control tube. Absence of turbidity indicates complete digestion.

Edlefsen's t. (*for glucose*). See *Edlefsen's reagent*, under *reagent*.

Ehrlich's t. See *Ehrlich's reaction*, under *reaction*, and *para-dimethyl-amino-benzaldehyd t.*

Ehrmann's t. (*for mydriatic substances*): The suspected substance is applied to an enucleated frog's eye, dilatation indicating the presence of a mydriatic substance.

Eijkman's t. (*for phenol*): Add to the suspected solution a few drops of an alcoholic solution of ethylic ether and nitrous acid, each, 1 part, and concentrated sulphuric acid, 2 parts: a red color is produced.

Einhorn's t. (*for blood in stomach, feces, and urine*): The fluid is tested by paper sensitized with ben-zidin. The ben-zidin paper is immersed in the fluid to be examined, and a few drops of hydrogen dioxide are added, when a blue color is formed if blood is present: the color should appear in a few seconds.

Einhorn's bead t. (*for digestive function*): A sample of the food to be examined is wrapped in gauze to which a colored glass bead is attached, and the whole is placed in a gelatin capsule, which is swallowed. The bead serves to help find and identify the gauze in the feces, and the digestive function is judged by the time the bead is passed and by the digestion of the food sample.

Eiselt's t. (*for melanin in the urine*): Oxidizing agents like nitric and sulphuric acids or potassium dichromate render the urine dark colored if melanin is present.

Eitelberg's t.: A large tuning-fork is held near the ear, at intervals, for twenty to thirty minutes. If the ear is normal, the perception of the vibrations increases after each interval; but if there is a lesion of the conducting apparatus, the perception decreases.

Ellermann and Erlandsen's t. See *tuberculin titer t.*

Emanuel-Cutting t. See *mastic t.*

emulsoid-gelatin t. See *gel t.*

epinephrin t. See *Goetsch's skin reaction*, under *reaction*.

epiphanin t. See *epiphanin reaction*, under *reaction*.

Erdman's t. (*for alkaloids*). See *Erdman's reagent*, under *reagent*.

erythrocyte sedimentation t. See under *reaction*.

Esbach's t. (*for albumin*). See *Esbach's reagent*, under *reagent*.

Escherich's t.: A modification of the von Pirquet reaction in which the tuberculin is injected subcutaneously.

ethyl butyrate t. (*for pancreatic lipase*): A neutral mixture of water, ethyl butyrate, and litmus turns red when acted on by lipase due to the liberation of butyric acid.

Ewald's t.: 1. (*For hydrochloric acid in stomach contents*). Mix 2 c.c. of a 10 per cent. solution of potassium sulphocyanid, 0.5 c.c. of a neutral solution of iron acetate, and 7.5 c.c. of water. This makes a ruby-red solution. A few drops are put into a porcelain dish and a drop or two of the suspected liquid are added. If HCl is present, a slight violet is seen; but on mixing the color becomes brown. 2. (*For motility of the stomach*). The injection of salol after a light meal. The salol passes into the intestine, where it is decomposed and salicylic acid secreted in the urine. Normally the salicylic acid should appear in from one to two hours, and may be detected by adding to the

urine a weak solution of ferric chlorid, when a purple color will appear. Called also *Ewald and Silven's t.* and *salut t.*

Exton's t. (for albumin in urine): Heat together equal volumes of Exton's reagent and urine. A precipitate indicates the presence of albumin.

Fahraeus's t.: A quantitative measure of the speed with which red blood-corpuscles settle. The results are important in the diagnosis of pregnancy and of some pathologic conditions.

Falk and Tedesco's t.: A test for bronchial disease based on the fact that if salicylates are given to a patient in whom the bronchial mucosa is injured, salicylic acid will appear in the sputum.

fat t. See *acrolein t.*, *Adams's t.*, *Bloor's t.*, *Meigs's t.*

fatigue t. See *fatigue reaction*, under *reaction*.

Fearon's t. (for vitamin A): Add 1 gm. of phosphorus pentoxid to 5 c.c. of oil. A purple color indicates vitamin A.

Fehling's t. (for glucose in the urine): Mix the suspected liquid with freshly prepared Fehling's solution (q. v. under *solution*) and boil. A red precipitate of cuprous oxid shows the presence of glucose.

fermentation t. (for glucose): Fill a graduated fermentation tube with the urine or unknown solution, add a small portion of compressed yeast, and incubate for twelve hours. The amount of gas that accumulates in the closed arm indicates the amount of glucose present.

ferric chlorid t. (for thiocyanates in saliva): Add a few drops of dilute ferric chlorid to saliva and acidify with hydrochloric acid. Red ferric thiocyanate forms, which is decolorized by adding mercury bichlorid.

fibrinogen t. (for liver function): Decrease in the amount of fibrinogen in the blood-plasma below the normal amount points to liver injury.

fibroderm bismuth-capsule t. See *Schwarz's t.* (2).

Fieus's t. (for antipyrin): To the suspected liquid add 12 drops of sulphuric acid and 2.5 gm. of sodium metaphosphate; filter, and to the filtrate add a few drops of a solution of sodium nitrate. If antipyrin is present, a green color will be produced.

film t. See *Ross's t.*

Finckh's t. (for mental disease): The patient is directed to explain the meaning of proverbs, such as "when the cat's away the mice will play," etc.

finger-nose t. (for coordinated movements of the extremities): The patient is directed to close his eyes and, with arm extended to one side, slowly to endeavor to touch the end of his nose with the point of his index-finger.

Fischer's t. (for glucose): The urine is boiled with phenylhydrazin and sodium acetate. If glucose is present yellow crystals of phenylglucosazone will be formed.

fistula t.: The air in the external auditory canal is compressed or rarefied: if there is erosion of the inner osseous wall of the tympanum, nystagmus will be produced, provided the labyrinth still functionates.

fixation t. See *fixation of the complement*, under *fixation*.

Fleig's t. (for blood in the urine): A test based on the fact that fluorescein is easily reduced to fluorescin in the presence of oxygenated water and a catalytic agent, such as hemoglobin and its derivatives.

Fleischl's t. (for bile-pigments in urine): Heat the urine with a strong solution of sodium nitrate and add sulphuric acid with a pipet. The acid sinks to the bottom of the tube and forms colored layers.

Fleitmänn's t. (for arsenic): In a tube containing the suspected fluid hydrogen is generated from zinc and solution of potassium hydroxid. The mouth of the tube is closed by a piece of filter-

paper moistened with a solution of silver nitrate. On heating, if arsenic is present, the filter-paper will turn black.

flocculation t. See *Sachs-Georgi t.* and *Vernes's t.*

Florence t. (for spermatic fluid): To the suspected substance add a strong aqueous solution of iodine and potassium iodid. If spermatic fluid is present, brown plates or needles will be formed.

Folin's t. See *Folin's methods*, under *method*.

Folin's t.: 1. (For quantity of urea.) See *Folin's microchemical method (for urea)*, under *method*. 2. (For quantity of uric acid.) See *Folin-Schaffer method (for uric acid)*, under *method*. 3. (For uric acid.) To the unknown add a saturated solution of oxalic acid and evaporate to dryness. Cool and extract phenols with 95 per cent. alcohol. Dissolve residue in water, add sodium carbonate, and Folin's sodium phosphotungstate reagent. A blue color indicates uric acid. 4. (For sugar in normal urine.) Shake the urine with picric acid and bone black to remove creatinin. Filter, add a small amount to Folin's sugar reagent, shake while boiling for one and a half minutes, and centrifugalize. A red layer of cuprous oxid in bottom of tube indicates sugar.

Folin and Denis's t. (for tyrosin): To 1 to 2 c.c. of the unknown add an equal volume of the reagent (containing 10 per cent. of sodium tungstate, 2 per cent. of phosphomolybdic acid), and 3 to 10 c.c. of a saturated solution of sodium carbonate. A blue color indicates tyrosin.

Folin and McElroy's t. (for glucose): (Reagent: 100 gm. of sodium pyrophosphate, 30 gm. of disodium phosphate, and 50 gm. of dry sodium carbonate in 1 liter of water. Dissolve with heat and add 13 gm. of copper sulphate dissolved in 200 c.c. of water.) To 5 c.c. of the reagent add 5 to 8 drops of the urine and boil. In the presence of sugar the hot solution is filled with a colloidal greenish-yellow or reddish precipitate.

Folin and Wu's t. See *Folin and Wu's method*, under *method*.

formaldehyd t. See *Burnam's t.*, *Kentman's t.*, *Leach's t.*, *Luebert's t.*, *Rimini's t.*, *Schiff's t.*

formalin t.: A test for syphilis based on the fact that the addition of a small quantity of formalin to syphilitic serum produces coagulation.

formol-gel t.: A test for kala-azar: a drop of the patient's serum is placed on a slide, which is then inverted over a watch-glass containing a few drops of liquor formaldehyd. The serum from cases of kala-azar will solidify into a stiff opaque jelly.

Fornet's ring t. See *Fornet's reaction*, under *reaction*.

Foubert's t. (of death): Testing the heart for movement by inserting the finger through an incision in an intercostal space.

Fouchet's t. (for bilirubin in blood): To a sample of the blood-serum there is added an equal part of a reagent consisting of 5 gm. trichloracetic acid, 20 c.c. water, and 2 c.c. ferric chlorid; a green color is produced if bilirubin is present.

Francis's t. (for bile-acids in urine): In a test-tube is placed 2 gm. of glucose in 15 gm. of sulphuric acid: the urine is placed on top of this, when a purple color forms if bile acids are present.

Frank and Nothmann's t.: The occurrence of glycosuria with a blood-sugar content below 1.0 after administration of 100 gm. of glucose indicates pregnancy which is of longer duration than three weeks and less than three months.

Fränkel's t.: Examination of the nasal cavity with the patient's head bent down between his knees and rotated so that the side to be examined is turned upward. If pus is seen in the middle meatus, suppurative in some of the anterior accessory sinuses is indicated.

Friedman-Hamburger t. Same as *edestin t.*

Fröhde's t.: A 1 per cent. solution of sodium molybdate in sulphuric acid: a test for alkaloids.

Frohn's t.: The use of the double iodid of bismuth and potassium as a test for alkaloids.

Frommer's t. (for acetone in urine): Alkalize about 10 c.c. of the urine with 2 or 3 c.c. of 40 per cent. caustic soda solution, add 10 or 12 drops of 10 per cent. alcoholic solution of salicylic acid (salicyl aldehyd), heat the upper portion to about 70° C. (it should not reach the boiling-point), and keep at this temperature five minutes or longer. In the presence of acetone an orange color, changing to deep red, appears in the heated portion.

Fuld's t. (for antipyrctic power of blood-serum): Three solutions are used: a 0.1 per cent solution of Grüber's dry trypsin in slightly alkaline normal saline, a 0.2 per cent. neutral solution of casein, and an alcoholic solution of acetic acid. A series of test-tubes are prepared containing definite amounts of casein solution and of diluted blood-serum and increasing amounts of trypsin solution. After incubating, 1 or 2 drops of the acetic acid solution are added to each test-tube. If any turbidity appears it indicates the presence of undigested casein. The amount of trypsin necessary to digest the casein completely in one-half hour can then be determined.

Fuld and Goss's t. See *antitrypsin t.*

fundus-reflex t. Same as *skiascopy*.

Fürbringer's t. (for albumin): In the urine are placed gelatin capsules opened at each end and containing a double salt of mercuric chlorid, sodium chlorid, and citric acid. If albumin is present cloudiness or a flocculent precipitate is produced.

furfurol t. (for proteins): Heat the suspected substance with sulphuric acid. If proteins are present, furfurol is formed.

Gairdner's coin-t. See *coin-t.*

galactose t. See *mucic acid t.*

Gallois's t. (for alcohols, proteins, tyrosin, and other sugars being present): Evaporate a solution of the suspected substance to partial dryness, and moisten the residue with a solution of mercuric nitrate. On drying, it assumes a yellow color, which heating turns to a bright red, which disappears when the liquid cools.

Ganassini's t. (for uric acid): Precipitate the alkaline urate with $ZnCl_2$. In contact with the air the precipitate turns blue.

Gardener-Brown t.: A vibrating tuning-fork is placed on the mastoid process of the patient: if the vibrations are heard longer than they can be felt by the patient's fingers, or if they cease to be heard while they can still be felt by the examiner, there is disease of the middle ear.

Garrod's t.: 1. (For hematuria in urine.) To 100 c.c. of urine, 20 c.c. of a 10 per cent. solution of caustic soda are added, and the whole is filtered. The filtrate is washed in water-free alcohol and the precipitate dissolved in hydrochloric acid. The test is completed with the spectroscope, which gives two absorption-bands indicative of hematuria. 2. (For uric acid in the blood.) 30 c.c. of blood-serum are treated with 0.5 c.c. of acetic acid. A fine thread is immersed in it, on which are formed crystals of uric acid.

gastric function t. See *Ewald's t.*, *Heichelheim's t.*, *Klemperer's t.*, *Sahl's t.*, *Schwarz's t.*, *Wintermiltz's t.*

Gate and Papacostas's t. See *formalin t.*

Gawalowski's t. (for glycosuria): Ammonium molybdate is added to suspected urine and heated to 100° C. If glucose is present, the solution becomes blue.

Gay-Force t. Same as *typhoidin t.*

Geissler's t. (for albumin in the urine): A test-paper is dipped in citric acid and dried; another is dipped in a solution containing 3 per cent. of mercuric chlorid and 14 per cent. of potassium

iodid, and dried; the two papers are placed in the urine. If there is albumin present, a precipitate will be formed.

gel t. Differentiation of syphilitic serum by the opacity and rapid precipitation produced by addition of glacial acetic acid to small quantities of the serum (J. E. R. McDonagh, 1916).

Gellé's t.: A rubber tube is inserted in the ear and a tuning-fork is brought in contact with it. By means of a bulb on the tube pressure or suction is made. If the ear is normal, the vibrations of the fork are distinctly perceived; but they are not perceived if there is any lesion of the ossicular chain.

Gentile's t. (for glucose or uric acid): Add to the suspected liquid a solution of potassium ferrocyanid made alkaline with caustic potash or soda. On heating it becomes decolorized.

Geraghty's t.: The phenolsulphonephthalein test.

Gerhardt's t.: (Carl J. Gerhardt) 1. (For acetone in the urine.) Add a solution of ferric chlorid and a red color is produced. This test is not reliable. 2. (For diacetic acid in the urine.) Filter, in order to remove the phosphates, and add a few drops of a solution of ferric chlorid, which produce a deep-red color, which disappears when sulphuric acid is added. 3. (Charles Frederic Gerhardt) (For bile-pigments in the urine.) It is made by shaking with an equal measure of chloroform and soon after adding tincture of iodine and potassium hydroxid to the separated chloroform, when a yellow or yellowish-brown color is produced.

Gerrard's t. (for glucose in the urine): Fehling's solution is treated with a 5 per cent. solution of potassium cyanid until the blue color begins to disappear. The suspected liquid is heated with this mixture, and if there is glucose present, more or less discoloration takes place.

Gies's biuret t. (for proteins): Gies uses the following reagent in making the test: mix 25 c.c. of a 3 per cent. solution of copper sulphate and 975 c.c. of a 10 per cent. solution of potassium hydroxid.

girdle t. (for splanchnoptosis): The examiner, standing behind the patient, places his arms around the patient, so that his hands meet in front of the patient's abdomen; he squeezes and raises the viscera and then allows them to fall suddenly. If the patient feels relieved by the raising pressure and experiences distress on the release, the condition is probably one of splanchnoptosis.

Glénard's t. Same as *girdle t.*

globulin t. See *Boveri's t.*, *Gordon's t.*, *Hamberstein's t.*, *Kaplan's t.*, *Lange's t.*, *Mayerhofer's t.*, *Nonne-Apel't t.*, *Pandy's t.*, *Pohl's t.*, *Ross-Jones t.*

glucose t. See *Agostini's t.*, *Allen's t.*, *Almén's t.*, *alphanaphthol t.*, *Baeyer's t.*, *Barfoed's t.*, *Baumann's t.*, *Benedict's t.*, *Bertrand's t.*, *Boelger's t.*, *Bohmanson's t.*, *Bollu's t.*, *Braun's t.*, *Caillau's t.*, *Campani's t.*, *Cappagnoli's t.*, *Casamajor's t.*, *Cole's t.*, *Cramer's t.*, *Crismer's t.*, *Donaldson's t.*, *Edelissen's t.*, *Fehling's t.*, *fermentation t.*, *Fischer's t.*, *Folin-McElroy t.*, *Gawalowski's t.*, *Gentile's t.*, *Gerrard's t.*, *Hager's t.*, *Haines's t.*, *Hassall's t.*, *Heller's t.*, *Horsley's t.*, *hydroxylamin t.*, *Jaffé's t.*, *Knapp's t.*, *Kowarski's t.*, *Loewe's t.*, *Löwenthal's t.*, *Mathews's t.*, *Maumené's t.*, *micologic t.*, *Molisch's t.*, *Moore's t.*, *Mulder's t.*, *Nickle's t.*, *nitropropiol t.*, *Nyländer's t.*, *Oliver's t.*, *osazone t.*, *Pavy's t.*, *Pélouse and Moore's t.*, *Penzoldt's t.*, *Purdy's t.*, *Riegler's t.*, *Rubner's t.*, *saccharimeter t.*, *Sachs's t.*, *safranin t.*, *Salkowski's t.*, *Schmidt's t.*, *silver t.*, *Soldani's t.*, *Trommer's t.*, *Warren's t.*, *Wender's t.*, *Worm-Müller t.*

glutoid t. See *Sahl's glutoid t.*

Gluzinski's t.: 1. (For bile-pigments.) Boil the solution with formalin until it becomes green; adding a little hydrochloric acid changes the tint to an

amethyst violet. 2. (For differentiation between ulcer and cancer of stomach.) Examination of the gastric contents recovered from a fasting patient: (1) After a test-breakfast consisting of the white of a boiled egg and 200 c.c. of water which is recovered after three-quarters of an hour. (2) After a test dinner consisting of a beefsteak and 250 c.c. of water, which is recovered after three and three-quarters hours. In ulcer, both the breakfast and the dinner give the reaction of free HCl. In beginning cancer the first meal will give reaction of free HCl, while the second meal will show only a slight trace or none at all.

glycerol t. See *acrolein t.*, *hypochlorite-orcinol t.*

glycuconates t. See *phloroglucin t.*, *Tollens*, *Neuberg and Schwick's t.*

glycyltryptophan t. (for carcinoma of stomach): Filtered gastric contents and glycyltryptophan are placed in a test-tube and kept at body temperature for twenty-four hours; if, on the addition of a few drops of bromin, a reddish-violet color is formed, carcinoma is indicated.

glyoxylic acid t. See *Hopkins-Cole test*.

Gmelin's t. (for bile-pigments): Fuming nitric acid is so added to the suspected urine that it forms a layer under it. Near the junction of the two liquids rings are formed—a green ring above, and under it a blue, violet-red, and reddish-yellow. If the green and violet-red rings are absent, the reaction shows the probable presence of lutein.

Goetsch's t. See *Goetsch's skin reaction*, under *reaction*.

gold number t. See *Lange's t.* (1).

Goldscheider's t. (for cutaneous thermal sensibility): Consists in touching the skin with the slightly pointed end of a metallic cylinder varying heated.

gold-sol t. See *Lange's t.* (1).

Gordon's t.: A test for the presence of globulin-albumin in the spinal fluid. One c.c. of spinal fluid is placed in a small test-tube and 0.1 c.c. of 1 per cent. solution of bichlorid of mercury in distilled water. The formation of a cloud or precipitate after standing an hour indicates a positive reaction.

Graefe's t. (for heterophoria): On holding a prism of 10° before one eye, base up or down, two images are formed. One of these images is displaced laterally in heterophoria.

Grandeau's t. (for digitalin): The substance is dissolved in concentrated sulphuric acid, to which bromin is added: a rose color is formed if digitalin is present.

Gräupner's t. (for cardiac efficiency): A test based on the fact that the blood-pressure of strong hearts rises during exercise, while that of weak hearts falls. The exercise was furnished by turning a wheel provided with a brake and permitting the measurement of the work done.

Gregerson and Boas's t. (for blood): A modification of the benzidin test to make it less sensitive for use in testing feces. Use a 0.5 per cent. solution of benzidin instead of a saturated solution and barium peroxid instead of hydrogen peroxid.

Griess's t. (for nitrites in the saliva): Mix it with 5 parts of water; add a few drops of dilute solution of sulphuric acid and a few drops of metadiamidobenzol: this produces a strong yellow color if nitrites are present.

Grigg's t. (for proteins): Metaphosphoric acid precipitates them all except the peptones.

Gröbly's t. (for malignancy): The total phosphorus content of the blood is determined by Neumann's method and the amount of phosphorus in mg. per 100 c.c. is divided by the first two figures of the erythrocyte count. If the quotient thus obtained does not exceed 3.17, malignancy may be excluded.

Grococo's t.: In slight cases of purpura and peliosis rheumatica, if an elastic ligature is placed around

the forearm, punctiform hemorrhages will appear in the bend of the elbow.

Gross's t. (for trypsin in feces): In a mortar thoroughly rub up a portion of the fecal mass with three times its bulk of 0.1 per cent. sodium carbonate solution. Filter. Mix 10 c.c. of the filtrate with 100 c.c. of a fresh solution consisting of 0.5 gm. Grüber's pure casein, 1 gm. sodium carbonate, and 1000 c.c. distilled water. Add a little toluol to prevent bacterial activity and place in an incubator at about 38° C. At intervals remove a few cubic centimeters and test for casein by adding a few drops of acetic acid of about 1 per cent. strength. A white cloud appears as long as any casein remains undigested. With the patient upon a protein diet, there is normally a sufficient amount of trypsin to digest all the casein in ten to fifteen hours. Delay or complete failure of digestion shows diminution or absence of trypsin.

Gruber's t. (for the sensitiveness of the ear to sounds): The end of the finger is inserted in the ear after the sound of a tuning-fork has ceased to be heard. The tuning-fork is then held against the finger, when the sound again becomes audible.

Gruber-Widal t. See *Gruber-Widal reaction*, under *reaction*.

Grünbaum's t.: In Addison's disease suprarenal extract does not raise the arterial tension.

Grünbaum-Widal t. Same as *Widal t.*

guaiac t. (for blood): A blood-stain treated with tincture of guaiacum, and then with hydrogen dioxide, assumes a blue tint.

Guenzburg's t. (for hydrochloric acid in the stomach contents): Dissolve 2 gm. of phloroglucin and 1 gm. of vanillin in 30 c.c. of alcohol; of this mix 2 drops with 2 drops of filtered gastric juice; heat it slowly in a porcelain cell. Free HCl produces a bright-red color; it is not present if the color is brownish-red or brown.

Gunning's t. (for acetone in urine): To a few cubic centimeters of urine or distillate in a test-tube add a few drops of tincture of iodine and of ammonia alternately until a heavy black cloud appears. This cloud will gradually clear up and, if acetone be present, iodoform, usually crystalline, will separate out. The iodoform can be recognized by its odor or by detection of the crystals microscopically. Iodoform crystals are yellowish six-pointed stars or six-sided plates.

Gunning-Lieben t. Same as *Gunning's t.*

Gutzeit's t. (for arsenic): A paper is moistened with an acidulated silver nitrate solution and exposed to the fumes from the suspected liquid, which is mixed with zinc and dilute sulphuric acid. The formation of a yellow spot on the paper indicates the presence of arsenic.

Hager's t. (for glucose.) See *Hager's reagent*, under *reagent*.

Haines's t. (for glucose): Copper sulphate, 30 gr.; glycerin, $\frac{1}{2}$ fl.oz.; liquor potasse, 5 fl.oz.; water, sufficient to make 6 fl.oz. When boiled and a little urine added, and again boiled, a yellow or reddish-yellow precipitate is produced.

Hallion's t. Same as *Tuffier's t.*

Hamburger's t.: A test made by injecting 0.1 c.c. of a 1:10,000 dilution of tuberculin just below the skin; subcutaneous infiltration follows in twenty-four hours if the patient is tubercular.

Hamel's t. (for slight jaundice): A little blood is drawn by puncture from the lobe of the ear into a capillary tube and the tube is allowed to stand for a few hours. The serum which collects in the upper part of the tube will be yellow if jaundice is present.

Hamilton's t.: When the shoulder-joint is luxated, a rule or straight rod applied to the humerus can be made to touch the outer condyle and the acromion at the same time.

Hammarsten's t.: 1. (For globulin.) In a neutral solution suspected to contain globulin dissolve

magnesium sulphate to saturation; the globulin will be precipitated and may be filtered out. 2. (For bile-pigment.) To one volume of acid mixture (1 part HNO_3 and 19 parts HCl , each 25 per cent.) add four volumes of alcohol. Then add a few drops of unknown, and a green color indicates biliverdin.

Hammer's t.: A complement-fixation test for tuberculosis, in which the antigen is a mixture of Koch's old tuberculin and an extract of tuberculous granulation tissue.

Hammerschlag's t.: Determination of the specific gravity of the blood by allowing drops of the blood to fall into benzene-chloroform mixtures of known densities.

Harding and Ruttan's t. (for aceto-acetic acid): Acidify the urine with acetic acid, add $\frac{1}{2}$ c.c. of $\text{N}/10$ sodium nitroprussid, and then overlie the solution with concentrated aqueous NH_4OH . A violet ring is produced.

Harrower's t. (for hyperthyroidism): Four $\frac{1}{2}$ gr. doses of thyroid extract are given the first day, four 1 gr. doses the second day, and four 2 gr. doses the third day. A record of the pulse-rate is kept during these days as an indication of the amount of hyperthyroidism.

Hart's t. (for oxybutyric acid in urine): Remove acetone and diacetic acid by diluting 20 c.c. urine with 20 c.c. water, adding a few drops of acetic acid, and boiling down to 10 c.c. To this add 10 c.c. water, mix, and divide between two test-tubes. To one tube add 1 c.c. of hydrogen peroxid, warm gently, and cool. This transforms β -oxybutyric acid to acetone. Now apply Lange's test for acetone to each tube. A positive reaction in the tube to which hydrogen peroxid has been added shows the presence of β -oxybutyric acid in the original sample of urine.

Hassall's t. (for glucose): The microscopic observation of growth of the *Saccharomyces cerevisiae* in urine: a sign of the presence of sugar.

Hauke and Koessler's t. (for phenols, hydroxy-aromatic acids, and imidazoles): To 5 c.c. of 1:1 per cent. sodium carbonate solution add 2 c.c. of para-diazobenzene sulphonic acid reagent. Then add 1 c.c. of solution to be tested.

Hawk's t. (for fecal amylase): Rub up and dilute the feces with seven volumes of a neutral mixture of Na_2HPO_4 , NaH_2PO_4 , and NaCl . Add varying amounts of this to tubes containing soluble starch and toluene and incubate for twenty-four hours. Test for digestion with iodine.

Hay's t. (for bile salts): A pinch of sublimated sulphur is dropped in the urine; the sulphur sinks if bile is present, but floats if it is absent.

Hecht's t. (for syphilis): A modification of Wassermann's reaction, based on the fact that normal human serum is capable of dissolving ten times its volume of a 2 per cent. solution of sheep's blood.

Hecht-Weinberg t. Same as *Hecht's t.*

Hecht-Weinberg-Gradwohl t. (for syphilis): A modification of the Wassermann test using not only the natural antisheep amboceptor in human serum, but also the native hemolytic complement, the hemolytic index of the human serum being determined before the sheep corpuscles are added to the tube.

heel-knee t.: The patient, lying on his back, is asked to close his eyes and touch the knee of one leg with the heel of the other and then to pass the heel slowly down the front of the shin to the ankle.

Heichelheim's t. Same as *iodipin t.*

Heller's t.: 1. (For albumin in urine.) Stratify cold nitric acid below the urine in a test-tube; albumin will form a white coagulum between the urine and the acid. 2. (For blood in the urine.) Add caustic potash and heat; the earthy phosphates are precipitated, and if blood is present, they are stained red by hematin. 3. (For glucose

in urine.) Add a solution of caustic potash: sugar will cause a brownish or reddish precipitate.

hematein t. (for blood): To 5 c.c. of the unknown add 5 c.c. of sodium hydroxid, 2 drops of hematein solution, and 10 drops of hydrogen peroxid. If blood is present the contents will turn rapidly to violet red, then to clear brown, and then to pale yellow. Without blood these changes come more slowly.

hematoporphyrin t. See *Garrod's t.*

hemin t. (for blood). See *Teichmann's t.*

hemoglobin t. See *Kober's t.*, and *t.*, *Stokes's t.*

hemosiderin t. See *Perles's t.*

Hennebert's t. See *Hennebert's sign*, under *sign*.

Hering's t.: On looking with both eyes through a tube blackened within and having a thread running vertically across the farther end, a small round body being placed either before or behind the thread—if vision is binocular, the subject is able at once to tell whether the ball be nearer to him than the thread or farther off; but if vision is monocular, he cannot tell whether it is nearer or farther than the thread.

Herman-Perutz t. Same as *Perutz reaction*, under *reaction*.

Herter's t.: 1. (For indol.) To the unknown add 1 drop of a 2 per cent. solution of beta-naphthoquinone-sodium-mono-sulphonate. Now add a drop of a 10 per cent. solution of potassium hydroxid and a blue or bluish-green color indicates indol. 2. (For skatol.) To the unknown add 1 c.c. of an acid solution of para-dimethyl-amino-benzaldehyd and heat to boiling. The purplish-blue color is intensified by the addition of hydrochloric acid.

Herz's t. (for efficiency of the myocardium): After slowly flexing and extending the forearm, the pulse-rate increases when the myocardium is strong and decreases when it is weak.

Herzberg's t. (for free hydrochloric acid in the gastric juice): Moisten a paper with a solution of Congo-red and dry it: free HCl colors it blue or bluish black.

Heynsius's t. (for albumin): To a suspected liquid add enough acetic acid to render acidulous, and then boil with a saturated solution of sodium chlorid; albumin will form a flocculent precipitate.

Hildebrandt's t. (for urobilin in urine): The reagent consists of an unfiltered solution of 10 parts of zinc acetate and 90 parts of absolute alcohol. The reagent is shaken before using and equal parts of reagent and urine are mixed, the precipitate which forms being filtered off. With increase of urobilin the filtrate shows a distinct green fluorescence, either directly or after the addition of ammonia.

Hindenlang's t. (for albumin): To the liquid to be tested add solid metaphosphoric acid; albumin, if present, forms a precipitate.

hippuric acid t. See *Luecke's t.*, *Spiro's t.*

histamin t.: 1 c.c. of a 0.1 per cent. solution of histamin is injected subcutaneously as a stimulant of gastric secretion.

hock t.: A test for spavin in horses made by holding up the limb with a hock bent sharply. The horse is then started suddenly, and in cases of spavin the first steps are very lame.

Hoffmann's t. (for tyrosin): Add mercuric nitrate to the suspected liquid and boil it; then add nitric acid with a little nitrous acid. A red color is produced if tyrosin is present, and a red precipitate is seen.

Hofmeister's t.: 1. (For leucin.) Warm the suspected liquid with mercurous nitrate; if leucin is present, metallic mercury is deposited. 2. (For peptones.) Mix phosphotungstic and hydrochloric acids; let the mixture stand twenty-four hours, and filter. With this reagent a solution containing peptones with no albumin will afford a precipitate.

Holmgren's t.: The use of skeins of colored worsted as a test of the perception of colors. A skein is given to the subject of the test, and he is asked to match it out of a set of variously colored skeins.

Hopkins's thiophene t. (for lactic acid): Add a few drops of stomach contents to 5 c.c. of concentrated sulphuric acid containing a little copper sulphate and heat two minutes. Cool and add a very little thiophene. A cherry-red color indicates lactic acid.

Hopkins-Cole t. (for protein): Glyoxylic acid is prepared by the action of sodium amalgam on a solution of oxalic acid. A few drops of this solution are added to the protein solution and strong sulphuric acid poured down the side of the tube. A bluish-violet color is produced at the junction of the two fluids.

Hoppe-Seyler t.: 1. (For carbon monoxid in the blood.) Add to blood twice its volume of a solution of caustic soda of 1.3 specific gravity: normal blood will form a dingy brown mass with a green shade if spread thin on a white surface; but if carbon monoxid is present, the mass is red, and so is the thin layer. 2. (For xanthin.) Add the substance to be tested to a mixture of chlorid of lime in a porcelain dish; a dark-green ring is formed at first.

Horsley's t. (for glucose): Boil the solution with caustic potash and potassium chromate. A green color is formed if glucose is present.

Houghton's t.: Ergot is given to a white leghorn cock; if the comb becomes darkened, the drug is of standard strength.

Hunt's t. Same as *acetonitril t.*

Huppert's t. (for bile-pigments): The suspected solution is treated with lime-water or calcium chlorid solution and then with a solution of ammonium or sodium carbonate. The precipitate of bile-pigments may be removed by shaking with chloroform, after washing with water and acidulating with acetic acid. Bilirubin colors the chloroform yellow and the acetic acid solution green.

Huppert-Cole t. (for bile-pigments): To 50 c.c. of the unknown add an excess of baryta water or milk of lime. To the precipitate add 5 c.c. of 95 per cent. alcohol, 2 drops of strong sulphuric acid, and 2 drops of a 5 per cent solution of potassium chlorate. Boil, and the supernatant liquid will be emerald or bluish-green if bile is present.

Hurtley's t. (for aceto-acetic acid): To 10 c.c. of the unknown add 2 c.c. of strong hydrochloric acid and 1 c.c. of fresh 1 per cent. sodium nitrite solution. Shake and add 15 c.c. of concentrated ammonium hydroxid and 5 c.c. of 10 per cent. ferrous sulphate. A violet or purple color develops slowly if aceto-acetic acid is present.

hydrobilirubin t. See *Schmidt's t.*

hydrochloric acid t. See *Bell's t.*, *Boag's t.*, *dimethyl-amino-azo-benzol t.*, *Ewald's t.*, *Guenzburger's t.*, *Hertzberg's t.*, *Leo's t.*, *Luettke's t.*, *Maly's t.*, *Mohr's t.*, *Rabuteau's t.*, *Reach's t.*, *Reach's t. (2).*, *resorcinol t.*, *Riegler's t.*, *Scivoletto's t.*, *Szabo's t.*, *Toepler's t.*, *vander Velden's t.*, *von Jaksch's t.*, *Winkler's t.*, *Witz's t.*

hydrogen dioxid t. (for blood): A 20 per cent. solution of hydrogen dioxid is added to the suspected fluid, when, if blood is present even in minute proportion, bubbles will rise, forming foam on the surface of the fluid.

hydrophilia skin t.: 0.2 c.c. of an 0.85 per cent. salt solution is injected intradermally. While the resulting swelling of the cuticle normally disappears in an hour or an hour and a half, in edema and ascites it disappears in from five to thirty-five minutes.

hydrostatic t.: Floating of the lungs of a dead infant when placed in water indicates that the child was born alive. Called also *Raygal's t.*

hydroxylamin t. (for glucose). See *Bang's method*, under *method*.

hyperemia t. See *Moszkowicz's t.*

hypochlorite-orsinol t. (for glycerol): To 3 c.c. of the unknown add 3 drops of N/1 sodium hypochlorite solution and boil one minute to drive off chlorin. Then add an equal volume of strong hydrochloric acid and a little orsinol. Boil and a violet or greenish-blue color indicates glycerol or a sugar, or some substance that can be oxidized to a sugar.

hypoxanthin t. See *Kossl's t.*

Ilimow's t. (for albumin): Acidulate with acid sodium phosphate, filter, and add a solution of carbolic acid (1:20). A cloudy precipitate indicates albumin.

Ilosvay's t. (for nitrites). See *Ilosvay's reagent*, under *reagent*.

imidazole t. See *Hauke and Koessler's t.*

indican t. See *Amann's t.*, *Jaffé's t.*, *Jolles's t.*, *MacMunn's t.*, *Obermeyer's t.*, *Wang's t.*

indigo t. See *Rosenbach's t.*, *Rosin's t.*

indigo carmin t. (for renal permeability): A solution of indigo-carmin is injected intramuscularly and the time of its appearance in the urine is noted. Normally, it begins to appear in about five minutes. Delay beyond this points to defective renal adequacy.

indole t. See *cholera red t.*, *Herter's t.*, *Kondo's t.*, *Legal's t.*, *Nencki's t.*, *nitroso-indol t.*, *para-dimethyl-amino-benzaldehyd t.*, *pine wood t.*, *Salkowski's t.*

indophenol t. (for the presence of oxidizing enzymes in cells and for detecting the presence of myeloblasts, etc.): Cover-glass films of the cells are fixed in alcohol. Float for ten to twenty minutes, face down, upon a freshly prepared solution of equal parts of 1 per cent. aqueous solutions of dimethyl-paraphenyldiamin and of alpha-naphthol. Rinse and mount in glycerin. The cytoplasm of cells containing oxidase (myeloblasts, myelocytes, polymorphonuclears, and large mononuclears) will be colored blue by indophenol.

inoculation t. (for acute anterior poliomyelitis): The cerebrospinal fluid of the suspected patient (*i. e.*, before the appearance of paralytic symptoms) is injected into a monkey. Paralysis will appear in the monkey within seven days if the patient is affected.

inosite t. See *Gallois's t.*, *Scherer's t.*, *Seidel's t.*

intracutaneous tuberculin t. See *Mendel's t.*

inulin t.: The use of inulin serum water as a medium for the cultivation of bacteria. The fluid consists of $\frac{1}{3}$ ox serum, $\frac{2}{3}$ distilled water, and 1 per cent. inulin water.

iodin t. (for starch): When a solution of iodine and potassium iodid in water is added to starch, and especially to an acid or neutral solution of cooked starch-paste, a deep blue color is produced which disappears on heating and reappears on cooling. Erythroextrin and glycogen give a red color with iodine. See also *Alfräise's t.*, *Bourget's t.*, *Winckler's t.*

iodipin t. (for motility of the stomach): Iodipin is given in a gelatin capsule. The saliva is then examined every fifteen minutes for iodine. The presence of iodine in the saliva indicates that the iodipin has reached the intestine, as it is not decomposed in the stomach. Called also *Heichelheim's t.*

iodoform t.: 1. (For acetone.) See *Gunning's t.* 2. (For alcohol.) Make the unknown alkaline and add a few drops of iodine solution. Heat gently, and yellow iodoform crystals indicate alcohol or some similar body.

iron t. See *Tizzoni's t.*

irrigation t.: The patient is examined with the bladder full. The anterior urethra is washed out with a warm solution of boric acid (3 per cent.), the

perineum being compressed to prevent the entrance of the fluid into the posterior urethra. When the washings are perfectly clear the patient voids his urine and any turbidity must come from the posterior urethra.

Ishihara's t.: A flocculation test for syphilis, using as antigen an alcoholic extract of the kidney of a pregnant rabbit.

Jacobsthal's t. (for serodiagnosis of syphilis): 1. The patient's serum is mixed with alcoholic extract of syphilitic liver in the proportion of 1 to 10, and the resulting precipitate is examined with the dark field illuminator. A strong positive reaction appears as a clumpy precipitate, a weak positive reaction as a small conglomeration of little fat-particles, while a negative reaction is shown as a thick emulsion of fine dancing particles: called also *optic serodiagnosis of syphilis*. 2. A modification of the Wassermann test in which complement fixation is done at a low temperature.

Jacoby's t. (for pepsin): The greatest dilution of gastric juice which will clarify an acid solution of ricin in three hours at 38° C. gives the number of peptic units in the juice.

Jacquemin's t. (for phenol): Add to the suspected liquid an equal quantity of anilin and some sodium hypochlorite in solution: a blue color is produced.

Jadassohn t. Same as *irrigation t.*

Jaffé's t.: 1. (For creatinin and glucose.) To the liquid add picric acid and then make alkaline with sodium hydroxid. A red color without heating indicates creatinin; a red color after heating indicates glucose. 2. (For indican.) To the suspected liquid is added an equal amount of concentrated hydrochloric acid, 1 c.c. of chloroform, and a few drops of a strong solution of sodium hypochlorite. The chloroform is colored blue if indican is present.

Jaksch's t. See *von Jaksch's t.*

Janet's t.: A test for differentiating between functional and organic anesthesia. The patient is instructed to say "yes" or "no," according as he does or does not feel the examiner's touch. He may say "no" in functional anesthesia, but he will say nothing in cases of organic anesthesia.

Javorski's t., Jaworski's t.: In hour-glass stomach, a splashing sound will be heard on succussion of the pyloric portion after siphonage.

jelly-film t. See *Ross's t.*

Jendrasie's t. (for water-soluble vitamin B): Prepare the reagent by mixing equal volumes of M/10 ferric chlorid and M/10 potassium ferricyanid and use at once. To a concentrated aqueous solution of the substance add about 2 per cent. of acetic acid, then add the reagent as long as the depth of the blue color increases. Stopper, let stand ten minutes, and read. One to five volumes of distilled water may be added to reduce the color. A distinct blue color or a bright blue precipitate is positive. A green color is negative.

Jenning's t.: A modification of Holmgren's test for color perception. Small patches of colored worsteds are placed so as to be protected from light and dust. The person to be examined indicates his color selection by pricking the record sheet with a pointed pencil.

Johnson's t. (for albumin): Put the urine in a test-tube and carefully pour upon it a strong solution of picric acid: a white coagulum of albumin appears at the junction of the liquids, which heating augments.

Jolles's t.: 1. (For bile-pigments in urine.) The urine is shaken with barium chlorid solution, chloroform, and a few drops of hydrochloric acid. The precipitate is removed and partially dried. Treatment with 2 drops of strong sulphuric acid will bring out the characteristic colors of the bile-pigments. 2. (For indican.) To the urine add a little alcoholic solution of thymol and fuming hydrochloric acid containing $\frac{1}{2}$ per cent. of ferric

chlorid. Chloroform shaken with this mixture becomes violet in color.

Justus's t. (for syphilis): Administration of mercury by inunction or subcutaneously, when, if syphilis is present, there will be a fall of hemoglobin of from 10 to 20 per cent.

Kabatschnik's t. (for hearing): A tuning-fork is held near the open ear and removed the moment the sound ceases; it is then applied to the nail of the examiner's finger and this finger is placed so as to close the patient's external auditory meatus. In a normal ear the sound will be heard again, although the fork has not been struck a second time.

Kafka's t. (for cerebrospinal syphilis): A modification of the mastic test, made with a solution of sodium bicarbonate, sodium chlorid, mastic resin, and a stain; called also the *stained normomastic t.*

Kahn's t.: A precipitation test for syphilis. The serum is inactivated as in the Wassermann test. To 0.3 c.c. of serum in a test-tube is added 0.05 of the diluted antigen. After shaking for three minutes the tube is incubated at 37° C. overnight. A positive reaction is shown by the presence of one or more lumps of precipitate.

kairin t. See *Petri's t.*

Kantor and Gies's t. (for proteins): Test papers, made by dipping them in Gies's reagent (see under *Gies's t.*), drying and cutting into strips, are used in making their biuret test.

Kaplan's t. (for globulin-albumin in spinal fluid): To 0.2 c.c. of the fluid in a test-tube are added 0.3 c.c. of distilled water. This is boiled up twice. Three drops of a 5 per cent. solution of butyric acid in physiologic salt solution are added and the mixture carefully underlaid with 0.5 c.c. of a saturated aqueous solution of ammonium sulphate. After twenty minutes a definite ring will form at the point of contact if globulin-albumin is present.

Kapsinow's t. (for bile pigments): Add Obermayer's reagent to the urine and heat. A green color indicates oil pigments.

Kashiwado's t. (for pancreatic disease): The patient swallows stained nuclei from a calf's thymus mixed with lycopodium grains. These later serve to indicate the portion of the feces which is to be examined.

Kastle's t. (for raw milk): To 5 c.c. of the milk add 0.3 c.c. of M/10 hydrogen peroxid solution and 1 c.c. of a 1 per cent. solution of tricoresol. Raw milk will give a slight yellow color, boiled milk will not.

Kasthe-Meyer t. Same as *phenolphthalein t.*

Kathrein's t. Same as *Marchal's t.*

Katyama's t. (for carbonyl-hemoglobin): To 5 drops of blood add 10 c.c. of water, 5 drops of orange-colored ammonium sulphid, and enough acetic acid to make the mixture acid. CO causes a rose-red color; normal blood, a dirty greenish gray.

Katzenstein's t. (for efficiency of the myocardium): On constriction of the femoral arteries the systolic blood-pressure is increased in cases where the myocardium is efficient.

Kauffmann's t. (for circulation): The subject drinks 150 c.c. of water, four times, at hour intervals. The foot of the bed is then raised about 25 cm. If there is insufficiency of the circulation, the diuresis increases during the following two hours.

Kelling's t.: 1. (For lactic acid in the stomach.) The stomach-contents are diluted with water, and to them are added one or two drops of a 5 per cent. watery solution of ferric chlorid. A greenish-yellow color is formed when lactic acid is present. 2. A test for the presence and location of an esophageal diverticulum by the sound of swallowing. 3. (For gastric carcinoma.) A test based on the fact that the serum of cancer patients will dissolve the red corpuscles of the hen.

Kentmann's t. (for formaldehyd): Dissolve in a test-tube 0.1 gm. of morphin in 1 c.c. of sulphuric

acid; add, without mixing, an equal volume of the liquid to be tested: in a short time the latter will take on a red-violet color if any formaldehyd is present.

Kerner's t. (for creatinin): Acidify the suspected solution and add phosphomolybdic or phosphotungstic acid in solution: if creatinin is present, it will form a crystalline precipitate.

kidney function t. See *Mosenthal's t.*

Killian's t. (for carbohydrate tolerance): Two hours after a standard breakfast give patient 200 c.c. of water. One hour later give 1.75 gm. of glucose per kilogram of body weight. Determine amount of glucose in blood specimens taken at hourly intervals. Also in the twenty-four-hour specimen of urine.

Kimberg's t. (for liver function): After a low nitrogen content diet for several days, 50 gm. of gelatin dissolved in hot chocolate is taken fasting. In liver disease there is an increase in the output of amino-acids, except in congestion of the liver and catarrhal jaundice.

Kiutsi-Malone t. (for pregnancy): A modification of the Abderhalden test based on the presence of specific enzymes in the urine.

Kjeldahl's t. (for nitrogen). See *Kjeldahl method, under method.*

Klausner's t. (for syphilis): The patient's serum is placed in a test-tube and covered with distilled water. A turbidity at the plane of contact indicates syphilis.

Klemperer's t. (for motor power of stomach): Wash out the stomach and introduce by the stomach-tube 100 c.c. of olive oil. After two hours withdraw the oil. As the stomach cannot absorb the oil, the amount withdrawn subtracted from the amount introduced indicates the amount passed out of the stomach. In the normal stomach not more than 20 to 40 c.c. should remain after two hours.

Knapp's t.: 1. (For sugar in the urine.) 10 gm. of mercuric cyanid are dissolved in 100 c.c. of a solution of caustic soda and diluted: heated with diabetic urine, metallic mercury is precipitated. **2. (For organic acids in stomach.)** Stomach contents are filtered and 1 c.c. treated with 5 c.c. of ether. The extract is floated on dilute iron solution in test-tubes, and the various colored rings formed will indicate the presence of the various acids.

Kober's t. (for proteins in milk): The proteins are precipitated with sulphosalicylic acid and the precipitate estimated nephelometrically.

Kobert's t. (for hemoglobin): The suspected liquid is treated with zinc powder or a solution of zinc sulphate; the resulting precipitate is stained red by alkalis.

Koch's t. (for hemorrhagic diathesis): With a needle pricks are made into the subcutaneous tissue. In hemorrhagic diathesis a bloody effusion develops around the pricks.

Kolmer's t.: 1. A modification of the Wassermann test for syphilis. **2.** A specific complement-fixation test for various bacterial diseases.

Kondo's t. (for indol or skatol): To 1 c.c. of the unknown add 3 drops of a 40 per cent. solution of formaldehyd and 1 c.c. of concentrated sulphuric acid. A violet-red color indicates indol; a yellow or brown color, skatol.

Konew's t. (for glands): A test-tube is filled to the depth of 3 cm. with mallease, and blood-serum from the suspected subject is introduced by means of a pipet at the bottom of the tube beneath the mallease. If the patient be affected with glands a white cloudiness will appear along the line separating the two liquids. Called also *ring t.*

Korotkow's t.: In aneurysm, if the blood-pressure in the peripheral circulation remains fairly high while the artery above the aneurysm is compressed, the collateral circulation is good.

Kossel's t. (for hypoxanthin): The liquid to be tested is treated with zinc and hydrochloric acid and with sodium hydroxide in excess: if hypoxanthin is present, a ruby-red color is produced.

Kottmann's t. (for thyroid function): To 1 c.c. of clear blood-serum add 0.25 c.c. of 0.5 per cent. solution of KI and 0.3 c.c. of 0.5 per cent. solution of AgNO₃. Expose serum for five minutes to light of 500 watt Mazda lamp at 25 cm. distance. Then add 0.5 c.c. of 0.25 per cent. solution of hydroquinon. Normal serum turns brown in a short time; that of patients with hypothyroidism in a shorter time; that of patients with hyperthyroidism only after considerable delay.

Kowarsky's t.: 1. (For glucose in urine.) In a test-tube place 5 drops of pure phenylhydrazin, 10 drops of glacial acetic acid, and 1 c.c. of saturated solution of sodium chlorid. To the mass which results add 2 or 3 c.c. of urine; boil two minutes, and cool. If glucose is present, crystals of phenylglucosazone will be seen with the microscope. **2. (Blood test for diabetes.)** Test of the patient's blood based on the reduction of a copper solution by the sugar in the blood to cuprous oxid, and the dissolving of the latter in an acid solution of ferrous sulphate, which causes the separation of an equal amount of ferrous oxid, which is measured by titration with potassium permanganate.

Krauss's t. See *Krauss's reaction, under reaction.*

Krokiewicz's t. (for bile-pigment in urine): 1 c.c. of a 1 per cent. solution of sodium nitrate and 1 c.c. of a 1 per cent. solution of sulphuric acid are mixed and added drop by drop to 0.5 c.c. of urine. The amount added must not exceed 10 drops. The mixture becomes bright red, changing to amethyst on the addition of 1 or 2 drops of concentrated hydrochloric acid and a large amount of water.

Kultz's t. (for β -oxybutyric acid): 1. The fermented urine is evaporated to a syrupy consistence, strong sulphuric acid in equal volume is added, and the mixture is distilled. If oxybutyric acid is present, α -crotonic acid will be formed, which will crystallize. 2. If, after fermentation, the urine shows dextrorotatory properties, β -oxybutyric acid is present.

Laborde's t. (for death): Oxidation of a needle plunged into the muscle of a limb after twenty to sixty minutes if life be present.

lactic acid t. See *Boaz's t., Hopkins' t. (2), Kelling's t., Strauss's t., Uffelmann's t.*

lactose t. See *Cole's t., Mathews's t., Meyer's t. (2), Moore's t., mucic acid t., Rubner's t.*

lactose t. (for renal function): 20 gm. of lactose dissolved in 20 c.c. of distilled water are injected under aseptic precautions into a vein at the bend of the elbow. The urine is collected hourly and tested (Nylander's test) until the sugar reaction ceases to be positive. If lactose secretion continues for more than five hours renal disease is indicated.

Ladendorff's t. (for blood): Treat the suspected liquid with tincture of guaiacum, and afterward with eucalyptus oil: the upper stratum of the mixture is turned violet and the lower blue if blood is present.

Landau color t. (for syphilis): To 0.2 c.c. of clear serum from the patient add 0.01 c.c. of a reagent consisting of a 1 per cent. solution of iodine in carbon tetrachlorid. Shake thoroughly until the iodine color has disappeared. Let stand for four or five hours. A positive reaction is shown by a clear, transparent, yellow color; a negative one by an opaque grayish color.

Lang's t. (for taurin): The solution to be tested is boiled with freshly prepared mercuric oxid: taurin will cause a white precipitate to appear.

Lange's t.: 1. (For the presence of protein—globulin—in the cerebrospinal fluid, and thus for the diagnosis of cerebrospinal syphilis.) It is performed by the addition of a preparation of col-

loidal gold to ten dilutions of spinal fluid, ranging from 1:10 to 1:5120. The results are interpreted according to the changes in color which result. When no change occurs the reaction is negative and is recorded as 0. The color changes depend upon the amount of gold precipitated and are recorded as 1, 2, 3, 4, 5, the last being clear, owing to complete precipitation of the gold. Syphilis of the nervous system gives a reaction in the first five dilutions: tuberculous meningitis reacts in the middle dilutions, pyogenic meningitis reacts in the high dilutions, while general paresis gives a reaction different from that given by cerebrospinal syphilis or tabes. Called also *gold-sol test*, *gold number method*, and *colloidal gold chlorid test*. 2. (For acetone in urine.) 15 c.c. of urine are mixed with 0.5 to 1 c.c. of acetic acid, and a few drops of a freshly prepared concentrated solution of sodium nitroprussid added. The mixture is overlaid with ammonia. At the point of junction a characteristic violet ring is formed.

lantern-t.: A test for color-blindness made with a set of specially devised lanterns.

Lautier's t. (for tuberculosis): A few drops of a 1 per cent. solution of old tuberculin are placed on the arm, covered with cotton, and left for forty-eight hours: if tuberculosis is present there will develop a patch of vesicles on an elevated reddened base.

Leach's t. (for formaldehyd): To 10 c.c. of milk add 10 c.c. of concentrated hydrochloric acid containing 0.02 per cent. of ferric chlorid. Heat, and if formaldehyd is present a violet color will be produced.

lead t. See *Blythe's t.*

Legal's t.: 1. (For acetone.) Render the urine acid with HCl and distil it. Liquor potassæ and sodium nitroprussid added to the distillate produce a ruby-red tint, which acetic acid changes to purple. Creatinin will also produce a red color, but this color disappears when acetic acid is put in. 2. (For indol.) To the unknown add a few drops of sodium nitroprussid. Make alkaline with potassium hydroxid. The violet color changes to blue on the addition of acetic acid.

Leiner's t. (for casein or paracasein): A piece of feces is fixed by heat on a slide and stained with a solution of acid fuchsin and methyl green. A pale blue or violet color is formed.

Le Nobel's t. See *Nobel's t.*

Leo's t. (for free hydrochloric acid): Calcium carbonate is added to the solution, which is neutralized if the acidity is due to free acid, but not if due to acid salts.

Lessilur-Prirey t.: A test for albumin in the sputum, the presence of which is believed to indicate the existence of pulmonary tuberculosis.

leucin t. See *Hofmeister's t.*, *Sherer's t.*

levulose t. See *Borchard's t.*, *Cipollina's t.*, *methyl-phenyl-hydrazin t.*, *resorcinol-hydrochloric acid t.*, *Rubner's t.*

Lieben's t. (for acetone in urine): Acidulate and distil it, and treat with ammonia and tincture of iodine: if acetone is present, a yellow precipitate of iodoform is produced.

Lieben-Ralfe t. (for acetone): Boil 1.3 gm. of potassium iodid in 3.75 c.c. of liquor potassæ; float the urine on the surface of the reagent in a test-tube: a precipitate of phosphate is formed at the upper surface of the reagent, which, if acetone is present, will be rendered yellow by iodoform.

Liebermann's t. (for proteins): A precipitate is made from the urine with alcohol; wash this with ether and heat with strong hydrochloric acid: this produces a fine violet-blue color if proteins are present.

Liebermann-Burchard t. (for cholesterin): Dissolve the suspected substance in chloroform, add acetic anhydrid, and treat with strong sulphuric

acid; if cholesterin is present, a violet color is produced, which soon changes to green.

Liebig's t. (for cystin): Boil the suspected substance with a caustic alkali and a little lead sulphid: if cystin is present, the lead sulphid will form a black precipitate.

Ligat's t. (for cutaneous hyperesthesia in abdominal disease): The skin is pinched between the thumb and forefinger and lifted up from the parts below.

Lignière's t.: A modification of the cuti-reaction consisting in shaving the skin and rubbing in a few drops of raw tuberculin. In tuberculous persons there appear papules whose color varies from pale pink to deep red.

Lindemann's t. (for diacetic acid in urine): To about 10 c.c. of urine add 5 drops 30 per cent. acetic acid, 5 drops Lugol's solution, and 2 or 3 c.c. chloroform, and shake. The chloroform does not change color if diacetic acid be present, but becomes reddish violet in its absence. Uric acid also decolorizes iodine, and if much is present double the amount of Lugol's solution should be used.

Linzenmeier's t.: An application of Fahraeus's test to the study of gynecologic and other conditions.

lipase t. (for liver function): A test based on the fact that lipase is present in the blood-plasma of normal individuals in a constant amount. Liver injury will cause a rise in the lipase of the blood-plasma as measured by the power of the blood to split ethyl butyrate. See also *copper soap t.*, *litmus milk t.*, *ethyl butyrate t.*

Lipp's t. See *sand t.*

litmus milk t. (for pancreatic lipase): Add pancreatic lipase to litmus milk, incubate, and note change of color.

liver function t. See *lipase t.*, *phenol-tetrachlorophthalein t.*

Livierato's t.: Two tests for hypotonia of the myocardium. 1. Right enlargement of the area of dulness over the heart on mechanical stimulation of the abdominal aortic plexus; called also *abdominocardiac sign*. 2. Spontaneous enlargement of the right heart, occurring on change from the reclining to the erect posture, and spontaneous return to the previous condition when the subject lies down again; called *othocardiac reflex*.

Loewe's t. (for glucose in urine): Treat the urine with a solution of soda containing bismuth subnitrate and glycerin: sugar gives a dark precipitate.

Loewi's t.: Three drops of adrenalin chlorid solution 1:1000 are instilled into the conjunctival sac, followed in five minutes by 3 more drops. This produces dilatation of the pupil in pancreatic insufficiency, diabetes, and hyperthyroidism.

Löwenthal's t. (for glucose not in urine): Boil the suspected substance with a solution of ferric chlorid, tartaric acid, and sodium carbonate; if glucose is present, the liquid becomes dark, and iron oxid is freely precipitated.

Lücke's t. (for hippuric acid): Add boiling hot nitric acid and then evaporate; heat the dry residue: a strong odor of nitrobenzol proves the presence of hippuric acid.

Luebert's t. (for formaldehyd in milk): 5 gm. of coarsely powdered potassium sulphate are placed in a 100 c.c. flask; 5 c.c. of suspected milk are put over it by a pipet, and 10 c.c. of sulphuric acid (specific gravity 1.84) are run down the side of the flask. If formaldehyd is present, a violet coloration soon occurs: if none is present, the fluid becomes brown or black.

luetin t. See *Noguchi's luetin reaction*, under *reaction*.

Lüttke's t. (for free hydrochloric acid in the gastric juice): A quantitative determination in succession of the total chlorids, the chlorin in the fixed chlorids, and then the combined and free HCl.

Lyle and Curtman's t. (for blood): Boil the stool with acetic acid, extract it with ether, and to the

etheral extract add a little guaiaconic acid in 95 per cent. alcohol. A decided green or light blue or purple color indicates the presence of blood.

MacDonagh's t. See *gel t.*

Maclean-de Wesselow t. See *urea concentration t.*

MacMunn's t. (*for indican*): Boil the urine in an equal quantity of hydrochloric acid and a little nitric acid; cool, and shake with chloroform, which becomes violet, and shows one absorption-band due to indigo-blue and one due to indigo-red.

MacWilliams's t. (*for albumin*): Take 20 c.c. of urine and add 2 drops of a saturated solution of salicylsulphonic acid: if albumin is present, a cloudiness or precipitate will be seen: if albumoses or peptones are present, this precipitate will disappear on boiling, but appears again on cooling.

magnesonitric t.: A test for albumin in the urine made with 1 part each of nitric acid and magnesium sulphate.

Magpie's t. (*for salts of mercury*): Stannous chlorid is added to the suspected solution, when a white and gray precipitate is formed, consisting of metallic mercury and calomel.

Malerba's t. (*for acetone*): Add a solution of dimethylparaphenyldiamin: a fine red or reddish color is seen.

Malmøjde's t.: If the urine of a tuberculous person is collected in sterile bottles and kept in free contact with air, but protected from dust, it preserves its acid reaction for from twelve days to three months, whereas the urine of healthy persons becomes alkaline in from three to ten days. Called also *uro-reaction*.

Malot's t. A test for the quantitative determination of phosphoric acid in urine by the reaction with cochineal and a uranium salt.

maltose t. See *Rubner's t.*

Maly's t.: 1. (*For free hydrochloric acid in the gastric juice*). A solution of methylene-blue is added: the free acid will turn it from a violet to a green or blue tint. 2. (*For free hydrochloric acid in stomach contents*). Filter into a glass dish and stain blue with ultramarine; place a piece of lead paper over it and cover; warm the mixture: the free acid will turn the blue to brown and darken the lead-paper.

Mandel's t. (*for proteins*): Add to the suspected liquid a 5 per cent. solution of chromic acid: proteins will cause a precipitation.

Mantoux t. (*for tuberculosis*). Same as *Mendel's t.*

Maréchal's t. (*for bile-pigments in urine*): Drop tincture of iodine carefully into the tube: when the drops touch the urine, a green color is seen.

Maréchal-Rosin t. Same as *Maréchal's t.*

Marris's atropin t. (*for typhoid and paratyphoid A and B infections*): The patient lies horizontally and completely quiet throughout the test, which is not employed till at least one hour after the last meal. The pulse-rate is counted minute by minute until it is found to be steady—usually a matter of ten minutes. Atropin sulphate is then injected hypodermically, the dose being $\frac{1}{32}$ grain, preferably over the triceps region, to ensure rapid absorption. Twenty-five minutes later the pulse is again counted minute by minute, until it is clear that any rise which may have followed the injection has begun to pass off. The difference between the average pulse-rate before the injection and the maximum reached after it gives the "escape," or acceleration of the pulse-rate, brought about by the dose of atropin. If the escape is 14 or less the case may be regarded as one of typhoid or paratyphoid fever. If it is 15 or more, the reaction is said to be negative.

Marsh's t. (*for arsenic or antimony*): Nascent hydrogen obtained from zinc and dilute sulphuric acid is allowed to act on the suspected substance; if arsenic is present, hydrogen arsenid (AsH_3) is formed. Ignite this gas and hold a piece of

porcelain in the jet of flame: metallic arsenic is deposited. For antimony the same test is serviceable, but the arsenical mirror is dissolved by potassium hypochlorite, while the antimonial mirror is not affected by it.

Marshall's t. (*for urea*): Treat the specimen with urease and titrate the ammonia so formed. See *under method*.

Maschke's t. See *von Maschke's t.*

Masset's t. (*for bile-pigments in urine*): Add 2 or 3 drops of sulphuric acid and a crystal of potassium nitrite: a grass-green color shows the presence of bile-pigments.

mastic t. (*for cerebrospinal syphilis*): A test depending on the precipitation of a solution containing mastic in cases of syphilis, and no change in the solution in negative cases. Called also *Emanuel-Culling test*.

Mathews's t. (*for lactose and glucose*): If both glucose and lactose are suspected, make a total quantitative test by Benedict's method. Add yeast to the urine and ferment out the dextrose, then make a second quantitative determination. The second determination is or may be lactose; confirm with the osazone test. The difference between the two determinations is glucose.

Maumené's t. (*for glucose*): Heat the urine with a little stannous chlorid; if sugar is present, a dark-brown precipitate will be formed.

Mauthner's t.: A method of testing color-blindness by the use of small bottles filled with different pigments, some with one only and some with two, the latter containing either pseudoisochromatic or isochromatic solutions.

Mayer's t. (*for alkaloids*): Mercuric chlorid, 13½ gm., and potassium iodid, 50 gm., are dissolved in 1000 c.c. of water: this is used as a test for alkaloid, with which it gives a white precipitate.

Mayerhofer's t.: The reduction of a decinormal solution of potassium permanganate solution by 1 c.c. of spinal fluid in an acid medium as an index of the amount of protein substance present in the fluid: used as an indication of the existence of tuberculous meningitis.

Méhu's t. (*for albumin in urine*): Add a little nitric acid, and mix with 10 volumes of a solution of 2 parts of alcohol, 1 part of phenol, and 1 part of acetic acid; shake it and a white precipitate appears. This test is said not to be entirely trustworthy.

Meigs's t. (*for fat in milk*): To 10 c.c. of milk in a special apparatus add 20 c.c. of water, 20 c.c. of ethyl ether, and shake. Then add 20 c.c. of 95 per cent. alcohol. Remove the ethereal layer, evaporate, and weigh.

Meinicke t.: A flocculation test for syphilis.

melanin t. See *bromin t.*, *Eissel's t.*, *Thormählen's t.*, *Zeller's t.*

Meltzer-Lyon t. (*for biliary disease*): A strong solution of magnesium sulphate is instilled into the duodenum by means of a tube, with the hope that this will paralyze the sphincter of Oddi, and that this paralysis will be followed by reflex contraction of the gall-bladder, thus permitting the collection of separate specimens of bile from the common duct, the gall-bladder, and the liver.

Mendel's t.: A tuberculin test by injecting into the superficial layers of the skin 0.05 c.c. of diluted old tuberculin. A positive reaction consists in infiltration and hyperemia around the site of the injection. Called also *intracutaneous tuberculin test*.

mercury t. See *Magpie's t.*, *Reimsch's t.*

Mérieux-Baillon t.: The serum from a tuberculous person is injected into the person to be tested; if the latter is tuberculous a reaction will be produced.

methylene-blue t. (*for renal permeability*): A solution of methylene-blue is injected intramuscularly and the time of its appearance in the urine is

noted. Normally, it appears in about thirty minutes. When delayed beyond this, renal permeability is less than normal. Called *Achard and Castaigne's t.*

methyl-phenyl-hydrazine t. (for *levulose*): Add 4 gm. of methyl-phenyl-hydrazine to 10 c.c. of unknown (containing about 2 gm. of levulose) and enough alcohol to clarify the solution. Add 4 c.c. of 50 per cent. acetic acid and heat five to ten minutes. Reddish-yellow needles of methyl-phenyl-levulosozone indicate levulose.

Mette's t. (for *estimating pepsin*): Tubes of coagulated albumin are introduced into the unknown and into a standard pepsin HCl mixture and the amount of digestion occurring in a given time is noted.

Meyer's t.: 1. The blood-vessel of a freshly killed ox is placed in the solution to be tested; if it contracts, adrenalin is assumed to be present. 2. (For *lactose*.) Precipitate the proteins of the milk with phosphotungstic acid and titrate the filtrate with Benedict's solution. 3. (For *blood*.) See *Meyer's reagent*, under *reagent*.

Michailow's t. (for *proteins*): Add ferrous sulphate to the solution, underlay it with strong sulphuric acid and a drop or so of nitric acid; a brown ring and red coloration indicate the presence of proteins.

micobiologic t.: Micologic test.

micologic t. (for *sugar in urine*): To the specimen of urine an equal quantity of 1 per cent. peptone solution is added. This mixture is sown with some species of *Monilia*. If sugar is present, gas is developed.

milk t. See *Babcock's t.*, *Bauer's t.* (3), *benzidin t.*, *Kastle's t.*, *Kober's t.*, *Storck's t.*, *Wilkinson and Peter's t.*

Millard's t. (for *albumin*): Make a reagent of 2 parts of liquefied carbolic acid, 6 parts of glacial acetic acid, and 22 parts of a solution of potassium hydroxide; this precipitates albumin.

Millon's t. (for *proteins and nitrogenous compounds*): A solution is made of 10 gm. of mercury and 20 gm. of nitric acid; this is diluted with an equal volume of water and decanted after standing twenty-four hours. This reagent gives a red color with proteins and other substances, such as tyrosin, phenol, and thymol, which contain the hydroxy-phenyl group.

miostagmin t. See under *reaction*.

Mitscherlich's t. (for *phosphorus in the stomach*): The contents of the stomach are made acid and distilled in the dark. The condenser will contain a luminous ring. Small amounts of alcohol, ether, or turpentine will prevent the reaction.

Mohr's t. (for *hydrochloric acid in the stomach contents*): Dilute to a light-yellow color a solution of iron acetate, free from alkaline acetates; add a few drops of a solution of potassium sulphocyanid, and then the filtered contents of the stomach; if they contain the acid, a red coloring ensues, which is destroyed by sodium acetate.

Molisch's t.: 1. (For *glucose in urine*.) Add 2 c.c. of urine, 2 drops of a 15 per cent. solution of thymol, and an equal volume of strong sulphuric acid, and a deep-red color results. 2. (For *glucose*.) To 1 c.c. of urine add 2 or 3 drops of a 5 per cent. solution of alpha-naphthol in alcohol, then add 2 c.c. of strong sulphuric acid; a deep violet color is produced, and a violet precipitate follows if water is added. 3. (For *proteins*.) The substance is treated with a 15 per cent. alcoholic solution of alpha-naphthol and then with concentrated sulphuric acid; a violet color is formed if proteins are present.

monosaccharid t. See *Barfoed's t.*

Moore's t. (for *glucose or any carbohydrate*): Boil the suspected solution with sodium or potassium hydroxide; if glucose or lactose is present, a yellow or brown color is produced.

Morelli's t. (to *differentiate between an exudate and a transudate*): Add a few drops of the suspected fluid to a saturated solution of mercuric chlorid in a test-tube; a flaky precipitate indicates a transudate, a clot indicates an exudate.

Moretti's t. (for *typhoid fever*): 25 c.c. of urine are saturated with 20 gm. of crystallized ammonium sulphate. After a quarter of an hour the urine is filtered and diluted to about one-third. To 10 c.c. of the filtrate one-fifth of its volume of a 10 per cent. solution of sodium hydrate is added, and then a drop of 5 per cent. tincture of iodine. The solution is shaken, and if the reaction is positive a persistent golden yellow color is produced.

Moriz-Weisz t. (for *urochromogen in urine*): Three drops of a 1:1000 solution of potassium permanganate are added to a test-tube half full of a mixture of urine with 2 parts of water. With a positive reaction the fluid turns yellow. If the reaction is negative the test is repeated with the urine diluted in half. It is thought to indicate the presence of tuberculous infection.

Mörner's t. (for *tyrosin*): 1. To a small quantity of the crystals in a test-tube add a few cubic centimeters of Mörner's reagent (formalin, 1 c.c.; distilled water, 45 c.c.; concentrated sulphuric acid, 55 c.c.). Heat gently to the boiling-point. A green color shows the presence of tyrosin. 2. See *nitroprussid t.* (1).

Moro's t. See *Moro's reaction*, under *reaction*.

morphin t. See *Oliver's t.*, *Weppen's t.*

Mosenthal's t. (for *kidney function*): With the patient on a prescribed general diet take samples of urine in two-hour periods during the day and once at night. Examine them for volume, specific gravity, total nitrogen and chlorids, and compare with normal.

Moszkowicz's t.: A test for arteriosclerosis made by rendering the lower limb bloodless by means of an Esmarch bandage. This is removed after five minutes have elapsed, when, in a normal limb, the color will return in a few seconds, but in one affected by arteriosclerosis the return of color takes place much more slowly. Called also *hyperemia t.*

Moynihan's t. (for *hour-glass stomach*): The two parts of a Seidlitz powder are given separately; in hour-glass stomach two distinct sacs can be observed.

mucic acid t. (for *galactose, lactose, et al.*): To the unknown add 20 per cent. of its volume of nitric acid and evaporate on water-bath to about 20 per cent. of its original volume. A fine white precipitate of mucic acid indicates galactose or a carbohydrate containing galactose.

Mulder's t.: 1. (For *glucose*.) Alkalinize the solution with sodium carbonate: on adding a solution of indigo-carmin and heating the mixture is decolorized, but becomes blue again when shaken with air. 2. (For *proteins*.) Treat the suspected substance with nitric acid: proteins are turned yellow by it; alkalinize the substance and it becomes an orange yellow. Called also *xanthoproteic reaction*.

Müller's t.: 1. (For *cystin*.) Boil the substance with potassium hydroxide until dissolved; when cold, dilute it with water; a solution of sodium nitroprussid produces a violet coloration, which soon changes to a yellow. 2. A drop of pus is allowed to fall into a small vessel containing some Millon's reagent. Ordinary pus forms a little lump that soon disintegrates and colors the liquid bright red. Tuberculous pus forms a tough skin on the surface of the fluid, which, if pushed down, takes on a globular shape.

Müller-Jochmann t.: 1. When a trace of pus is placed on some sterile coagulated blood-serum, and the latter put in an incubator, no change takes place if the pus is tuberculous. Ordinary pus, on the other hand, will form a cup-shaped depression in the culture-medium. 2. See *antitrypsin t.*

murexid t. See *Weidel's t.*

Mylius's t. (for bile acids): To each cubic centimeter of the solution of bile acids add 1 c.c. of strong sulphuric acid and 1 drop of furofural solution; if bile acids are present, a red color is produced, which turns to a bluish violet in the course of a day or so.

Nagel's t.: A test for color vision performed by means of cards with the colors printed in concentric circles.

Nakayama's t. (for bile-pigments): Add 5 c.c. of acid urine to the same amount of 10 per cent. barium chlorid solution and centrifugalize. To the precipitate is added 2 c.c. of a reagent consisting of 99 parts of 95 per cent. alcohol, 1 part of fuming hydrochloric acid to a liter of which 4 gm. of ferric chlorid has been added. The fluid is boiled, when a green color is obtained, which, on the addition of yellow nitric acid, becomes violet or red.

Neisser and Wechsberg's t. (for bactericidal power of blood): Patient's serum is inactivated, mixed with fresh guinea-pig complement, and the bacteria incubated and then plated on agar.

Nencki's t. (for indol): Treat the suspected material with nitric acid and a little nitrous acid: a red color follows, and in concentrated solution a red precipitate may appear.

Nessler's t. (for free ammonia). See Nessler's reagent, under reagent.

Neubauer and Fischer's t.: The glycoltryptophan test.

Neukomm's t. (for bile acids): A drop of the suspected substance is placed on a small white porcelain cover with a drop of dilute cane-sugar solution and one of dilute sulphuric acid. The mixture is carefully evaporated over a flame, a violet stain being left if bile acids are present.

Nicklès's t. (for distinguishing cane-sugar from glucose): Heat the sugar with carbon tetrachlorid to 100°. C. This blackens cane-sugar, but not glucose.

ninhydrin t. (for amino-acid nitrogen). See Harding and MacLean's t.

Nippe's t. (for blood): A modified form of Teichmann's test.

nitrate's t. See Allesandri and Guaceni's t.

nitric acid t. (for albumin). See Heller's t.

nitric acid-magnesium sulphate t. (for albumin). See Roberts's t.

nitrites t. (in saliva): To the saliva add 1 to 2 drops of H_2SO_4 , a few drops of KI solution, and some starch paste. A blue color indicates nitrites. See also Griess's t., Ilosvay's t.

nitropropiol t. (for sugar in urine): The urine is mixed with an alkali and heated with ortho-nitrophenylpropionic acid, when the color reaction will be seen.

nitroprussid t.: 1. (For cystein.) If a protein containing cystein is dissolved in water and 2-4 drops of a 4 to 5 per cent. solution of sodium nitroprussid and then a few drops of ammonia are added, a deep purple red color appears; called also Mörner's t. 2. (For acetone.) See Legal's t. 3. (For creatinin.) See Weyl's t. (1).

nitroprussid-acetic acid t. See Salkowski's t.

nitroso-indol-nitrate t. (for indol and skatol): Acidify the unknown with nitric acid and add a few drops of potassium nitrite. A red color or a red precipitate indicates indol; a white turbidity, skatol.

Nobel's t.: 1. (For aceto-acetic acid and acetone.) Stratify ammonium hydroxid on urine acidified with acetic acid and to which a little sodium nitroprussid has been added. A violet ring at the junction indicates aceto-acetic acid or acetone. 2. (For bile-pigments.) Add zinc chlorid and a little of the tincture of iodine; a dichroic coloration follows.

Noguchi's t. See Noguchi's reaction, under reaction.

Nonne-Apelt t. See Nonne-Apelt reaction, under reaction.

Norris's atropin t. See atropin t.

Nothnagel's t.: A crystal of a sodium salt placed upon the serous surface of the bowel in operations on the intestine causes an ascending peristalsis and thus shows the direction of the exposed gut.

nuclear t., nucleus t. (for proteolytic pancreatic function): A test based on the fact that cell-nuclei are digested by the pancreatic juice, and not by the stomach.

nucleo-albumen t. See Ott's t.

Nylander's t. (for glucose in urine): Dissolve 2 parts of bismuth subnitrate and 4 of sodium and potassium tartrate in 100 c.c. of a 10 per cent. solution of sodium hydroxid; of this add 1 part to 10 of the suspected urine and boil five minutes; a black coloration or black precipitate indicates a reducing sugar.

nystagmus t. See Bárány's symptom, under symptom.

Obermeyer's t. (for indican in urine): Precipitate the urine with a 1:5 lead acetate solution with care, lest an excess of the reagent be taken; filter and agitate the filtrate with an equal amount of fuming hydrochloric acid containing a little of the solution of ferric chlorid; to this add chloroform, which is turned blue by indigo.

Obermüller's t. (for cholesterolin): Put the substance to be tested in a test-tube and melt it with a drop or two of propionic anhydrid over a small flame: on cooling, the mass becomes successively blue, green, orange, carmin, and copper-colored.

occult blood t. See benzidin t.

Oliver's t.: 1. (For albumin.) Underlay the urine with a 1:4 solution of sodium tungstate and a 10:6 solution of citric acid: a white coagulum at the junction of the two layers shows the presence of albumin. 2. (For sugar.) Boil the suspected liquid with indigo-carmin: sugar will change the blue to a red or yellow. 3. (For morphin.) If, to a solution of morphin, a few cubic centimeters of hydrogen peroxid be added and the mixture be stirred with a piece of copper wire, the solution takes on a deep port-wine color, with the evolution of gas. 4. (For bile acids.) To 5 c.c. of the unknown add 2 to 3 drops of acetic acid and filter. An equal volume of 1 per cent. solution of peptone will produce a precipitate insoluble in excess of acetic acid if bile acids are present.

orcinol t. (for pentose in urine). See Bial's t.

organolectic t.: A test by the senses.

orthotolidin t. (for blood). See Rutlan and Hardisty's t.

osazone t. (for sugars). See phenylhydrazin t.

Otani's t. (for typhoid, paratyphoid, and dysentery): A small amount of the citrated blood of the patient is taken up in a capillary pipet, and to this is added an equal amount of a fine emulsion of the bacilli of the disease in question. After autoclaving, a drop of the contents is placed on a slide, stained, and the phagocytes counted. If 30 per cent. or more of the phagocytes have taken up bacilli the test is positive.

Ott's t. (for nucleo-albumin in urine): To the urine is added an equal volume of saturated solution of salt, and then Almén's reagent (dissolve 5 gm. of tannic acid in 240 c.c. of 50 per cent. alcohol and add 10 c.c. of 25 per cent. acetic acid); a precipitate forms when nucleo-albumin is present.

oxyphenylsulphonic acid t. (for albumin in urine): Dissolve in 20 parts of water 3 parts of oxyphenylsulphonic acid and 1 part of salicylsulphonic acid; add to 1 c.c. of urine a drop of the reagent; if albumin is present, a clear white precipitate appears.

Pachon's t.: Measuring of the blood-pressure for the purpose of determining the state of the collateral circulation in aneurysm.

palmin t., palmitin t. (for pancreatic efficiency): After a test-meal containing palmitin, the contents of the stomach are examined for the presence of fatty acids. They will be found in cases where the pancreas is normal, for the presence of fat in the stomach causes the pylorus to open and admit the pancreatic juice, which splits palmitin into fatty acids.

Pandy's t.: A test for globulin in the cerebrospinal fluid. Mix 80 to 100 c.c. pure carbolic acid with distilled water, shake, and place in incubator several hours. After several days at room temperature pour off top watery part which serves as the reagent. With a Pasteur pipet a drop (1 $\frac{1}{10}$ c.c.) of the fluid to be tested is deposited on the bottom of a watch crystal filled with the reagent. If no cloudy precipitate forms within five seconds the reaction is negative.

para-dimethyl-amino-benzaldehyd t. (for proteins): To the unknown add an equal volume of hydrochloric acid and boil. Then add 2 drops of a 5 per cent. solution of para-dimethyl-amino-benzaldehyd in 10 per cent. sulphuric acid. A red to violet color indicates tryptophan or indol.

Parnum's t. (for albumin): Filter the urine, and add one-sixth of its volume of a saturated solution of magnesium or sodium sulphate; acidulate with acetic acid and boil: if albumin is present, a white precipitate is formed.

Patrick's t.: With the patient supine the thigh and knee are flexed and the external malleolus is placed over the patella of the opposite leg; the knee is depressed, and if pain is produced thereby arthritis of the hip is indicated. Patrick calls this test *fabere sign*, from the initial letters of the movements necessary to elicit it, namely, flexion, abduction, external rotation, extension.

Paul's t.: Pus from a suspected pustule is rubbed into the scarified eye of a rabbit; if the pus is variolous or vaccinal, a condition of epitheliosis develops in the rabbit in from thirty-six to forty-eight hours.

Pavy's t. (for glucose in urine): Prepare a reagent by mixing 120 c.c. of Fehling's solution with 200 c.c. of ammonia (specific gravity, 0.88), 400 c.c. of a solution of sodium hydroxid (specific gravity, 1.14), and 1000 c.c. of water; boil the suspected liquid with this solution: if glucose is present, the reagent is decolorized.

Pélouse-Moore t. (for sugar in urine): Boil with a solution of potassa, cool, and add 1 drop of concentrated sulphuric acid, when the odor of burnt sugar will be given off.

pentose t. See Bial's t., orcin t., phloroglucin t.

Penzoldt's t.: 1. (For acetone.) To the suspected liquid add a warm saturated solution of ortho-nitrobenzaldehyd, and render it alkaline with sodium hydroxid: if acetone is present, the mixture becomes yellow and then green; thereafter a precipitate forms, which, on shaking with chloroform, gives a blue color. 2. (For glucose in urine.) Add caustic potash and a slightly alkaline solution of diazobenzosulphonic acid; shake the mixture until it foams: a red or yellow-red color is produced, the foam also being red. 3. (For stomach absorption.) A capsule containing 3 grains of potassium iodid are given and a glass of water taken. Dried starch paper is moistened with the patient's saliva, and then a drop of fuming nitric acid placed on the paper. A blue or violet color will form.

Penzoldt-Fischer t. (for phenol): Alkalinize strongly the substance to be tested and dissolve in a solution of diazobenzosulphonic acid: phenol, if present, produces a deep-red color.

peppermint t.: A method of discovering leaks in drain-pipes by placing oil of peppermint in the pipes and noticing where the odor is emitted.

pepsin t. See Jacoby's t.

peptone t. See Randolph's t.

perchlorid t.: A port-wine colored reaction obtained by treating the urine of pregnant women affected with hyperemesis with perchlorid of iron. The intensity of the reaction indicates the gravity of the case.

percutaneous tuberculin t. See Moro's t.

Peria's t. (for tyrosin). See Piria's t.

Perles's t.: A test for hemosiderin made by treating the substance with hydrochloric acid and potassium ferrocyanid: the Prussian-blue reaction is produced if hemosiderin is present.

permanganate t. Same as Moriz-Weisz t.

peroxidase t. See Goodpasture's stain, under stain.

Petri's t.: 1. (For kairin in urine.) Add acetic acid and calcium chlorid in solution, when a fuchsin-red color is produced. 2. (For proteins.) Add diazobenzosulphonic acid and sodium hydroxid: an orange or brownish color is formed, and on shaking, a red froth is produced.

Pettenkofer's t. (1844) (for bile acids in urine): Drop a solution of the suspected material into a mixture of sugar and sulphuric acid: a purplish-crimson color is produced. This test is also given by amino-myein, cephalin, lecithin, and myelin.

Petzetaki's t. (for typhoid fever): Fifteen c.c. of urine are placed in a test-tube and to this is added a little 5 per cent. alcoholic solution of iodine; if the upper part of the urine takes on a golden yellow color, the test is positive.

phenol t. See Allen's t., Berthelot's t., Davy's t., Eijkman's t., Hauke and Koessler's t., Jacquemin's t., Penzoldt's t., Plugge's t.

phenolphthalein t. (for blood): Boil a thin fecal suspension, cool, and add it to half as much reagent (made by dissolving 1 to 2 gm. of phenolphthalein and 25 gm. of potassium hydroxid in water. Add 10 gm. of metallic zinc and heat until decolorized). A pink color indicates the presence of blood.

phenolsulphonaphthalein t. See phenolsulphonaphthalein.

phenoltetrachlorphthalein t. (for liver function): Phenoltetrachlorphthalein is injected intravenously, and normally it appears in the feces, being excreted by the liver with the bile, and giving a bright color to the feces. A drop in the normal excretion of this substance points to liver injury.

phenylhydrazin t. See Kowarsky's t. and von Jaksch's t. (2).

phloridzin t. (for renal insufficiency): The bladder is emptied and a hypodermic injection given of a mixture of 5 to 10 gm. each of sodium carbonate and phloridzin. Sugar will appear in the urine within half an hour if the kidney is healthy. If only a small quantity of sugar appears, there is probably renal insufficiency; if none at all, then serious kidney disease probably exists.

phloroglucin t. (for galactose, pentose, and glyconates in urine): A solution of phloroglucin in hydrochloric acid is added to the urine and warmed, a red color forming if suspected substances are present.

phosphoric acid t. See Malol's t., Mitchenrich's t.

phthalein t. See phenolsulphonaphthalein.

picric acid t.: 1. (For creatinin.) See Jaffé's t. 2. (For sugar.) See Benedict's t.

picrotoxin t. See Becker's t.

pineapple t. (for butyric acid in stomach): A few drops of sulphuric acid and alcohol are added to a dried ethereal extract of the gastric juice. If butyric acid is present, an odor of pineapple will be given off, caused by the formation of ethyl-butyrate.

pine wood t. (for indol): A pine splinter moistened with concentrated hydrochloric acid is turned cherry red by a solution of indol.

Piorkowski's t. (for typhoid bacilli): Alkaline urine is boiled with a small amount of peptone and gelatin. The filtered product is sterilized

and inoculated with the suspected substances. Plate cultures are made. Typhoid colonies will develop in twenty-four hours.

Piotrowski's t. See *biuret t.* (1).

Piria's t. (for tyrosin): Moisten the suspected material with strong sulphuric acid and warm it; then dilute and warm it again; neutralize it with barium carbonate, filter, and add ferric chlorid in dilute solution: if tyrosin is present, a violet color is seen, which is destroyed by an excess of ferric chlorid.

Pirquet's t. See *Pirquet's reaction*, under *reaction*.

Plugge's t. (for phenol): A dilute solution containing phenol becomes red on mixture with a mercuric-nitrate solution containing a trace of nitrous acid; mercury is also precipitated and the odor of salicyl is given off.

Poechl's t. (for determining the presence of the cholera bacillus): Add 10 drops of concentrated sulphuric acid to 7 c.c. of the pure culture, when a rose color will be formed, deepening to a purple.

Pohl's t. (for globulins): These substances are precipitated from solution by ammonium sulphate.

Politzer's t. (for deafness in one ear): When a tuning-fork is placed in front of the nares it is heard only by an unaffected ear during deglutition.

Pollacci's t. (for albumin in urine): Dissolve in 100 c.c. of water 1 gm. of tartaric acid, 5 gm. of mercuric chlorid, and 10 gm. of sodium chlorid, and add 5 c.c. of a 40 per cent. solution of formaldehyd. This solution added to urine will cause coagulation of albumin in a white zone.

polyuria t. See *Albarran's t.*

Porges-Meier t. (for syphilis): A 1 per cent. emulsion of lecithin in physiologic salt solution is mixed with an equal volume of blood-serum and allowed to stand for five hours. Blood-serum from the patient to be tested is added, when the lecithin will be precipitated if the patient has syphilis.

Porges-Salomon t. (for syphilis): A 1 per cent. sodium glycocholate solution is mixed with an equal volume of clear activated serum from the patient. If the serum is syphilitic, distinct flocculi will appear at the top of the fluid.

Porter's t.: 1. (For excess of uric acid.) The upper portion of the urine is boiled in a test-tube and a few drops of 4 per cent. acetic acid are added; in a few hours crystals of uric acid will form just below the surface. 2. (For indican.) 10 c.c. of urine are shaken with an equal amount of hydrochloric acid and 5 drops of a 0.5 per cent. solution of potassium permanganate; add 5 c.c. of chloroform and shake. A purple color with a deposit of blue matter indicates indican.

Posner's t.: 1. (For the source of albumin in urine.) A 24-hour sample of urine is preserved with formalin, shaken, and the leukocytes counted in the blood-counting chamber—100,000 leukocytes per 2 c.c. of urine indicates 0.1 per cent. of albumin. In this case the albumin is probably due solely to the pus. If albumin is present in greater proportion than this, it is probably due to Bright's disease. 2. (For proteins.) Posner makes a ring biuret test by mixing the potassium hydroxid solution and the unknown and then stratifying very dilute copper sulphate solution on top of the mixture.

potassium iodid t. (for renal function): The patient receives 0.5 gm. of potassium iodid in solution by mouth, and the urine is tested every two hours for iodine. If iodine secretion is prolonged beyond sixty hours, excretion through the renal tubules is indicated.

precipitin t. See *serum t.*

Prendergast's t. (for typhoid fever): Intradermal injection of 5 mg. of typhoid vaccine. In the non-typhoid patients there develops within twenty-four hours an area of redness about the site of the injection, while in the typhoid patient there is no reaction.

protein t. See *acetic acid and potassium thiocyanid t.*, *Acree and Rosenheim's t.*, *Adamkiewicz's t.*, *Bardach's t.*, *Burchard-Lieberman t.*, *coagulation t.*, *Ehrlich's t.*, *furfural t.*, *Gies's t.*, *Grigg's t.*, *glyoxylic acid t.*, *Hopkins-Cole t.*, *Kantor and Gies's t.*, *Kober's t.*, *Lieberman's t.*, *Mandel's t.*, *Michailow's t.*, *Millon's t.*, *Molisch's t.*, *para-dimethyl-amino-benzaldehyd t.*, *Petri's t.*, *Piotrowski's t.*, *Reich's t.*, *Schulte's t.*, *Schultze's t.*, *sulphur t.*, *trichlorohydridene hydrate t.*, *von Aldor's t.*, *xanthoproteic t.* See also *albumen t.*

protozoan t.: The use of protozoan protoplasm as a test for pathologic tissue change, by observing the rate of reproduction of cultures of paramecium bred on normal and pathologic tissue.

Purdy's t. (for glucose.) See *Purdy's fluid*, under *fluid*.

purin bodies t. See *Cook's t.*

pus t. See *Donne's t.*

pyramidon t. (for occult blood in feces): A small portion of the feces is stirred up in 3 to 4 c.c. of distilled water and filtered. To the filtrate add 3 or 4 c.c. of a 90 per cent. alcoholic solution of pyramidon and several drops of a 30 per cent. acetic acid with hydrogen peroxid. A violet blue color indicates occult blood.

pyridin t. See *Anderson's t.*

pyrocatechin t. See *Brieger's t.*

quinin t. See *André's t.*, *Binz's t.*, *Brandé's t.*, *thalieoquin t.*

Quinlan's t. (for bile): A 3 mm. layer of the suspected liquid is examined by the spectroscope: if bile is present, some of the violet color of the spectrum will be absorbed.

Raabe's t. (for albumin): Filter the urine into a test-tube and drop a crystal of trichloroacetic acid into it: albumin will form a white ring about the crystal; uric acid may form a similar ring, but it is not so well defined.

Rabuteau's t.: 1. (For hydrochloric acid in urine.) Add a little indigosulphonic acid to color the urine, and sulphurous acid to decompose what hydrochloric acid may be present: the urine will be decolorized. 2. (For hydrochloric acid in stomach contents.) 1 gm. of potassium iodate and 0.5 gm. of potassium iodid are added to 50 c.c. of starch mucilage, and the filtered stomach liquids are added to it: free hydrochloric acid will render the mixture blue.

Ralfe's t.: 1. (For acetone in urine.) Boil 4 c.c. of liquor potassæ with 1.5 gm. of potassium iodid; overlay it with 4 c.c. of urine: a yellow ring with specks of iodoform appears at the plane of contact. 2. (For peptones in urine.) Put 4 c.c. of Fehling's solution in a test-tube and overlay it with urine: a rose-colored ring shows the presence of peptones.

Randolph's t. (for peptones in urine): Add 2 drops of a saturated solution of potassium iodid and 3 drops of Millon's reagent to 5 c.c. of cold and slightly acid urine: a yellow precipitate shows the presence of peptones.

Raygat's t. See *hydrostatic t.*

Reach's t. (for hydrochloric acid in gastric juice): Barium iodate and bismuth oxyiodate are given, which are decomposed by hydrochloric acid with the liberation of iodine. The saliva is then tested for iodine.

reckoning t.: A mental test, consisting in requiring the patient to add in pairs a series of numbers. The total number of sums accomplished per minute indicates the patient's capacity for mental work, while their accuracy indicates the patient's fixed associations and power of attention.

Rees's t. (for albumin): Small amounts of albumin are precipitated from solution by tannic acid in alcoholic solution.

Rehfuss's t.: A test for studying gastric secretion. By means of a specially devised tube (*Rehfuss tube*) inserted into the stomach imme-

diately after an Ewald test-meal a specimen of the contents is drawn off at fifteen-minute intervals until the close of digestion. Each specimen is examined and the results are plotted in a graphic curve, the abscissa of which is the number of minutes at which the gastric contents were removed, and the ordinate the number of cubic centimeters of decinormal sodium hydroxide solution necessary to titrate the free acidity and the total acidity of the gastric contents.

Reichl's t. (*for proteins*): Add 2 or 3 drops of an alcoholic solution of benzaldehyde and a quantity of sulphuric acid previously diluted to twice its volume with water; then add a few drops of ferric sulphate solution. The mixture will sooner or later take on a deep blue color.

Reinsch's t.: 1. (*For arsenic*.) Acidulate the liquid with HCl, insert a strip of clean copper, and boil; if arsenic is present, a gray or bluish film of copper is deposited. Remove the copper, wash, dry, insert in a long glass tube, and heat. The arsenic sublimes to the cooler parts of the tube as octahedral crystals. 2. (*For mercury in urine*.) Acidify the urine with HCl and place in it a piece of clean copper foil. After twelve to twenty-four hours remove foil, wash, and dry, introduce into a tube, and distil off the mercury as in the arsenic test.

Remont's t. (*for salicylic acid*): Make the milk acid with sulphuric acid, extract the salicylic acid with ether, and identify it by the purple or violet color produced on the addition of ferric chloride.

renal function t. See *indigocarmin t.*, *lactose t.*, *methylene-blue t.*, *phloridzin t.*, *phthalein t.*, *potassium iodid t.*, *Rowntree and Geraghty's t.*, *Simonelli's t.*, *urea concentration t.*, *Wohlgemuth's t.*

rennin t. See *Riegel's t.*

Reoch's t.: 1. (*For albumin*.) Same as *Mac-Williams's t.* 2. (*For free HCl in stomach contents*.) Add to the suspected substance a mixture of iron and quinin citrate and potassium sulphocyanid; if free HCl is present, a red coloration is produced.

resorcinol t. (*for hydrochloric acid*). See *Boaz's t.*
resorcinol-hydrochloric acid t. (*for levulose*). See *Selivanoff's t.*

resorption skin t. Same as *hydrophilia skin t.*

Reuss's t. (*for atropin*): The substance examined is treated with sulphuric acid and oxidizing agents; if atropin is present, an odor of roses and orange-flowers is given off.

Reynold's t. (*for acetone*): To the liquid to be examined add freshly prepared mercuric oxid; shake and filter, overlay the filtrate with ammonium sulphid, when it is turned black.

Rieckenberg's t. See under *phenomenon*.

Riegel's t. (*for rennin*): To 10 c.c. of milk there is added 5 c.c. of neutral gastric juice; this is incubated fifteen minutes, when coagulation will occur if rennin is present.

Riegler's t.: 1. (*For albumin*.) 10 gm. of betanaphthol-sulphonic acid are dissolved in 200 c.c. of distilled water and filtered; 5 c.c. of urine are treated with 20 to 30 drops of solution. Turbidity shows the presence of albumin. 2. (*For hydrochloric acid in the gastric juice*.) Congo-red is changed to blue if hydrochloric acid is present. 3. (*For glucose*.) Place in a test-tube 0.1 gm. of phenylhydrazin hydrochlorid, 0.25 gm. of sodium acetate, and 20 drops of the urine. Heat to boiling. Add 10 c.c. of a 3 per cent. solution of potassium hydroxid and gently shake the tube. A red color indicates sugar.

Rimini's t. Same as *Burnam's t.*

ring t.: 1. (*For glands*) See *Konew's t.* 2. (*For protein*.) See *Heller's t.*, *Roberts's t.*, *Posner's t.*

Rinne's t.: A tuning-fork is held alternately before the ear and over the mastoid process; if the sound is heard better before the ear, the air conductivity is better than the bone conductivity, and vice versa.

Rivalta's t. See *Rivalta's reaction*, under *reaction*.

Roberts's t.: 1. (*For albumin*.) Underlay the urine with a mixture containing 5 parts of saturated solution of magnesium sulphate and 1 part of nitric acid; a white ring or layer forms at the plane of junction. 2. (*For glucose*.) Determine the specific gravity of the urine at a certain temperature; add a little tartaric acid and some yeast; after twenty-four hours filter and again find the specific gravity. Each degree of density lost represents a grain of glucose in a fluidounce of the urine.

Roffo's t.: To 2 c.c. of fresh centrifugized blood-serum are added 5 drops of a 5 per cent. solution of neutral red. The normal yellow of the serum changes to red if the subject has cancer.

Roger-Josué t. See *blister t.*

Ronchese t. (*for quantitative determination of ammonia in urine*): One based on the action of formalin on the ammonia salts. A 10 per cent. solution of sodium carbonate is added, a drop at a time, to the urine until the reaction becomes neutral. The formalin (40 per cent.) is neutralized with a one-fourth normal soda solution against phenolphthalein until a slight pink tint develops. Then 25 c.c. of the neutral urine and 10 c.c. of the neutral formalin are mixed and titrated against decinormal soda solution until a deep pink develops. The calculation is simple: 1 c.c. of the decinormal soda solution for 100 c.c. of urine corresponds to 0.017 gm. ammonia in 1000 c.c. of urine.

Rose's t. (*for blood*): The scrapings from a blood-stain are boiled in dilute caustic potassa; when examined the liquid will show a greenish color in a thin layer and a red color in a thicker layer.

Rosenbach's t. (*for indigo-red*): Boil with nitric acid, and a blue color will be formed.

Rosenbach-Gmelin t. (*for bile-pigment*): Filter the urine through a very small filter; put a drop of nitric acid with a trace of nitrous acid on the inside of the filter, when a pale-yellow spot will appear, surrounded with yellowish-red, violet, blue, and green rings.

Rosenheim's t. (*for cholera*): Add iodopotassium iodid solution (2 gm. of iodine and 6 gm. of potassium iodid in 100 c.c. of water) to an alcoholic extract of the material. Dark brown plates and prisms may be seen with a microscope if cholera is present.

Rosenheim-Drummond t. (*for vitamin A*): Dissolve 1 or 2 drops of cod-liver oil in about 5 c.c. of an anhydrous fat solvent. Add 1 drop of concentrated sulphuric acid. A temporary deep violet color indicates vitamin A.

Rosenthal's t.: 1. (*For blood in urine*): Add caustic potash to the urine, remove the precipitate and dry it; a small amount is placed on a slide with a crystal of sodium chloride; apply a cover-glass and cause a few drops of glacial acetic acid to flow under it; warm the plate, and when it is cool hemin crystals will appear if blood is present. 2. A modification of the phenoltetrachlorophthalein test in which the amount of the dye which remains in the blood at definite periods after injection of 5 mg. per kilogram of body weight. The normal liver will remove most of the dye from the blood in fifteen minutes and all of it within an hour.

Rosin's t. (*for indigo-red*): Render the liquid alkaline with sodium carbonate and extract with ether; this is colored red.

Ross's t. (*for syphilis*): To a 2 per cent. agar solution (5 c.c.) add 0.4 c.c. of Unna's polychrome blue, 0.4 c.c. of a 5 per cent. aqueous solution of sodium bicarbonate, and 4.2 c.c. of sterile water. This is poured in a thin layer on a slide, and when it has solidified, the material to be examined is placed on a cover-glass and dropped on the slide; if spirochetes are present they are stained. Called also *film test* and *thick-film t.*

Ross-Jones t. (*for excess of globulin in cerebrospinal fluid*): 1 c.c. of cerebrospinal fluid is floated over 2 c.c. of concentrated ammonium sulphate solution;

excess of globulin produces a fine white ring at the line of junction.

Rossel's aloin t. (*for blood in stools*): About 1 dram of the feces is put in a test-tube and extracted with 5 to 10 c.c. of ether to remove the fat. After pouring off the ether the feces are thoroughly shaken up with 5 c.c. of glacial acetic acid. The acid is then poured into another test-tube and extracted with 5 to 10 c.c. of ether. The test is then made with this ether. To that ether are added 20 to 30 drops of old oil of turpentine and 10 to 15 drops of a 1 to 4 per cent. solution of Barbados aloin in 60 to 70 per cent. alcohol. In the presence of blood the mixture takes on a light red color, turning to bright cherry red in about ten minutes.

Rothera's t. (*for acetone*): To 5 c.c. of urine add a little solid ammonium sulphate and add 2 to 3 drops of a fresh 5 per cent. solution of sodium nitroprussid and 1 to 2 c.c. of concentrated ammonium hydrate. A permanganate color forms if acetone is present.

Roussin's t., microscopical examination of suspected blood-stains.

Rowntree and Geraghty's t.: The phenolsulphonephthalein test. See under *phenolsulphonephthalein*.

Rubin's t.: A test for patency of the fallopian tubes made by transuterine insufflation with carbon dioxide. If the tubes are patent the gas enters the peritoneal cavity and may be demonstrated by the fluoroscope or roentgenogram. This subphrenic pneumoperitoneum causes pain in both shoulders of the patient. If the manometer registers not over 100 mm. Hg. the tubes are patent; if between 120 and 130, there is stenosis or stricture but not complete occlusion; if it rises to 200, the tubes are completely occluded.

Rubner's t.: 1. (*For carbon monoxid in blood.*) Shake the blood with 4 or 5 volumes of lead acetate in solution: if the blood contains CO, it will retain its bright color; if not, it becomes a chocolate brown. 2. (*For lactose, glucose, maltose, and levulose.*) Add lead acetate to the urine, boil, and then add an excess of ammonium hydroxid. Lactose gives a brick-red color; glucose gives a coffee-brown color; maltose gives a light yellow color; and levulose gives no color at all.

Ruge and Philipp's t.: A test for the virulence of microorganisms based on their ability to survive and multiply in the patient's blood in vitro.

Ruhemann's t. (*for uric acid in urine*). See *Ruhemann's method*, under *method*.

Rumpel-Leede t. See *Rumpel-Leede phenomenon*, under *phenomenon*.

Russo's t. See *Russo's reaction*, under *reaction*.

Ruttan and Hardisty's t. (*for blood*): Blood in the presence of a 4 per cent. glacial acetic acid solution of orthotolidin and hydrogen peroxid gives a bluish color.

Ryan's skin t.: A test for fatigue by making, with a blunt instrument, a stroke on the skin of the forearm and noting by means of a stop-watch the time that elapses between the moment of stimulation and the moment at which the white streak thus produced begins to fade. The time is shorter in fatigued persons.

saccharimeter t.: Dextrose in solution rotates the plane of polarized light to the right, while levulose turns it to the left.

Sachs-Georgi t.: A precipitation for syphilis; the addition of 1 c.c. of a solution of cholesterinized alcoholic extract of human or beef heart (1 part) and 0.9 per cent. sodium chlorid solution (9 parts) to 0.3 c.c. of syphilitic serum will cause a flocculent precipitation. Called also *flocculation t.*

Sachsse's t. (*for sugar in the urine*): A solution of 18 gm. of red iodid of mercury, 25 gm. of potassium iodid, 80 gm. of potassium hydroxid, in water enough to make a liter: sugar, if present, causes a black precipitate.

safranin t. (*for sugar in the urine*): Add normal sodium hydroxid solution to an equal quantity of urine, add safranin, and heat to 180° F., when the safranin will be dissolved if sugar is present.

Sahli's t. (*for motive and digestive power of stomach*): The patient is fed a soup made of definite amounts of water, flour, butter, and salt, and in an hour the stomach-contents are removed. The amount of fat present shows how much of the meal has been digested, and the acidity indicates how much the stomach has secreted.

Sahli's desmoid t. See *desmoid reaction*, under *reaction*.

Sahli's glutoid t. (*for digestive function*): A glutoid capsule containing 0.15 gm. of iodoform is taken with an Ewald breakfast. The capsule is not digested by the stomach fluid, but is readily digested by pancreatic juice. Appearance of iodine in the saliva and urine within four to six hours indicates normal gastric motility, normal intestinal digestion, and normal absorption. Glutoid capsules are prepared by soaking gelatin capsules in formalin.

Sahli-Nencki t. (*for lipolytic activity of the pancreas*): The administration of salol, which is to be excreted as salicylic acid.

salicylaldehyd t. (*for acetone*). See *Frommer's t.*

salicylic acid t. See *Remont's t.*, *Siebold and Bradbury's t.*

Salkowski's t.: 1. (*For CO in the blood.*) Add to the blood 20 volumes of water and sodium hydroxid in solution (specific gravity, 1.34). If CO is present, it becomes cloudy and then red; flakes of red afterward float on the surface. 2. (*For cholesterolin.*) Dissolve in chloroform and add an equal volume of strong sulphuric acid: if cholesterolin is present, the solution becomes bluish-red, and slowly changes to a violet-red; the sulphuric acid becomes red, with a green fluorescence. 3. (*For indol.*) To the solution to be tested add a little nitric acid, and drop in slowly a solution of potassium nitrite (2 per cent.): a red color shows that indol is present, and a red precipitate is afterward formed. 4. (*For glucose.*) A modified form of Trommer's test. 5. (*For creatinin.*) To the yellow solution obtained in Weyl's test add an excess of acetic acid and heat. A green color results, which turns to blue.

Salkowski-Ludwig t. (*for uric acid*): A solution of silver ammonionitrate and ammonium and magnesium chlorids precipitates uric acid.

Salkowski and Schipper's t. (*for bile-pigments*): To 10 c.c. of the unknown add 5 drops of a 20 per cent. solution of sodium carbonate and 10 drops of a 20 per cent. solution of calcium chlorid. To the precipitate add 3 c.c. of alcohol containing 5 per cent. of strong hydrochloric acid and a few drops of sodium nitrite. Heat. A green color indicates bile pigments.

salol t. See *Ewald's t.* (2).

Salomon's t.: Testing of the stomach washing by Esbach's test for albumin, after twenty-four hours without protein food. The presence of albumin indicates ulcerative cancer.

salvarsan t. See *Abelen's t.*

sand t. (*for bile and hemoglobin in urine*): A layer of white sand is spread on a plate and on this is poured some of the urine. If the urine contains pigments, a spot is left on the sand, which is brown with hemoglobin and greenish with bile-pigment. Called also *Lipp's t.*

Saundby's t. (*for blood in feces*): To a small quantity of feces in a test-tube 10 drops of a saturated benzin solution are added. To this are added 30 drops of hydrogen peroxid solution, when a dark blue color will develop if blood is present.

scarification t. See *Pirquet reaction*, under *reaction*.

Schalfijew's t. (*for blood*): Treat defibrinated

blood with excess of glacial acetic acid, heat to 80° C., cool, and examine for hemin crystals.

Scherer's t.: 1. (*For inosile.*) Evaporate on platinum foil with nitric acid; add ammonia and a single drop of calcium chlorid in solution; reëvaporate to dryness: a rose-red coloration indicates the presence of inosile. 2. (*For leucin.*) Evaporate with care on platinum foil; moisten with sodium hydroxid: warming develops a pale-yellow or brown color, and evaporation changes the substance to an oily drop. 3. (*For tyrosin.*) Treat with nitric acid and dry with care on platinum foil; the formation of nitrotyrosin nitrate renders it yellow, and caustic soda changes the color to reddish yellow.

Schick t.: Intracutaneous injection of a quantity of diphtheria toxin equal to one-fiftieth of the minimal lethal dose diluted in salt solution. Since one-thirtieth of a unit of antitoxin per cubic centimeter of blood is sufficient to neutralize this amount of toxin, if the patient has less than this amount the toxin is not neutralized, and an area of inflammation is produced on the skin at the site of the injection. The test is a measure of immunity to diphtheria.

Schiff's t.: 1. (*For carbohydrates in urine.*) Make warm and add sulphuric acid; expose to the fumes of the urine a paper dipped in a mixture of equal volumes of xylidin and glacial acetic acid with alcohol and dried: the paper becomes red if carbohydrates are present. 2. (*For cholesterol.*) Add a reagent composed of 2 parts of sulphuric acid with 1 part of a dilute solution of ferric chlorid; evaporate to dryness and a violet color is produced. 3. (*For cholesterol.*) Evaporate with nitric acid and add ammonia; a red color not changed by alkalis is produced. 4. (*For allantoin and urea.*) Add a solution of furfural in hydrochloric acid; a yellow color appears, turning to purple and then to a brownish black. 5. (*For uric acid.*) Treat silver nitrate paper with an alkaline solution of the suspected substance; a brown stain shows the presence of uric acid. 6. (*For formaldehyd in milk.*) The solution consists of an aqueous solution of magenta, 40 c.c.; distilled water, 250 c.c.; aqueous solution of sodium bisulphite, 10 c.c.; pure concentrated sulphuric acid, 10 c.c., which is allowed to stand until it is colorless; 2 c.c. of this solution are added to a test-tube two-thirds full of milk. If formaldehyd is present, a pink or lilac color will appear in from thirty to sixty seconds.

Schlesinger's t. (*for urobilin*): To about 5 c.c. of the urine in a test-tube add a few drops of Lugol's solution to transform the chromogen into the pigment. Now add 4 or 5 c.c. of a saturated solution of zinc chlorid in absolute alcohol and filter. A greenish fluorescence, best seen when the tube is viewed against a black background and the light is concentrated upon it with a lens, shows the presence of urobilin. Bile-pigment, if present, should be removed by adding about one-fifth volume of 10 per cent. calcium chlorid solution and filtering.

Schmidt's t.: 1. (*For bile.*) Particles of fresh feces are rubbed up with concentrated aqueous solution of corrosive sublimate in a glass dish. After standing covered for twenty-four hours the matter is examined, bilirubin appearing as green particles, hydrobilirubin as red ones. 2. (*For sugar.*) Lead acetate is added and precipitated with ammonia; on heating, the white precipitate remains unchanged if saccharose or milk-sugar is present; but if glucose is present, an orange tint is seen. 3. (*For proteolytic pancreatic function.*) See *nucleus t.* 4. (*For intestinal indigestion.*) The patient is placed upon a definite diet. After a few days the feces are examined for fermentation. If this occurs within forty-eight hours it points to the imperfect intestinal digestion of starch. 5. (*For digestive function of the stomach.*) A test based upon the fact that when the gastric secretion is absent or greatly diminished, connective-

tissue masses appear in the stool after eating raw chopped meats.

Schoenbein's t.: 1. (*For blood.*) Blue coloration obtained by adding hydrogen peroxid to tincture of guaiac mixed with suspected blood. 2. (*For copper.*) A solution containing a copper salt becomes blue if potassium cyanid and tincture of guaiac be added.

Schroeder's t. (*for urea*): Add a crystal of the substance to a solution of bromin in chloroform: the urea will decompose and gas will be formed.

Schulte's t. (*for proteins*): Remove all coagulable protein, precipitate with six volumes of absolute alcohol, dissolve the precipitate in water, and apply the biuret test.

Schultz-Charlton t. See *under reaction.*

Schultze's t.: 1. (*For cellulose.*) Iodin is dissolved to saturation in a zinc-chlorid solution (specific gravity, 1.8), and 6 parts of potassium iodid are added: this reagent colors cellulose blue. 2. (*For cholesterol.*) Evaporate with nitric acid, using a porcelain dish and water-bath. If cholesterol is present, a yellow deposit is formed, which changes to yellowish-red when ammonia is added. 3. (*For proteins.*) To a suspected solution add a very little of a dilute solution of cane-sugar and concentrated sulphuric acid; keep it at 60° C., and a bluish-red coloration is produced.

Schultze's indophenol-oxydase t. See *indophenol t.*

Schumm's t. Same as *benzidin t.*

Schürmann's t. (*for syphilis*): To 0.1 c.c. of blood-serum of the patient there is added enough physiologic salt solution to make 3 or 4 c.c.; to this is added 1 drop of perhydrol and the fluid is mixed with 0.5 c.c. of a reagent consisting of 0.5 c.c. of phenol, 0.62 c.c. of 5 per cent. aqueous ferric chlorid solution, and 34.5 c.c. of distilled water. Normal blood-serum gives a slight green ring at the junction of the two fluids, which disappears on shaking, the mixture remaining clear. Syphilitic serum gives a dark-brown color at the junction, and on shaking the mixture appears very dark.

Schwabach's t. (*for the condition of the sound-conducting and sound-perceiving apparatus*): Measurement of the time during which a series of tuning-forks are heard by air-conduction and by bone-conduction.

Schwartz-McNeil t.: A complement-fixation test for gonorrhea in which the antigen is an autolysate of a large number of strains of gonococci.

Schwarz's t.: 1. Heat the substance with charcoal: the odor of mercaptan indicates the presence of sulphonal. 2. (G. Schwarz) (*For digastric function of stomach.*) With a test breakfast there is administered a capsule of gold-beaters' skin containing 4 gm. of bismuth carbonate and 0.25 gm. of neutral pepsin. The patient is then examined fluoroscopically. At first the capsule appears as a circular sharply defined area, but if it is dissolved by the stomach juice the area becomes a broad band. If the shadow of the capsule remains unchanged after five hours, anacidity of the stomach is indicated. Called also *fibroderm bismuth-capsule t.*

Scivoletto's t. (*for hydrochloric acid in urine*): Dip filter-paper in starch paste and dry; sprinkle it with urine and dry; hang it in a flask containing strontium acetate in solution: a blue color indicates the presence of the acid.

sedimentation t.: 1. Same as *agglutination t.* 2. See *erythrocyte sedimentation reaction*, under *reaction*.

Seidel's t. (*for inosile*): Evaporate in a platinum crucible with nitric acid, and treat with ammonia and strontium acetate in solution: inosile, if present, causes a green coloration and a violet precipitate.

Seliwanoff's t. (*for fructose in urine*): To the urine is added an equal volume of hydrochloric acid con-

taining resorcinol in the following proportion: 0.5 resorcinol, 30 c.c. water, and 30 c.c. concentrated hydrochloric acid. Formation of a Burgundy-red color after heating indicates fructose.

Sellards's t. (for acidosis): The patient is given 5 gm. of sodium bicarbonate, dissolved in water, by mouth, every two or three hours until the urine, passed before each dose, becomes neutral or faintly alkaline. Tolerance of 20-30 gm. shows moderate acidosis; tolerance of from 75-100 gm. indicates distinct acidosis. Called also *bicarbonate tolerance t.*

semen t. See *Barberio's t.*, *Florence's t.*

Senn's t.: The introduction of hydrogen into the intestines by the rectum as an aid in the diagnosis of intestinal perforations.

sero-enzyme t. Same as *Abderhalden's t.*

serum t. (for human blood): Human blood-serum is injected several times, at intervals, into a rabbit. The suspected specimen is dissolved in physiologic salt solution and added to the serum of a rabbit treated in the above way. The serum will become clouded if the suspected specimen is human blood. Called also *biologic t.*, *precipitin t.*, *Bordet t.*, and *Uhlenhuth's t.*

Sgambati's t. See *Sgambati's reaction*, under *reaction*.

shadow t. See *retinoscopy*.

Shear's t. (for vitamin D): To the oil add an equal volume of acid anilin (1 part concentrated HCl and 15 parts anilin). Mix and boil. A green color changing to red indicates vitamin D.

Sherer's t. (for pure leucin): A small portion of leucin with a few drops of nitric acid are evaporated on platinum foil. The transparent residue turns a brownish color on the addition of a caustic alkali. When the mixture is concentrated, an oil-like drop is obtained.

Siebold and Bradbury's t. (for salicylic acid in urine): Alkalinize with potassium carbonate; add a solution of lead nitrate in excess; filter, and add a dilute solution of ferric chlorid, when a violet color will be produced.

Siewer's t. Same as *Ewald's t. (2)*.

sigma t. See *sigma reaction*, under *reaction*.

silver t. (for glucose in the urine): Boil it with silver nitrate solution and an excess of ammonia; metallic silver will be deposited. Tartaric acid and aldehyd also produce this reaction.

Simonelli's t. (for renal inadequacy): Iodin is administered and the urine and saliva tested for iodine. If iodine does not appear in the urine at the same time as in the saliva, the kidneys are diseased.

skatol t. See *Ciamician and Magnanini's t.*, *Herter's t.*, *Kondo's t.*, *nitroso-indol t.*

skin t. See *cutaneous reaction*, under *reaction*.

Smith's t. (for bile-pigments): Overlay the suspected liquid with tincture of iodine diluted 1:10; a green ring or plane appears at the junction of the two liquids in the tube.

Soldaini's t. (for glucose in the urine): Dissolve 15 gm. of copper carbonate and 416 gm. of potassium bicarbonate in 1400 c.c. of water for a reagent; two parts of urine are boiled with 1 part of the reagent. A yellow precipitate of copper suboxide shows the presence of glucose.

Solera's t. (for thiocyanates): Saturate filter-paper with 1 per cent. starch-paste containing 1 per cent. of iodic acid. Dry and preserve as test paper. A piece of this paper moistened with saliva will turn blue if thiocyanate be present.

Sonnenschein's t. (for strychnin): The substance is dissolved in a drop of sulphuric acid, some cerous ceric oxid is added, and stirred with a glass rod. A deep blue color is formed, changing to violet, and finally to cherry red.

soy-bean t. See *urease t.*

Spiegler's t. (for albumin): Acidulate with acetic acid and filter; prepare a reagent with 8 gm. of mercuric chlorid, 10 gm. of sodium chlorid, and 4 gm. of tartaric acid in 200 c.c. of water and 20 c.c. of glycerin; overlay the reagent with the filtrate. If albumin is present, a white ring appears at the junction of the liquids.

Spiro's t.: 1. A test for the determination of ammonia and urea, embracing a combination of Folin's method for urea and the Mörner-Sjöqvist method for urea. 2. (*For hippuric acid.*) Warm the unknown with acetic anhydride anhydrous sodium acetate and benzaldehyd. Cool, and crystals of phenyl-amino-cinnamic acid-lactimid form.

sponge t.: A test performed by passing a hot sponge up and down the spine; if any lesion of the spine is present, pain is felt as the sponge passes over its locality.

Stanford t.: A modified Binet test.

Stange's t.: After a few preliminary deep inspirations, the patient takes a deep breath and holds it as long as possible; unless he can hold it for at least thirty seconds he is not a good anesthetic risk.

starch t. See *iodin t.*

station t.: A test for disturbances of coordination, made by placing the patient in an erect posture, with the heels and toes of the two feet together; if the swaying of the body is beyond normal, coordination is defective.

Stein's t.: Inability to stand on one foot with the eyes shut: seen in disease of the labyrinth.

Stern's t.: A modification of the Wassermann test by using fresh active serum and the patient's complement, and overcoming non-specific reactions by two-fifths to one-fifth of the usual dose of extract and three or four times the amboceptor unit.

Stewart's t.: Estimation of the amount of collateral circulation, in aneurysm of the chief artery of a limb, with a calorimeter.

Stock t. (for acetone in urine): The distillate of the urine is used. From 50 to 100 c.c. of urine are made acid by the addition of either acetic, hydrochloric, or sulphuric acid. The first 10 c.c. of distillate will contain all the possible acetone. About 1 inch of the distillate is placed in a test-tube; a drop or two of a 10 per cent. solution of hydroxylamin hydrochlorid are added, and sufficient sodium hydroxide or carbonate to render the solution alkaline to liberate hydroxylamin; the mixture is shaken and a couple of drops of pyridine are added and the mixture shaken; then 1 inch of ether is added and the mixture shaken. Bromine water is then added drop by drop, with mixing, until the ether layer becomes yellow; then a few drops of strong hydrogen peroxide are added; if acetone is present the ether will turn a distinctive green blue.

Stokes's t. (for oxyhemoglobin): Prepare a reagent by dissolving ferrous sulphate, adding tartaric or citric acid, and alkalinizing with ammonia. This reagent reduces hemoglobin.

Stokvis's t. (for bile-pigment): With 25 c.c. of urine mix 8 c.c. of a 1:5 zinc-acetate solution; wash the precipitate in water on a filter, and dissolve in ammonia-water. Filter again, and in a short time the filtrate shows a bluish-green tint.

Storck's t. (for human milk): The ferment of human milk will decompose hydrogen dioxide.

Strassburg's t. (for bile acids in albumin-free urine): Add cane-sugar to the urine; dip filter-paper into it and dry. A drop of sulphuric acid on the paper will cause a red or violet spot if bile acids are present.

Strauss's t. (for lactic acid in stomach): Extract the lactic acid from the stomach contents by means of ether. To the ether add distilled water and a little ferric chlorid; a green color indicates lactic acid.

Strauss's biologic t. (*for glands*). See *Strauss's reaction*, under *reaction*.

Struve's t. (*for blood in the urine*): Alkalize the urine and add tannic and acetic acids until the reaction becomes acid and a dark precipitate is formed. When this is dried, crystals of hemin may be obtained from it by adding ammonium chlorid and glacial acetic acid.

strychnin t. See *Allen's t.*, *Wenzell's t.*

sugar t. See *osazone t.* and *glucose t.*

Sullivan's t. (*for cystein*): To 1 or 2 c.c. of the unknown solution add 1 to 2 drops of an 0.5 per cent. solution of 1-2-naphthoquinone-4-sodium sulphionate and then 5 c.c. of a 20 per cent. sodium thiosulphate made up in 0.25 normal sodium hydroxid. A brilliant red color indicates a free SH group, cystein rather than cystin.

sulphonal t. See *Schwartz's t.*

sulphur t. (*for proteins*): The suspected liquid is heated with an excess of sodium hydroxid and a small quantity of acetate of lead. If proteins are present, a black precipitate of lead sulphid is formed.

syphilis t. See *Bruck's t.*, *butyric acid t.*, *Emanuel and Cutting's t.*, *Fornet's t.*, *Hecht's t.*, *Hennebert's t.*, *Herman and Perutz's t.*, *Jacobsthal's t.*, *Landau's t.*, *luetin t.*, *MacDonagh's t.*, *mastic t.*, *Noguchi's t.*, *Porges and Meyer's t.*, *Porges and Solomon's t.*, *Ross's t.*, *Sachs and Georgi's t.*, *Schuerman's t.*, *Stern's t.*, *thick film t.*, *Vernes's t.*, *Wassermann's t.*, *Wells's t.* See also the following under *reaction*: *compunctive r.*, *Jarisch-Herxheimer r.*, *Klausner's r.*, *luetin r.*, *Noguchi's r.*, *Noguchi's luetin r.*, *palidim r.*, *Perutz's r.*, *Wassermann's provocative r.*

Szabo's t. (*for HCl in the stomach contents*): Add to the suspected liquid a reagent containing equal parts of a 0.5 per cent. solution of sodioferic tartrate and ammonium sulphocyanid. If HCl is present, the reagent is changed from a pale yellow to a brownish red.

tannic acid t. (*for nucleoprotein*). See *Ott's t.*

tannin t. (*for carbon monoxid hemoglobin*): Dilute the blood with 4 volumes of distilled water and add a little potassium ferricyanid to change the oxyhemoglobin into methemoglobin. Divide into two parts and thoroughly oxygenate one by shaking to decompose the carbon monoxid hemoglobin in it. Add to each part a little yellow ammonium sulphid and a little tannin solution. A bright red precipitate in the part not shaken indicates carbon monoxid hemoglobin. The methemoglobin in the other part gives a dirty, olive-green precipitate.

Tanret's t. (*for albumin*): Tanret's reagent (see *reagent*) gives a white precipitate with albumin.

Tardieu's t. (*for infanticide*): Presence of air-bubbles in gastric mucosa after establishment of fetal respiration.

Targowla's t. See *Targowla's reaction*, under *reaction*.

taurin t. See *Lang's t.*

Taylor's t.: A modification of Schönbein's test for blood, the blue precipitate forming a deep sapphire blue solution when taken up by alcohol or ether.

Teichmann's t. (*for blood*): The suspected liquid is put under a cover-glass with a crystal of sodium chlorid and a little glacial acetic acid; heat carefully without boiling and then cool. If blood is present, rhombic crystals of hemin will appear.

thalleioquin t. (*for quinin*): A neutralized solution of the suspected liquid is treated with chlorn, or bromin and then with an excess of ammonia when the green substance, thalleioquin, will be formed.

therapeutic t.: A test of a specificity of a remedy by ascertaining if it will act as a specific in some suspected cases.

thick-film t. See *Ross's t.*

thiocyanate t. See *ferric chlorid t.*, *Solera's t.*

Thomas-Binetti t.: Rapid decoloration of methylene-blue by cancer serum in the presence of cancer extracts.

Thompson's t. (*for gonorrhea*): The morning urine is placed in two glasses in order to determine whether the gonorrheal process is localized in the anterior portion of the urethra or is more general.

Thormählen's t. (*for melanin in urine*): Treat with a solution of sodium nitroprussid, potassium hydroxid, and acetic acid. If melanin is present, a deep-blue color will form.

three-glass t.: On arising in the morning the patient urinates successively into three glass receptacles labelled I, II, and III. In acute anterior urethritis the urine in I will be turbid from pus, while II and III will be clear; but in posterior urethritis the urine in all three glasses will be turbid. Blood in I only comes from the anterior urethra, but if it comes from the posterior urethra all three will contain blood. Shreds in glass III point to chronic prostatitis.

Thudichum's t. (*for creatinin*): Add to the suspected substance a dilute solution of ferric chlorid. A dark-red color, increased by warming, indicates the presence of creatinin.

thyroid t. See *thyroid sign*, under *sign*.

Tidy's t.: 1. (*For albumin in urine*.) Add equal volumes of carbolic and glacial acetic acids. Albumin will form a white precipitate. 2. (*For albumin in urine*.) Add 15 drops of alcohol and 15 drops of carbolic acid. Albumin will form a white precipitate.

Tizzoni's t. (*for iron in tissues*): Treat a section of tissue with a 2 per cent. solution of potassium ferrocyanid, and then with a 0.5 per cent. solution of HCl. The tissue will be stained a blue color if iron is present.

TNT t. See *Webster's t.*

Tollens's t.: 1. (*For aldehyd*.) Treat the suspected solution with an ammoniacal solution of silver nitrate and potassium hydroxid. If aldehyd is present, a mirror of metallic silver appears. 2. (*For glucose*.) Prepare a reagent by precipitating a silver-nitrate solution with potassium hydroxid and dissolving with ammonia. This is reduced by glucose. 3. (*For pentose*.) See *phloroglucin t.* 4. (*For conjugate glycuronates*.) To 5 c.c. of the urine add 1 c.c. of a 1 per cent. solution of naphthoresorcinol in 95 per cent. alcohol and 5 c.c. of strong hydrochloric acid. Boil and cool. An ether extract of this mixture is violet red if glycuronates are present.

Tollens, Neuberg, and Schwket's t. (*for glycuronic acid*): Extract the glycuronic acid from acidified urine with ether, add water, evaporate the ether, and make orcinol test.

tongue t. See *tongue phenomenon*, under *phenomenon*.

Töpler's t. (*for free HCl in gastric contents*): One or 2 drops of a 0.5 per cent. alcoholic solution of dimethyl-amino-azobenzene is added to a trace of the gastric contents. In the presence of free HCl a fine cherry-red color develops.

Torquay's t. (*for bile*): A small amount of the suspected liquid is added to a test-tube containing an aqueous solution of methyl-violet, 1:2000. Bile will change the blue color to red.

Trendelenburg's t.: Raise the leg above the level of the heart until the veins are empty; then lower it quickly. If the veins become distended at once varicosity and incompetence of the valves are indicated.

trichophyton t. (*for trichophyton infection*): When filtrates of the ring-worm microörganism are injected into persons who have been infected with the disease, a reaction is produced somewhat resembling the tuberculin reaction

tricrosol peroxidase t. (*for raw milk*). See *Kastle's t.*

triketohydrindene hydrate t.: Add a small amount of 1 per cent. solution of ninhydrin and boil. A blue color indicates a free carboxyl and alpha-amino group in proteins, peptones, peptids, or amino-acids.

Trommer's t. (for glucose in the urine): To 2 parts of urine 1 part of potassium or sodium hydroxid is added; a very dilute solution of copper sulphate is then added drop by drop, and then the whole is boiled. Sugar, if present, causes the precipitation of an orange-red deposit.

Trousseau's t. (for bile in urine): Tincture of iodine diluted with 10 parts of alcohol is added to urine in a test-tube. A green ring is formed where the liquids touch if bilirubin is present.

trypsin t. See *Gross's t.*

tryptophan t.: Testing of the stomach contents for the presence of tryptophan, which indicates the presence of carcinoma of the stomach. The test is performed by adding to the suspected liquid a few drops of 3 per cent. acetic acid, and then adding to this carefully, drop by drop, a few drops of bromine-water. A reddish-violet color is formed if tryptophan is present.

Tschernogowbous's t.: A modification of the Wassermann test by using the natural amboceptor and complement in the patient's serum against guinea-pig erythrocytes.

tuberculin t.: A test for the existence of tuberculosis, consisting in the subcutaneous injection of 5 mg. of tuberculin. In healthy persons it produces no appreciable effect, but in tuberculous patients it produces a moderate fever, which lasts for several hours, and also a swelling and redness in tuberculous lesions of the patient. See also *ophthalmic reaction, cuti-reaction of von Pirquet, Calmette's reaction, Morro's reaction*, under *reaction*, and *Mendel's t.*

tuberculin titer t.: A test for the hypersensitivity of the organism to tuberculin by a graduated cutaneous tuberculin test with varying concentrations of the tuberculin. Called also *Ellermann and Erlandsen's t.*

tuberculous albumin reaction t. Same as *Lessliur-Priley t.*

Tuffer's t.: In aneurysm, when the main artery and vein of a limb are compressed, swelling of the veins of the hand or foot will occur only if the collateral circulation is free.

two-glass t. (for urethritis): The patient collects his urine on rising, the first part in one glass and the second part in a separate glass. If he has anterior urethritis the first portion will be turbid and the second portion clear; if he has both anterior and posterior urethritis both portions will be turbid.

typhoidin t.: A cutaneous test for typhoid fever made by inoculating typhoid in into the skin of the forearm. A positive reaction consisting in the formation of an indurated and reddened area at the site of inoculation.

tyrosin t. See *Folin and Denis's t.*, *Hoffmann's t.*, *Moerner's t.*, *Piria's t.*

Tyson's t. (for bile acids in urine): 180 to 240 c.c. of urine are evaporated to dryness on the water-bath. The residue is extracted with absolute alcohol, and to the extract 12 to 14 volumes of ether are added. The bile acids are precipitated, then are filtered off, dissolved in water, and the aqueous solution decolorized with animal charcoal.

Udránsky's t.: 1. (*For bile acids.*) Take 1 c.c. of a solution of the suspected substance, add a drop of 0.1 per cent. solution of furfural in water, underlay with strong sulphuric acid, and cool. If bile is present, a bluish-red color is formed. 2. (*For tyrosin.*) Take 1 c.c. of the suspected substance in solution, add a drop of 0.5 per cent. aqueous solution of furfural, underlay with 1 c.c. of concentrated sulphuric acid. A pink color shows the presence of tyrosin.

Uffelmann's t. (for lactic acid in the gastric contents): To a quantity of material taken from the stomach there are added a few drops of a reagent containing 3 drops of a solution of ferric chloride, 3 drops of a concentrated solution of carbolic acid, and 20 c.c. of water. Hydrochloric acid, if present, decolorizes this solution, while lactic acid turns it yellow.

Uhlenhuth's t. See *serum t.*

Ulrich's t. (for albumin): The reagent consists of saturated solution of common salt, 98 c.c.; glacial acetic acid, 2 c.c. It must be perfectly clear. Boil a few cubic centimeters of this fluid in a test-tube, and immediately overlay with the urine. Albumin and globulin give a white ring at the zone of contact.

Ultzmann's t. (for bile-pigments): To 10 c.c. of the urine to be tested add 3 or 4 c.c. of a 1:3 solution of potassium hydroxid and an excess of HCl. Bile-pigments will cause an emerald-green coloration.

uracil t. See *Wheeler and Johnson's t.*

urea t. See *Benedict's t.*, *Bloxam's t.*, *Schroeder's t.*, *urease t.*

urea-concentration t. (for renal efficiency): A test based on the fact that urea is absorbed rapidly from the stomach into the blood, and is excreted unaltered by the kidneys: 15 gm. of urea are given with 100 c.c. of fluid, and the urine which is collected at the end of two hours is tested for urea concentration. Called also *Maclean-de Wesselow t.*

urease t.: A test for urea based on the conversion of urea into ammonium carbonate by the urease of soy bean. See *Marshall's method*, under *method*.

uric acid t. See *Bayrac's t.*, *Cole's t.*, *Denige's t.*, *Folin's t.*, *Ganassin's t.*, *Genete's t.*, *Murexid t.*, *Porter's t.*, *Salkowski and Ludwig's t.*, *Wiedel's t.*

urobilin t. See *Hildebrandt's t.*, *Schlesinger's t.*

urochromogen t. See *Moriz's t.*, *Weisz's t.*

Urriola's t.: The discovery of blood-pigment in the urine indicates the existence of malaria.

Valenta's t. (for foreign fats in butter): The butter is heated with an equal amount of glacial acetic acid and then cooled. If opacity begins to show at 96° F., there is adulteration; if opacity is not observed until about 62° F., the butter is pure.

Valsalva's t. (for pneumothorax): After a deep inspiration the mouth and nose are held tightly closed, and a strong attempt at expiration is made. This determines the possibility of the inflation of lung tissue compressed by pneumothorax.

valve t.: Auscultation of the heart while the patient lies with the legs raised obliquely and the arms lifted perpendicularly.

van Deen's t. See *Deen's t.*

van den Bergh's t.: 1. (*The direct test.*) Dilute 1 c.c. of the serum with 2 c.c. of distilled water and add 0.25–50 c.c. of freshly prepared diazo reagent (q. v. under *reagent*). A bluish-violet color beginning immediately and becoming maximal in ten to thirty seconds is called a *prompt* or *immediate direct reaction*, indicating the presence of uncombined bilirubin and therefore the existence of obstructive jaundice. A reddish coloration beginning after one to fifteen minutes and gradually deepening to a violet is called a *delayed direct reaction*, which indicates impaired liver function. A reddish color which appears at once and deepens to a violet is called a *biphasic direct reaction*. 2. (*The indirect test.*) To 0.5 c.c. of serum add 1 c.c. of 96 per cent. alcohol and centrifugize. To 1 c.c. of the clear supernatant fluid add 0.25 c.c. of the diazo reagent. A violet-red color appears at once if positive and is due to bilirubin fixed to the blood protein, pointing to hemolytic jaundice. This test can be made in a quantitative manner by determining the dilution of the serum which gives a color corresponding to a dilution of azobilirubin of 1:200,000 (one unit of bilirubin).

van der Velden's t. Same as *Maly's t.*

vanillin t. (for indol): To 5 c.c. of the culture add 5 drops of 5 per cent. vanillin solution in 95 per cent. alcohol and 2 c.c. of hydrochloric acid. Indol gives an orange color; tryptophan, a reddish-violet color.

van Slyke t. 1. (For amino-nitrogen.) Nitrous acid acting on amino-nitrogen sets free nitrogen gas which is collected and its volume determined. 2. (For urea.) Treat the sample with urease, pass the ammonia so formed into fiftieth normal acid, and titrate the excess of acid.

van Slyke and Cullen's t. See under *method*.

Vaughn and Novy's t. (for tyrotoxin): Adding 2 or 3 drops each of sulphuric and carbolic acids and a few drops of an aqueous solution of the suspected substance to tyrotoxin gives a yellow or orange-red color.

Vernes's t. (for syphilis): Direct method: A test based on the degree of flocculation produced by various blood sera on a specially prepared extract of dried horse-heart muscle, called perethenol. Indirect method: A test based on measuring the amount of flocculation produced in perethenol according to the degree of inhibition of hemolysis of sheep corpuscles by swine serum. The degree of flocculation by normal serum and that by syphilitic serum is noted during a course of time and the various readings are plotted into curves (syphilimetry). Normal sera give a horizontal line, but with syphilitic sera the curve of flocculation oscillates up and down.

Vitali's t.: 1. (For alkaloids.) Evaporate with fuming nitric acid and add a drop of potassium hydroxid, when color reactions will occur. For atropin the color is violet turning to red. 2. (For alkaloids.) Add sulphuric acid, potassium chlorate, and an alkaline sulphid. Various color-reactions will follow. 3. (For bile-pigments.) Add a few drops of potassium nitrate in solution and dilute sulphuric acid. The color reactions are green, followed by blue or red and yellow. 4. (For bile-pigments.) Add quinin bisulphate in solution and follow with ammonia, sulphuric acid, a crystal of sugar, and alcohol. A violet color results. 5. (For thymol.) Distil, and pass the vapor through a mixture of chloroform and potassium hydroxid solution. A red color results. 6. (For pus in the urine.) The urine is acidified with acetic acid and filtered. On the filter-paper thus obtained a small quantity of guaiacum is dropped. The paper will turn a dark blue if pus is present.

vitamin t. See *Fearon's t., Rosenheim-Drummond t., Shear's t.*

Vollhard's t. (for chlorids): The chlorids are precipitated by a known amount of AgNO_3 . The excess of AgNO_3 is then titrated with KCNS . See under *method*.

von Aldor's t. (for proteoses): Precipitate the urine with phosphotungstic acid, wash the precipitate with alcohol, bring into solution with potassium hydroxid, and apply the biuret test.

von Dungern's t.: 1. A complement-fixation test for the diagnosis of malignant disease. 2. A chemical serum test for syphilis, made with an alkaline indigo solution.

von Jaksch's t.: 1. (For free HCl in gastric juice.) A test-paper prepared with benzopurpurin B takes on a fine violet color if HCl is present. If present in considerable amount, it becomes dark blue. 2. (For glucose in urine.) A mixture of 3 parts of sodium acetate and 2 parts of phenylhydrazin hydrochlorate is added to the urine; warm it, and put the test-tube in hot water for half an hour. On cooling, yellow needles of phenylglucosazone are seen as a precipitate. 3. (For melanin.) Add to the suspected liquid a few drops of a solution of ferric chlorid. If melanin is present, a gray appearance is produced. After precipitation add more ferric chlorid, and the precipitate will be redissolved. 4. (For uric acid.)

Heat the powder slowly on a glass dish with a few drops of bromin-water or chlorin-water: the substance becomes red. After cooling, add ammonia, and it becomes purplish-red.

von Maschke's t. (for creatinin): To the suspected solution add a few drops of Fehling's solution, after mixing with a cold solution of sodium carbonate: an amorphous, flocculent precipitate proves the presence of creatinin.

von Pirquet's t. See *cuti-reaction of von Pirquet, under reaction*.

von Recklinghausen's t. (of heart function): A test based on the proposition that the product of the frequency of the pulse by the amplitude of the blood-pressure is equal to the amount of blood expelled by the heart in a second, divided by the distensibility of the circulatory system.

von Zeynek and Mencki's t. (for blood): Precipitate the urine with acetone, extract the precipitate with acidified acetone, and examine the colored extract under the microscope for small hemin crystals.

Voges-Proskauer t. See under *reaction*.

Vulpian t. (for adrenalin): Add a few drops of FeCl_3 solution, and a green color indicates adrenalin.

Wang's t. (quantitative test for indican): The indican is converted into indigosulphuric acid and titrated by means of a potassium permanganate solution.

Warren's t. Same as *Trommer's t.*

Wassermann's t. See *Wassermann's reaction, under reaction*.

water-gurgle t. (for stricture of the esophagus): The swallowing of water causes a peculiar gurgle, heard on auscultation.

Waterhouse pus t.: If pain in a local inflammation is increased by the application of a Bier bandage, pus is present.

Weber's t.: 1. (For ear disease.) A vibrating tuning-fork is held against the vertex. The sound is heard best by the non-affected ear if deafness is due to disease of the auditory apparatus; by the affected ear, if deafness is due to obstruction of the air-passages. 2. (For indican.) Boil 30 c.c. of suspected urine with an equal volume of hydrochloric acid containing a little nitric acid; cool it, and shake with ether: if indican is present, the ether will become red or violet and the froth will be blue. 3. (For blood.) Mix the blood with 30 per cent. acetic acid and extract with ether. To the ethereal extract add an alcoholic solution of guaiac and hydrogen peroxid. A blue color indicates blood.

Webster's t. (for T. N. T. in urine): The urine is extracted with ether, then acidified with a mineral acid, and again extracted with ether. In the latter extract the presence of the azoxy-compound formed from T. N. T. is shown by the development of a violet tint on the addition of alcoholic potash.

Weidel's t.: 1. (For uric acid.) The substance tested is treated with nitric acid, evaporated, and moistened with ammonia water: if uric acid is present, murexid will be formed, and a purple color is produced. Called also *murexid t.* 2. (For xanthin.) Warm with freshly prepared chlorin water containing a trace of nitric acid until gas ceases to be produced: contact with gaseous ammonia develops a pink or purple color. 3. (For xanthin bodies.) Dissolve in warm chlorin water, evaporate, and treat with ammonia: a pink or purple color will form, changing to violet on the addition of sodium or potassium hydroxid.

Weil's t. (for syphilis): A test for syphilis based on the fact that the erythrocytes of syphilitics are especially resistant to the hemolyzing power of cobra venom.

Weil-Felix t. See *Weil-Felix reaction, under reaction*.

Weinstein's t. Same as *tryptophan t.*

Weisz permanganate t. See *Moriz-Weisz t.*

Welland's t.: A vertical bar placed between the eyes and letters to be read shows the degree of binocular fixation.

Wender's t. (for glucose): Make a reagent by dissolving 1 part of methylene-blue in 300 parts of distilled water; alkalinize this with potassium hydroxid and heat with a suspected solution: glucose, if present, will decolorize it.

Wenzell's t. (for strychnin): Treat the suspected material with a solution of 1 part of potassium permanganate in 2000 parts of sulphuric acid: strychnin, even in very small proportion, will cause color reactions.

Weppen's t.: 1. (For morphin.) Treatment with sugar, bromin, and sulphuric acid: a red color shows the presence of morphin. 2. (For veratrin.) Add sugar and sulphuric acid: a yellow, green, or blue color is formed.

Wernicke's t.: The hemianopic pupil reaction. See under reaction.

Wetzel's t. (for carbon monoxid in blood): To the blood to be examined add 4 volumes of water and treat with 3 volumes of a 1 per cent. tannin solution. If CO is present, the blood becomes carmin-red; normal blood slowly assumes a grayish hue.

Weyl's t.: 1. (For creatinin.) To the suspected solution add a little of a dilute solution of sodium nitroprussid, and then carefully put in a few drops of a weak solution of sodium hydroxid: a ruby-red color results, changing to blue on warming with acetic acid. 2. (For nitric acid in the urine.) Distil 200 c.c. of urine with 0.2 part of sulphuric or hydrochloric acid, receiving the distillate in a potassium hydroxid solution. If metaphenyldiamin is added, a yellow color will form; if there is added pyrogallic acid in aqueous solution with a little sulphuric acid, the color will be brown; but sulphalanic acid in solution, followed in ten minutes by naphthylamin hydrochlorate, produces a red tint.

Wheeler and Johnson's t. (for uracil and cytosin): To the unknown solution add bromin-water until the color is permanent, but avoid excess. Now add an excess of barium hydroxid. A purple color indicates one of these substances.

Whipple's t's. See *fibrinogen t.*, *lipase t.*, and *phenoltetrachlorophthalin t.*

Widal's hemoclastic crisis t. See *hemoclastic crisis*, under *crisis*.

Widal's serum t. (1896). See *Gruber-Widal reaction*, under *reaction*.

Wideroe's t.: A test for the character of puncture fluids. A few drops of Millon's reagent are placed in a watch-glass, and 1 drop of the fluid to be tested is placed on the surface. A film of coagulated protein at once forms. If this film is coherent and can be lifted readily, the exudate is tuberculous; if less readily, it is inflammatory; if it breaks up so that it cannot be lifted at all, it is a transudate.

Wilbrand's prism t.: A small circle of white paper is placed upon a black surface, and the patient is seated before it with one eye bandaged. He is directed to look at the spot, and a strong prism is placed before the eye in such a way that the image of the spot is thrown upon the blind half of the retina. We notice whether the eye at once moves to find the object again, and whether the movement is reversed when the prism is withdrawn. The presence of this reaction places the lesion in the cerebrum, the absence of the reaction locates it in the tract.

Wildbolz's t. See *auto-urine t.*

Wilkinson and Peter's t. (for raw milk): Benzidine and hydrogen peroxid give a blue color in raw milk, but not in heated milk.

Williamson's blood-t.: In a narrow test-tube 40 c.mm. of water and 20 c.mm. of blood are placed; to this are added 1 c.c. of methylene-blue (1:6000) and 40 c.mm. of liquor potassae. The tube is

placed in a pot of boiling water. If the blood is from a diabetic patient, the blue soon disappears, but not otherwise.

Winkler's t.: 1. (For alkaloids.) A solution of mercuric chlorid with an excess of potassium iodid is added: alkaloids will cause a white precipitate. 2. (For free HCl in the gastric juice.) Filter the juice into a porcelain cell with a few drops of the 5 per cent. alcoholic solution of alpha-naphthol containing 1 per cent. or less of glucose. Heat carefully, and a bluish-violet zone will appear, which rapidly grows darker. 3. (For iodin.) Sodium nitrate is mixed with a starch-paste: iodin gives a blue color with it.

Winslow's t. Test for respiration in doubtful death by observing a vessel of water placed at the bottom of the chest.

Winternitz's t. Same as *iodipin t.*

Witz's t. (for hydrochloric acid in the gastric juice): A 1:48 aqueous solution of methyl-violet causes a violet color, changing to blue and then green.

Wohlgemuth's t. (for renal inadequacy): The urine is mixed with a solution of soluble starch, 1:1000, and is incubated to permit digestive reaction. The fluid is then tested with iodine to determine the amount of starch hydrolysis. The test is based on the fact that the normal kidney tissue secretes a diastatic enzyme which is diminished in proportion as the kidney parenchyma is diseased.

Wolff-Eisner t. Same as *Calmette reaction*, under *reaction*.

Wolff-Junghans t. (for gastric cancer): Quantitative estimation of the soluble albumin in the gastric extracts after giving a test-meal; marked increase of dissolved albumin indicating malignant disease.

Woodbury's t. (for alcohol in the urine): To 2 c.c. of urine 1 c.c. of sulphuric acid is added, and a crystal of potassium dichromate: a green color will soon form.

Wormley's t. (for alkaloids): 1. Made by treating with an alcoholic solution of picric acid, when a yellow precipitate will be formed. 2. Made by treating with a solution of 1 part of iodine and 2 parts of potassium iodide in 60 parts of water: a colored precipitate will be formed.

Worm-Müller t. (for glucose in the urine): A test made by boiling in a test-tube $\frac{1}{2}$ c.c. of a 2.5 per cent. solution of copper sulphate and 2.5 c.c. of a solution of sodic potassium hydroxid. Boil each and mix, and a yellowish or red precipitate will be formed.

Wreden's t.: Test for death of the fetus by the presence of gelatinous substance in the middle ear, which can only be expelled on establishment of full respiration; never found in a child which has lived for twenty-four hours.

Wurster's t.: 1. (For hydrogen dioxide.) Test-paper is saturated with the solution of tetramethylparaphenyldiamin: hydrogen dioxide turns it to a blue-violet color. 2. (For tyrosin.) The suspected material is dissolved in boiling water and a little quinon: a ruby-red color will form, changing slowly to brown.

Wys's t. See *iodine number*, under *number*.

xanthin t. Same as *Hoppe-Seyler t.*

xanthoproteic t. Same as *Mulder's t.*

xylin t. Same as *Schiff's t.*

Yakimoff's t.: Atoxyl is warmed in a test-tube; the slightest yellowish discoloration indicates the presence of dangerous impurities.

Yefimov's t. (for worms in urine): 1. From 5 to 10 c.c. of urine are treated with 5 or 10 drops of a solution of mercuric nitrate. If the precipitate formed is grayish or dirty, the patient has intestinal worms. 2. The crystals formed by evaporating a drop of urine are examined under the micro-

scope. Granular crystals indicate the presence of cestodes; wax-like ones show the presence of nematodes.

Yvon's t. 1. (*For acetanilid in urine*.) Extract it with chloroform and heat the residue with mercurous nitrate, when a green color will form. 2. (*For alkaloids*.) Add a solution of 3 gm. of bis-muth subnitrate, made by boiling in 40 c.c. of water, to which are added 14 gm. of potassium iodid and 40 drops of hydrochloric acid: a red color will show the presence of an alkaloid.

Zaleski's t. (*for carbon monoxid in blood*): To 2 c.c. of blood add an equal volume of water and 3 drops of a one-third saturated solution of copper sulphate: if carbon monoxid is present, a brick-red deposit is thrown down; otherwise the precipitate is greenish brown.

Zeisel's t. (*for colchicin*): Dissolve in hydrochloric acid, boil with ferric chlorid, and shake with chloroform: a brown or dark-red layer will form at the bottom.

Zeller's t. (*for melanin in urine*): Add bromin-

water: a yellow precipitate will form, which changes slowly to black.

Zenoni's t.: Sputum is mixed with alcohol and stained with aqueous solution of safranin, when the mucin is colored yellow and the albumin red.

Ziehen's t. (*for mental disease*): The patient is requested to explain the difference between such contrasted objects as ice and water, cat and dog, etc.

Zouchlos's t. (*for albumin in the urine*): 1. Precipitate it with a mixture of 1 part of acetic acid and 6 parts of a 10 per cent. solution of mercuric chlorid. 2. Prepare a reagent with 100 parts of a 10 per cent. solution of potassium sulphocyanid and 20 parts of acetic acid: drop it slowly into the urine until the albumin appears as a white cloudiness. 3. Add equal parts of succinic acid and potassium sulphocyanid: albumin, if present, will be precipitated.

Zsigmondy's gold number t. Same as *Lange's t.* (1).

Zwenger's t. Same as *Liebermann's t.*

testa (tes'tah) [L.]. A shell; oyster-shell. **t. o'vi**, egg-shell. **t. prapara'ta**, oyster-shell powdered and washed.

testaceous (tes-ta'she-us) [L. *tes'ta* shell]. Of the nature of shell; having a shell.

testacoids (tes'tak-oidz) A proprietary preparation of testicular hormones for use in male sex dysfunction.

testaden (tes'tad-en) [L. *tes'tis* testicle + Gr. *ἀδὴν* gland]. A therapeutic preparation of the testes of bulls: used in diseases of the nerves and spinal cord. Daily dose, 90-120 gr. (6-8 gm.).

test-breakfast (test-bre'k'fast). See *test-meal*.

testectomy (tes-tek'to-me) [L. *tes'tis* testicle + Gr. *ἐκτομή* excision]. Removal of a testicle; castration.

testes (tes'tēz) [L.]. 1. Plural of *tes'tis* testicle. See *testicle*. 2. The posterior tubercles of the corpus quadrigeminum.

testibrachial (tes-tib-ra'ke-al). Pertaining to the testibrachium.

testibrachium (tes-tib-ra'ke-um) [L. *tes'tis* testicle + *bra'chium* arm]. The superior crus, or peduncle, of the cerebellum; the prepuduncle.

testicle (tes'tik-l) [L. *testic'ulus*]. Either one of the two glands which produce semen. It is an ovoid body, suspended in the scrotum from its posterior edge by the spermatic cord. It is inclosed in three tunics—the *tunica vaginalis*, a serous sac, derived from the peritoneum and consisting of two layers, a *visceral* and a *parietal* layer; the *tunica albuginea*, a strong fibrous tunic; and the *tunica vasculosa* (or *pia mater testis*), composed chiefly of blood-vessels held together by areolar tissue. This latter lines the *tunica albuginea* and the various septa within the testicle. The posterior border of the *tunica albuginea* is reflected into the interior of the gland, forming an incomplete septum, the *mediastinum testis*, or *corpus highmorianum*, from which numerous septa are given off, dividing the interior of the testicle into cone-shaped spaces. The spaces contain the lobules (*lobuli testis*), which consist of one or more convoluted tubes (*seminiferous tubules*), which by their union form larger tubules (*tubuli recti* or *straight tubules*). The tubuli recti enter the mediastinum, there forming the *rete testis*, from which spring 12 to 20 efferent tubes (*vasa efferentia*). These penetrate the *tunica albuginea* and form on top of the testicle the head of the epididymis, in which the convoluted ducts are coiled in the form of conic masses (*coni vasculosi*). They empty into a single convoluted tube (*tube of the epididymis*), which is continued into the vas deferens. The testicle is contained in the abdomen

up to about the eighth month of fetal life, at which time it descends through the inguinal canal into the scrotum. **Cooper's irritable t.**, a testicle affected with neuralgia. **inverted t.**, a testicle whose position in the scrotum is reversed, the epididymis being attached to the anterior instead of the posterior surface. **pulpy t.**, a testicle affected with medullary sarcoma. **retained t.** Same as *undescended t.* **undescended t.**, the state in which the testicle fails to descend into the scrotum, but remains in the inguinal canal.

testicond (tes'tik-ond) [L. *tes'tis* testicle + *condere* to hide]. Having undescended testicles.

testicular (tes-tik'u-lar). Pertaining to a testis. **t. juice**. See *spermin*.

testiculin (tes-tik'u-lin). A preparation of the testicles of animals: used as a remedial agent.

testidin (tes'tid-in). An alcoholic fluidextract of the testicles of bulls.

testiodyl (tes-te-i'o-dil). A combination of iodine with the albumin of coagulated blood: used like alkali iodids.

testin, testine (tes'tin, -tīn) [L. *tes'tis* testicle]. A sterilized extract of the testicles of rams: used for neurasthenia, impotence, etc. See *spermin*.

testis (tes'tis), pl. *tes'tes* [L.]. 1. A testicle. 2. Either posterior tubercle of the corpus quadrigeminum; a postopticus. **t. cer'e'brī**, either of the corpora quadrigemina. **t. fœmin'e'us**, an ovary. **t. mul'ie'bris**, an ovary. **t. re'dux**, a testicle which tends to be drawn to the upper part of the scrotum.

testitis (tes-tī'tis). Same as *orchitis*.

testitoxico'sis (tes'te-tok-sik-o'sis) [*testicli* + Gr. *τόξον* poison]. A condition of intoxication which sometimes follows double ligation of the vas deferens.

test-meal (test-mēl). A meal which, after a certain interval, is withdrawn from the stomach, its condition furnishing a guide to the digestive power of the stomach. **Boas's t.-m.** is a tablespoonful of oatmeal in a quart of water, boiled down to a pint. **Dock's t.-m.**, the same as Ewald's except that one shredded wheat biscuit is substituted for the rolls or bread. **Ewald's t.-m.** consists of 2 rolls or slices of dry bread and 9 to 12 ounces of water. **Fischer's t.-m.**, Ewald's test-meal to which is added $\frac{1}{2}$ pound of finely chopped, lean Hamburger steak, broiled and slightly seasoned. **Leube-Riegel t.-m.**, 12 ounces of soup, 4 ounces of minced steak, 2 ounces of white bread, 6 ounces of water.

test-object. An object used for testing the defining power of a microscope.

testogan (tes'to-gan). A trade name for the mixed extracts of certain glands of internal secretion.

test-paper. Paper impregnated with litmus or other reagent: used in testing the acid or alkaline reaction of a fluid.

test-solution. A solution of some reagent used in testing for the presence of some substance.

test-tube. A tube of thin glass closed at one end: used for observing chemic reactions or the growth of bacterial cultures.

test-types. Black letters or words printed upon a card: used for testing the acuity of vision. **Jaeger's t.-t's**, lines of type of various sizes on a card for testing near vision.

tetania (te-ta'ne-ah) [L.]. Tetany. **t. gravis** -**rum**, tetany in pregnant women. **t. parathyriopri'a**, tetany caused by removal of the parathyroids.

tetanic (te-tan'ik) [Gr. *τετανικός*]. 1. Pertaining to or of the nature of tetanus. 2. Producing tetanus.

tetaniform (tet-an'if-orm) [*tetanus* + L. *for'ma* shape]. Like or resembling tetanus.

tetanigenous (tet-an-ij'en-us) [Gr. *τέτανος* tetanus + *γεννᾶν* to produce]. Producing tetanus or tetanic spasms.

tetanilla (tet-an-il'ah). 1. A form of tetany without rigidity, but attended by mental changes. 2. *Paramyoclonus multiplex*.

tetaniin (tet'an-in) [Gr. *τέτανος* tetanus]. A poisonous ptomain, $C_{13}H_{30}N_2O_6$, from cultures of the bacillus of tetanus, and from the tissues of tetanus patients. It produces paralysis, tetanic convulsions, and death. See *ptomaines*, table of.

tetanism (tet'an-izm). A form of more or less continuous muscular hypertonicity sometimes seen in young infants; a series of clinical conditions resembling those of tetanus, but dependent on infection with an organism other than the *Clostridium tetani*.

tetanization (tet'an-iz-a'shun). The induction of tetanic convulsions or symptoms.

tetanize (tet'an-iz). To throw into a state or condition of tetanus or continuous spasm; to induce tetanoid movements in an organism or a muscle.

tetanocannabin (tet'an-o-kan'ab-in). A poisonous principle sometimes found in hemp: it resembles strychnin in its action.

tetanode (tet'an-öd). A term applied to the unexcited stage of tetany.

tetanoid (tet'an-oid) [Gr. *τέτανος* tetanus + *εἶδος* form]. Like or resembling tetanus.

tetanolysin (tet-an-ol'is-in) [*tetanus* + *lysin*]. A specific poison or hemolysin derivable from the tetanus toxin.

tetanometer (tet-an-om'et-er) [*tetanus* + Gr. *μέτρον* measure]. An apparatus for measurement and analysis of tetanus.

tetanomotor (tet'an-o-mo'tor) [*tetanus* + L. *mo'tor* mover]. A device for the mechanic production of tetanic motor spasm.

tetanophil, **tetanophilic** (tet'an-o-fil, tet-an-o-fil'ik) [*tetanus* + Gr. *φιλεῖν* to love]. Having an affinity for the toxin of tetanus.

tetanospasmin (tet'an-o-spaz'min). A specific neurotoxic poison derivable from the toxin of tetanus.

tetanotoxin (tet'an-o-toks'in) [*tetanus* + *toxin*]. A poisonous ptomain, $C_5H_{11}N$, from cultures of the bacillus of tetanus. See *ptomaines*, table of.

tetanus (tet'an-us) [Gr. *τέτανος*, from *τείνειν* to stretch]. 1. Lock-jaw; an acute infectious disease caused by a toxin elaborated by the *Clostridium tetani*, in which there is more or less persistent tonic spasm of some of the voluntary muscles. Tetanus usually begins gradually, but may begin suddenly; it may be of brief duration or it

may last for some weeks. The first sign is stiffness of the jaw and esophageal muscles and some of the muscles of the neck. Soon the jaws become rigidly fixed (*trismus*, or *lock-jaw*), the voice is altered, the muscles of the face contract, producing a wild, excited expression, a compound of bitter laughter and crying (the *risus sardonius*). The muscles of the back, extremities, and penis become tetanic. If the patient is bent back in a bow, the condition is termed *opisthotonos*; if he is bent to the side, *pleurothotonos*; if he is bent forward, *emprothotonos*. The paroxysms are reflex, and are excited by noises, currents of air, and even the irritation of the bed-clothes. The temperature usually rises, and may attain a remarkable height (113° F.), and continues to rise for a time after death. The pain is great, the patient also suffering from hunger, thirst, and want of sleep. The mind is clear. This disease is usually, but not always, fatal, the patient expiring from asphyxia or exhaustion. 2. Continuous tonic spasm of a muscle; steady contraction of a muscle without distinct twitching. **acoustic t.**, a series of induction shocks in a frog's nerve and muscle preparation: the speed is measured by the pitch of a vibrant rod. **acute t.** See under *tetanus*. **t. anticus**, tetanus in which the body is bowed forward. See under *tetanus*. **t. antitoxin**. See under *antitoxin*. **apyretic t.**, tetany. **artificial t.**, that which is produced by a drug like strychnin or by implantation. **t. bacillus**. See *Clostridium tetani*. **cephalic t.**, a form which results most frequently from wounds of the head and in which the infection seems to be confined to the head. **cerebral t.**, a form of tetanus produced by inoculating the brain of animals with tetanus antitoxin. It is attended by epileptiform convulsions and excitement. **chronic t.**, a form seen in man in which the onset is later, the progress of the disease is slower, and the prognosis more favorable than in the acute form. **cryptogenic t.**, tetanus which occurs without any wound or other ascertainable cause. **t. dorsalis**, **t. posticus**, tetanus in which the body is bent backward. See under *tetanus*. **drug t.**, toxic spasm produced by some tetanic drug. **extensor t.**, that which affects especially the extensors. **flexor t.**, tonic spasm of flexor muscles. **head-t.** Same as *Kopf-t.* **hydrophobic t.** See *Kopf-t.* **idiopathic t.**, that which does not follow a lesion. **imitative t.**, hysteria which simulates tetanus. **impf-t.**, inoculated tetanus: cultures from it afford a special form of pathogenic bacillus. **t. infantum**. See *trismus neonatorum*. **inoculation t.**, experimental tetanus produced by inoculation with a culture of the *Bacillus tetani*. **intermittent t.**, tetany. **Kopf-t.**, tetanus due to a wound of the head, especially one near the eyebrow: it is marked by trismus, facial paralysis on one side, and pronounced dysphagia; the symptoms resemble those of rabies: it is often fatal. Called also *head-t.*, *hydrophobic t.* **t. lateralis**, tetanus in which the body is bent sideways. See under *tetanus*. **localized t.**, tetanic spasm of a single part. **modified t.**, localized tetany. **t. neonatorum**, tetanus of very young infants, usually due to the infection of the umbilicus. **t. paradoxus**, cephalic tetanus in which trismus is combined with paralysis of the facial or other cranial nerve. **partial t.**, tetany. **postoperative t.**, that which follows an operation. **postserum t.**, tetanus developing even after the administration of tetanus serum. **puerperal t.**, that which occurs in childbed. **rheumatic t.**, that which is due to exposure to cold and wet. **Ritter's t.**, tetanic contractions taking place at the opening of a constant current which has been passing for some time along a nerve: seen in tetany. **Rose's t.** Same as *Kopf-t.* **splanchnic t.**, a form in which the muscles of deglutition and of respiration are severely involved and in which there is severe dysphagia. **toxic t.**, that produced by an overdose of nux vomica or strychnin.

t. toxin. See under *toxin*. **traumatic t.,** that which follows wound poisoning. **uterine t.** Same as *puerperal t.*

tetany (tet'an-e). 1. A disease characterized by painful tonic and symmetric spasm of the muscles of the extremities. It occurs after typhoid fever, diarrhea, exposure to cold, rickets, and excision of the parathyroids. It is supposed to be due to a toxic agent; it may continue for several weeks, but usually ends in recovery. 2. Tetanus (2). **duration-t.,** a continuous tetanic contraction in response to a very strong continuous current: it occurs especially in degenerated muscles; symbol, DT. **epidemic t.** See *rheumatic t.* **gastric t.,** a severe form due to disease of the stomach, attended by difficult respiration and painful tonic spasms of the extremities. **parathyreoprival t.,** tetany due to removal of the parathyroids. **rheumatic t.,** an acute epidemic disease, not uncommon in Europe, lasting two or three weeks, and seldom fatal. Called also *epidemic t.* **thyreoprival t.,** a form due to suspension of the function of the thyroid gland.

tetarcone (tet'ar-kōn). Same as *tetartocone*.

tetartanopia, tetartanopsis (tet'ar-tan-o'pe-ah, -op'se-ah) [Gr. *tetartos* fourth + *an* neg. + *ōp* eye or *ōp* vision]. Absence of vision in a corresponding quadrant of each field.

tetartocone (tet-ar'to-kōn) [Gr. *tetartos* fourth + *cone*]. The posterior internal cusp of an upper premolar tooth.

tetartocoonid (tet-ar-to-ko'noid). The posterior internal cusp of a lower premolar tooth.

tethelin (teth'el-in) [Gr. *τῆλιν* flourishing]. A water-soluble phospholipin obtained from the anterior lobe of the pituitary body, which on hydrolysis yields inositol, which accelerates the growth process, and which prolongs the life span (T. Brailsford Robertson). It is employed to accelerate repair in slowly healing wounds.

tetmil (tet'mil). Ten millimeters taken as a unit of measurement.

tetra-. A Greek prefix signifying *four*.

tetra-allyl-ammonium alum. An alum, $N(C_3H_5)_4Al_2(SO_4)_3 \cdot 12H_2O$; a uric acid solvent.

tetra-amlyose (tet-rah-am'il-ōs). An anhydrid compound obtained from dextrin. It is a polymerized form of diamylose, $[(C_6H_{10}O_5)_2]$.

tetrabasic (tet-rah-ba'sik) [Gr. *tētra* four + *basis* base]. Containing four atoms of replaceable hydrogen.

tetrablastic (tet-rah-blas'tik). Having four germ layers.

tetrabrachius (tet-rah-bra'ke-us) [Gr. *tētra* four + *βραχίων* arm]. A monster-fetus having four arms.

tetrabromfluorescein (tet-rah-brōm'flu-o-res'e-in). Eosin.

tetrabromophenolphthalein (tet'rah-brōm-o-fe'nol-thal'e-in). An indicator, $C_8H_4 \cdot CO \cdot O \cdot C \cdot (C_6H_4Br_2OH)_2$, which is colorless with acids and violet with alkalis.

tetrabromophthalein sodium (tet'ra-bro-mo-thal'e-in). The sodium salt of tetrabromophenolphthalein: used for roentgenologic examination of the gall-bladder, in which organ it appears after intravenous injection.

tetracetate (tet-ras'et-āt) [Gr. *tētra* four + *acetate*]. A compound of a base with four acetic acid molecules.

Tetrachilomastix (tet'ra-ki-lo-mas'tix). A flagellate protozoan sometimes found in the intestinal tract of man. **T. bengalensis**, a form found commonly in India associated with chronic intestinal complaints. **T. intestinalis**, a coprozoic, flagellate organism sometimes found in human feces. It is pyriform in shape, has four anterior flagella, and can be cultivated.

tetrachirus (tet-rah-ki'rus) [Gr. *tētra* four + *χελ* hand]. A monster-fetus having four hands.

tetrachlorethane (tet'rah-klor-eth'an). Acetylene tetrachloride, $CHCl_2 \cdot CHCl_2$, formed by the action of chlorine on acetylene.

tetrachlorethylene (tet'rah-klor-eth'il-ēn). An anthelmintic drug, C_2Cl_4 .

tetrachlorid (tet-rah-klo'rid) [Gr. *tētra* four + *chlorid*]. A chlorid in which the radical combines with four atoms of chlorine.

tetrachlormethane (tet'rah-klor-meth'an). Carbon tetrachloride, CCl_4 .

tetrachrome stain (tet'rah-krōm). See under *staining methods*.

tetrachromic (tet-rah-kro'mik) [Gr. *tētra* four + *χρῶμα* color]. Able to distinguish only four colors.

tetracid (tet'ras-id). Capable of replacing four atoms of hydrogen in an acid; or having four atoms of hydrogen replaceable by acid radicals.

Tetracoccus (tet-rah-kok'us) [Gr. *tētra* four + *κόκκος* berry]. A genus or form of microphytes made up of a tetrad or of tetrads of cells. **T. intracellularis**, a pathogenic form believed to be the specific cause of epidemic cerebrospinal meningitis.

tetracrotic (tet-rah-krot'ik) [Gr. *tētra* four + *κρότος* beat]. Same as *catatracrotic*.

tetrad (tet'rad) [Gr. *τετράς* quadrant]. 1. Any element having a valence, or combining power, of four: used also adjectively. 2. A group of four similar bodies. 3. A square of cells produced by the division into two planes of certain cocci: if of four cells, it is a tetrad of the first power; if of sixteen cells, it is of the second power.

tetra-ethyl-ammonium hydroxid (tet'rah-eth'il-am-o-ne-um). A bitter agent, $N(C_2H_5)_4OH$, in colorless, deliquescent, hair-like needles. It is a solvent of uric acid and urea. Dose of the 10 per cent. solution, 10-20 min. (0.666-1.25 c.c.).

tetra-ethyl lead (tet'rah-eth-il-led). An organic lead compound, $Pb(C_2H_5)_4$, used as an antiknock agent in internal combustion motors. It is highly poisonous, and because of the mental symptoms produced it is known as "looney gas." It can be absorbed through the skin and has caused several deaths among those handling it. It is added to the gasoline in small amount (1 part in 10,000), but the lead comes out with the exhaust, and may under some conditions be harmful.

tetragenic (tet-raj-en'ik). Produced by the *Micrococcus tetra* genus.

tetragenous (tet-raj'en-us) [Gr. *tētra* four + *γενῶν* to produce]. Giving rise to bacterial tetrads; splitting into groups of four: said of bacteria.

tetragonum (tet-rag-o-num) [L.; Gr. *τετράγωνον*]. A square or quadrant; a quadrangular area or space. **t. lumbale**, the quadrangular space bounded by the four lumbar muscles—by the serratus posticus inferior above, the internal oblique below, the sacrospinalis internally, and the external oblique externally.

tetragonus (tet-rah-go'us). The platysma muscle, **tetrahedron chest** (tet-rah-he'dron). See under *chest*.

tetrahydric (tet-rah-hi'drik) [Gr. *tētra* four + *hydrogen*]. Containing four atoms of replaceable hydrogen: said of an acid or alcohol.

tetrahydrobetanaphthylamin. See *thermin*.

tetrahydropalmatin (tet'rah-hi-dro-pal'mat-in). A crystalline alkaloid, $C_{21}H_{25}NO_4$, from the roots of *Corydalis tuberosa*.

tetrahydroparaquinanisol. Thallin sulphate.

tetraiodoethylene (tet-rah-i'yo-do-eth'il-ēn). See *diiodoform*.

tetraiodophenolphthalein (tet'rah-i'o-do-fe-nol-thal'e-in). A dye, $C_8H_4 \cdot CO \cdot O \cdot C \cdot (C_6H_4I_2OH)_2$, which after intravenous injection is excreted in the

- bile in sufficient amount to make possible x-ray pictures of the gall-bladder. Dose, 0.04-0.045 gm. per kilo of body weight made up to 10 per cent. solution for intravenous injection or 3.5 gm. in salol-coated pills by mouth.
- tetraiiodopyrrol** (tet-rah-i'ō-do-pir'ol). See *iodol*.
- tetramastia** (tet-rah-mas'te-ah). Tetramazia.
- tetramastigote** (tet-rah-mas'tig-ōt) [Gr. *τέτρα* four + *μαστιξ* lash]. Having four flagella.
- tetramazia** (tet-rah-ma'ze-ah) [Gr. *τέτρα* four + *μαζή* breast]. The condition of having four mammary glands.
- tetrameric, tetramerous** (tet-rah-mer'ik, tet-rah-mer-us) [Gr. *τέτρα* four + *μέρος* part]. Having four parts.
- tetramethyl** (tet-rah-meth'il). A name for chemic compounds each molecule of which contains four methyl groups.
- tetra-methyl-ammonium hydroxid.** $N(CH_3)_4OH$; has been used in rheumatism.
- tetramethylbenzene** (tet'rah-met-hil-ben'zēn). Durol.
- tetramethylendiamin** (tet-rah-meth'il-ēn-dī'am-in). Putrescin.
- tetramethylputrescin** (tet'rah-meth'il-pu-tres'in). An extremely poisonous crystalline base, $N(CH_3)_2(CH_2)_4N(CH_3)_2$, derivable from putrescin. It produces symptoms like those of muscarin poisoning.
- tetramitiasis** (tet'rah-mit-i'as-is). Infestation with *Tetramitus*.
- Tetramitis mesnili**. See *Chilomastix mesnili*.
- tetramylose** (tet-rah-mil'ōs). One of the structural elements of starch; it consists of two bisamylose units.
- tetranitrol** (tet-rah-ni'trol). Same as *nitro-erythrol*.
- tetranophthalmos** (tet'ran-of-thal'mos) [Gr. *τέτρα* four + *ὄφθαλμός* eye]. A monster-fetus having four eyes.
- tetranopsia** (tet-rah-nop'se-ah) [Gr. *τέτρα* four + *ὄψις* vision]. A disordered state of vision in which there is obliteration of one-fourth of the visual field.
- Tetranthera** (tet-rah-n'the-rah). See *maidolokri*.
- tetranucleotid** (tet-rah-nu'klo-o-tid). Nucleic acid.
- tetranucleotidase** (tet'rah-nu-kle-ot'id-ās). An enzyme that splits nucleic acid into nucleotids.
- Tetranychus** (tet-rah-n'ik-us). A genus of acarids.
- T. autumnalis**, the harvest-bug, whose mite, *Leptus autumnalis*, burrows under the skin, producing severe itching. Called also *Trombidium autumnale*. **T. molestissimus**, an acarid attacking man and causing severe itching. **T. tealsahu** ate, a Mexican mite which attacks man.
- tetraotus, tetrotus** (tet-rah-o'tus, tet-ro'tus) [Gr. *τετράωτος* four-eared]. A monster-fetus with two nearly separate heads, two faces, four eyes, and four ears.
- tetraplégia** (tet-rah-ple'je-ah) [Gr. *τέτρα* four + *πλῆγη* stroke]. Paralysis of all four extremities.
- tetraploid** (tet'rap-loid). See *polyplaid*.
- tetrapus** (tet'rah-pus) [Gr. *τέτρα* four + *πούς* foot]. A monster-fetus having four feet.
- tetrasaccharid** (tet-rah-sak'ar-id). A carbohydrate containing four (hypothetical) saccharid groups, $C_{24}H_{42}O_{21}$.
- tetrascelus** (tet-ras'el-us) [Gr. *τέτρα* four + *σκέλος* leg]. A monster-fetus having four legs.
- tetrastichic** (tet-rah-skis'tik) [Gr. *τέτρα* four + *στίχος* division]. Divided into four elements by fission.
- tetraster** (tet-ras'ter) [Gr. *τέτρα* four + *ἀστήρ* star]. A figure in karyokinesis produced by the quadruple division of the nucleus.
- tetrastichiasis** (tet'ras-tik-i'as-is) [Gr. *τέτρα* four
- + *στίχος* row]. A condition in which there are four rows of eyelashes.
- Tetrastoma** (tet-ras'to-mah) [Gr. *τέτρα* four + *στόμα* mouth]. A genus of trematodes sometimes found in the urine.
- tetratomic** (tet-rat-on'ik) [Gr. *τέτρα* four + *ἄτομον* atom]. 1. Consisting of four atoms. 2. Having four replaceable atoms.
- Tetratrichomonas buccalis**. Same as *Trichomonas buccalis*.
- tetravaccine** (tet-rav-ak'sin) [Gr. *τέτρα* four + *vacine*]. A vaccine containing dead cultures of the bacteria of typhoid, paratyphoid A, paratyphoid B, and cholera.
- tetravalent** (tet-rav'al-ent). Same as *quadrivalent*.
- tetrelle** (tet-rel'). An apparatus for feeding mother's milk to weakly infants. The suction is applied by the mother through one tube, the milk flowing to the infant's mouth through another tube.
- tetrodonin** (tet-ro-don'ia). A poisonous crystalline body from the roe of fishes of the genus *Tetrodon*.
- tetrodotoxin** (tet-ro-do-tok'sin). A toxic substance isolated by Tahara from the ovaries of the fish *Tetrodon*.
- teronal** (tet-ro-nal). Diethylsulphondiethylmethane, $(C_2H_5)_2C(SO_2C_2H_5)_2$, occurring in the form of colorless scales. It is hypnotic. Dose, 10-20 gr. (0.66-1.33 gm.).
- teronerythrin** (tet-ron-er'ith-rin). A pigment from certain birds' feathers, mullets, and many invertebrates.
- tetrophthalmos** (tet-rof-thal'mos) [Gr. *τέτρα* four + *ὄφθαλμός* eye]. A double-faced monster-fetus with two ears and four eyes.
- tetrose** (tet'rōs) [Gr. *τέτρα* four]. A sugar the molecule of which contains four atoms of carbon.
- tetrotus** (tet-ro'tus) [Gr. *τέτρα* four + *οὖς* ear]. See *tetraotus*.
- tetroxid** (tet-roks'id) [Gr. *τέτρα* four + *oxid*]. A compound of a radical with four oxygen atoms.
- tetryl** (tet'ril). An organic compound, tetra-nitromethyl-anilin, $(NO_2)_3C_6H_4N(NO)_2CH_3$, which may cause an industrial dermatitis.
- tetryl-dermatitis**. An occupation eruption caused by working with tetryl (tetra-nitromethyl-anilin).
- tetter** (tet'er). 1. A popular name for various skin diseases. 2. A skin disease of animals communicable to man, and characterized by intense itching. **blister-t.**, pemphigus. **brwny t.**, seborrhoea capitis. **crusted t.**, impetigo. **dry t.**, squamous or dry eczema. **eating t.**, lupus. **honeycomb t.**, favus. **humid t.**, moist t., eczema. **milky t.**, crusta lactea. **scaly t.**, psoriasis and squamous eczema.
- tety** (te'te). A disease of Madagascar marked by a pustular or scaly eruption about the nose and mouth.
- teucin** (tu'krin). 1. A crystalline glucosid, $C_{21}H_{24}O_{11}$, from *Teucrium fruticosum*, a labiate plant called germander. It is employed in the treatment of tuberculosis. Hypodermic dose, 10-45 gr. (0.666-3 gm.). 2. A sterilized fluidextract of *Teucrium scorodium*, or water-germander; highly commended for the local and hypodermic treatment of lupus and tuberculous abscess.
- Teucrium** (tu'kre-um) [Gr. *τεύκριον*]. A genus of labiate plants called germander. Several old-world species are medicinal, especially those mentioned under *teucin*.
- teutlose** (tūt'lōs) [Gr. *τεῦλον* beet]. A kind of sugar found in beet-root.
- tewfikose** (tu'fik-ōs). A sugar occurring in the milk of the Egyptian buffalo, *Bos bubalus*.
- Texas fever** (teks'as). See under *fever*.
- texis** (teks'is) [L.; Gr. *τέξις*]. Childbirth.

textiform (teks'tif-orm) [L. *textifor'mis*; *tex'tum* web + *for'ma* form]. Formed like a network, tissue, or web.

textoblastic (teks-to-blas'tik) [*tex'tum* tissue + Gr. *βλάστος* germ]. Forming adult tissue; regenerative: said of cells.

textoma (teks-to'mah) [L. *tex'tum* tissue + Gr. *-oma* tumor]. A tumor composed of completely differentiated tissue-cells.

textometer (teks-to-me'ter) [L. *tex'tum* tissue + Gr. *μήτρῃς* mother]. Protoplasm regarded as the mother of tissues; liquor sanguinis.

textural (teks-tu-ral). Pertaining to the texture, or constitution, of the tissues.

texture (teks'tür) [L. *textu'ra*]. 1. Any of the organized tissues or substances of the body. 2. The arrangement of the elementary parts of the body.

textus (teks'tus) [L.]. A tissue.

T. F. See *tuberculin filtrate*.

tfol (tfol). A wax-like, soapy earth from Algeria: 20 parts mixed with 100 parts of heavy tar oil form an antiseptic paste for use in skin diseases.

TGL. A symbol for a globin contained in a solution of tubercle bacilli in a 10 per cent. salt solution.

Th. Chemical symbol of *thorium*.

thalamencephal (thal'am-en-sef'al). See *thalamencephalon*.

thalamencephalic (thal'am-en-sef'al'ik). Pertaining to the thalamencephalon.

thalamencephalon (thal'am-en-sef'al-on) [*thalamus* + *encephalon*]. The interbrain; one of the embryonic structures produced from the posterior part of the anterior cerebral vesicle, and developing into the part of the brain about the third ventricle, such as the optic tracts, the thalami, the infundibulum, the corpora albicantia, the conarium, and other parts. Called also *diencephalon* and *ween-brain*.

thalami (thal'am-i) [L.]. The genitive singular and nominative plural of *thalamus*.

thalamic (thal'am'ik). Pertaining to the thalamus.

thalamocoele, thalamocœle (thal'am-o-sēl, thal'am-o-se'le) [Gr. *θάλαμος* chamber + *κοίλα* hollow]. The third ventricle of the brain.

thalamocortical (thal'am-o-kor'tik-al). Pertaining to the thalamus and cortex.

thalamocrural (thal'am-o-kru'ral). Pertaining to an optic thalamus and a crus cerebri.

thalamolenticular (thal'am-o-len-tik'u-lar). Pertaining to the thalamus opticus and to the lenticular nucleus.

thalamomammillary (thal'am-o-mam'il-a-re). Pertaining to the thalamus and mammillary bodies.

thalamopeduncular (thal'am-o-pe-dunk'u-lar). Thalamocrural.

thalamotegmental (thal'am-o-teg-men'tal). Pertaining to the thalamus and tegmentum.

thalamus (thal'am-us) [L.; Gr. *θάλαμος* chamber]. [B N A]. A mass of gray matter at the base of the brain projecting into and bounding the third ventricle. The internal capsule separates it from the lenticular nucleus, and radiating fibers connect it with the cortex. It is made up of an anterior, lateral, and inner nucleus, and the pulvinar. Called also *optic thalamus* and *thalamus nervi optici*. **new t.** See *neothalamus*. **old t.** See *palæothalamus*.

thalassin (thal-as'in) [Gr. *θάλασσα* sea]. A principle derived along with congeatin from *Anem'one scutell'rus*. It produces irritation of the skin and mucous membranes.

thalassophobia (thal'as-o-fō-be-ah) [Gr. *θάλασσα* sea + *φόβος* fear]. Morbid dread or fear of the sea.

thalassotherapy (thal'as-o-ther'ap-e) [Gr. *θάλασσα* sea + *θεραπεία* cure]. The treatment of disease by sea-bathing, sea-voyages, and sea-air.

Thaleichthys (thal-e-ik'this). See *eulachon oil*, under *oil*.

thaliectrin (thal-ik'trin). A poisonous alkaloid derived from the plant *Thalic'trum macrocar'pum*.

thalleoquin (thal'e-o-quin). A greenish, resinous substance, used as a test for quinin.

thallin (thal'in). An antiseptic, bactericidal, and antipyretic crystalline substance, the sulphate of paramethoxytetrahydro-quinolin, $C_9H_9N.O.CH_3$, derived from coal-tar. Dose, 2-15 gr. (0.133-1 gm.). **t. acetate**, a compound which has been used in night-sweats of phthisis, but has dangerous toxic properties. **t. periodid, t. periodosulphate**, a substance in black crystals: recommended for cancer. Dose, $\frac{1}{2}$ gr. (0.05 gm.). **t. salicylate**, used like the acetate. **t. sulphate**, a yellowish-white, crystalline substance, $(C_{10}H_{13}NO)_2H_2SO_4$, soluble in water, and used as an antipyretic in febrile affections, and as an external and internal antiseptic in typhoid fever, gonorrhea, etc. Dose, $\frac{1}{2}$ -2 gr. (0.03-0.13 gm.), given hourly **t. tartrate**, a salt, $C_{10}H_{13}NO.C_4H_6O_6$, in yellowish crystals. It is soluble in water, and is used like the sulphate.

thallinization (thal'in-iz-a'shun). Treatment by frequent doses of thallin.

thallium (thal'e-um) [Gr. *θαλλός* green shoot]. A soft, bluish-white metal; symbol, Tl; atomic weight, 204; specific gravity, 11.8; its salts are active poisons. Its sulphate is used in cystitis. **t. acetate**, serviceable in the night-sweats of tuberculosis, but may lead to complete loss of the hair. It is also used internally in treating tinea tonsurans because of its depilatory effect. Dose, 1½ gr. (0.1 gm.). **t. sulphate**, used in cystitis in 1 per cent. solution.

thallophyte (thal'o-fit) [Gr. *θαλλός* green shoot + *φυτὸν* plant]. One of a class of cryptogamous plants of low structure, including the bluish-green algae and fungi.

thallospore (thal'o-spōr). A thalus modified to serve as an organ of reproduction.

thallus (thal'us). A simple plant body not differentiated into root, stem, and leaf; e. g., in seaweeds and algae. See *mycelium*.

thalosen (thal'o-sen). A laxative preparation of phenolphthalein, senna, and sulphur.

thalsahuate, thalsahuata (thahl-sah-wah'tah, thal-sah-wah'tah). An insect or mite of Mexico, possibly identical with the harvest-bug: it causes a skin disease.

Thamnidium (tham-nid'e-um). A genus of molds which resembles mucor and which is often found growing on meat in cold storage. It can grow at 28° F. and forms a profuse hairy growth known as "whiskers." The species most frequently found are *T. elegans* and *T. chelocladioides*.

thamuria (tham-u're-ah) [Gr. *θαμύς* often + *οὔρον* urine]. Frequency of urination.

thanatobiologic (than'at-o-bi-o-loj'ik) [Gr. *θάνατος* death + *βίος* life]. Pertaining to life and death.

thanatognomonic (than'at-o-no-mon'ik) [Gr. *θάνατος* death + *γνωμονικός* decisive]. Indicating the approach of death.

thanatoid (than'at-oid) [Gr. *θάνατος* death + *εἶδος* form]. Resembling death.

thanatol (than'at-ol). A proprietary disinfectant preparation of pyrocatechin mono ethyl ester, $OH.C_6H_4.O.C_2H_5$.

thanatology (than-at-ol'o-je) [Gr. *θάνατος* death + *λόγος* discourse]. The medicolegal study of death and conditions affecting dead bodies.

thanatomania (than'at-o-ma'ne-ah) [Gr. *θάνατος* death + *μανία* madness]. Suicidal or homicidal mania.

thanatometer (than-at-om'et-er) [Gr. *θάνατος* death + *μέτρον* measure]. A thermometer used to prove the occurrence of death by the reduction of the bodily temperature.

thanatophidia (than'at-o-fid'-eh) [Gr. *θάνατος* death + *ὄφης* snake]. The deadly serpents collectively; toxicophidia.

thanatophidial (than'at-o-fid'-e-al). Pertaining to venomous snakes.

thanatophobia (than'at-o-fō'-be-ah) [Gr. *θάνατος* death + *φόβος* fear]. The unwarranted apprehension of imminent death; morbid dread of death.

thanatopsia, thanatopsy (than-at-op'-se-ah, than'at-op-se) [Gr. *θάνατος* death + *ὄψις* view]. Necropsy.

thanatosis (than-at-o'-sis) [Gr. *θάνατος* death]. Gangrene or necrosis.

Thane's method (thānz) [George Dancer *Thane*, British anatomist]. A method of locating the fissure of Rolando. Its upper end is about one-half inch behind the middle of a line uniting theinion and the glabella, and its lower end about one-quarter inch above and one and one-quarter inches behind the external angular process of the frontal bone.

Thapsia (thap'se-ah) [L.; Gr. *θαψία*; named from the isle of *Thapsus*]. A genus of umbelliferous plants. *T. gorgani'ca*, of northern Africa, affords an irritant resin somewhat used in plasters; the plant is locally employed as a polychrest remedy.

thaumatropy (thaw-mat'ro-pe) [Gr. *θαῦμα* wonder + *τροπός* turning]. The transformation of an organ or structure into another organ or structure.

thaumaturgic (thaw-mat-er'jik) [Gr. *θαῦμα* wonder + *ἔργον* work]. Magical; miraculous.

thea (the'ah). Latin for *tea*.

theaism (the'ah-izm). Excess in tea-drinking and its ill consequences.

theatrin (the'at-rin). A proprietary ointment-base composed of wax, oil, and water.

thebaic (the-ba'ik) [L. *Thebaicus* Theban; opium was once prepared at Thebes]. Pertaining to or derived from opium.

thebaica (the-ba'ik-ah). Opium.

thebain (the-ba'in). A crystalline, poisonous, and anodyne alkaloid from opium, $C_{19}H_{21}NO_3$, having properties similar to those of strychnin. Dose, $\frac{1}{16}$ gr. (0.1 gm.).

thebaism (the'bah-izm). Same as *opiumism*.

thebesian (the-be'ze-an). [Named for or described by Adam Christian *Thebesius*, German physician, 1686-1732]. See *foramen, valve, and vein*.

theca (the'kah), pl. *the'ca* [L.; Gr. *θήκη* repository]. A case or sheath, as of a tendon. **t. cor'dis**, the pericardium. **t. follic'uli**, the outer covering of the graafian follicle. **t. vertebra'lis**, the spinal or vertebral dura.

thecal (the'kal). Pertaining to a theca.

thecitis (the-si'tis) [Gr. *θήκη* sheath + *-itis* inflammation]. Inflammation of the sheath of a tendon.

thecodont (the'ko-dont) [Gr. *θήκη* chest + *ὀδούς* tooth]. Having the teeth inserted in sockets or alveoli.

thecostegnosis (the'ko-steg-no'sis) [Gr. *θήκη* sheath + *στεγνώσις* narrowing]. Contraction of a tendon-sheath.

Theden's bandage (ta'denz) [Johann Christian Anton *Theden*, German surgeon, 1714-1797]. See *bandage*.

theic (the'ik). One who is addicted to the immoderate use of tea.

Theile's canal, glands (ti'lez) [Friedrich Wilhelm *Theile*, German anatomist, 1801-1879]. See *canal and gland*.

Theileria (thi-le're-ah). A genus of minute intracellular parasites. **T. par'va**. See *Piroplasma parva*. **T. tsutsugamu'shi**, the causative agent in tsutsugamushi disease.

theileriasis (thi-le-ri-as-is). Infection with *Theileria*. See *Rhodesian fever, under fever*.

thein (the'in) [L. *the'a* tea]. A crystallizable base,

trimethyl xanthin, $C_8H_{10}N_4O_2$, from tea; isomeric with caffeine: used in neuralgia, etc. Hypodermic dose, $\frac{1}{8}$ -1 gr. (0.011-0.066 gm.).

theinism, theism (the'in-izm, the'izm). The ill effect of habitual excess in tea-drinking.

thelalgia (the-lal'je-ah) [Gr. *θήλη* nipple + *ἄλγος* pain]. Pain in the region of the nipple.

thelitis (the-li'tis) [Gr. *θήλη* nipple + *-itis* inflammation]. Inflammation of a nipple.

thelium (the'le-um), pl. *the'lia* [L.]. A papilla; also a nipple.

thelyblast (thel'ib-last) [Gr. *θήλυς* female + *βλάστος* germ]. 1. The femino-nucleus; the active element of the female generative cell. 2. The passive element of the male generative cell.

thelyblastic (thel-ib-las'tik). Pertaining to or of the nature of a thelyblast.

thelygan (thel'ig-an). A trade name for the mixed extracts of certain glands of internal secretion.

Thelypho'nus gigan'teus. See *vinegerone*.

thelyplasty (thel'ip-las-te) [Gr. *θήλυς* female + *πλάσσειν* to form]. Plastic operation on the nipple.

thelytocia (thel'it-o'she-ah) [Gr. *θήλυς* female + *τόκος* birth]. Normal parthenogenesis producing females only.

thelytocous (the-lit'o-kus). Producing female offspring only.

thelytoky (the-lit'o-ke). Thelytocia.

Themison (them'is-on). A Greek physician who lived probably about 80-40 b. c. He was the founder of the school of the Methodists.

thenad (the'nad). Toward the thenar eminence, or toward the palm.

thenal (the'nal). Pertaining to the palm or thenar.

thenar (the'nar) [Gr. *θέναρ*]. 1. The palm or the sole. 2. The mound on the palm at the base of the thumb. Called also *t. eminence*. 3. Pertaining to the palm. **t. muscles**, the abductor and flexor muscles of the thumb.

thenen (the'nen). Pertaining to the thenal aspect or surface alone.

Theobroma (the-o-bro'mah) [Gr. *θεός* god + *βρώμα* food]. A genus of sterculiaceous plants. The seeds of *T. cacao* (called theobroma and cacao) contain the alkaloid theobromin, and are used in the preparation of cocoa and chocolate. They also yield an oil (*oil of theobroma*: cacao-butter), a light-yellow fat, which is used as an emollient in the preparation of suppositories and pills.

theobromin (the-o-bro'min). An alkaloid, $C_7H_5N_4O_2$, dimethylxanthin, found in the leaves of *Theobroma cacao*, and prepared artificially from xanthin. It has physiologic properties similar to those of caffeine, and is used as an anodyne and antirheumatic. **t. salicylate**, a white, crystalline compound, $C_7H_5N_4O_2 \cdot COO \cdot C_6H_4OH$, sparingly soluble in water. It is a diuretic more stable and serviceable than diuretin. Dose, 15 gr. (1 gm.). **t. sodiosalicylate**, a white compound, $C_7H_7N_4O_2 \cdot Na \cdot C_6H_4OH \cdot COO \cdot Na$, soluble in hot water and warm dilute alcohol. It is a safe antiseptic, diuretic, and antirheumatic in heart affections with dropsy. Called also *diuretin*. Dose of a 5 per cent. solution, 15 min. (1 c.c.). **t. sodium acetate**. See *agurin*.

theobromose (the-o-bro'mōs). Theobromin lithium, $C_7H_7O_2N_4Li$; used as a diuretic.

theocalcin (the-o-kal'sin). A double salt or mixture of calcium theobromin and calcium salicylate: used like theobromin. Dose, 7-15 gr. (0.5-1 gm.).

theocin (the'o-sin). Synthetic theophyllin. It is used as a diuretic. Dose, 4 gr. (0.26 gm.). **soluble t., t.-sodium**, sodium acetate and dimethylxanthin sodium: used as a diuretic. Dose, $\frac{1}{16}$ -5 gr. (0.1-0.3 gm.).

theoforin (the-o-for'in). A combination of theobromin with sodium formate, $C_7H_7O_2N_4Na + H \cdot$

CO.ONa. It is soluble in water and is recommended as a diuretic

theoform (the'o-form). An iodoform substitute; a condensation product of theobromin and formaldehyd.

theolactin (the-o-lak'tin). A white, diuretic powder, being theobromin-sodium and sodium lactate. Dose, 15 gr. (1 gm.).

theolin (the'o-lin). A colorless, volatile liquid hydrocarbon, heptane, C_7H_{16} ; obtainable from petroleum, etc. It resembles benzin and has similar uses.

theomania (the-o-ma'ne-ah) [Gr. *θεός* god + *μανία* madness]. Religious insanity; especially insanity in which the patient believes himself inspired by or possessed of divinity.

theomaniac (the-o-ma'ne-ak). One who is affected with theomania.

theonacet (the-on-as'et). See *aguirin*.

theonasal (the-o-na'sal). Theobromin sodiosalicylate.

theophobia (the-o-fó-be-ah) [Gr. *θεός* god + *φόβος* fear]. Morbid fear of the wrath of God.

theophorin (the-o-for'in). Same as *theosforin*.

theophyllin (the-o-fil'in) [L. *the'a* tea + Gr. *φύλλον* leaf]. A white, odorless, crystalline alkaloid, dimethyl xanthin, $C_7H_8N_4O_2$, from tea: isomeric with theobromin. **t. sodio-acetate**, $C_7H_7O_2N_4.CH_3.CO.ONa.H_2O$.

theorem (the'o-rem). A proposition capable of demonstration. **Gibbs' t.**, substances which lower the surface tension of the pure dispersion medium tend to collect on its surface. **Hazen's t.**, the proposition that for every death from typhoid fever avoided by the purification of public water-supplies two or three deaths are avoided from other causes.

theory (the'o-re) [Gr. *θεωρία*]. 1. The doctrine of the principles underlying the art of healing as distinguished from the practice of that art. 2. A formulated hypothesis, or, loosely speaking, any hypothesis or opinion not based upon actual knowledge. **Adam's t.**, a hypothesis for the explanation of heredity, resembling Ehrlich's side-chain theory of immunity. In this hypothesis it is assumed that the idioplasm, or vital protoplasm, is made up of a mass of molecules which form a central ring from which side-chains may be detached or to which they may become attached without alteration of the primitive center. Environment causes the central ring to have attached certain side-chain combinations, and in this way the modification of the tissue-cells are brought about. Environment also leads to other modifications in the form of new side-chain combinations. **Altmann's t.**, a theory that protoplasm is made up of granular particles (bioblasts) grouped in masses and enclosed in indifferent matter. **apposition t.**, the theory that tissues grow by the deposit of cells from without. **atomic t.**, the theory that the molecules of a substance are made up of one or more atoms, each representing a definite amount of the element, which amount does not vary in the molecule, whatever combinations the molecule may enter. **avalanche t.**, the theory that nervous influence increases in force as it descends along an efferent nerve. **biochemic t.** See *Ehrlich's biochemic t.* **Bowman's t.** (of urinary secretion), the theory that in the glomeruli, water and inorganic salts are produced, while the urea and related bodies are eliminated by the epithelial cells in the convoluted tubes. Cf. *Ludwig's t.* **brunonian t.**, the obsolete opinion of John Brown (1735-1788) that all diseases are due to an excess or lack of stimulus. **Buchner's t.**, a theory of immunity which supposes that the cells of a body which has recovered from an infection undergo a reactive change which protects against similar infections. **Bunge's t.**, there is a causal relation

between alcoholism in a father and inability to suckle a child in his daughter. **cell-chain t.**, the theory that the nerve-fiber consists of a chain of special cells which have only secondarily been brought into relation with the central cell. **chemicoparasitic t.**, the theory that dental caries is caused by combined chemical and parasitic action. **cloaca t.**, the theory assumed by children and some neurotics that a child is born like a passage of the bowels. **Cohnheim's t.**, the theory that the emigration of the leukocytes was the essential feature of inflammation. **corpuscular t.**, the theory that light consists of minute particles of matter given out in all directions from a luminous body. **darwinian t.** See *darwinism*. **De Vries's t.** See *t. of mutations*. **Dieulafoy's t.**, the theory that appendicitis is always due to the appendix becoming a closed cavity. **dualistic t.** See *polyphyletic t.* Cf. *unitarian t.* **Ehrlich's biochemic t.**, the theory that specific chemic affinity exists between specific living cells and specific chemic substances. **Ehrlich's side-chain t.**, **lateral-chain t.**, a theory advanced regarding the phenomena concerned in immunity and cytotoxicity. According to this theory, the protoplasm of the body-cells contains highly complex organic molecules, consisting of a tolerably stable central group, to which are attached less stable "lateral chains" (or "side chains") of atoms or atomic groups. The ordinary chemic transformations in the protoplasm are carried on by means of these lateral chains (or *receptors*), the stable center of the molecule remaining unaffected. The lateral chains contain a group of atoms (*haplophore group*), which is capable of uniting with similar groups (*haplophore groups*) in toxins, bacterial cells, and foreign cells. As the lateral chains of the cell protoplasm are seized upon by the foreign cells, the stable central group is stimulated to produce new lateral chains (*receptors*), which are formed in excess and thrown off into the body-juices. These side chains that have been thrown off constitute *intermediary bodies* or *ceptors*. The intermediary bodies (called also *ceptors*, *haptine*, *immune body*, *sensitizer*, *fixative*, *preparative*, and *desmon*) are designated, according to their nature, as *uniceptors* and *amboceptors*. The *uniceptors*, represented by the antitoxins, are single bodies, and produce their effect by seizing and anchoring the toxin by means of its haptophore group. The *amboceptors*, represented by the cytotoxicins and bacteriolysins, have two affinities, one for the invading bacteria or foreign cells, and one for a body called the *complement*, *end-body*, or *adjuvant*, which exists normally in the body-juices. The complement, when united with the bacteria or foreign cells through the medium of the amboceptor, is capable of causing solution of the bacteria or cells by means of a *toxophore* or *zymoloxic* group. **emergency t.**, Cannon's theory that the suprarenal medulla is stimulated to secrete by activity on the part of the sympathetic nervous system in conditions of emotional excitement, pain, etc.; or, in other words, to meet bodily emergencies. **emigration t.** Same as *Cohnheim's t.* **Flourens's t.**, the opinion that the entire cerebrum is concerned in each and every psychic operation or process. **Frerich's t.**, the theory that uremia is really a poisoning by ammonium carbonate formed by the action on urea of a ferment contained in the blood. **Freud's t.**, hysteria is due to a psychic trauma which was not adequately reacted to when it was received, and remains as an affect-memory. **germ-t.** 1. The doctrine that all organisms are developed from a cell. 2. The doctrine that infectious diseases are of microbic origin. **Glénard's t.**, the theory that abdominal ptosis is a nutritional disease with atrophy and prolapse of the intestine. Cf. *Stiller's t.* **Golgi's t.**, the theory that the neurons communicate by the neuraxons of Golgi's cells and the collaterals of the neuraxons of Deiters' cells. **Goltz's t.**, the theory that the function

of the semicircular canals is to transmit sensations of position, and thus materially aid in the sense of equilibrium. **ground-water t.** See *Pettenkofer's t.* **Hammarsten's t.**, that the coagulation of the blood is due to the decomposition of fibrinogen and the production from it of fibrinogen by the agency of fibrin. **Helmholtz t.**, a theory of sound perception: each basilar fiber responds sympathetically to a definite tone and stimulates the hair-cells of Corti's organ, which rest upon the fiber. The nerve impulse from this stimulation of the hair-cells is carried to the brain. **Hering's t.**, the doctrine that color sensation depends on decomposition and restitution of the visual substance: dissimulation producing red, yellow, and white, and restitution producing blue, green, and black. **Huguier's t.**, uterine prolapse is usually due to lengthening of the supravaginal part of the cervix. **humoral t.**, the theory that the body contains four humors—blood, phlegm, yellow bile, and black bile, a right proportion or mixing of which constitutes health; improper proportion or irregular distribution constitutes disease. **ionic t.** proposes that, on going into solution, the molecules of an electrolyte break up or dissociate into two or more portions, these portions being positively and negatively charged electrically, the positively charged portions being different chemically than those negatively charged. When an electric current is passed through the solution of an electrolyte the positively charged portions are attracted by the negative pole or electrode, and move toward it; the negatively charged portions are attracted by and migrate toward the positive electrode. From this property of moving toward one of the electrodes, these charged molecular fractions of electrolytes are called ions, from the Greek verb meaning "to move." **Kern plasma relation t.**, the theory that for each cell there exists a definite size relation of nuclear mass to cell mass. **Lamarck's t.**, the theory that acquired characteristics may be transmitted. **Liebig's t.**, the hydrocarbons which oxidize easily are the foods which produce animal heat. **Ludwig's t.** (*of urinary secretion*), the theory that urine is formed by the simple process of filtration in the glomeruli and diffusion along the urinary tubules. **MacDougal's t.**, the hypothesis that many, if not all, variations in nature are formed by chemico-modifications of the germ-cells. **Maly's t.**, that the hydrochloric acid of the gastric juice is formed by the interaction of the phosphates and the chlorides of the blood. **t. of medicine**, the study of the principles of the science and art of medicine as distinguished from the *practice of medicine*, or the application of those principles in actual practice. **Mendelian t.** See *Mendel's law*, under *law*. **Metchnikoff's t.**, the theory that bacteria and other harmful elements in the body are attacked and destroyed by cells called phagocytes, and that the contest between such harmful elements and the phagocytes produces inflammation. **Meyer's t.**, the theory that dementia præcox is functional and not organic. **migration t.**, the theory that sympathetic ophthalmia is produced by migration of the pathogenic agent through the lymph-channels of the optic nerve. **mnemic t.**, the theory that the cell has an inherited "memory" of the influences that are brought to bear upon it, and that consequently it tends to inherit acquired characteristics. **Monakow's t.**, the theory of diascisis. See *diascisis*. **monophyletic t.**, the theory that all forms of blood-corpuscles, both red and white, have their origin in one and the same form of primordial blood-cell (hemoblast, hemogonium), the several types of corpuscles arising from a process of differentiation. Called also *unitarian t.* Cf. *polyphyletic t.* **t. of mutations**, the theory of heredity, according to which the variability in the germ-plasm is such that it may at times give rise not to fluctuating variations, but to marked and permanent variations,

and these latter, if advantageous to the animal, are preserved by natural selection. Such permanent variations are called mutations or sports. Called also *De Vries's t.* **myogenic t.**, the theory that the muscle-fibers of the heart possess in themselves the power of originating and maintaining the contraction of the heart. Cf. *neurogenic t.* **Nernst's t.**, the theory that electric stimulus to the tissues is due to dissociation of the ions which produces a concentration of the salts in the solution which envelops the cell membranes. **neurogenic t.**, the theory that the muscle-fibers of the heart act only in response to nerve stimulation. Cf. *myogenic t.* **neuron t.** (Waldeyer, 1891), the theory that the nervous system consists of innumerable neurons in contiguity, but not in continuity. See *neuron*. **onion t.**, the obsolete opinion that the vitreous is made up of layers arranged like those of an onion. **orange t.**, the obsolete opinion that the vitreous body is composed of radial sectors like those of an orange. Cf. *onion theory*. **paralytic t.**, the doctrine that hyperemia is the most essential fact of inflammation, and is caused by paralysis of the vasomotor nerves. **Pasteur's t.**, the theory that the immunity secured by an attack of a disease is caused by the exhaustion of material needed for the growth of the organism of the disease. **Pettenkofer's t.**, the theory that epidemics, as of typhoid fever, occur at the time when the ground-water is at a low level; and that bacteria of the disease do not pass directly from the sick to the healthy, but pass into the soil, where they ripen when the soil is dry. **phlogiston t.** See *phlogiston*. **pintheoid t.**, the theory that man is descended from the ape. **polyphyletic t.**, the theory that the various corpuscles and cells of the blood have their origin from two or more distinct varieties of primordial (mother) cells; called also *dualistic t.* Cf. *monophyletic t.* **proteomorph t.**, the theory that immunity against bacterial infection is handled by the hematopoietic system primarily, and secondarily by all the cells of the body, the waste products of the process being excreted by the liver. **quantum t.**, the theory that the radiation and absorption of energy take place in discrete quantities called quanta (E) which vary in size and are defined by the equation $E = hv$, in which h is Planck's constant and v is the frequency of the radiation. **resonance t.**, the theory of specificity which assumes that the surface forces of reacting substances must harmonize. **Ribbert's t.**, that a tumor is formed from the development of cell-rests owing to reduced tension in the surrounding tissues. **Schenck's t.**, the theory that when no sugar is excreted, the ovum will be developed which is qualified to become a male fetus. **Schiefferdecker's symbiosis t.**, the theory that among the tissues of the body there is a sort of symbiosis, so that the products of metabolism in one tissue serve as a stimulus to the activities of other tissues. **side-chain t.** See *Ehrlich's side-chain t.* **Stiller's t.**, the theory that gastroptosis is due to universal asthenia characterized by weakness and laxity of the viscera. Cf. *Glenard's t.* **Traube's resonance t.** See *resonance t.* **Trauber-Rosenstein t.**, the theory that puerperal eclampsia is caused by cerebral anemia due to some poisonous element of the blood. **undulatory t.**, the doctrine that light, heat, and electricity are propagated by undulations in an ether that pervades all space. **unitarian t.** See *monophyletic t.* **unitary t.**, the theory that disease is single in its nature and is not made up of separate and distinct morbid entities. **Villemin's t.**, the theory of the infectiousness and specificity of tuberculosis held before the discovery of the bacillus. **Weismann's t.** See *Weismannism*. **Young-Helmholtz t.**, the doctrine that color vision depends on three sets of retinal fibers, corresponding to the colors red, green, and violet. **zeist t.**, **zeistic t.**, the theory that pellagra is due to eating diseased maize.

Zuntz's t. (*of muscle contraction*), muscle-fibrils consist of rods and cylinders. The beginning of the contractile process lies in the combustion which takes place within the rods. The resultant carbon dioxide dissolves in the water present (as if it were so much sugar) and exerts an osmotic pressure of approximately 5 gm. per sq. cm. At the moment of their formation the carbon dioxide molecules have a temperature of over 6000° C. The osmotic pressure of the contents of the rods is raised by this high temperature to 462 gm. per sq. cm. As the result of this osmotic difference between the contents of the rod and the sarcoplasm bathing it, water diffuses rapidly into the rod, causing it to shorten and approach the spheric shape, *i. e.*, the muscle contracts. Presently the temperature falls through radiation, etc.; the osmotic pressure of the carbon dioxide falls; water diffuses outward, followed by a slower diffusion of the carbon dioxide and other products of muscular activity; *i. e.*, the muscle relaxes.

theosin (the'o-sin). A proprietary synthetic alkaloid resembling theophyllin: used as a diuretic.

theotherapy (the-o-ther'ap-e) [Gr. *θεός* god + *θεραπεία* treatment]. The treatment of disease by prayer and religious exercises.

thephorin (the'for-in). A bitter crystalline diuretic powder, a double salt of sodium theobrominate (or theophyllinate) and sodium formate. It is an analogue of diuretin in which the salicylic acid is replaced by formic acid.

therapeusis (ther-ap-u'sis). Therapeutics.

therapeutic, therapeutical (ther-ap-u'tik, ther-ap-u'tik-al) [Gr. *θεραπευτικός*]. 1. Pertaining to therapeutics, or to the art of healing. 2. Curative.

therapeutics (ther-ap-u'tiks) [Gr. *θεραπευτική*]. 1. The science and art of healing. 2. A scientific account of the treatment of disease. **alimentary t.**, treatment by careful regulation of the diet, food, etc.; alimentotherapy. **cellular t.**, organotherapy. **dental t.**, that branch of dentistry which deals with the treatment of diseases of the teeth. **dynamic t.**, treatment based on the careful selection of each separate drug for a distributive purpose. **empiric t.**, treatment by remedies that experience has proved to be useful. **massive sterilizing t.**, *therapia sterilizans magna*. **mediate t.**, medication of a nursing child through its mother's milk, the remedy being administered to the mother. **mental t.**, treatment directed to influencing the mind, including hypnotic suggestion, etc. **rational t.**, treatment based upon a knowledge of the disease and of the action of the remedies employed. **ray t.**, radiotherapy. **specific t.**, treatment of a disease by a drug that is regarded as specific, as of syphilis by mercury. **stomatologic t.**, the treatment of diseases of the mouth. **suggestive t.**, treatment of disease by hypnotic suggestion. **testicular t.**, treatment by the hypodermic injection of testicular extract. **vibratory t.**, treatment by vibrations of various kinds, as by vibratory motions in massage.

therapeutist (ther-ap-u'tist). A person skilled in the treatment of disease.

therapi-a sterilizans magna. Ehrlich's method of treatment by the use of some chemical agent which will destroy the parasites in the body of a patient without being seriously toxic for the patient.

therapin (ther'ap-in). A glycerid of therapeutic acid from cod-liver oil.

therapist (ther'ap-ist). Same as *therapeutist*.

therapol (ther'ap-ol). A proprietary remedy, described as being an ozonized vegetable oil: used in diphtheria.

therapy (ther'ap-e) [Gr. *θεραπεία*]. The treatment of disease; therapeutics. See under *treatment*. **autoserum t.**, treatment of disease by the injection of the patient's own blood-serum. **bacterial t.** Same as *opsonic t.* **biologic t.**, treat-

ment of disease by the injection of the substances which produce a biologic reaction in the organism. The term includes the use of serums, antitoxins, vaccines, and non-specific proteins. **collapse t.**, treatment of pulmonary tuberculosis by operative immobilization of the diseased lung. **Curie t.**, treatment with radium. **deep x-ray t.** See *Erlangen treatment*, under *treatment*. **diathermic t.**, treatment by thermopenetration. **emanation t.**, treatment of disease by the emanations from radio-active substances. **fever t.** See *Weiss's treatment*, under *treatment*. **heterovaccine t.**, bacterial vaccine therapy by the use of some germ other than the specific cause of the disease. **immunization t.** Same as *serum-t.* **non-specific t.**, treatment of infections by the injection of non-specific substances, such as proteins, proteoses, bacterial vaccines, etc., which produce a general and non-specific effect on cellular activity. **nuclein t.**, the treatment of disease by nucleins from blood-serum and from various organs. **opsonic t.**, the treatment by the use of bacterial vaccines to increase the opsonic index of the blood; called also *vaccine t.* **organic t.**, organotherapy. **paraspecific t.**, non-specific therapy. **phlogetan t.**, the treatment of various conditions by the subcutaneous or intramuscular injection of some derivative of albuminoid bodies containing nucleoprotein. **protective t.** Same as *sparing t.* **protein t.**, injection of foreign proteins by the parenteral route in inflammatory and venereal diseases; non-specific therapy. **protein shock t.** Same as *protein t.* **serum-t.** Same as *serotherapy*. **solar t.**, heliotherapy. **sparing t.**, treatment directed to the protecting and sparing of an organ by allowing it to rest as much as possible. Called also *protective t.* **substitutive t.** See *substitutive medication*, under *medication*. **thyroid t.**, treatment of various diseases by the thyroid gland of sheep or by derivatives from it. It is employed in myxedema, cretinism, goiter, obesity, scrofuloderma, psoriasis, pityriasis, lupus, etc. **vaccine t.**, active immunization against a disease by the injection of the bacteria of the disease or their products directly into a patient. **Weiss's fever t.** See *Weiss's treatment*, under *treatment*. **zomo t.**, treatment by the administration of meat juice.

theriaca (the-ri'ak-ah) [Gr. *θηριακή* antidotal to the poison of wild animals, from *θήρ* wild animal]. 1. An antidote; especially a cure for snake-bite. 2. Molasses, or treacle. **t. androm'achi**, Venice treacle, a celebrated mixture of sixty-four drugs, formerly prescribed as an antidote for poisons.

theriakol (the-ri'ak-ol). A proprietary substance: good against snake-bite.

theriatrics (the-re-a'triks) [Gr. *θήρ* beast + *ιατρικός* curative]. Veterinary medicine.

Therioplectes (the're-o-plek'tēz). A genus of tabanid flies.

theriotherapy (the're-o-ther'ap-e) [Gr. *θηρίον* beast + *θεραπεία* treatment]. Treatment of the diseases of lower animals.

theriotomy (the-re-o'to-me) [Gr. *θηρίον* beast + *τέμνειν* to cut]. The dissection or anatomy of animals.

therm (therm) [Gr. *θέρμη* heat]. A heat-unit; the amount of heat needed to raise one gram of water through one degree centigrade.

thermacogenesis (ther'mak-o-jen'es-is) [Gr. *θέρμη* heat + *γένεσις* generation]. The action of a drug in affecting the temperature.

thermæ (ther'me) [Gr. *θέρμη* heat]. Warm springs or warm baths; also establishments for the therapeutic use of warm medicinal springs.

thermaërotherapy (ther-ma'er-o-ther'ap-e) [Gr. *θέρμη* heat + *αἴρ* air + *θεραπεία* treatment]. Treatment by the application of hot air.

thermæsthesia (ther-mes-the'ze-ah). See *thermæsthesia*.

thermal (ther'mal). Pertaining to or characterized by heat. **t. death-point**. See under *death-point*.

thermalgia (ther-mal-je'-ze-ah) [Gr. *θέρμη* heat + *ἀλγος* pain]. A condition in which the application of heat produces pain.

thermalgia (ther-mal'je-ah) [Gr. *θέρμη* heat + *ἀλγος* pain]. A condition marked by sensations of intense burning pain; *causalgia*.

thermanalgia (ther'man-al-je'-se-ah). Thermo-analgia.

thermanesthesia (ther'man-es-the'ze-ah) [Gr. *θέρμη* heat + *anesthesia*]. Lack of ability to recognize sensations of heat and cold; absence of the heat sense.

thermantidote (ther-man'tid-ōt). A hand-blowing machine for ventilation.

thermatology (ther-mat-ol'o-je) [Gr. *θέρμη* heat + *λόγος* treatise]. The scientific study of heat as a therapeutic agent.

theresthesia, **thermesthesia** (ther-mes-the'-ze-ah) [Gr. *θέρμη* heat + *αἴσθησις* feeling]. Ability to recognize heat and cold; the temperature sense.

thermesthesiometer, **thermesthesiometer** (ther'mes-the-ze-om'et-er) [*thermesthesia* + Gr. *μέτρον* measure]. An instrument for measuring sensibility to heat and cold.

thermic (ther'mik). Of or pertaining to heat. **t. fever**, sunstroke.

thermifugin (ther-mif'u-jin). Sodium methyl trihydroxy quinolin carbonate, an antipyretic remedy, $C_9H_7(CH_3)_3.NCOONa$, in colorless crystals. Dose, $1\frac{1}{2}$ –3½ gr. (0.1–0.25 gm.).

thermin (ther'min). Tetrahydronaphthylamin: a colorless liquid, $C_{10}H_{11}.NH_2$; used as a mydriatic. **t. hydrochlorid**, $C_{10}H_{11}.NH_2.HCl$, a colorless, crystalline mydriatic agent.

thermion (ther'mi-on) [Gr. *θέρμη* + *ιον*]. A particle containing an electric charge emitted by an incandescent substance; such as the electrons emitted from the cathode in a Coolidge tube.

thermionics (ther-me-on'iks). The science of the phenomena exhibited by thermions.

thermit (ther'mit). A mixture of aluminum and ferric oxide.

thermo- [Gr. *θέρμη* heat]. A prefix implying some relation to heat.

thermo-esthesia (ther'mo-es-the'ze-ah). See *thermesthesia*.

thermo-algia (ther'mo-al-je'-ze-ah). Same as *thermalgia*.

thermo-analgia (ther'mo-an-al-je'-ze-ah) [Gr. *θέρμη* heat + *analgia*]. Complete anesthesia to heat stimulation.

thermo-anesthesia (ther'mo-an-es-the'ze-ah). See *thermanesthesia*.

thermocauterectomy (ther'mo-kaw-ter-ek'to-me) [*thermocautery* + Gr. *ἐκτομή* excision]. Excision of an organ (as the uterus) by the thermocautery; *igniextirpation*.

thermocautery (ther-mo-kaw'ter-e) [Gr. *θέρμη* heat + *cautery*]. Cauterization by means of a heated wire or point.

thermochemistry (ther-mo-kem'is-tre) [Gr. *θέρμη* heat + *chemistry*]. The scientific study of the relations between thermic and chemical energies.

thermochromic (ther-mo-kro'ik) [Gr. *θέρμη* heat + *χρόα* color]. Reflecting some of the heat-rays and absorbing or transmitting others.

thermochoism, **thermocrosis** (ther-mok'ro-izm, ther-mo-kro'sis). The state or condition of being thermochoic.

thermo-coagulation (ther'mo-ko-ag-u-la'shun). Treatment of growths by producing coagulation through the action of high-frequency currents.

thermocurrent (ther-mo-kur'ent). A thermo-electric current.

thermodiffusion (ther'mo-dif-u'zhun). Diffusion by heat.

thermodin (ther-mo'din). A white, crystalline powder, $C_6H_4.(OC_2H_5)_2N(COCH_3)COOC_2H_5$, or acetylparaethoxyphenylurethan, derived from urethan. It is soluble in 450 parts of boiling and 2600 parts of cold water. It is an antipyretic, antiseptic, and analgesic, and is used in typhoid fever, pleurisy, influenza, and pneumonia. Dose, 5–15 gr. (0.333–1 gm.).

thermodynamics (ther'mo-di-nam'iks) [Gr. *θέρμη* heat + *δύναμις* power]. The science of the transformation of heat and energy.

thermo-electric (ther'mo-e-lek'trik). Pertaining to electricity generated by heat.

thermo-electricity (ther'mo-e-lek'tris'ti-e). Electricity generated by heat.

thermo-esthesia (ther'mo-es-the'ze-ah). See *thermesthesia*.

thermo-esthesiometer (ther'mo-es-the-ze-om'et-er). See *thermesthesiometer*.

thermo-excitory (ther'mo-ek-si'to-re). Exciting or stimulating the production of heat in the body.

thermofuge (ther'mo-fūj). A proprietary preparation of aluminum silicate, glycerin, and antiseptics: used as an anodyne and antiphlogistic dressing.

thermogenesis (ther-mo-jen'es-is) [Gr. *θέρμη* heat + *γένεσις* production]. The production of heat: especially the process of generating heat within the animal body.

thermogenetic, **thermogenic** (ther'mo-jen-et-ik, ther-mo-jen'ik). Producing heat or pertaining to the production of heat.

thermogenics (ther-mo-jen'iks). A scientific view of the production of heat.

thermogenous (ther-moj'en-us). Same as *thermogenetic*.

thermograph (ther'mo-graf) [Gr. *θέρμη* heat + *γράφειν* to record]. A registering thermometer; an instrument for recording heat variations.

thermohyperalgia (ther'mo-hi-per-al-je'-ze-ah) [Gr. *θέρμη* heat + *hyperalgia*]. A condition in which the application of heat causes extreme pain.

thermohyperesthesia, **thermohyperesthesia** (ther'mo-hi-per-es-the'ze-ah) [Gr. *θέρμη* heat + *hyperesthesia*]. Extreme sensitiveness to heat and cold.

thermohypesthesia (ther'mo-hi-pes-the'ze-ah). *Thermohypoesthesia*.

thermohypoesthesia (ther'mo-hi-po-es-the'ze-ah). Decreased sensibility to heat and cold.

thermo-inhibitory (ther'mo-in-hib'it-or-e). Inhibiting or retarding the production of bodily heat. See *center*.

thermol (ther'mol). A white, tasteless, and non-toxic base, acetyl salicyl phenetidin, $C_{17}H_{17}NO_4$, analgesic, antiseptic, and antipyretic. Dose, 3–6 gr. (0.109–0.4 gm.).

thermolabile (ther-mo-la'bil). Easily altered or decomposed by heat. As applied to sera, it means losing its activity at a temperature of from 55° to 56° C.

thermolamp (ther'mo-lamp) [Gr. *θέρμη* heat + *λάμπη* lamp]. A lamp for heating.

thermolaryngoscope (ther'mo-lar-ing'go-skōp). A laryngoscope heated by electricity so that the mirror does not become obscured by condensing moisture.

thermology (ther-mol'o-je) [Gr. *θέρμη* heat + *λόγος* treatise]. The science of heat.

thermolysis (ther-mol'is-is) [Gr. *θέρμη* heat + *λύσις* loosening]. 1. Chemic dissociation by means of heat. 2. The dissipation of bodily heat by means of radiation, discharge of excretions, etc.

thermolytic (ther-mo-lit'ik) [Gr. *θέρμη* heat + *λύειν* to loosen]. 1. Pertaining to thermolysis. 2. Dissipating the heat of the body, or promoting its dissipation. See *center*.

thermomassage (ther'mo-mas-azh') [Gr. *θέρμη* heat + *μάσση* massage]. Massage with heat.

thermometer (ther-mom'et-er) [Gr. *θέρμη* heat + *μέτρον* measure]. An instrument for ascertaining temperatures. It consists of a substance which expands and contracts with alterations of temperature, and of a graduated scale indicating the degree of expansion or contraction (see *table of equivalents*). **air-t.**, one whose expansible material is air. **alcohol t.**, one whose expansible material is alcohol. **axilla t.**, a clinical thermometer to be used in the axilla. **Celsius t., centigrade t.**, one with 100 degrees between the melting-point of ice and the boiling-point of water, the former being at zero and the latter at 100 degrees. **clinical t.**, one for use at the bedside of the sick. **differential t.**, one for measuring very small variations of temperature. **Fahrenheit t.**, one in which the space between the freezing-point and the boiling-point is divided into 180 degrees, 32° being the freezing-point of water and 212° the boiling-point of water. **fever-t.**, an ordinary clinical thermometer. **half-minute t.**, an exceedingly sensitive form of clinical thermometer. **homograde t.**, a thermometer in which 100° represents the normal temperature of the human body (98.5° F., 37° C.), zero the freezing-point, and 270° the boiling-point (212° F., 100° C.). **kata t.** See *kata thermometer*. **maximum t.**, one which registers the maximum heat to which it has been exposed. **mercurial t.**, one which has mercury in its expansible column. **metallic t.**, one which contains some metal other than mercury as its expansible element. **metastatic t.**, one which will indicate very minute changes of temperature. **minimum t.**, one which registers the lowest temperature to which it has been exposed. **Réaumur t.**, one which has 80° in place of the 100° of the centigrade scale. **resistance t.**, a thermometer which uses the electric resistance of metals as its measurement of temperature. It consists of a resistance bulb of nickel or platinum wire and a Wheatstone bridge. **self-registering t.**, one which records variations of temperature. **surface-t.**, a clinical thermometer for taking the temperature of the surface of the body.

thermometric (ther-mo-met'rik). Pertaining to a thermometer or to the measurement of heat.

thermometry (ther-mom'et-re). The measurement of temperatures.

thermoneurosis (ther-mo-nu-ro'sis) [Gr. *θέρμη* heat + *neurosis*]. Pyrexia of vasomotor origin.

thermopalpation (ther'mo-pal-pa'shun) [Gr. *θέρμη* heat + *πάληψις* palpation]. Palpation for the purpose of determining differences of temperature at different portions of the body.

thermopenetration (ther'mo-pen-et-ra'shun). Application of currents of low tension and high amperage, which produce warmth in the deeper parts of the body; medical diathermy. Called also *De Keating-Hart method*.

thermophagy (ther-moi'aj-e) [Gr. *θέρμη* heat + *φαγείν* to eat]. The eating of very hot food.

thermophil, thermophilic (ther'mo-fil, ther-mo-fil'ik) [Gr. *θέρμη* heat + *φιλέιν* to love]. Not able to grow without a high or very considerable degree of heat; fond of heat; said of bacteria which develop best at a temperature of 40° to 70° C.

thermophobia (ther-mo-f'o-be-ah) [Gr. *θέρμη* heat + *φόβος* fear]. Morbid dread of heat.

thermophore (ther'mo-for) [Gr. *θέρμη* heat + *φέρειν* to bear]. A metallic box or rubber bag filled with a mixture of glue, sodium acetate, sodium chloride, and calcium sulphate. Dipped in hot water, it retains its heat for a long time, and is used in the local treatment of diseases.

thermophylic (ther-mo-fil'ik) [Gr. *θέρμη* heat + *φιλική* guard]. Resisting the destructive effects of heat (said of certain bacilli).

TABLE OF EQUIVALENTS OF CENTIGRADE AND FAHRENHEIT THERMOMETRIC SCALES.

thermopile (ther'mo-pil) [Gr. *θέρμη* heat + *πῖλα* pile]. A thermo-electric battery used in measuring small variations in the degree of heat. It consists of a number of metallic plates connected together, in which, under the influence of heat, an electric current is produced.

thermoplegia (ther-mo-ple'je-ah) [Gr. *θέρμη* heat + *πληγή* stroke]. Heat-stroke or sunstroke; thermic fever.

thermopolypnea, thermopolypnoea (ther'mo-pol-ip-ne-ah) [Gr. *θέρμη* heat + *πολύς* many + *πνοή* breath]. A quickening of the respiration due to great heat or high temperature.

thermopolypneic (ther'mo-pol-ip-ne'ik). Concerned with thermopolypnea; concerned with the causation of panting by the application of heat.

thermoprecipitation (ther'mo-pre-sip-it-a'shun) [Gr. *θέρμη* heat + *πρόσπτωση* precipitation]. Precipitation by heat.

thermoprecipitin (ther'mo-pre-sip-it'in). A heated extract of a bacterium used for precipitin tests.

thermoprecipitinogen (ther'mo-pre-sip-it-in'o-jen). A heated precipitinogen. When injected into animals coctoprecipitins are produced.

thermoradiotherapy (ther'mo-ra'de-o-ther'ap-e). A method of applying the x-rays in combination with a heating of the tissues by thermopenetration on the theory that the radiosensitiveness of tissues is increased by heating them.

thermoregulation (ther-'mo-reg u-la-'shun). Heat regulation.

thermoregulator (ther-mo-reg-'u-la-tor). 1. Controlling or regulating heat. 2. Same as *thermostat*.

thermoscope (ther-'mo-skōp) [Gr. θερμη heat + σκοπεῖν to view]. A differential thermometer.

thermostabile (ther-mo-sta-'bil). Not easily affected by moderate heat; not affected by a temperature of over 55° C.

thermostat (ther-'mo-stat) [Gr. θερμη heat + ιστάναι to halt]. An apparatus or appliance for regulating the heat automatically.

thermosteresis (ther-'mo-ster-e-'sis) [Gr. θερμη heat + στέρσις deprivation]. The deprivation of heat.

thermosystaltic (ther-'mo-sis-tal-'tik) [Gr. θερμη heat + σύν together + στέλλειν to send]. Contracting under the influence or stimulus of heat.

thermosystaltism (ther-mo-sis-'tal-tizm) [Gr. θερμη heat + συστέλλειν to contract]. Muscular contraction in response to temperature changes.

thermotactic (ther-mo-tak-'tik) [Gr. θερμη heat + τακτικός regulating]. Regulating or controlling the bodily temperature. See *center*.

thermotaxic (ther-mo-taks-'ik) [Gr. θερμη heat + τάξις order]. Same as *thermotactic*.

thermotaxine (ther-mo-taks-'in). A proprietary antipyretic and sedative remedy.

thermotaxis (ther-mo-taks-'is) [Gr. θερμη heat + τάξις arrangement]. 1. The normal adjustment of the bodily temperature. 2. The movement of organisms in relation to heat.

thermotherapy (ther-mo-'ther-ap-e) [Gr. θερμη heat + θεραπεία therapy]. Treatment of disease by the application of heat.

thermotics (ther-mot-'iks). The science of heat.

thermotonometer (ther-'mo-to-nom-'et-er) [Gr. θερμη heat + τόνος tension + μέτρον measure]. An instrument for measuring the amount of muscular contraction caused by heat.

thermotoxin (ther-mo-toks-'in) [Gr. θερμη heat + τοξίνη]. Any toxic substance formed in the living organism by heat.

thermotracheotomy (ther-'mo-tra-ke-ot-'o-me). Tracheotomy with the actual cautery.

thermotropism (ther-mot-'ro-pizm) [Gr. θερμη heat + τροπή turn]. The attractive and repulsive influence exerted by heat on certain bacterial cells.

thermozine (ther-'mo-zin). A proprietary aseptic poultice material, used in veterinary practice for wounds, sores, and inflammations.

theroid (the-'roid) [Gr. θηριώδης beast-like]. Resembling an animal of a lower order.

theromorph (the-'ro-morf) [Gr. θήρ wild beast + μορφή form]. A morphologic part of an organism or individual with supernumerary, teratic, or absent parts, giving it a resemblance to a lower animal.

theromorphia, theromorphism (the-ro-morf-'e-ah, the-ro-morf-'izm). The abnormal resemblance of some part of the organism to the normal structure of the corresponding part of an animal of lower type.

thesis (the-'sis) [Gr. θέσις proposition]. An essay prepared for a degree.

Thessalus (thes-'al-us). A Greek physician, the son of Hippocrates, believed to have been the author of medical writing. He regarded excessive bile secretion as a cause of disease.

Thessalus of Tralles. A Greek physician of the school of the Methodists; born in Lydia, and practising during the reign of Nero. He was a pupil of Themison.

theverin (they-'et-in). A bitter, white, crystalline or powdery and poisonous glucosid from *Thevetia nerifolia* and *T. thevetia*, apocynaceous tropical plants. It is emetocathartic and antipyretic.

thial (thi-'al). Urotropin oxymethylsulphonate: used in solution as an antiseptic.

thialdin (thi-'al-'din). An agent occurring in volatilizable crystals, $\text{NH}(\text{CHCH}_3)_3$, derived from aldehyd ammonia by the action of sulphureted hydrogen; it is a heart stimulant.

thialion (thi-'a-'le-on). A proprietary preparation of a lithium salt: used for gout, etc.

thiasin (thi-'as-in). A sulphur-containing compound isolated from blood; it is identical with ergothionein.

thick wind (thik). Rough breathing in horses, usually occurring after pneumonia.

Thielmann's diarrhea drops, diarrhea mixture (tēl-manz) [Karl Heinrich Thielmann, German internist, 1802-1872]. See under *mixture*.

Thiersch's method (tēr'shez) [Karl Thiersch, German surgeon, 1822-1895]. A method of skin-grafting in which long, broad strips of skin are used, which include one-half the thickness of the skin; i. e. the epidermis, rete, and part of the cutis vera.

thigenol (thi-je-'nol). A soluble sulphur compound containing 10 per cent. of organic sulphur. It is a solution of the sodium salts of synthetic sulpho-oleic acids and is used in place of sulphur in skin diseases.

thigh (thi). The portion of the leg above the knee. **t.-bone**, the femur. **cricket-t.**, rupture of some of the fibers of the rectus femoris, which may occur in playing cricket or foot-ball; sometimes the tendon of the quadriceps or that of the patella is also ruptured. **Heilbronner's t.**, broadening and flattening of the thigh: seen in cases of organic paralysis when the patient lies on his back on a hard mattress. It does not appear in hysterical paralysis.

thigmesthesia (thig-mes-the-'zhe-ah) [Gr. θίγμα touch + αίσθησις sensation]. Tactile sensibility.

thigmocyte (thig-'mo-sit) [Gr. θίγμα touch + κύτος cell]. A name recently given to a blood-platelet on the theory that the platelet's function is to adhere to non-greasy matter. When the platelets make an effort to ingest foreign matter, the cells stretch and allow thrombin to exude, thus allowing clotting to occur.

thigmotaxis (thig-mo-taks-'is). Same as *thigmotropism*.

thigmotropism (thig-mot-'ro-pizm) [Gr. θίγμα touch + τρόπος turning]. An adjustment with reference to contact or mechanical stimuli.

thilalanin (thi-'lan-in) [Gr. θείον sulphur + L. lanina wool]. A yellowish, oily substance, consisting of lanolin that contains 3 per cent. of sulphur. It is used locally in skin diseases.

thilaren (thi-'lar-en). A solution of linalyl acetate thiozonid and alkali thiozonate: used in preparing artificial sulphur baths.

thilaven (thi-'lav-en). $\text{C}_6\text{H}_7\text{S}_3\text{C}_2\text{H}_2\text{C}_5\text{H}_9\text{O}_6$, a solution of linalyl acetathiozone in alkaline thiozone, used as a substitute for ichthyol.

thio- [Gr. θείον sulphur]. A prefix implying composition with sulphur.

thio-acid (thi-o-as-'id). Any acid formed by the substitution of sulphur for the oxygen of an oxygen acid.

thio-albumose (thi-o-al-'bu-mōs). A deuterio-albumose having a large sulphur content.

thio-alcohol (thi-'o-al-'ko-hol). Same as *mercaptan*.

thio-aminopropionic acid (thi-'o-am-'in-o-propion-'ik). See under *acid*.

Thiobacillus (thi-o-bas-'il-us) [Gr. θείον sulphur]. A genus of the family Nitrobacteriaceae. They obtain their energy from the oxidation of sulphur or sulphids to sulphates.

Thiobacteria (thi-'o-bak-te-re-ah). Thiobacteriales.

Thiobacteriales (thi-'o-bak-te-re-a-'les). An order under the class Schizomycetes. It includes the

sulphur bacteria whose cells contain either granules of free sulphur or bacterioporpurin, or both.

thiocamph (thi'o-kamf). A greenish-yellow fluid derived from camphor and sulphur dioxide: disinfectant.

thiocol (thi'o-kol). A white or pinkish, crystalline powder, potassium ortho-guaiacol-sulphonate, $\text{CH}_3\text{O.C}_6\text{H}_3(\text{OH}).\text{SO}_2\text{OK}$, soluble in water and containing about 60 per cent. of guaiacol. It is used as a substitute for guaiacol in tuberculosis, catarrhs, and chronic coughs. Dose, 5-20 gr. (0.33-1.333 gm.).

thiocyanate (thi-o-si'an-ät) [Gr. $\theta\epsilon\iota\omega\nu$ sulphur + $\kappa\upsilon\alpha\nu\omicron\varsigma$ blue]. A salt analogous in composition to a cyanate, but containing sulphur instead of oxygen.

thiodin (thi'o-din). A preparation of iodine, ichthyol, hydrastin, glycerin, etc., in the form of suppositories.

thio-estrin (thi-o-es'trin). A proprietary sulphur preparation: used in gout, rheumatism, etc.

thio-ether (thi-o-e'ther). A sulphur ether; an ether in which sulphur replaces oxygen.

thioethylamin (thi-o-et-hil-am'in). An amin, $\text{SH}(\text{CH}_2)_2\text{NH}_2$, formed from cysteine by the loss of CO_2 .

thioflavin (thi-o-fla'vin) [Gr. $\theta\epsilon\iota\omega\nu$ sulphur + $\phi\lambda\upsilon\nu\iota\varsigma$]. A yellow dye, methyl dehydrothiopytoluidin sulphonate.

thioform (thi'o-form). Basic bismuth dithiosalicylate, $\text{OH.C}_6\text{H}_3\text{S.CO.OBiO} + \text{Bi}_2\text{O}_3 + 2\text{H}_2\text{O}$; a yellow-gray powder; antiseptic: used chiefly in dentistry and veterinary practice, and as an external disinfectant.

thiogenic (thi-o-jen'ik) [Gr. $\theta\epsilon\iota\omega\nu$ sulphur + $\gamma\epsilon\nu\alpha\iota\nu$ to produce]. Able to convert hydrogen sulphid into higher sulphur compounds.

thiogenol (thi-o-je'no'l). A proprietary solution of the sodium sulphonate of a synthetic sulpho-oil combined with sulphur: an antiseptic for external use.

thiol (thi'ol). Basic bismuth dithiosalicylate (see *thioform*), a blackish-brown powder formed by the action of sulphur on coal-tar oil, and soluble in water and alcohol. It is used internally and externally in various skin diseases. Dose, 2-10 gr. (0.13-0.6 gm.). **liquid t.**, thiol in a thick solution: used like ichthyol.

thiolin (thi'o-lin). A dark-green substance prepared by boiling 1 part of sulphur in 6 parts of linseed oil, and treating the product with sulphuric acid. It is used like ichthyol in skin diseases. Called also *thiolinic acid*. **t.-sodium**. See *sodium thiolinate*.

thiolip (thi'o-lip) [Gr. $\theta\epsilon\iota\omega\nu$ sulphur + $\lambda\iota\pi\omicron\varsigma$ fat]. A proprietary salve of sulphur and lanolin for cutaneous affections.

thionin (thi'o-nin). A dark-green dye or stain, aminophenthiazin, $\text{NH}_2\text{C}_6\text{H}_3(\text{NS}).\text{C}_6\text{H}_3\text{NH}_2$, giving a purple color in solution, and used as a stain in microscopy. **t. hydrochlorate**, a purple stain. Called also *Lauth's violet*.

thionyl (thi'o-nil). The radicle SO .

thiophen, thiophene (thi'o-fen). A colorless, oily benzene derivative, $(\text{CH})_4\text{S}$, which is miscible with water. **t. diiodid**, a crystalline antiseptic powder, $\text{C}_6\text{H}_4\text{I}_2\text{S}$: used as a wound disinfectant. **t. iodid**. See *iodothiophen*. **t.-sodium sulphonate**, a white powder, $\text{C}_6\text{H}_4\text{S.NaSO}_3$: useful in prurigo. **t. tetrabromid**, a yellow powder: used like iodoform as a dusting-powder.

thiophil, thiophilic (thi'o-fil, thi-o-fil'ik) [Gr. $\theta\epsilon\iota\omega\nu$ sulphur + $\phi\iota\lambda\epsilon\iota\nu$ to love]. Growing successfully in the presence of sulphur or sulphur compounds.

thiopinol (thi-o-pi'no'l). A solution of sulphur in alcohol, glycerin, and oil of pine: used for sulphur baths in rheumatic, neuralgic, and cutaneous affections.

thiopyrin (thi-o-pi'rin). Antipyrin in which the oxygen is replaced by sulphur.

thioresorcinol (thi'o-re-sor'sin-ol) [Gr. $\theta\epsilon\iota\omega\nu$ sulphur + *resorcinol*]. Phenyl bisulphhydrate, $\text{C}_6\text{H}_4\text{-(SH)}_2$: a yellow-gray powder: used like iodoform in powder or ointment.

thiosapo (thi-o-sa'pol) [Gr. $\theta\epsilon\iota\omega\nu$ sulphur + *L. sa'po* soap]. A proprietary therapeutic soap containing sulphur.

thiosavonal (thi-o-sav'o-nal). Any one of a series of proprietary therapeutic sulphur soaps.

thiosebate (thi-o-se'bät). Any salt of thiosebic acid. Potassium thiosebate occurs in the thiosavonals.

thiosinamin (thi-o-sin'am-in). A bitter, crystalline substance, $(\text{NH}_2)\text{CS.NHCH}_2\text{CH}_2$, allyl or sulphocarbamide or allyl thio-urea, from oil of mustard and ammonia. It is soluble in water, alcohol, or ether, and is used as a resolvent for scar structures, etc., and in lupus, tuberculosis, and arsenamin dermatitis. Dose, $\frac{1}{2}$ -1½ gr. (0.033-0.6 gm.); hypodermic dose, 4½-7 gr. (0.3-0.45 gm.). Called also *rhodalin*.

thiosulphate (thi-o-sul'fat). Any salt of thiosulphuric acid.

thiosulphuric acid (thi'o-sul-fu'rik). See *acid*.

Thiothrix (thi'o-thriks) [Gr. $\theta\epsilon\iota\omega\nu$ sulphur + $\theta\rho\iota\chi\eta$ hair]. A genus of encapsulated, non-motile threads with sulphur-bearing cells.

thio-urea (thi-o-u're-ah). Sulphocarbamid, $\text{CS-(NH}_2)_2$, being urea in which the oxygen is replaced by sulphur.

thioxidyphenylamin (thi-oks-e-di-fen-il-am'in). A yellow powder used locally as a substitute for iodoform and internally in cystitis. Dose, 2-4 gr. (0.13-0.25 gm.).

thiozin (thi'o-zin). See *thilaven*.

thiozon (thi'o-zön). A linalyl-sulphur compound used in baths for scabies.

third nerve (third). The oculomotor nerve. See *nerves, table of*.

thirinol (thir'in-ol). A resinol derivable from the gum resin opopanax.

thirst (therst). A craving for water or other drink. See *dipsosis* and *polydipsia*. **t.-cure**. See *Schroth's treatment, under treatment*.

Thiry's fistula (thi'rëz) [Jean Hubert Thiry, Belgian physician, 1817-1897]. See *fistula*.

thiselö (thi'sel-o). Popular name for fistula.

thiuret (thi'u-ret). A crystalline powder, $\text{C}_8\text{H}_7\text{N}_3\text{S}_2$: its salts are antiseptic. The hydrobromid, hydrochlorid, phenolsalicylate, salicylate, and phenolsulphonate of thiuret are employed therapeutically.

thlipsencephalus (thlip-sen-sef'al-us) [Gr. $\theta\lambda\iota\psi\epsilon\varsigma$ pressure + $\epsilon\gamma\kappa\epsilon\phi\alpha\lambda\omicron\varsigma$ brain]. A monster with a deficient skull, or with the upper part of the skull lacking.

thlyptol (thlip'tol). A proprietary liquid antiseptic and deodorant combination of oil of thyme, eucalyptus, etc., with benzoic acid.

thoka-losi (tho-kah-lo'se). Incision of the membranous portion of the urethra, practised by natives of Australia and the Fiji Islands in the belief that it is a cure for fever and rheumatism.

thoko (tho'ko). A skin disease endemic in Fiji; probably yaws.

Thoma's ampulla, fluid (to'mahz) [Richard Thoma, German histologist, born 1847]. See *ampulla* and *fluid*.

Thoma-Zeiss (to'mah-zis) [Richard Thoma, German histologist; Carl Zeiss, German optician]. An instrument consisting of a glass receptacle at the bottom of a slide for a microscope, having the bottom divided into minute squares. It is used for counting the red and white corpuscles of the blood. Called also *Abbe-Zeiss counting-cell*.

Thomas's splint (tom'as) [Hugh Owen Thomas, surgeon in Liverpool, 1834-1891]. See *splint*.

Thompson's solution (tom'sonz) [Ashburton *Thompson*, English physician of the nineteenth century]. See *solution*.

Thompson's test (tom'sonz) [Sir Henry *Thompson*, English surgeon, 1820-1904]. See under *tests*.

Thomsen's disease (tom'senz) [Asmus Julius *Thomsen*, Danish physician, 1815-1896]. See *disease*.

Thomson's fascia (tom'sonz) [Allen *Thomson*, Scotch anatomist, 1809-1884]. See *fascia*.

thomsonianism (tom-so'ne-an-izm). An empiric system of medical practice, chiefly botanic, founded by Samuel *Thomson*, 1769-1843.

thoracal (tho'rak-al). Same as *thoracic*.

thoracalgia (tho-rak-al'je-ah) [Gr. *θώραξ* chest + *ἄλγος* pain]. Pain in the chest-wall.

thoracaorta (tho-rak-a-or'tah). The thoracic aorta.

thoracotomy (tho-rah-sek'to-me) [Gr. *θώραξ* chest + *ἐκτομή* excision]. Thoracotomy with resection of a portion of a rib.

thoracentsis (tho'rah-sen-te'sis) [Gr. *θώραξ* chest + *κέντησις* puncture]. Surgical puncture or tapping of the chest-wall. Called also *paracentsis thoracis* and *pleuracentsis*.

thoracic (thor-as'ik) [L. *thoracicus*; Gr. *θωρακικός*]. Pertaining to the chest. **t. duct.** See *duct*.

thoracico-abdominal (tho-ras'ik-o-ab-dom'in-al). Pertaining to the thorax and abdomen.

thoracico-acromialis (tho-ras'ik-o-ak-ro-me-a'lis). Same as *acromiothoracic artery*. See *arteries*, *table of*.

thoracicohumeral (tho-ras'ik-o-hu'mer-al). Pertaining to the thorax and the humerus.

thoracispinal (tho'ras-is-pi'nal). Pertaining to the thoracic segment of the spinal column.

thoracobronchotomy (tho'rak-o-bron-kot'o-me). Incision into the bronchus through the thoracic wall.

thoracoceloschisis (tho-ra-ko-se-lös'kis-is) [Gr. *θώραξ* chest + *κοιλία* belly + *σχίσις* fissure]. Fissure of the thorax and abdomen.

thoracocentesis (tho'rak-o-sen-te'sis). Same as *thoracentsis*.

thoracocyllosis (tho'rak-o-sil-ös'is) [Gr. *θώραξ* chest + *κύλλωσις* crippling]. Deformity of the chest.

thoracocyrstosis (tho'rak-o-sir-to'sis) [Gr. *θώραξ* chest + *κύρτωσις* curvature]. Abnormal curvature of the thorax, or unusual prominence of the chest.

thoracodelphus (tho'rak-o-del'fus) [Gr. *θώραξ* chest + *ἄδελφός* brother]. A double monster with one head, two arms, and four legs, the bodies being joined above the navel.

thoracodidymus (tho'rak-o-did'im-us) [Gr. *θώραξ* chest + *δίδυμος* twin]. A double monster united at the thorax.

thoracodynia (tho'rak-o-din'e-ah) [Gr. *θώραξ* chest + *δύνη* pain]. Pain in the chest.

thoracogastrodidymus (tho'rak-o-gas-tro-did'im-us) [Gr. *θώραξ* chest + *γαστήρ* belly + *δίδυμος* twin]. A twin monstrosity with the bodies joined at the bellies and chests.

thoracogastroschisis (tho'rak-o-gas-tros'kis-is) [Gr. *θώραξ* chest + *γαστήρ* belly + *σχίσις* cleft]. Fissure of the thorax and abdomen.

thoracograph (tho-rak'o-graf) [Gr. *θώραξ* chest + *γράφειν* to write]. An apparatus for obtaining diagrams showing the movements of the chest during respiration.

thoracolaparotomy (tho'rak-o-lap-ar-ot'o-me) [Gr. *θώραξ* chest + *λαπάρα* loin + *τομή* a cut]. Incision through both the thorax and abdomen to gain access to the subphrenic space and adjoining regions.

thoracolumbar (tho-rak-o-lum'bar). Pertaining to the thoracic and lumbar parts of the spine.

thoracolysis (tho-rak-ol'is-is) [Gr. *θώραξ* chest + *λύσις* loosening]. The freeing of the chest wall from adhesions. **t. præcordi'aca.** See *cardiolysis*.

thoracamelus (tho-rak-om'el-us) [Gr. *θώραξ* chest + *μέλος* limb]. A monster-fetus with an arm or leg of a twin fetus attached to the thorax.

thoracometer (tho-rak-om'et-er) [Gr. *θώραξ* chest + *μέτρον* measure]. Same as *stethometer*.

thoracometry (tho-rak-om'et-re). Measurement of the thorax.

thoracomydynia (tho'rak-o-mi-o-din'e-ah) [Gr. *θώραξ* chest + *μῦς* muscle + *δύνη* pain]. Pain in the muscles of the chest.

thoracopagus (tho-rak-op'ag-us) [Gr. *θώραξ* chest + *πάγος* fixed]. A twin monster fused at the thorax.

thoracoplasty (tho-ra'ko-plas-te) [Gr. *θώραξ* chest + *πλάσσειν* to mold]. Plastic surgery of the thorax; operative repair of defects of the chest.

thoracopneumoplasty (tho'rak-o-nu'mo-plas-te) [Gr. *θώραξ* chest + *πνεῦμα* lung + *πλάσσειν* to form]. Plastic surgical operation involving the chest and lung.

thoracoschisis (tho-rak-os'kis-is) [Gr. *θώραξ* chest + *σχίσις* fissure]. Congenital fissure of the chest.

thoracoscope (tho-rak'o-sköp) [Gr. *θώραξ* chest + *σκοπεῖν* to inspect]. 1. An instrument for examining the pleural cavity. It is pushed into the cavity through an intercostal space. 2. A stethoscope.

thoracoscopy (tho-rak-os'ko-pe) [Gr. *θώραξ* chest + *σκοπεῖν* to inspect]. The diagnostic examination of the chest; specifically, the direct examination of the pleural cavity by means of the endoscope; pleural endoscopy.

thoracostenosis (tho'rak-o-ste-no'sis) [Gr. *θώραξ* chest + *στένωσις* contraction]. Abnormal contraction of the chest-wall; wasp waist.

thoracotomy (tho-rak-os'to-me) [Gr. *θώραξ* chest + *στόμα* opening]. The operation of resecting the chest-wall in order to allow room for an enlarged heart.

thoracotomy (tho-rak-ot'o-me) [Gr. *θώραξ* chest + *τέμνειν* to cut]. Surgical incision of the wall of the chest.

thoradelphus (tho-rah-del'fus). Same as *thoracodelphus*.

thoradin (thor'ad-in). Same as *thoremadin*.

thorax (tho'raks) [Gr. *θώραξ*]. The chest; the part of the body between the neck and the abdomen. The surface of the thorax is divided into regions as follows: *supraclavicular*, above the clavicles; *suprasternal*, above the sternum; *clavicular*, over the clavicles; *sternal*, over the sternum; *mammary*, the space between the third and sixth ribs on either side; *inframammary*, below the mamma and above the lower border of the twelfth rib on either side; on the back: *scapular*, over the scapula; *interscapular*, between the scapulae; *infrascapular*, below the scapulae; on the sides: *axillary*, above the sixth rib; *infra-axillary*, below the sixth rib. **Amazon t.**, a chest with only one breast. **barrel-shaped t.**, barrel-chest: a malformed chest which is rounded like a barrel; seen in pulmonary emphysema. **fusiform t.**, a chest deformed by tight lacing. **t. paralyticus**, the long flat thorax of patients with constitutional visceroptosis. **Peyrot's t.**, a chest that is obliquely oval: seen in large pleural effusions.

Thorel's bundle (to'relz) [Ch. *Thorel*, German physician]. See under *bundle*.

thoremadin (tho-rem'ed-in). A proprietary preparation of thorium: used for the radio-active treatment of skin disease, such as epithelioma, lupus, etc.

thoriagram (tho're-ag-ram) [thorium + Gr. *γράμμα* mark]. A photograph made with thorium.

thorium (tho're-um) [*Thor*, a Norse deity]. A rare, heavy gray metal, having radioactive properties; atomic weight, 232.15; symbol, Th. Thorium is the parent of a series of radio-active products, including mesothorium, radiothorium, and thorium emanation. See the *table of radio-active elements*, p. 963. Some of its salts have been employed as medicines. Emanations from this substance have antiseptic and antifermentative properties. **t. nitrate**, $\text{Th}(\text{NO}_3)_4 \cdot 4\text{H}_2\text{O}$, has been used in solution in pyelography. **t. sodium citrate**. It is used in solution for the diagnosis of conditions in the urinary system as it is opaque to x-rays.

Thormählen's test (tor'ma-lenz) [Johann Thormählen, German physician]. See under *tests*.

thorn-apple (thorn'ap-l). Same as *stramonium*.

Thornton's sign (thorn'tonz) [Knowsley Thornton, British physician, 1845-1904]. See under *signs*.

thornwaldtitis (torn-wald-ti'tis). Same as *Thornwaldt's disease*. See *disease*.

Thornwaldt's disease (torn'valdtz) [Gustavus Ludovicus Thornwaldt, German physician, 1843-1910]. See *disease*.

thoron (tho'ron). Thorium emanation.

thorow-joint (thur'o-joint). A diarthrosis, or arthrodia.

thorough-pin (thur'o-pin). A distention of the synovial sheath of the flexor perforans tendon of the horse at the hock-joint; also a similar distention on the carpal joint of the foreleg.

thoroughwort (thur'o-wort). See under *Eupatorium*.

thorter-ill (thor'ter-il). A disease of sheep, causing them to jump up in walking, and due to the presence of *census cerebri* in the spinal cord. Called also *leaping ill* and *loupings ill*.

thought-reading (thawt). Perception of the thoughts and feelings of a person's mind by means of involuntary muscular movements.

thought-transfer. Transfer of thought from one person to another without speech or other communication.

thoxos (thoks'os). A proprietary rheumatism remedy containing strontium, lithium, and colchicum.

thread, celluloid. Sterilized linen thread impregnated with celluloid solution, used for ligatures and sutures. **Simonart's t.**, a band formed by the stretching of adhesions of the amnion and fetus when the amniotic cavity is distended with its proper fluid.

thread-fungi (thred). A general term for the fungi of pityriasis, favus, herpes tonsurans, etc.

thread-galvanometer. See *galvanometer*.

thread-granules. See *mitochondria*.

thread-reaction (thred). Mandelbaum's reaction.

thread-worm (thred'wurm). Same as *Oxyuris*.

three-day fever (thre'da). Dengue.

three friends (thre frendz). A liquor or cordial prepared in Italy from eucalyptus wood. It is antiseptic, stomachic, restorative, and antiperiodic.

three-glass test. See under *tests*.

thremmatology (threm-at-ol'o-je) [Gr. *θρέμμα* nursing + *λόγος* discourse]. The science of the laws of heredity and variation.

threpsis (threp'sis) [Gr.]. Nutrition.

threpsology (threp-sol'o-je) [Gr. *θρέψις* nutrition + *λόγος* discourse]. The sum of what is known concerning nutrition; the science of nutrition.

threshold (thresh'öld). That degree of stimulus that just produces a sensation; a stimulus that is just appreciable or just comes within the limits of perception. Called also *Schwelle*. **absolute t.**, the lowest possible limit of perceptibility of any sensation. Called also *stimulus t.* **achromatic t.**, the least intensity of the spectrum that produces

a sensation of color. Reduction of intensity below this point produces a sensation of brightness only, without any color distinction. **auditory t.**, the *mini'mum audib'ile*, or slightest perceptible sound. **t. of consciousness**, the *mini'mum sensib'ile*, or lowest limit of sensibility. **differential t.**, the lowest limit of discriminative sensibility; the ratio which the difference of two stimuli must bear to half their sum in order that their difference may be just perceptible. **double-point t.**, the smallest distance apart at which two stimuli of touch are felt as distinct. **neuron t.**, that degree of excitation of a neuron which just suffices to call forth a fruitful excitation (sensation, movement, or the like) in a neuron with which it is in contact. **relational t.**, the ratio which two stimuli must have to each other in order that the difference between them may be just perceptible. **stimulus t.** See *absolute t.* **t. substances**. See under *substance*. **t. of visual sensation**, the *mini'mum vis'ible*, or slightest possible vision of any object.

thridacium (thri-da'she-um) [Gr. *θρίδαξ* lettuce]. Same as *lactucarium*.

thrill (thrill). A tremor or vibration felt on applying the hand or finger-tips to the body; fremitus. **aneurysmal t.**, the vibratory sensation felt on the palpation of an aneurysm. **aortic t.**, a thrill perceptible over the aortic orifice in disease of its valves. **hydatid t.**, a vibration felt on percussing over a hydatid cyst. **presystolic t.**, a thrill occasionally felt just before the systole by the hand placed over the apex of the heart. **purring t.**, a thrill of a quality suggesting the purring of a cat.

throat (thröt). 1. The pharynx. 2. The fauces. 3. The anterior part of the neck. **t.-cough**, a cough that is produced by irritation of the throat. **t.-deafness**. See *deafness*. **sore-t.** See *sore-throat*. **trench t.**, Vincent's angina.

throb (throb). A pulsating movement or sensation.

throbbing (throbb'ing). Beating; attended with a beating sensation.

throe (thro). A severe pain or paroxysm.

thromballosis (throm-bal-o'sis). The condition of the venous blood produced by coagulation.

thrombase (throm'bäs). See *thrombin*.

thrombectomy (throm-bek'to-me) [Gr. *θρόμβος* clot + *ἐκτομή* excision]. The operation of excising a venous thrombus.

thrombin (throm'bin). 1. The hypothetical fibrin ferment of the blood; the enzyme, present in clotted but not in circulating blood, which converts fibrinogen into fibrin. Called also *thrombase*. 2. Same as *fibrinogen*.

thrombo-angiitis (throm'bo-an-je-i'tis) [Gr. *θρόμβος* clot + *angiitis*]. Inflammation of the intima of a blood-vessel with clot formation. **t. obliterans**, Buerger's term for a form of gangrene attributed to a thrombo-angiitis occurring generally in the larger arteries and veins of the leg, although it may appear in the upper extremity. Called also *presenile spontaneous gangrene*.

thrombo-arteritis (throm'bo-ar-ter-i'tis). Thrombosis conjoined with arteritis, or inflammation of an artery. **t. purulen'ta**, purulent softening of an arterial thrombosis, with infiltration of the artery-walls.

thrombocinase (throm-bo-ki'näs). Thrombokinase.

thrombocyst, thrombocystis (throm'bo-sist, throm-bo-sis'tis) [Gr. *θρόμβος* clot + *κύστις* cyst]. The sac which forms around a clot or thrombus.

thrombocyte (throm'bo-sit) [Gr. *θρόμβος* clot + *κύτος* cell]. Same as *blood-platelet*.

thrombocytoctrit (throm-bo-si'to-krit) [*thrombocyte* + Gr. *κρίνειν* to separate]. An instrument for measuring the platelet content of the blood.

thrombocytopenia (throm'bo-si-to-pe'ne-ah). Same as *thrombopenia*.

thrombogen (throm'bo-jen) [thrombin + Gr. *γεννάν* to produce]. A substance thought to exist in the blood, and by the action of a zymoplastic substance (*thrombokinas*) to be converted into thrombin. Called also *prothrombin*.

thrombogenic (throm-bo-jen'ik) [Gr. *θρόμβος* clot + *γεννάν* to produce]. Producing a clot, curd, or coagulum.

thrombold (throm'boïd) [Gr. *θρομβοειδής*]. Like or resembling a thrombus.

thrombokinas (throm-bo-kin'ās). The zymoplastic substance which acts on thrombogen to produce thrombin.

thrombokinesis (throm'bo-kin-e'sis) [Gr. *θρόμβος* clot + *κίνησις* motion]. The formation of a blood-clot; clotting of blood.

thrombolympangitis (throm'bo-lim-fan-jī'tis) [thrombus + *lympangitis*]. Inflammation of a lymph-vessel due to a thrombus.

thrombopenia (throm-bo-pe'ne-ah) [thrombocyte + Gr. *πενία* poverty]. Decrease in the number of blood-platelets.

thrombopeny (throm'bo-pe-ne). Thrombopenia.

thrombophilia (throm-bo-fil'e-ah) [thrombosis + Gr. *φιλέω* to love]. A tendency to the occurrence of thrombosis.

thrombophlebitis (throm'bo-fle-bi'tis) [Gr. *θρόμβος* clot + *φλέψ* vein + *-ιτις* inflammation]. Thrombosis conjoined with inflammation of a vein or of veins. **t. purulen'ta**, purulent softening of a venous thrombus, with infiltration of the wall of the vessel.

thromboplastic (throm-bo-plas'tik) [Gr. *θρόμβος* clot + *πλάσσειν* to form]. Causing or accelerating clot formation in the blood.

thromboplastin (throm-bo-plas'tin). A substance existing in the tissue which causes clotting of the blood. It has been used in solution as a hemostatic.

thrombosed (throm'bozd). Affected with thrombosis.

thrombosin (throm-bo'sin). A principle derived from fibrinogen, under the influence of the nucleoproteins of broken-down leukocytes, and itself convertible into fibrin.

thrombosinuitis (throm'bo-si-nu-si'tis). Thrombosis of a dural sinus.

thrombosis (throm-bo'sis) [Gr. *θρόμβωσις*]. The formation or development of a thrombus. **agonal t.**, lardaceous coagula of intravital blood formed in the heart and great vessels before death (Ribbert, 1916). **atrophic t.** See *marasmic t.* **cardiac t.**, thrombosis of the heart. **coagulation t.**, that produced by coagulation of fibrin in a vessel. **compression t.**, that which is due to the compression of a vein between the heart and the thrombus. **creeping t.**, thrombosis gradually involving one portion of a vein after another. **dilatation t.**, thrombosis due to the slowing of circulation on account of dilatation of a vein. **embolic t.**, thrombosis following obstruction of a vessel by an embolus. **infective t.**, that which is due to a bacterial invasion. **jumping t.**, thrombosis affecting a vein in a part shortly after its affecting one in another part. **marantic t.**, **marasmic t.**, thrombosis, chiefly of the longitudinal sinus, occurring in the wasting diseases of infancy and of old age. Called also *atrophic t.* **placental t.** 1. A normal formation of thrombi in the placenta. 2. An abnormal extension of the foregoing process to the veins of the uterus. **plate t.**, **platelet t.**, an abnormal accumulation of blood-plates, forming a thrombus. **puerperal t.**, coagulation of blood in the veins occurring after childbirth. **Ribbert's t.** See *agonal t.* **sinus-t.**, thrombosis of a venous sinus. **traumatic t.**, thrombosis due to injury to a part. **venous t.**, thrombosis of a vein.

thrombotasis (throm-bos'tas-is) [thrombus + *stasis*]. Stasis of blood in a part, attended with the formation of a thrombus.

thrombotic (throm-bot'ik). Pertaining to or affected with thrombosis.

thrombus (throm'bus) [Gr. *θρόμβος*]. A plug or clot in a vessel remaining at the point of its formation. Cf. *embolus*. **agglutinative t.** Same as *hyaline t.* **agonal t.**, **agon y t.**, a clot formed in the heart during the process of dying. **annular t.**, one which has an opening through its center, while the circumference is attached to the wall of the vessel. **antemortem t.**, a white thrombus formed in the heart or in a large vessel before death. Cf. *postmortem t.* **ball-t.**, a rounded heart-clot. **blood-plate t.** See *plate*, *platelet thrombosis*, under *thrombosis*. **calci-fied t.**, a phlebolith. **coral t.**, a red clot formed by coagulated fibrin inclosing red corpuscles.

currant-jelly t., a soft, reddish, jelly-like clot. **ferment t.**, a thrombus formed on account of the development of fibrin-ferment in the blood. **fibrinous t.**, a thrombus composed mainly of fibrin, and attached to the walls of a blood-vessel. **globulin t.**, **hematoblastic t.**, a thrombus composed largely of globulin. **hematostatic t.**, a form due to stagnation of the blood, and made up principally of red corpuscles. **hyaline t.**, a thrombus composed of erythrocytes which have lost their hemoglobin, forming a colorless translucent mass. **infective t.**, a form occurring as a result of septic or bacterial poisoning. **Laennec's t.**, a globular thrombus in the heart, chiefly in cases of fatty degeneration. **laminated t.**, **mixed t.**, a thrombus whose substance is disposed in layers which sometimes differ in their material. **lateral t.**, a clot attached to the side of a vessel, incompletely obstructing the blood-current. **marantic t.**, **marasmic t.**, a form due to wasting disease and deprivation of the blood. See *thrombosis*, *marantic*, *marasmic*. **mechanic t.**, a form due to mechanic obstruction of the blood-current. **milk-t.**, an accumulation of curdled milk in a lactiferous duct. **mixed t.** See *laminated t.* **mural t.**, a thrombus attached to a diseased area of endocardium. **obstructive t.**, one which completely obliterates the lumen of the vessel at its site. **organized t.**, one which is traversed by loops from the vasa vasorum. **pale t.**, a dull-white thrombus. **parasitic t.**, an accumulation of the pigmented bodies of free malarial parasites and their spores in the capillaries of the brain. **parietal t.**, one which is so attached to the wall of a vessel as to form a kind of valve. Called also *valvular t.* **phagocytic t.**, an accumulation of melaniferous leukocytes in the capillaries of the brain. **pigmentary t.**, an accumulation of free pigment in the capillaries of the brain. **plate-t.**, a thrombus composed of blood-plates. **postmortem t.**, a thrombus or clot of blood formed in the heart or in a large vessel after death. **primary t.**, one which remains at the place of its origin. **propagated t.**, one which has been carried to a point more or less remote from the place of its origin, or which has grown beyond its original limits. **red t.**, a thrombus of a dark-red color formed by the coagulation of blood which is at rest. **stratified t.**, one made up of layers of different colors. **traumatic t.**, one which results from an injury. **valvular t.** See *parietal t.* **white t.** 1. One which contains no pigment. 2. One composed chiefly of leukocytes.

Thrombus in the saphenous vein (Green).

through-drainage (thru). See *drainage*.

through-illumination. See *transillumination*.

throwing-back. Atavism.

thrush (thrush). 1. Mycotic stomatitis; a dis-

ease of infants attended with the formation of aphthae, or whitish spots in the mouth. It is due to the presence of fungi of the genera *Monilia*, *Oidium*, *Saccharomyces*, and others. The aphthae are followed by shallow ulcers. The disease is often attended with fever and gastro-intestinal irritation. The mouth is to be treated with borax and honey, and the spots may be touched with silver nitrate. Mild aperients, followed by a general tonic and sustaining treatment, are often useful. 2. A disease of the horse's foot attended with a fetid discharge.

thrust-culture (thrust). Same as *stab-culture*.

thrypsis (thrip'sis) [Gr. *θρίψις*]. A comminuted fracture.

Thudichum's test (too'de-koomz) [Johann Ludwig Thudichum, German physician of the 19th century]. See under *tests*.

Thuja (thu'jah) [L.; Gr. *θύια*]. 1. A genus of coniferous trees called *ar'bor-vitæ*. 2. The fresh tops of *T. occidentalis*, white cedar: diuretic, antipyretic, sudorific, and emmenagogue. Dose of volatile oil, 5-10 min. (0.33-0.66 c.c.).

thujone (thu'jōn): A volatile oil, $C_{10}H_{16}O$, obtainable from the oil of thuja: stimulant and antipyretic.

thulium (thu'le-um) [*Thule*, ancient name of Shetland]. A very rare metallic element; symbol, Tu; atomic weight, 168.5.

thumb (thum) [L. *pollex*, *pol'lux*]. The most external or more nearly radial of the five digits of the hand. **t.-center**. See under *center*. **t.-lancet**, a lancet with a broad-pointed extremity, having double cutting-edges. **t.-sucker**, a child who habitually sucks the thumb; deformity of the jaws and teeth may result from the habit. **t.-print**, a finger print of the thumb.

thumps (thump). 1. A disease of swine caused by *Ascaris* larvæ in the lungs. 2. A kind of singultus, or hiccup, of horses, due to spasm of the diaphragm.

thunder-humor (thun-der-hu'mor). A popular name for an obstinate skin disease: said to be due to lightning-stroke.

thus (thus) [L. gen. *thu'ris*]. Olibanum or frankincense. **American t.**, the turpentine of various American pine trees. See *olibanum*. **gum t.**, turpentine.

Thuya (thu'yah). See *Thuja*.

thyalol (thi'kal-ol). A proprietary antiseptic preparation for dentists' use.

thylacitis (thi-las-i'tis) [Gr. *θύλαξ* pouch + *-itis* inflammation]. Inflammation of the oil-glands of the skin.

thymacetin (thi-mas-e'tin) [Gr. *θύμον* thyme + *L. acetum* vinegar]. A white, crystalline thymol derivative, $C_6H_2(CH_3)(C_6H_7)(OC_2H_5)NH(C_2H_5O)$. Slightly soluble in water, freely so in alcohol, and used as an antineuralgic, like phenacetin. Dose, 3-5 gr. (0.2-0.333 gm.).

thyme (tim) [L. *thymus*; Gr. *θύμος*]. A plant of the genus *Thymus*. The *Thymus vulgaris*, or garden thyme, contains a volatile oil, which is aromatic and carminative. It also contains *thymol*, *thymene*, and *cumene*. Dose of oil, 1-5 min. (0.066-0.333 c.c.); of fluidextract, 15-60 min. (1-4 c.c.). **t.-camphor**. See *thymol*. **wild t.**, *Thymus serpyllum*, which contains a volatile oil similar to that of *Thymus vulgaris*.

thymectomize (thi-mek'to-miz) [see *thymectomy*]. To remove the thymus gland from.

thymectomy (thi-mek'to-me) [Gr. *θύμος* thymus + *ἐκτομή* excision]. Removal of the thymus.

thymegol (thi-me'gol). A parasulphonic derivative of thymol, mercury, and potassium. It is a red-brown powder: antiseptic and emetic.

thymelcosis (thi-mel-ko'sis) [Gr. *θύμος* thymus + *ἐλκος* ulceration]. Ulceration of the thymus.

thymene (thi'mēn). A clear, oily hydrocarbon, $C_{10}H_{16}$, from the oil of thyme.

thymenthol (thi-men'thol). A proprietary antiseptic preparation.

thymhydroquinone (thim-hi'dro-kwin-ōn'). A substance obtainable from the urine after the administration of thymol.

thymian (thim'e-an, tim'e-an). German for *thyme*.

thymic (thi'mik) [L. *thymicus*]. 1. Pertaining to the thymus. 2. Contained in or derived from thyme. **t. acid**. See *acid*.

thymicolymphatic (thi'mik-o-lim-fat'ik). Pertaining to the thymus and the lymphatic glands.

thymidol (thi'mid-ol). Methylpropylphenol menthol used in mouth-washes and in filling dental cavities.

thymine (thi'min) [Gr. *θύμος* thymus]. A pyrimidin base, methyl uracil, $C_5H_6N_2O_2$, obtained from nucleic acid.

thymiodid (thi-mi'o-did). A proprietary surgical dressing.

thymion (thim'e-on) [Gr. *θύμιον*]. A cutaneous wart.

thymiosis (thim-e-o'sis) [Gr. *θύμιον* wart]. Yaws.

thymitis (thi-mi'tis). Inflammation of the thymus.

thymochrom (thi'mo-krom). Same as *phymochrom*.

thymocyte (thi'mo-sit) [*thymus* gland + Gr. *κύτος* cell]. Lymphocyte-like cells occurring in the thymus gland.

thymoform (thi'mo-form). A yellowish, antiseptic powder, thymoloform, $CH_2(C_6H_5)(CH_3)(C_6H_7)O_2$, prepared from formaldehyd and thymol. It is soluble in ether, alcohol, chloroform, and olive oil, but insoluble in water and glycerin. It is used like aristol and iodoform.

thymogenic (thi-mo-jen'ik) [Gr. *θύμος* spirit + *γενᾶν* to produce]. Of affective or hysterical origin.

thymohydroquinone (thi'mo-hi-dro-kwin-ōn'). A compound occurring in the urine after the administration of thymol.

thymokesis (thi-mo-ke'sis). Enlargement of the remnant of the thymus gland that is found in the adult.

thymol (thi'mol). Thyme-camphor, methylisopropyl phenol, $(CH_3)_2CH.C_6H_3(CH_3)OH$, a crystalline phenol from oil of thyme and from the oils of various other labiate plants. It is an important antiseptic and antirheumatic, and is used both internally and externally. It is applied externally in ulcers, stomatitis, and leukorrhea; internally it is used as an anthelmintic and an intestinal antiseptic; it is sometimes employed in 1:1000 solution as an antiseptic in operations. Dose, $\frac{1}{2}$ -2 gr. (0.033-0.133 gm.). **t. blue**. See under *blue*. **t.-camphor**, a compound of thymol and camphor: used in pruritus and in ichthyosis. **t. carbonate**, thymotal. **t.-gauze**, gauze impregnated with a 1 per cent. solution of thymol. **t.-inhalation**, a mixture of 20 gr. of thymol, 3 fl.dr. of alcohol, 10 gr. of magnesium carbonate, and enough water to make 3 fl.oz. Of this, one teaspoonful is used in a pint of water. **t. iodid**. See *aristol*. **t. phthalein**. See *thymol-phthalein*. **t. salicylate**. See *salithymol*. **t. solution**, a 1:1000 solution of thymol: used for spraying. **t. urethan**, a colorless, crystalline compound of thymol and thymol carbonic ester: used as an anthelmintic.

thymolize (thi'mo-liz). To treat with thymol.

thymoloform (thi-mo'lo-form). A yellowish powder, a product of formaldehyd and thymol: used like iodoform.

thymol-phthalein (thi-mol-thal'e-in). An indicator, $C_6H_4.CO.O.C(C_6H_5.CH_2.C_3H_7.OH)_2$, with a PH range of 9.3 to 10.5, being colorless at 9.3 and blue at 10.5.

thymolysin (thi-mol'is-in). An antibody that damages or kills thymus cells.

thymolysis (thi-mol'is-is) [*thymus* + Gr. λύσις dissolution]. Destruction of thymus tissue.

thymolytic (thi-mo-lit'ik). Having a destructive effect on thymus tissue.

thymoma (thi-mo'mah) [*thymus* + Gr. -ομα tumor]. A tumor of the thymus.

thymopathy (thi-mop'ath-e). 1. [Gr. θυμός mind + πάθος suffering.] Any mental affection or disease. 2. [Gr. θυμός thymus + πάθος suffering.] Any disease of the thymus.

thymoprivic (thi-mo-priv'ik). Thymoprivous.

thymoprivous (thi-mop'riv-us) [*thymus* + L. *privus* without]. Pertaining to or caused by removal of, or atrophy of, the thymus.

thymopsyche (thi-mo-si'ke) [Gr. θυμός mind + ψυχή soul]. Affective processes.

thymotal (thi'mo-tal). Thymol carbonate, $(\text{CH}_3)_2\text{C}_6\text{H}_5\text{C}_2\text{H}_5\text{CO}_2$, a white, crystalline powder with the odor of thymol; antelmintic and used for ankylostomiasis. Dose, 15-30 gr. (1-2 gm.).

thymotol (thi'mo-tol). Aristol.

thymotoxic (thi-mo-tok'sik). Toxic for thymus tissue.

thymotoxin (thi-mo-tok'sin). Thymolysin.

thymotrope (thi'mo-tröp). A person who exhibits thymotropism.

thymotropic (thi-mo-trop'ik). Pertaining to or marked by thymotropism.

thymotropism (thi-mot'ro-pizm) [*thymus* + Gr. τροπή a turning]. That type of endocrine constitution in which the influence of the thymus prevails.

thymovidin (thi-mo'vid-in). A hormone which originates in the thymus of birds and stimulates the oviduct to the production of normal egg envelopes.

thymoxol (thi-moks'ol). An antiseptic and deodorant preparation of thymol and hydrogen dioxide: used in otitis media, ozena, etc.

thymozol (thi'mo-zol). A proprietary antiseptic and cicatrizing: used like iodoform.

thymus (thi'mus) [L.; Gr. θυμός]. 1. A two-lobed body in the neck and thorax of an infant or of a young animal. It is composed of a connective-tissue lobe inclosed in a sort of capsule, and containing endothelial cells inclosing leukocytes and corpuscles of Hassall. The thymus appears to be a true lymph-gland, and to have a hematopoietic function; it begins to waste away about the second year, and disappears about the end of the thirteenth year. 2. See *thyme*. 3. A homeopathic preparation of wild thyme. 4. An acrothymion: a rugose wart with a round top. **accessory t.**, a separated portion of the thymus gland. **t. extract**, a preparation of the thymus of animals: used therapeutically. **internal t.**, a body in either lobe of the thyroid of the cat. **persistent t.**, **t. persistens hyperplastica**, a thymus which persists into adult life, sometimes even becoming hypertrophied.

thymus-death. See *thymustod*.

thymusectomy (thi-mus-ek'to-me) [*thymus* + Gr. ἐκτομή excision]. Excision of the thymus.

Thymustod (ti-moos-töd') [Ger.]. Thymus-death; a fatal condition due to hypertrophy of the thymus, and marked by stridulous breathing, suffocation, dyspnea, and rapid death.

thynnin (thin'in). A protamin from the sperm of the tunny fish, *Thynnus thynnus*.

thypar (thi'pahr). Deprived of the thyroid and parathyroid glands; lacking thyroid and parathyroid.

thyraden (thi'rad-en) [*thyroid* + Gr. ἄδην gland]. The dried extract of thyroid gland, one part of which represents two parts of fresh gland. It is a light, brownish, permanent powder, and is

used in cretinism, myxedema, rickets, obesity, psoriasis, etc. Dose, 5-10 gr. (0.333-0.666 gm.).

thyramine (thi-ram'in). A trade name for an organic base derived from ergot and used like ergot.

thyraesthesia (thi-ras-the'ne-ah) [*thyroid* + Gr. ἀσθένεια weakness]. Neurasthenia due to deficient thyroid secretion.

thyrein (thi're-in). Same as *iodothyrein*.

thyreiodin (thi-re-i'o-din). Same as *iodothyrein*.

thyremphraxis (thi-rem-fraks'is) [Gr. θυρεός shield + ἐμφραξις stoppage]. Obstruction of the thyroid gland.

thyreo-. For words beginning thus, see those beginning *thyro-*.

thyreoiditis (thi-re-o-i'tis). Inflammation of the thyroid gland.

thyreosis (thi-re-o'sis). See *thyrosis*.

thyresol (thi're-sol). A colorless liquid, the methyl ether of santalol, a proprietary non-irritating sandalwood preparation: used internally in gonorrhea. Dose, 8 gr. (0.5 gm.), three times a day.

thyrin (thi'rin). The active principle of the secretion of the thyroid gland.

thyro-adenitis (thi'ro-ad-en-i'tis) [Gr. θυρεός shield + ἄδην gland + -itis inflammation]. Inflammation of the thyroid gland.

thyro-antitoxin (thi'ro-an-te-toks'in). 1. An antitoxin developed in thyroid poisoning. 2. A thyroid preparation, theoretically $\text{C}_6\text{H}_{11}\text{N}_3\text{O}_5$. It is a crystalline compound, and is said to be an effective therapeutic agent.

thyroaplasia (thi'ro-ap-la'ze-ah) [*thyroid* + α-neg. + πλασία molding]. Defective development of the thyroid gland with deficient activity of its secretion.

thyro-arytenoid (thi'ro-ar-it-e'noid). Pertaining to the thyroid and arytenoid cartilages. See also *muscles*, *table of*.

thyrocardiac (thi-ro-kar'de-ak). 1. Pertaining to the thyroid and the heart. 2. A person having cardiac disorder which is the result of prolonged thyroid intoxication.

thyrocele (thi'ro-sēl) [Gr. θυρεός shield + εἶδος form + κήλη tumor]. A tumor of the thyroid gland; goiter.

thyrochondrotomy (thi'ro-kon-drot'o-me) [*thyroid* + *chondrotomy*]. Surgical incision of the thyroid cartilage.

thyrocolloid (thi-ro-kol'oid). The colloid matter of the thyroid gland.

thyrocricotomy (thi'ro-kri-kot'o-me) [Gr. θυρεός shield + *cricotomy*]. Tracheotomy through the cricothyroid membrane.

thyro-epiglottic (thi'ro-ep-ig-lot'ik). Pertaining to the thyroid and to the epiglottis.

thyro-epiglottideus (thi'ro-ep-ig-lot-id'e-us). See *muscles*, *table of*.

thyrofi ssure (thi-ro-fish'ur). The operation of making an opening through the thyroid cartilage for the purpose of gaining access to the interior of the larynx.

thyrogenic (thi-ro-jen'ik). Thyrogenous.

thyrogenous (thi-roj'en-us) [Gr. θυρεός shield + γεννάν to produce]. Originating in the thyroid gland.

thyroglandin (thi-ro-glan'din). 1. A preparation of the thyroid body: said to be an efficient therapeutic agent. 2. A therapeutic compound of thyroïdin hydrochlorate and iodoglandin. Dose, 3-5 gr. (0.2-0.333 gm.).

thyroglobulin (thi-ro-glob'u-lin). A globulin; the iodine-protein of the thyroid gland; it is therapeutically active. On decomposition with mineral acid it yields thyroïdin.

thyroglossal (thi-ro-glos'al). Pertaining to the thyroid gland and the tongue. **t. duct**, a duct of the embryo extending from the thyroid to the

base of the tongue: it sometimes persists in part to adult life.

thyrohyal (thi-ro-hi'al). 1. Pertaining to the thyroid body and the hyoid bone. 2. A greater cornu of the hyoid; also the fetal bone which becomes the greater cornu of the hyoid.

thyrohyoid (thi-ro-hi'oid). Pertaining to the thyroid gland or cartilage and the hyoid bone.

thyrohyoideus (thi'ro-hi-oid'e-us). See *muscles, table of*.

thyroid (thi'roid) [Gr. *θυρεοειδής*; *θυρεός* shield + *ειδός* form]. 1. Resembling a shield; scutiform. 2. A large reddish, ductless gland in front of and on either side of the trachea, and usually consisting of two lateral lobes and a connecting isthmus. The thyroid is inclosed in a covering of areolar tissue, and is made up of numerous closed follicles surrounded by a vascular network and containing colloid matter. It is probably a hematopoietic organ, and performs various functions of the highest importance in the economy of the body. The colloid matter of the thyroid is composed of a protein and a non-protein constituent, together with phosphorus and iodine, a nucleo-albumin, and certain extractive compounds. Sheep thyroids are used in the treatment of certain diseases. Called also *t. body*, *t. gland*. See *thyroid therapy*, under *therapy*; also *thyraden* and *thyroidin*, *iodothylin*, etc. **aberrant t.**, a mass of thyroid tissue situated in an abnormal location. **accessory t.**, an exclave or detached portion of the thyroid occasionally present at the base of the tongue; sometimes more than one is present. It is quite distinct from the parathyroids. **t. body**, **t. gland**, the thyroid. **t. cartilage**. See under *cartilage*. **t. extract**, one of the therapeutic preparations of the thyroid of animals. See *thyraden*. **t. fever**, fever resulting from absorption of thyroid matters during thyroidectomy. **t. foramen**. See *foramen*. **t. graft**. See *graft*. **intrathoracic t.** See *substernal t.* **retrosternal t.**, **substernal t.**, a thyroid situated in whole or part in the thorax behind the sternum. **t. therapy**, **t. treatment**. See *therapy*.

thyroidea (thi-ro'i-de-ah). The thyroid gland. **t. accessoria**, **t. im'a**. See *accessory thyroid*, under *thyroid*.

thyroidectin (thi-roi-dek'tin). A substance prepared from the blood of animals from which the thyroid gland has been removed: used in exophthalmic goiter. It is sold in capsules, each containing 5 gr. (0.33 gm.). Dose, 1 or 2 capsules.

thyroidectomized (thi-roi-dek'to-mizd). Having the thyroid gland removed.

thyroidectomy (thi-roid-ek'to-me) [*thyroid* + Gr. *ἐκτομή* excision]. The surgical removal of the thyroid.

thyroideum (thi-roi'de-um). The U. S. P. name for dried thyroid gland.

thyroidin (thi-roid'in). 1. Same as *thyraden*. 2. A crystallizable, iodine-free principle obtained from the thyroids of sheep, one part of which is said to represent six parts of the fresh gland. It is used for goiter, cretinism, obesity, lupus, psoriasis, etc. Dose, 1½-3 gr. (0.1-0.2 gm.). 3. The alleged essential secretion of the thyroid body.

thyroidism (thi'roid-izm). 1. Thyroid poisoning; the condition resulting from overdoses of thyroid extract. 2. Hyperthyroidism. 3. The ill effect of the removal of the thyroid; dethyroidism.

thyroiditis (thi-roid-i'tis). Inflammation of the thyroid body. **ligneous t.**, fibrosis of the thyroid gland. Called also *Riedel's disease*. **parasitic t.** See *Chagas' disease*, under *disease*.

thyroidization (thi'roid-iz-a'shun). Treatment with a preparation of the thyroid.

thyroidotomy (thi-roid-o'to-me) [*thyroid* + Gr. *τεμνειν* to cut]. Surgical incision of the thyroid.

thyro-intoxication (thi'ro-in-tok-sik-a'shun). Thyroid poisoning; thyrotoxicosis.

thyro-iodin (thi-ro-i'o-din). Iodothylin; an amorphous brown powder forming the principal therapeutic extractive of sheep's thyroids. It is said to contain 9 per cent. of iodine and 0.5 per cent. of phosphorus. It has a stimulant effect upon the circulatory and nervous systems, and is used in myxedema, rickets, goiter, corpulency, etc., and in certain skin diseases. Dose, 4-12 gr. (0.25-0.75 gm.).

thyro-iodinin (thi'ro-i-od'in-in). Same as *thyro-iodin*.

thyrolaryngeal artery (thi'ro-lar-in'je-al). See *arteries, table of*.

thyrolingual duct (thi-ro-ling'wal). Same as *thyroglossal duct*.

thyrolysin (thi-rol'is-in). A thyrolytic serum.

thyrolytic (thi-ro-lit'ik) [*thyroid* + Gr. *λύσις* dissolution]. Destruction of thyroid tissue.

thyron (thi'ron). A proprietary preparation from pigs' thyroids; used like other thyroid preparations.

thyroncus (thi-rong'kus) [*thyroid* + Gr. *ὄγκος* tumor]. Same as *goiter*.

thyronucleo-albumin (thi'ro-nu'kle-o-al-bu'min). A nucleo-albumin present in the thyroid gland.

thyro-oxy-indol (thi-ro-ok-se-in'dol). See *thyroxin*.

thyroparathyroidectomy (thi'ro-par-ah-thi'roi-dek'to-me) [*thyroid* + *parathyroid* + Gr. *ἐκτομή* excision]. Excision of the thyroid and parathyroids.

thyropenia (thi-ro-pe'ne-ah) [*thyroid* + Gr. *πένια* poverty]. Defective thyroid action without clinical symptoms; latent hypothyrosis.

thyrophyma (thi-ro-f'mah) [*thyroid* + Gr. *φύμα* tumor]. Tumor of the thyroid gland.

thyroprival (thi-ro-pri'val) [*thyroid* + L. *privus* without]. Due to removal of the thyroid, or to suppression of its functions; strumiprival.

thyroprivia (thi-ro-priv'e-ah) [*thyroid* + L. *privus* without, deprived of]. The condition after the removal of the thyroid body.

thyroprivic, **thyroprivicus** (thi-ro-priv'ik, thi-ro-priv-us). Thyroprival.

thyroproteid (thi-ro-pro'te-id). A toxic protein substance derived from the thyroid and used therapeutically.

thyroprotein (thi-ro-pro'te-in). A toxalbumin derivable from the thyroid. It is probably one of the functions of the thyroid to produce a ferment which neutralizes the toxic effect of an accumulation of thyroprotein in the body.

thyroptosis (thi-ro-pt'o-sis) [*thyroid* + Gr. *πτῶσις* fall]. The condition in which a goitrous thyroid is displaced so as to be concealed in the thorax.

thyrosis (thi-ro'sis), pl. *thyro'ses*. Any disease based on disordered thyroid action.

thyrotherapy (thi-ro-ther'ap-e) [*thyroid* + *therapy*]. Treatment of disease by preparations of the thyroid glands of sheep.

thyrotome (thi'ro-tōm). An instrument for cutting the thyroid cartilage.

thyrotomy (thi-ro'to-me) [*thyroid* + Gr. *τεμνειν* to cut]. The surgical division of the thyroid cartilage.

thyrotoxic (thi-ro-toks'ik). Marked by toxic activity of the thyroid gland.

thyrotoxicosis (thi-ro-toks-ik-o'sis). The diseased condition produced by poisons that enter the system through the thyroid gland, or by excessive activity of the thyroid gland; toxic adenoma of the thyroid.

thyrotoxin (thi-ro-toks'in). A cytotoxin specific for thyroid tissue.

thyrotrope (thi'ro-trōp). A person with any disorder of the endocrine function of the thyroid.

thyrotropic (thi-ro-trop'ik). Pertaining to or marked by thyrotropism.

thyrotropism (thi-rot'ro-pizm) [*thyroid* + Gr. *τροπή* a turning]. Any disorder of the endocrine function of the thyroid; that type of endocrine constitution in which the influence of the thyroid prevails.

thyroxin (thi-rok'sin). A crystalline iodine-containing compound, probably a tetraiodo-substituted derivative of the parahydroxyphenyl ether of tyrosine, $\text{OH} \cdot \text{C}_6\text{H}_4 \cdot \text{O} \cdot \text{C}_6\text{H}_4 \cdot \text{CH}_2 \cdot \text{CH}(\text{NH}_2) \cdot \text{COOH}$, isolated by Kendall from the thyroid gland, and possessing the physiologic properties of thyroid extract. Used in cases of defective thyroid functioning, such as simple goiter, cretinism, and myxedema. Dose, 0.2-2 mg.

thyroxinum (thi-rok'in-um). The U. S. P. name for thyroxin.

thyrus (thir'sus) [Gr. *θήρσος* a wand]. The penis.

Thysanoso'ma actinoid'es. A tapeworm infesting sheep of the western United States.

thysanotrix (thi-san'o-triks). See *ichthyosis thysanotrichica*.

Ti. The chemical symbol for *titanium*.

tiacarana (te-ah-kar-an'yah). Dermal leishmaniasis of the ulcerative type.

tibia (tib'e-ah) [L.]. The inner and larger bone of the leg below the knee. It articulates with the knee above and with the astragalus below.

Lannelongue's t., a syphilitic tibia. **saber-shaped t.**, a deformity of the tibia due to gummatous periostitis.

tibiad (tib'e-ad). Toward the tibial aspect.

tibiæus (tib'e-e'us). Same as *tibialis*.

tibial (tib'e-al) [L. *tibia'lis*]. Of or pertaining to the tibia.

tibiale (tib'e-a'le). A bone on the tibial side of the tarsus of the embryo, partly represented in the adult by the astragalus. **t. exter'num**, **t. post'i'cum**, a sesamoid bone found in the tendon of the tibialis posterior muscle.

tibialgia (tib-e-al'je-ah) [*tibia* + Gr. *ἄλγος* pain]. Painful shin, with lymphocytosis and eosinophilia, probably due to defective nutrition or avitaminosis (von Schrötter, 1916).

tibialis (tib-e-a'lis). See *muscles, table of*.

tibien (tib'e-en). Pertaining to the tibia alone or in itself.

tibio-accessorius (tib'e-o-ak-ses-o're-us). See under *muscles, table of*.

tibiocalcanean (tib'e-o-kal-ka'ne-an). Pertaining to the tibia and the calcaneus.

tibiofemoral (tib'e-o-fem'or-al). Pertaining to the tibia and the femur.

tibiofibular (tib'e-o-fib'u-lar). Pertaining to the tibia and the fibula.

tibionavicular (tib'e-o-nav-ik'u-lar). Pertaining to the tibia and the navicular or scaphoid bone.

tibioperoneal (tib'e-o-per-o-ne'al). Same as *tibiofibular*.

tibioscaploid (tib'e-o-skaf'oid). Tibionavicular.

tibiotarsal (tib'e-o-tar'sal). Pertaining to the tibia and the tarsus.

tic (tik) [Fr.]. 1. As formerly used, any spasmodic movement or twitching, as of the face. 2. As at present used, a psychoneurosis marked by quick, sudden spasms that are identical with the movements of volitional intent. Tics occur in persons of neurotic tendency, are often hereditary, and usually develop in youth. Called also *mimic spasm*, *habit-spasm*, and *maladie des tics*. **bowing t.**, salaan convulsions, or repeated bowing movements of the head. **convulsive t.**, spasm of those parts of the face supplied by the seventh nerve. **degenerative t.**, tic occurring in connection with degeneration of the central nervous system. **t. de pensée** (deh pah-sa'), the habit of

involuntarily expressing any thought that happens to come to the mind. **diaphragmatic t.**, spasmodic twitching movements of the diaphragm. Called also *respiratory t.* **t. douloureux** (doo-loo-ro'), a spasmodic facial neuralgia. **facial t.**, spasm of the facial muscles. **gesticulatory t.**, that marked by spasmodic movements resembling the gestures of an orator or an actor. **habit t.**, habit spasm. See *spasm*. **laryngeal t.**, that marked by a noisy expulsion of air through the glottis. **local t.**, a tic affecting only a limited locality, as the eye. **mimic t.**, facial tic. **motor t.**, a tic which is marked only by the spasmodic movement without mental disturbance. It includes facial spasm, blepharospasm, respiratory, laryngeal, rotatory, and other varieties of tic. **t. non-douloureux**, myoclonus. **progressive choreic t.**, a chronic disease beginning in early life, marked by spasms which at first affect the neck muscles, but, as the disease advances, spread to the rest of the body. The disease ends fatally. **psychomotor t.**, a tic that is accompanied with some mental disorder. It includes the peculiar habit-spasms of insanity that are attended with delusions or insane ideas—the peculiar conditions known as mental torticollis, latah, miryachit, palmus, and Gilles de la Tourette's disease, or dancing mania. **respiratory t.** See *diaphragmatic t.* **rotatory t.** Same as *rotatory spasm*. See *spasm*. **saltatory t.**, saltatory spasm; a nervous condition marked by rhythmic dancing or jumping movements whenever the patient stands. **spasmodic t.**, a condition marked by spasmodic movements of groups of muscles occurring at irregular intervals.

tick (tik). A blood-sucking arachnid parasite of the family Ixodidae. The ticks are larger than their relatives, the mites. All ticks are divided into two subfamilies, the Argatidae, or soft ticks, and the Ixodidae, or hard ticks. The former includes the genera *Argas* and *Ornithodoros*, the latter the genera *Boophilus*, *Amblyomma*, *Dermacentor*, *Hæmaphysalis*, *Hyalomma*, *Ixodes*, *Margoropus*, *Rhipicephalus*, and *Rhipiceator*. **adobe t.** See *Argas persicus*. **bont t.**, *Amblyomma hebraeum*. **brown dog t.**, *Rhipicephalus sanguineus*. **dog t.**, *Hæmaphysalis leachi*, *Dermacentor variabilis*, *Rhipicephalus sanguineus*. **ear t.**, *Ornithodoros megnini*. **lone star t.**, *Amblyomma americanum*. **miana t.** See *Argas*. **pigeon t.**, *Arcus*. **seed t.**, the young ticks soon after hatching. **spinous ear t.** See *Otiobius megnini*. **tampan t.**, *Ornithodoros moubata*. **wood t.** See *Dermacentor* and *Ixodes ricinus*.

tickle (tik'el). To titillate; to produce in any subject the effect called tickling.

tickling (tik'ling). Light stimulation of a sensitive surface, and its reflex effect, such as involuntary laughter, etc.

Ticorea febrif'uga (ti-ko're-ah). A South American tree which affords a valuable antiperiodic medicine.

ticpolonga (tik-po-long'ah). A very venomous serpent of Ceylon and India, *Dabo'ia el'egans*. Called also *co'bra-mon'il*.

tictology (tik-to'l-o-je) [Gr. *τίκτω* to give birth + *λόγος* treatise]. Obstetrics.

ticuna (ti-ku'nah) [name of a tribe of Indians]. An arrow-poison of South America.

t. i. d. An abbreviation for the Latin *ter in die*, "three times a day."

tidal air (ti-dal). See under *respiration*. **t. breathing**, Cheyne-Stokes respiration. See *respiration*. **t. wave**. See *wave*.

tide, acid (tid). A temporary increase in the acidity of the urine which sometimes follows fasting. **alkaline t.**, temporary increase of the alkalinity of the urine during gastric digestion.

Tidy's test (ti'déz) [Charles Meymott Tidy, English physician, 1843-1892]. See under *tests*.

Tiedemann's glands, nerve (te'dem-anz) [Friedrich Tiedemann, German anatomist, 1781-1861]. See *gland* and *nerves*, table of.

tiger-lily appearance. See *tabby-cat heart* under *heart*.

tight-nailing. See *nail-bound*.

tigilium (tig'le-um) [L. gen. *tig'lii*]. The croton-oil plant, *Croton tig'lium*. See *croton oil*, under *oil*.

tigretier (te-gret-e-a') [Fr.]. A form of hysteric dancing mania peculiar to Tigré, a region in Abyssinia.

tigroid (tigr'oid) [Gr. *τυρροειδής* spotted]. Spotted like a tiger. A term applied to Nissl bodies or masses of deeply staining substance in the protoplasm of neurons.

tigrolysis (ti-grol'is-is). The breaking up of the tigroid substance of a cell, especially of a nerve-cell.

tikitiki (te-ke-te'ke). The Japanese name for rice polishings. A soup made from them is used as a neuritis-preventing diet.

Tilia (til'e-ah) [L.]. A genus of trees, the lindens or basswood. *T. europæa* is the linden, or lime, whose flowers are stimulant and demulcent, and are used in catarrh of the respiratory passages, in headache, and in the preparation of sedative baths for irritable conditions.

tiliacrin (til-e-ak'o-rin). An alkaloid, $C_{30}H_{27}NO_3 \cdot (OCH_3)_2$, from *Tiliacoria acuminata*.

tiliadin (til'i-ad-in). A neutral body, $C_{21}H_{32}O_{12}$, from the bark of *Tilia europæa*.

Tillaux's disease (te-ôz') [Paul Jules Tillaux, French physician, 1834-1904]. Mammitis with the formation of multiple fibrous tumors in the breast.

Tilletia (til-e'she-ah). A genus of ustilagineous fungi causing smut on cereals. *T. scarlatino'sa* is said to occur in the blood of scarlet-fever patients.

tilma (til'mah), pl. *til'mata* [Gr. *τίμα*]. A spasm.

tilmus (til'mus). The pulling out of the hair.

timbre (tim'ber, tahn'br) [Fr.]. A musical quality in a tone or sound. *t. métallique*, a high-pitched amphoric sound having a metallic quality.

time (tim) [Gr. *χρόνος*; L. *tem'pus*]. A measure of duration. **association t.**, the time required for the completion of a mental association. **bleeding t.**, the duration of the bleeding that follows puncture of the ear-lobe; employed as a test of hemophilia. **coagulation t.**, the time which it takes a drop of blood to coagulate. **inertia t.**, the time required to overcome the inertia of a muscle after the reception of a stimulus from a nerve. **perception t.**, the time required for the process of perceiving a stimulus. **psychophysical t.**, the time occupied by mental operations, especially in producing voluntary actions. **reaction t.**, the time elapsing between the application of a stimulus and the resulting reaction. **recognition t.** Same as *perception t.* **t.-sense**, the sense by which the lapse of time is perceived.

tin (tin) [L. *stan'num*]. A white, metallic element, having an atomic weight of 118, a specific gravity of 7.3, a valence of 2 or 4; symbol, Sn. Some of its salts are reagents, while others are stains. **t. chlorid**, a compound, $SnCl_2 + 2H_2O$, or stannous chlorid; used as a test reagent.

Tinct., tinct. An abbreviation for *tincture* or *tinctura*.

tinctable (tink'tab-l). Stainable or tingible.

tinction (tink'shun) [L. *tin'gere* to dye]. 1. The act of staining. 2. The addition of coloring or flavoring agents to a prescription.

tinctorial (tink-to're-al). Pertaining to dyeing or staining.

tinctura (tink-tu'rah) [L.; gen. and pl. *tinctu'ræ*]. Latin for *tincture*. **t. antacrida**, an emmenagogue preparation of corrosive chlorid of mercury, guaiac, Canada turpentine, and oil of sassafras.

tincturation (tink-tu-ra'shun). The preparation of a tincture; the treatment of a drug with a

menstruum, such as alcohol or ether, in such a way as to form a tincture.

tincture (tink'tür) [L. *tinctu'ra*]. A medicinal solution, usually less strong than a fluidextract. **alcoholic t.**, one prepared with alcohol. **ammoniated t.**, a tincture prepared with ammoniated alcohol. **antiperiodic t.** Same as Warburg's *t. aqueous t.*, one prepared with water. **balsamic t.**, compound tincture of benzoin. **Bestucheff's t.**, the tincture of ferrous chlorid. **bitter t.**, a composition of centaury, gentian, bitter-orange peel, bitter-orange berries, and orange-flowers extracted with alcohol. **Churchill's t.**, iodine, 16.5; potassium iodid, 3.3; distilled water, 2.5, and alcohol enough to make 100. **Dewees' t.**, a preparation of guaiac, 4 ounces; sodium carbonate, 90 gr.; allspice, 1 ounce; spirit of ammonia, 1 fl.oz.; alcohol, 15 fl.oz. **etheral t.**, a tincture made with ether and alcohol. **Fleming's t.**, strong tincture of aconite. **t. of gambir, compound**, it contains gambir and Saigon cinnamon. Dose, 1 fl.dr. (4 c.c.). **glycerinized t.**, a tincture made with alcohol to which glycerin has been added. **golden t.** Same as *Bestucheff's t.* **t. of green soap**, liniment of soft soap. **Greenough's t.**, an alcoholic tooth-wash containing alum, bitter almonds, logwood, orris-root, horse-radish, potassium oxalate, cochineal, etc. **Hatfield's t.**, a tincture of guaiac and soap. **Huxham's t.**, tinctura cinchonæ composita. **hydro-alcoholic t.**, one prepared with very dilute alcohol. **Klaproth's t.** Same as *Bestucheff's t.* **mother-t.**, a homeopathic tincture from which the standard dilutions are prepared. **Norwood's t.**, tincture of veratrum viride, stronger than that of the U. S. P. **Physick's t.**, a tonic preparation made by steeping iron filings, gentian, ginger, and orange-peel in old cider. **Rymer's cardiac t.**, tincture of aloes and rhubarb, containing camphor, capsicum, cardamom, sulphuric acid, etc. **spirituous t.**, an alcoholic tincture. **stomachic t.** 1. Bitter tincture. 2. Compound tincture of cardamom. **Turnbull's t.**, a strong tincture of aconite. **vinous t.**, a tincture prepared with wine. **Warburg's t.**, antiperiodic tincture; tinctura antiperiodica; a powerful antiperiodic preparation of quinin sulphate, aloes, rhubarb, and various aromatic and tonic drugs. **Whytt's t.**, a compound tincture of gentian, cinchona, and orange-peel.

tinea (tin'e-ah) [L. "moth"]. Ringworm. **t. alba**, a form caused by *Trichophyton maculati'eni*. **t. albigena**, a form due to *Trichophyton albiscic'ans*. **t. amiantacea**. Same as *seborrhea*. **t. asbestina**, seborrhea. **t. axilla'ris**, ringworm of the axilla. **t. barbæ**. See *t. sycosis*. **t. cap'itis**. See *t. tonsurans*. **t. cilio'rum**, tinea capitis affecting the eyelashes. **t. circina'ta**, ringworm of the body; a variety forming reddish circles on the trunk or limbs. It is due to one or other of the trichophyton fungi and is attended with more or less itching. Called also *t. cor'poris*. **t. cor'poris**. See *t. circinata*. **t. cru'ris**, ringworm on the inside of the thighs, a parasitic skin disease marked by brownish eczematous patches on the inside of the thighs, groin, and genitals; it is caused by the trichophyton fungus (possibly *Epidermophyton*). Called also *eczema marginatum*, *tinea trichophytina cruris*, *tinea circinata cruris*, *epidermophytosis cruris*, *trichophytosis cruris*, and in tropical countries *Dhobie itch*. **t. decal'vans**. Same as *alopecia areata*. **t. favo'sa**, favus, or crusted ringworm. See *favus*. **t. fico'sa**, favus. **t. fla'va**, a form of tinea in which the affected parts are yellowish. It is common in tropical countries and is caused by *Malassezia tropica*. Called also *tropical pityriasis versicolor*, *microsporiasis flava*, and *achromia squamosa*. **t. fur-fura'cea**, a dry, scaly form of seborrhea. **t. gal'li**, a fungous disease of the combs of cocks. Called also *whitecomb*. **t. imbrica'ta**, Tokelau ringworm; an aggravated form of ringworm caused

by *Endodermophyton cruris*, occurring in tropical countries, and marked by intense itching and the development of concentrically arranged patches. **t. inguinalis**, *tinea cruris*. **t. intersec'ta**, a form marked by elevated roundish patches on the body or extremities. **t. ker'ion**, a highly inflammatory and suppurative form infesting mainly the beard and scalp. It is marked by boggy swelling of the affected parts, which become covered with pustules, from which exudes a sticky pus. **t. ni'gra**, *tinea* in which the affected parts are black. It is caused by *Cladosporium mansonii*, and is common in India, Ceylon, Java, and China. Called also *pityriasis nigra* and *microsporiasis nigra*. **t. nigrocircina'ta**, a form due to *Trichophyton ceylonense* and marked by lesions on the neck and scrotum which consist of rings with elevated margins enclosing black areas. **t. nodo'sa**. Same as *trichorrhexis nodosa*. **t. syco'sis**, sycosis, or barber's itch; a disease of the bearded parts of the face and of the neck, caused by one or other of the trichophyton fungi, and marked by the formation of reddish, concentric patches covered with dry, fragile hairs and yellow scales or pustules. Called also *t. barba*. **t. tar'si**, ulcerous blepharitis. **t. tonsu'rans**, ringworm of the scalp; a variety caused by *Trichophyton tonsu'rans*, and marked by the formation of gray, elevated patches covered with yellow scales and with dry, fragile hairs. **t. trichophyti'na**, ringworm; a contagious disease of the skin due to one or more of the trichophyton fungi. It occurs in various parts of the body, and is distinguished by names indicating the locality of the part, as *barba*, *capitis*, *corporis*, *cruris*, *unguium*, etc. **t. tropica'lis**, Dhobie itch or the *tinea cruris* of tropical countries. **t. unguium**, a form of ringworm affecting the nails and causing them to become opaque and brittle. **t. ve'ra**, favus. **t. versic'olor**, a contagious skin disease caused by *Microsporon fur'fur* (*Malasse'zia fur'fur*). It is marked by dry, yellowish, irregular patches on the trunk, covered with scales. It is attended with itching.

Tinel's sign (tin-elz'). See under *sign*.

tingibility (tin-jib-il'it-e). The quality of being tingible.

tingible (tin'jib-l) [*tin'gere* to stain]. Susceptible of being tinged or stained.

tingling (ting'ling). A prick-like thrill, caused by cold or by striking a nerve. **distal t. on percussion**. See *Tinel's sign*, under *sign*.

tinkle (tink'el). Same as *tinkling*.

tinkling (tink'ling). An auscultatory sound like the ringing of a small bell: sometimes heard over large pulmonary cavities and in pneumothorax. **metallic t.**, a ringing sound, as of a metallic object, sometimes heard in connection with other respiratory sounds. **metallic t., Bouillaud's**, a clicking sound sometimes heard on the right side of the apex-beat in hypertrophy of the heart.

tinnitus (tin-i'tus, tin'it-us) [L. "a tinkling"]. A ringing or singing sound in the ears. Called also *t. aurum*. **clicking t.**, a clicking sound in the ear heard in chronic catarrhal otitis media. **Laudet's t.**, a dry click heard with the otoscope in catarrh of the eustachian tube; due to reflex spasm of the tensor palati muscle. **nervous t.**, that which arises from some disturbance of the optic nerve or its central connection. **telephone t.**, tinnitus due to the use of the telephone.

Tinospora (tin-os'po-rah). A genus of menispermaceous vines. The stalk and root of *T. cordi-fo'lia* are used in snake-bite, etc.

tintometer (tin-tom'et-er) [*tint* + Gr. μέτρον measure]. An instrument used in determining the proportion of coloring-matter in a liquid, as in blood.

tintometric (tin-to-met'rik). Pertaining to tintometry.

tintometry (tin-tom'et-re). The use of the tintometer.

tiodin (ti'o-din). Thiosaminethyl iodide, $C_3H_5-NH.CS.NH_2.C_2H_5I$, a remedy acting like fibrolysin and thiosaminin in lymphatic and metasphyilitic diseases.

tip, Woolner's (tip) [Thomas Woolner, English sculptor and poet, 1826-1892]. The helical apex of the ear.

Tipulidæ (tip-u'lid-e). The crane flies.

tiquer (te-ka') [Fr.]. A person subject to a tic.

tire (tir). Exhaustion due to overexercise.

tirebal (têr-bahl') [Fr.]. An instrument resembling a corkscrew, for extracting bullets.

tirefond (têr-fo') [Fr.]. An instrument like a corkscrew, for raising depressed portions of a bone.

tires (tirz). Same as *trembles*.

tiring (tir'ing). The operation of passing a wire around a fractured patella, like a tire around a wheel.

tisane (tiz-ahn') [Fr.]. A medicinal decoction. Same as *plisan*. **t. de champagne**, a light variety of champagne wine. **t. de Feltz**, a decoction of sarsaparilla and isinglass medicated with antimony sulphid: antisphyilitic.

tisic (tiz'ik). Same as *phthisic*.

tisis (tis'is). Same as *phthisis*.

tissue (tis'u) [Fr *tis'su*]. An aggregation of similarly specialized cells united in the performance of a particular function. **accidental t.**, a tissue growing in or upon a part to which it is foreign. It is either analogous or heterologous. **adenoid t.**, connective tissue like that forming the lymphatic glands. It consists of a network of fibers, in the meshes of which lodge lymphoid cells. **adipose t.**, fatty tissue; connective tissue made up of fat-cells in a meshwork of areolar tissue. **analogous t.**, an accidental tissue similar to one found normally in other parts of the body. **areolar t.**, connective tissue made up largely of interlacing fibers. See *connective t.* **basement t.**, the substance of a basement membrane. **bony t.**, bone, whether normal or of a soft tissue, which has become ossified. **cancellous t.**, the loose spongy tissue of the interior and articular ends of bone. **cartilaginous t.**, the substance of the cartilages. **cellular t.**, loose connective tissue with large interspaces, like the subperitoneal structure. **chordal t.**, the tissue of the notochord. **chromaffin t.**, a tissue composed largely of chromaffin cells, well supplied with nerves and vessels. It occurs in the adrenal medulla and also forms the paraganglia of the body. **cicatricial t.**, the dense fibrous tissue forming a scar or cicatrix and derived directly from a granulation tissue. Called also *scar t.* **compact t.**, the hard external portion of a bone. **t. conduction**, conduction of sound through the tissues of the head to the internal ear; bone conduction. **connective t.**, the tissue which binds together and is the support of the various structures of the body. It is made up of fibroblasts, fibroglia, collagen fibrils, and elastic fibrils. It is derived from the mesoblast, and includes areolar fibers, elastic, mucous, adenoid, osseous, and cartilaginous tissues. Cf. *fibroblast*. **cribriform t.**, areolar tissue. **dartoid t.**, that which resembles the dartos in structure. **dental t.** Same as *dentin*. **elastic t.**, connective tissue made up of yellow, elastic fibers, frequently massed into sheets. **t.-element**, any structure, as a cell or a fiber, which, combined with other similar structures, makes up a body tissue. Called also *anatomic element* and *morphologic element*. **embryonic t.**, connective tissue in its primitive state, as it occurs in the embryo and in certain conditions in the adult; it is seen also in various neoplasms. **endothelial t.**, the peculiar connective tissue which lines the serous and lymphoid spaces. **episcleral t.**, the loose connective tissue over the sclera, between it and the conjunctiva. **epithelial t.**, a general name for any tissue not derived from the mesoblast. **erec-**

tile t., tissue containing large venous spaces with which arteries communicate directly, as in the penis, etc. **etheral t.**, one prepared with ether. **fatty t.** Same as *adipose t.* **fibrous t.**, the ordinary connective tissue of the body, made up largely of yellow or white parallel fibers. **gelatinous t.**, that which yields gelatin on boiling with water. **gelatinous t.**, mucous tissue. **glandular t.**, a specialized form of mucous tissue. **granulation t.**, a young vascularized connective tissue formed in the process of healing of ulcers and wounds and ultimately forming the cicatrix. **heterologous t.**, one which is unlike any other that is normal to the organism. **homologous t.**, one identical with another in structural type. **hylic t.**, primitive pulp-tissue of the embryo. **indifferent t.**, undifferentiated embryonic tissue. **interstitial t.**, the connective tissue between the cellular elements of a body; the stroma. **intertubular t.**, the dense tissue of dentin in which the dentinal tubes are embedded. **junctional t.**, the bridge between the auricle and ventricle of the heart formed by the auriculoventricular node and the auriculoventricular bundle. **laminated t.**, cellular tissue. **lardaceous t.**, one charged with lardacein as a result of a degenerative process. **lepidic t.**, the lining membrane tissue of the embryo. **leprous t.**, an abnormal tissue formed under the influence of *Bacillus leprae*, and peculiar to leprosy. **t.-lymph**, lymph derived from the tissues. **lymphoid t.** Same as *adenoid t.* **mesenchymal t.**, mucous tissue. **t. metamorphosis**, change in the structure of tissue, either *constructive* or *destructive*. See *metabolism*. **mucoïd t.**, a jelly-like connective tissue, such as occurs in the umbilical cord. **mucous t.**, that which represents the embryonic connective tissue. **muscular t.**, the substance of a muscle. **nervous t.**, the substance of which the nerves and nerve-centers are composed. **nodal t.**, tissue made up of nerve and muscle-fibers, such as that composing the sino-auricular node of the heart. **osteogenic t.**, the part of the periosteum or perichondrium next to the bone; it is concerned in the formation of osseous tissue. **osteoid t.**, a tissue of cells with large nuclei lying in angular cavities. **parenchymatous t.** Same as *parenchyma*. **peridontal t.**, the tissues surrounding the root of a tooth, including the cementum, the pericementum, the alveolus, and the gingiva. **podophyllous t.**, the tissue on the inner surface of the hoof of an animal. **primitive pulp t.**, hylic tissue. **reticular t.**, retiform t., adenoid tissue. **scar t.** See *cicatrical t.* **sclerous t's**, the cartilaginous, fibrous, and osseous tissues. **skeletal t.**, a term including fatty, fibrous, adenoid, bony, and cartilaginous tissues. **splenic t.**, the spleen-pulp. **subcutaneous t.**, the layer of loose connective tissue situated directly beneath the skin. **sustentacular t.**, a non-nervous structure of the retina composed of the radials, or müllerian fibers of that organ.

tiswin (tis'win). An alcoholic drink formerly prepared by the Apache Indians.

titanium (ti-ta'ne-um) [L. *ti'tan* the sun]. A rare, dark gray, metallic element; atomic weight, 48.1; symbol, Ti; specific gravity, 5.8. It is used in homeopathic practice. **t. dioxide**, TiO_2 , a substance used in dentistry to give a natural yellowish tint to artificial teeth.

titer, **titre** (ti'ter) [Fr. *titre* standard]. A suffix signifying the measure of: e. g., *colontiter* is the smallest amount of a certain substance which indicates the presence of the colon bacillus. **agglutination-t.**, the highest dilution of a serum which causes clumping of bacteria.

titillation (tit-il-a'shun) [L. *titilla'tio*]. The act or sensation of tickling.

titoxin (te-toks'in). One of the substances (the other being called toxinan) formed during the interaction between toxin and antitoxin.

titrate (ti'trät). To analyze by titration.

titration (ti-tra'shun) [Fr. *titre* standard]. Volumetric analysis by means of standard solutions of known strength. **colorimetric t.**, a method of determining the hydrogen-ion concentration by adding an indicator to the unknown and then comparing the color with a set of tubes containing this same indicator in solutions of known hydrogen-ion concentration. **electric t.**, **electrode t.**, **potentiometer t.**, a method of determining the hydrogen-ion concentration by placing a hydrogen electrode in the unknown solution and measuring the potential developed as compared with some standard electrode by means of a potentiometer. **formol t.** See *Sörensen's method*, under *method*.

titrimetry (ti-trim'et-re) [*titration* + Gr. *μέτρον* measure]. Analysis by titration.

titubation (tit-u-ba'shun) [L. *tituba'tio*]. The act of staggering or reeling; a staggering or stumbling gait, especially one due to a lesion of the spinal system.

Tizzoni's test (tid-zo'nēz) [Guido *Tizzoni*, Italian physician, born 1853]. See under *tests*.

tjettek (tyet'ek). A deadly poison prepared by the Javanese from the root of *Strychnos tieut'e*.

Tl. Symbol for *thallium*.

tlalsahuate (tlal'sah-what'e). See *Trombidium tlalsahuate*.

Tm. Symbol for *thulium*.

Tn. Symbol for *normal intra-ocular tension*.

TNT, T. N. T. A British war-time abbreviation for *trinitrotoluene*.

TO. 1. An abbreviation for *original tuberculin*. See *tuberculin*. 2. An abbreviation for *tinctura opii*, tincture of opium.

toadhead (töd'hed). A form of nearly aborted head sometimes seen in a so-called acephalous fetus.

tobacco (to-bak'o) [L. *tab'acum*]. The dried and prepared leaves of *Nicotia'na tab'acum*, a solanaceous plant. Tobacco contains the alkaloid *nicotin*, and unites the qualities of a sedative narcotic with those of an emetic and diuretic. It is also a heart depressant and antispasmodic. It is employed as a relaxant and anodyne in orchitis, as a poultice, and in intestinal obstruction by rectal injection. Internally it is used in tetanus and poisoning by strychnin. Its smoke is inhaled in asthma and spasmodic laryngitis, and the juice is applied locally for the destruction of parasites. **t.-heart**, a cardiac disturbance due to excessive use of tobacco. **Indian t.**, lobelia.

tobaccoism (to-bak'o-izm). Ill health due to excessive use of tobacco; nicotineism.

Toboldt's apparatus (to'bölts) [Adelbert August Oskar *Toboldt*, German laryngologist, born 1827]. An illuminating apparatus for use with a laryngoscope.

tocanalgin (to-kan-al'jin) [Gr. *τόκος* birth + *ἄλγος* pain]. A preparation obtained by the action of living ferments on morphin chlorhydrate: used in producing mild narcosis in childbirth. Dose, min. 8-24 ($\frac{1}{2}$ -1½ c.c.).

tochil (tö'shil). Endemic hemoptysis caused by a species of distomum which burrows into the tissues of the respiratory tract. See *Paragonimus westermani*.

tocodynamometer (to'ko-di-nam-om'et-er) [Gr. *τόκος* birth + *δύναμις* power + *μέτρον* measure]. An arrangement for measuring the expulsive force of the uterine contractions during labor.

tocograph (tok'o-graf) [Gr. *τόκος* birth + *γράφειν* to write]. A recording tocodynamometer.

tocokinin (tok-o-kin'in) [Gr. *τόκος* birth + *κινεῖν* to move]. An extract from yeast and certain vegetables which has the properties of an estral hormone.

tocology (to-ko-lo-je) [Gr. *τόκος* childbirth + *λόγος* discourse]. That branch of medicine which treats of parturition; obstetrics.

tocomania (to-ko-ma'ne-ah) [Gr. *tókos* labor + *μανία* madness]. Puerperal mania.

tocometer (to-kom'et-er) [Gr. *tókos* labor + *μέτρον* measure]. Same as *tocodynamometer*.

tocophobia (tok-o-fó-be-ah) [Gr. *tókos* childbirth + *φόβος* fear]. Abnormal dread of childbirth.

tocosin (tok'ó-sin). Same as *syslogene*.

tocus (to'kus) [L.; Gr. *tókos*]. Labor; childbirth.

Toddalia (tod-al'e-ah). A genus of rutaceous shrubs. The root of *T. aculeata*, of the East Indies, is an aromatic stomachic.

Todd's cirrhosis, potion (todz) [Robert Bentley Todd, English physician, 1809-1860]. See *cirrhosis* and *potion*.

toddy (tod'e) [Hind. *tāri*, *tādī*]. 1. The fermented sap of various palm trees. 2. A drink prepared from gin or whisky, sugar, and water.

toe (to). A digit or dactyl of the foot. **t.-drop**, inability to raise or extend the toes, due to paralysis more or less complete. **hammer-t.**, a condition in which the proximal phalanx of a toe—oftenest that of the second toe—is extended and the second and distal phalanges are flexed, causing a claw-like appearance. **Morton's t.**, a painful affection of the metatarsophalangeal joint of the fourth toe. **t.-phenomenon**. See *phenomenon*. **seedy t.**, a disease of horses' feet marked by a fungous growth of a horny, honey-combed texture between the coffin-bone and the wall of the hoof.

toe-clonus. See *clonus*.

toe-crack. See *sand-crack*.

toe-drop. See under *drop*.

Toepfer's test. See *Töpfer's test*.

toilet (toi'let). The cleansing and dressing of an operation-wound or other injury, or of an obstetric case.

Toison's solution (twah-zawz') [J. Toison, French histologist, born 1858]. See under *stains*, *table of*.

Tokelau ring-worm (to'ke-low). See *tinea imbricata*.

toko-. For words thus beginning, see those beginning *toco-*.

tolamine (tol'am-in). Same as *chloralamine-T*.

tolerance, toleration (tol'er-ans, tol'er-a'shun) [L. *tolerantia*]. Ability to endure the continued or increasing use of a drug. **alkali t.**, ability of the body to endure the administration of alkalies, measured by the amount of alkali that must be given to cause an alkaline urine. This forms a rough measure of the degree of acidosis. **crossed t.**, the lessened susceptibility which persons who have acquired a tolerance for one drug or poison may thereafter exhibit toward another drug. **glucose t.**, a diabetic's ability to metabolize glucose. It is measured by the maximum amount of total glucose in a well-balanced diet, equally divided into three meals, which can be taken without having glucosuria at any time during the twenty-four hours.

tolerant (tol'er-ant). Able to receive or endure, without pernicious effect, the action of any particular drug.

tolerific (tol'er-if'ik). Producing or causing tolerance.

tolipyrin (tol-ip-y'rin). Same as *tolpyrin*.

Tollens' test (tol'eniz) [Bernhard Tollens, German chemist, 1842-1918]. See under *tests*.

tolu (to'lu). See *balsam of tolu*.

toluendiamin (tol'u-en-di-am'in). A drug, $\text{CH}_3\text{-C}_6\text{H}_3\text{-(NH}_2)_2$, said to increase the amount of bile secreted. Dose, $\frac{1}{2}$ -1 gr. (0.033-0.066 gm.).

toluene (tol'u-én). The hydrocarbon, $\text{C}_6\text{H}_5\text{.CH}_3$, methylbenzene; a colorless liquid obtainable from tolu and other resins.

toluene-sodium-sulphonchloramid. See *chloramin-T*.

toluene-sulphondichloramin. Dichloramin-T.

toluidin (tol-u'id-in). A compound, $\text{CH}_3\text{.C}_6\text{H}_4\text{-NH}_2$ made by reducing nitrotoluene. It is homologous with anilin. **t.-blue**, the zinc-chlorid double salt of dimethyltoluthionin, occurring in the form of a black powder yielding a blue solution. It is a powerful bactericide: used in infectious conjunctivitis in 1 : 1000 solution.

toluol (tol'u-ol). See *toluene*.

tolusafrafin (tol-u-saf'ran-in). A dibenzo-para-diazine dye, $\text{NH}_2\text{-(CH}_3\text{).C}_6\text{H}_3\text{.N}_2\text{-(C}_6\text{H}_5\text{)Cl.C}_6\text{H}_3\text{-(CH}_3\text{).NH}_2$, the chief constituent of safranin.

toluyl (tol'u-il). The univalent acid radical, $\text{C}_7\text{H}_7\text{CO}$.

toluylendiamin (tol'u-il-en-di-am'in). The compound, $\text{CH}_3\text{.C}_6\text{H}_3\text{.(NH}_2)_2$, reputed to be an active hepatic stimulant and cholagogue.

toluylene (tol-u'il-én). The hydrocarbon, diphenylene, $\text{C}_6\text{H}_5\text{.CH.CH.C}_6\text{H}_5$. Also called *stilbene*. **t.-red**. See *neutral red*.

tolyl (toi'il). The univalent radical $\text{CH}_3\text{.C}_6\text{H}_4$, isomeric with benzyl. **t. hydroxid**, cresol.

tolpyrin (tol-ip-y'rin). A colorless, crystalline compound, $\text{C}_{12}\text{H}_{14}\text{N}_2\text{O}$, or methylantipyrin, soluble in 10 parts of water, readily soluble in alcohol, but insoluble in ether. It is used as an antipyretic, antineuralgic, and antirheumatic like antipyrin. Called also *tolylantipyrin*. Dose, 5-15 gr. (0.333-1 gm.). **t. salicylate**. Same as *tolysal*.

tolysal (toi'is-al). Tolpyrin salicylate, $\text{C}_{19}\text{H}_{20}\text{NaO}_4$, an antipyretic drug occurring in colorless crystals, soluble in alcohol, but insoluble in water. It is used mainly in rheumatism and in neuralgia. Dose, 15-30 gr. (1-2 gm.).

tolysin (toi'is-in). A proprietary brand of neocinchophen.

tomato (to-ma'to). The solanaceous plant *Lycopersicon esculentum* and its edible fruit, a source of vitamins. A fluidextract is prepared, said to be useful in stomatitis, etc. Dose, 30-60 min. 2-4 c.c.).

-tome [Gr. *τέμνειν* to cut]. A suffix signifying (a) an instrument for cutting or (b) a segment.

tomentum (to-men'tum). A network of minute blood-vessels of the pia and the cortex cerebri. Called also *t. cerebri*.

Tomes's fibers, layer, process (tômz) [Sir John Tomes, English dentist, 1836-1895]. See under *fiber*, *layer*, and *process*.

tomomania (to-mo-ma'ne-ah) [Gr. *τομή* cut + *μανία* madness]. 1. Undue eagerness to perform surgical operations. 2. A hysterical desire to be operated upon surgically.

tomotocia (to-mo-to'she-ah) [Gr. *τομή* cut + *τόκος* birth]. Delivery by abdominal section.

-tomy (-to'me) [Gr. *τομή* a cutting]. A suffix signifying the operation of cutting.

tonagen (to'naj-en). A proprietary tonic and nutrient food.

tonaphasia (ton-af-a'zhe-ah). Inability to recall a familiar tune; musical aphasia.

tone (tôn) [Gr. *τόνος*; L. *tonus*]. 1. The normal degree of vigor and tension; a healthy state of a part; particularly the tension of normal muscles which exists independently of voluntary innervation; tonus. 2. A particular quality of sound or of voice. **feeling t.**, the condition or state of mind and feeling which accompanies every thought or act. **finger t.**, the sound heard with the phonendoscope on placing the end of the finger on the diaphragm while the instrument is in use. **heart-t's**, the sounds heard in the auscultation of the heart. **jecoral t.**, the sound produced by percussion over the liver. **plastic t.**, the posture maintaining mechanism of muscle by virtue of which a limb passively placed in any position tends to maintain that position.

tonga (tong'ah). A mixture of medicinal barks from Fiji, said to be made from *Prem'na laticens* and *Epiprem'num mirabile*: used in neuralgia. Dose of fluidextract, 30-120 min. (2-8 c.c.).

tongaline (tong'al-in). A proprietary medicine for gout, rheumatism, and neuralgia, containing tonga and various antarthritics.

tongin (ton'jin). An alkaloid from tonga.

tongue (tung). A movable muscular organ on the floor of the mouth, subserving the special sense of taste and aiding in mastication, deglutition, and articulation of sound. It is attached to the hyoid bone by muscles, to the epiglottis by the glosso-epiglottidean folds, and to the soft palate by the anterior pillars. It is divided by a median raphe and fibrous septum into halves. An anteroposterior fold (the *frænum lin'gue*) connects it through part of its length with the floor of the mouth. The tongue is made up of *intrinsic* muscular fibers—*i. e.*, those of the lingualis muscle, and by *extrinsic* muscles, the styloglossus, hyoglossus, geniohyoglossus, and palatoglossus. The mucous membrane of the tongue presents *papilla*, of which the circumvallate, numbering eight or ten, are arranged on the back part in a V-shaped line; the *fungiform* are on the sides, apex, and dorsum; the *filiform*, or *conic*, are arranged in lines over the anterior part of the dorsum. **adherent t.**, a tongue that is attached by folds of mucous membrane to the sides and floor of the mouth. **baked t.**, the dry, brown tongue of typhoid fever. **bald t.**, a tongue characterized by the absence of papillæ. **bifid t.**, a tongue that is divided in its anterior part by a longitudinal fissure. **black t.**, the presence of a brown or greenish fur-like patch on the dorsum of the tongue composed of hypertrophied filiform papillæ with microorganisms and some pigment. Called also *anthracosis lingue*, *glossophytia*, *hyperkeratosis lingue*, *keratomycosis lingue*, *lingua villosa nigra*, *melanotrichia lingue*, and *nigrites lingue*. **cardinal t.**, a tongue whose surface is denuded of epithelium, giving it a bright red appearance. **Clarke's t.**, a tongue affected with syphilitic glossitis sclerosa. **cleft t.** Same as *bifid t.* **coated t.**, a tongue covered with a whitish or yellowish layer consisting of desquamated epithelium, debris, bacteria, fungi, etc. The condition is associated with gastric or intestinal disorder. **dotted t.** See *stippled t.* **dry t.**, a tongue the surface of which is dry. The condition is seen in certain fevers. **earthy t.**, a tongue that is coated with a deposit of rough, calcareous matter. **fern-leaf t.**, a tongue with a central furrow having lateral branches. **filmy t.**, one with symmetric whitish patches. **furred t.**, a tongue with papillæ so changed as to give the mucous membrane the appearance of whitish fur. **furrowed t.**, scrotal tongue. **geographic t.**, a tongue with denuded patches surrounded by thickened epithelium. **grooved t.**, scrotal tongue. **hairy t.**, a tongue the papillæ of which have a hair-like appearance. **mappy t.** Same as *geographic t.* **parrot-t.**, the dry, horny tongue of low fever, which cannot be protruded. **plastered t.**, a tongue coated with a very abundant layer of recently deposited matter. **Sandwith's bald t.**, an extremely clean tongue sometimes seen in the late stages of pellagra. **scrotal t.**, a tongue marked by deep depressions or furrows, and having an appearance similar to that of the wrinkled skin of the scrotum. **smokers' t.**, leukoplakia. **split t.** See *bifid t.* **stamp-lickers' t.**, inflammation of the surface of the tongue, due to irritation from licking stamps. **stippled t.**, a tongue in which each papilla is covered with a separate white patch of epithelium. Called also *dotted t.* **strawberry t.**, a tongue with enlarged, red, fungiform papillæ; it is seen in scarlatina. **sulcated t.**, scrotal tongue. **t.-swallowing**, a condition in which the tongue slips back into the throat, causing choking. **t.-tie**, abnormal short-

ness of the frenum of the tongue, resulting in limitation of the motion of that organ. **t.-traction**, a remedial procedure recommended as a cardiac stimulant. **wooden t.**, one affected with actinomycosis. **wrinkled t.**, scrotal tongue.

tonic (ton'ik) [Gr. *τονικός*]. 1. Producing and restoring the normal tone. 2. Characterized by continuous tension. 3. An agent which tends to restore normal tone. **bitter t.**, a tonic of bitter taste: used for stimulating the appetite and improving digestion, such as quinin, quassia, and gentian. **cardiac t.**, one which strengthens the heart's action, such as digitalis, strophanthus, or strychnin. **digestive t.**, an intestinal or stomachic tonic. **general t.**, one which braces up the whole system: cold baths, electricity, and exercise are general tonics. **hem-atic t.**, a medicine which improves the quality of the blood: the principal medicines of this class are iron, arsenic, manganese, mercuric chlorid, and quinin. **intestinal t.**, one that improves the tone of the intestinal tract. **nerve t.**, one that increases the tone of the nervous system. To this class belong arsenic, zinc oxid, strychnin, phosphorus, ammonium chlorid, and quinin. **stomachic t.**, one which aids the functions of the stomach. Here are classed the alcoholic stimulants, vegetable bitters, hydrochloric and nitrohydrochloric acids. **vascular t.**, one which increases the tone of the blood-vessels. Among them are belladonna, digitalis, ergot, and strychnin.

tonicity (to-nis'ti-e). The normal condition of tone or tension.

tonicize (ton'is-iz). 1. To improve the tone of a part. 2. To induce tonic contraction of a muscle.

tonoclonic (ton'ik-o-klon'ik). Same as *tono-clonic*.

toninervin (ton-in-er'vin). A soluble preparation of quinin and iron: used as an antipyretic, antiseptic, stomachic, and tonic. It is said to be free from the disagreeable effects of quinin. Dose, 1½-5 gr. (0.1-0.3 gm.).

toniquinin (ton-ik-win'in). A proprietary quinin substitute.

tonitrophobia (ton'it-ro-fo-be-ah). Tonitrophobia.

tonitruophobia (ton'it-ru-fo-be-ah) [L. *ton'itru* thunder + Gr. *φόβος* fear]. Morbid fear of thunder.

Tonka, T. bean (tong'kah). The seed of *Dip'leryx odorata*, a North American tree. It affords coumarin, and is used as a flavoring agent and to disguise odors.

tonnenem (ton'e-nem). Pirquet's term for 1000 nems; *i. e.*, the food value of 1 metric ton of milk.

tonoclonic (ton-o-klon'ik). Both tonic and clonic; said of a spasm consisting of a convulsive twitching of the muscles.

tonogen (ton'o-jen). A proprietary epinephrin.

tonograph (to'no-graf) [Gr. *τόνος* tone + *γράφειν* to record]. A recording tonometer.

tonol (ton'ol). A name given by a certain chemical manufacturer to identify the glycerophosphates of his house.

tonometer (to-nom'et-er) [Gr. *τόνος* tone + *μέτρον* measure]. An instrument for measuring tension, especially the blood-pressure or the intra-ocular tension. **Gärtner's t.**, an instrument for measuring blood-pressure by means of a compressing ring applied to the finger. **Musken's t.**, an instrument for measuring the tonicity of the Achilles tendon. **Schiötz's t.**, an instrument for measuring the intra-ocular pressure.

tonometry (to-nom'et-re). The measurement of tension, especially of intra-ocular tension.

tonophant (ton'o-fant) [Gr. *τόνος* tone + *φαίνειν* to show]. An instrument for rendering acoustic vibrations visible.

tonophosphan (ton-of-o-san). The sodium salt of dimethyl-amino-methyl-phenyl-phosphinic acid, $(\text{CH}_3)_2\text{N} \cdot \text{C}_6\text{H}_4(\text{CH}_2)_2\text{P}(\text{OH})\text{ONa}$. It is a stimulant of unstriated muscles.

tonoplast (ton/o-plast) [Gr. *τόνος* tension + *πλάσσειν* to form]. A small intracellular body which forms powerful osmotic substances within itself and thus swells up to form a small vacuole (De Vries, 1885). The term is now applied to the limiting membrane of an intracellular vacuole, the vacuole membrane.

tonoscope (ton/o-skōp) [Gr. *τόνος* tone + *σκοπεῖν* to inspect]. 1. An apparatus for rendering sound visible by registering the vibrations on a screen. 2. A device for examining the head or brain by means of sound.

tonquinol (ton'kwín-ol). A white, crystalline substance, $\text{C}_{11}\text{H}_{13}\text{N}_3\text{O}_6$; used as a substitute for musk.

tonsil (ton'sil) [L. *tonsil'la*]. 1. A small, almond-shaped mass between the pillars of the fauces on either side. The tonsils are composed mainly of lymphoid tissue, are covered with mucous membrane, and contain various crypts and many lymph-follicles. They are believed to act as sources for the supply of phagocytes to the mouth and pharynx, which destroy bacteria entering the mouth. 2. A lobe on either side of the lower surface of the cerebellum. See *amygdala*. **abdominal t.**, the vermiform appendix. **t. of the cerebellum**. See *amygdala*. **eustachian t.**, Gerlach's tonsil. **faucial t.** Same as *tonsil* (1st def.). **Gerlach's t.**, a mass of adenoid tissue about the pharyngeal end of the eustachian tube, and along its median wall within. Called also *tubal t.* **lingual t.**, a group of glands at the root of the tongue. **Luschka's t.**, **pharyngeal t.**, **third t.**, a mass of lymphoid glands between the nasopharyngeal orifices of the eustachian tubes. **palatine t.** Same as *tonsil* (1st def.). **submerged t.**, enlargement of the tonsil, which is wholly or partly hidden by the anterior pillars of the fauces, so that no enlargement can be recognized. **tubal t.** See *Gerlach's t.*

tonsilla (ton-sil'ah), L. for *tonsil*. **t. cerebelli** [B N A]. See *amygdala*. **t. intestinalis**, Peyer's patch. **t. lingualis** [B N A], lingual tonsil. **t. palatina** [B N A]. See *tonsil* (1st def.). **t. pharyngea** [B N A], pharyngeal tonsil.

tonsillar, tonsillary (ton'sil-ar, ton'sil-a-re) [L. *tonsilla'ris*]. Of or pertaining to a tonsil.

tonsillectome (ton-sil-ek'tōm). An instrument for performing tonsillectomy.

tonsillectomy (ton-sil-ek'to-me) [L. *tonsil'la* tonsil + Gr. *ἐκτομή* excision]. The surgical removal of a tonsil.

tonsillith (ton'sil-ith). See *tonsillolith*.

tonsillitic (ton-sil-it'ik). Pertaining to or affected with tonsillitis.

tonsillitis (ton-sil-'tis) [L. *tonsil'la* tonsil + Gr. *-itis* inflammation]. Inflammation of a tonsil. **caseous t.** See *lacunar t.* **catarrhal t.**, **acute**, a form associated with acute catarrhal pharyngitis, in which the tonsils are red and swollen. Called also *erythematous t.* **catarrhal t.**, **chronic**, a form attended by permanent hypertrophy, and usually requiring tonsillectomy. **diphtherial t.** See *diphtheria*. **erythematous t.** See *catarrhal t.*, **acute**. **follicular t.**, that which especially affects the follicles. **herpetic t.**, a local manifestation of herpes on the tonsil. **lacunar t.**, tonsillitis in which the follicles of the tonsils are filled with plugs of caseous matter. Called also **caseous t.** **lingual t.**, a lymphadenoid mass at the base of the tongue. **mycotic t.**, a form due to fungi. **parenchymatous t.**, **acute**, quinsy; a form attended with high fever, severe pain, headache, dysphagia, and suppuration. Treated with ice in the mouth; a wash of lobelia tincture; hot compresses and ice alternately to the neck; sodium salicylate. **preglottic t.**, inflammation

of the lingual tonsil. **pustular t.**, that which is characterized by the formation of pustules. **streptococcus t.** See *septic sore throat*, under *sore throat*. **superficial t.**, inflammation of the mucous membrane over a tonsil. **suppurative t.** Same as *parenchymatous t.*, **acute**.

tonsillolith (ton'sil-o-lith) [L. *tonsil'la* tonsil + Gr. *λίθος* stone]. A concretion or calculus in a tonsil.

tonsillomoniliasis (ton'sil-o-mo-nil-i'as-is). Infection of the tonsil with *Monilia*.

tonsillomycosis (ton-sil'o-mi-ko'sis). Any mycotic infection of the tonsils.

tonsilloprive (ton'sil-o-priv) [*tonsil* + L. *privare* to deprive]. Having the tonsils removed; due to removal or absence of the tonsils.

tonsilloscope (ton-sil'o-skōp) [*tonsil* + Gr. *σκοπεῖν* to examine]. An instrument for inspecting the tonsils.

tonsillotome (ton'sil-o-tōm) [L. *tonsil'la* tonsil + Gr. *τέμνω* to cut]. A knife used in tonsillotomy.

tonsillotomy (ton-sil-o-tō-me) [L. *tonsil'la* tonsil + Gr. *τέμνω* to cut]. The surgical removal of a tonsil or part of it; also, the incision of a tonsil.

tonsillotyphoid (ton'sil-o-ti'foid). Same as *pharyngotyphoid*.

tonsilsector (ton-sil-sek'tor). A special form of tonsillotome.

tonsolith (ton'so-lith). Tonsillolith.

tonsure (ton'shūr) [L. *tonsu'ra* shaving]. An early bald spot over the rolandic area.

tontine (ton-tēn') [named from Lorenzo Tonti, an Italian banker who lived in the 17th century]. A kind of life-insurance in which no dividends are paid to the policy-holders until the end of a specified time, when the accumulated dividends are divided among the survivors who have kept up the premiums on their policies.

tonus (to'nus) [L.; Gr. *τόνος*]. Tone or tonic; particularly, a condition of tension in muscle which exists independently of voluntary innervation. See *tone*. **acerebral t.**, tonic contraction of muscles after removal of the cerebrum. **chemic t.**, the state of slight but continuous chemic activity in muscles when at rest. **myogenic t.**, tonic contraction of muscle dependent upon some property of the muscle itself or of its intrinsic nerve-cells. **neurogenic t.**, tonic contraction of muscle due to stimulation received through the nervous system.

tooth (tūth), pl. *teeth*. Any one of a set of small, bone-like structures of the jaws for masticating the food. There are two sets of teeth, the *temporary* (milk or deciduous) teeth, which are lost in childhood, and the *permanent t.*, which begin in the seventh year to displace the temporary teeth and last until old age. There are 20 temporary teeth, 10 in each jaw, as follows: 4 incisors, 2 canines, and 4 molars. There are 32 permanent teeth, 16 in each jaw, as follows: 4 incisors, 2 canines, 4 bicuspid, and 6 molars. Each tooth has three parts—a *crown*, or *body*, above the gum and covered with enamel; a *neck*, between the crown and root; a *root*, or *fang*, within the alveolus, and covered with cement. The *incisors* are cutting teeth, and have a crown shaped like a wedge. Each has one long and conic root. The *cuspid* are tearing teeth. Each has a long and conic crown and a single root. The cuspid in the upper jaw are called the *eye-teeth*, and those in the lower, the *stomach-teeth*. The crowns of the bicuspid have two cusps. Each bicuspid has a grooved, conic, single root. *Molars*, or *grinders*, have broad, square crowns. The upper molars have four cusps and the lower molars five. The lower molars have two roots; the upper, three roots. The third molar has only one root. This third molar is known as the *dens sapientie*, or "wisdom-tooth." A tooth consists of a solid portion and a pulp-cavity. The solid portion consists of *dentin*,

or ivory, forming most of the tooth, and resembling bone; *enamel*, the hardest of organized bodies, covering the crown; and *cement*, covering the root. *Cement*, or *crusta petrosa*, is true bone. The *pulp-cavity* within the crown is continuous with a canal in the root which opens at the root-apex for the passage of nerves and vessels. This cavity contains the *pulp*, a soft, sensitive substance containing many vessels and nerves, and composed of cells and connective tissue. *Development*: The temporary teeth are formed in the primitive dental groove by an involution of epithelium about the ninth or eleventh week. The enamel comes from a collection of epithelial cells, the *enamel-germ*. This enamel-germ descends until it meets a vascular growth coming up from the connective tissue, and called the papilla. Over the papilla the enamel-germ forms a cup. A membrane inclosing the enamel-germ extends upon the papilla, and cuts the enamel off from the epithelial structure. This is the *dental sac*. The cells are after a time calcified. Odontoblasts in the papilla form the dentin. The cement comes from the wall of the dental sac. The *permanent teeth*, which replace the milk-teeth, develop, like them, from a secondary dental groove, recurring, after their formation, behind the germs of the milk-teeth, and inclosed in sacs. The molars, or permanent teeth superadded, are formed by backward extension of the enamel-germ of the tooth just in front. *Eruption*, or *cutting* of the teeth, is due to growth of the root, the germ being absorbed by pressure. The order of eruption of *milk-teeth*: Lower central incisors, six to eight months; upper central incisors, six to eight months; lateral incisors, seven to nine months; upper and lower first molars, fourteen to sixteen months; canines, seventeen to eighteen months; second molars, eighteen to twenty-four months. *Permanent teeth*: First molars, five to seven years; first central incisors, seven to eight years; four lateral incisors, eight to nine years; four first bicuspsids, ten to eleven and a half years; four second bicuspsids, eleven to twelve years; first canines, twelve to fourteen years; four second molars, twelve to fifteen years; four third molars, seventeen to twenty-two years. Various other dental structures in the animal and vegetable organisms are also called teeth. See further under *teeth*. **t.-ache**, pain in a tooth; odontalgia. **t. hood**. See *odontoclamis*. **t.-key**, a dentist's instrument formerly used for extracting teeth by torsion. **lion's t.**, Taraxacum. **t.-pulp**, the connective, nervous, and other tissues which fill the pulp-cavity of a tooth. **t.-rash**. See *strophulus*. **t.-spasm**, infantile eclampsia. **virgin t.**, a horse's tooth not yet worn down by use.

Tooth's type (tooths) [Howard Henry Tooth, English physician, 1856-1925]. The hereditary form of progressive muscular atrophy.

toot-poison (toot'poi-zn). A poison from *Coriaria sarmento'sa*, a plant of New Zealand.

topalgia, topoalgia (to-pal'je-ah, to-po-al'je-ah) [Gr. *τόπος* spot + *ἄλγος* pain]. Fixed or localized pain. It is seen in neurasthenia.

topasol (to'pas-ol). See *anticornutin*, *anticoroin*, *antimucorin*, *antiperonosporin*.

topesthesia, topæsthesia (to-pes-the'ze-ah) [Gr. *τόπος* place + *αἴσθησις* sensation]. The power of localizing a tactile sensation.

Töpper's test (tep'ferz) [Alfred Edouard Töpper, German physician, born 1858]. See under *tests*.

tophaceous (to-fa'shus) [L. *topha'ceus*; *ip'hus* sandstone]. Of a hard or gritty nature.

tophi (to'fi). Plural of *tophus*.

tophus (to'fus), pl. *to'phi* [L. "porous stone"]. 1. Same as *chalk-stone*. 2. Tartar of the teeth, or salivary calculus. **dental t.**, calcareous matter on the roots of teeth in gouty people. **t. syphiliticus**, a syphilitic node.

tophyperidrosis (tof'ip-er-id-ro'sis) [Gr. *τόπος*

place + *ὑπέρ* over + *ἵδρω* sweat]. Excessive local sweating.

topic, topical (top'ik, top'ik-al) [Gr. *τοπικός*]. Pertaining to a particular spot; local.

topica (top'ik-ah). Medicine for local external use.

Topinard's angle, line (top-e-närz') [Paul Topinard, French scientist, 1830-1912]. See *angle, line*.

topo-anesthesia (top'o-an-es-the'ze-ah) [Gr. *τόπος* place + *anesthesia*]. Loss of power to localize a tactile sensation.

topognosis (top-og-no'sis) [Gr. *τόπος* place + *γνώσις* recognition]. Same as *topesthesia*.

topographic, topographical (to-po-graf'ik, to-po-graf'ik-al) [Gr. *τόπος* spot + *γράφειν* to write]. Describing special regions.

topography (to-pog'ra-fe) [Gr. *τόπος* place + *γράφειν* to record]. The description of an anatomic region or of a special part.

topology (to-pol'o-je) [Gr. *τόπος* place + *λόγος* treatise]. 1. Topographic anatomy. 2. The relation between the presenting part of the fetus and the birth canal.

toponarcosis (top'o-nar-ko'sis) [Gr. *τόπος* place + *νάρκωσις* benumbing]. Localized anesthesia.

toponeurosis (top'o-nu-ro'sis) [Gr. *τόπος* spot + *neurosis*]. A neurosis affecting a limited region.

toponym (top'o-nim). The name of a region as distinguished from an organ.

toponymy (to-pon'im-e) [Gr. *τόπος* place + *ὄνομα* name]. Terminology pertaining to the position and direction of organs and parts.

topophobia (to-po-fō-be-ah) [Gr. *τόπος* place + *φόβος* fear]. A morbid dread of particular places.

topophylaxis (top'o-fi-lak'sis) [Gr. *τόπος* place + *φύλαξις*]. The application of a constricting band, intended to confine the phylaxis following arsenaphenamin injections to the limb in which the injection is made.

topothermesthiometer (top'o-therm-es-the-ze-om'et-er) [Gr. *τόπος* place + *θερμη* heat + *αἴσθησις* sensation + *μέτρον* measure]. An apparatus for measuring the local temperature sense.

topovaccinotherapy (top'o-vak-sin-o-ther'ap-e) [Gr. *τόπος* place + *vaccinotherapy*]. Artificial local immunization.

toramin (tor'am-in). The ammonium salt of the trichlor-butyl-ester of malonic acid. A bitter soluble white powder employed as a non-narcotic cough medicine in place of the derivatives of opium.

torcular Herophili (tor'ku-lar he-rof'il-i) [L. "the wine-press of Herophilus"]. The dilated point of confluence of the superior sagittal, straight, occipital, and two transverse sinuses of the dura mater. It is lodged in a depression at one side of the internal occipital protuberance. Called also *confluens sinuum*.

torfu (tor'fu). A Japanese food-preparation from the Soja bean, in white tablets.

toric (to'rik). Pertaining to or resembling a torus. **t. lens**. See *lens*.

toril (to'ril) [L. *torus* bull]. A proprietary beef-extract.

tormen (tor'men), pl. *tor'mina* [L.]. A severe gripping or physical pain.

tormentil (tor-men'til) [L. *tormentil'la*]. A plant, *Potentilla tormentil'la*, and its astringent rhizome. Dose of fluidextract, 1-2 fl. dr. (4-8 c.c.).

tormina (tor'min-ah). Plural of *tormen*.

torminal (tor'min-al). Pertaining to, or characterized by, *tormina*.

Tornwald's disease. See *Thornwald's disease*. **torose, torous** (to'rōs, to'rus) [L. *toro'sus*]. Bulging or knobby.

torpent (tor'pent) [L. *tor'pens*]. 1. Inactive; in abeyance. 2. An agent that reduces irritation.

torpid (tor'pid) [L. *tor'pidus* inactive]. Not acting with normal vigor and facility.

torpidity (tor-pid'it-e). Sluggishness; inactivity, slowness.

torpor (tor'por) [L.]. Lack of response to normal or ordinary stimuli. **t. ret'inæ**, a condition in which the retina is excited to action only by stimuli of considerable luminous power.

torque (tork) [L. *torque're* to twist]. A rotary force; in dentistry, the rotation of a tooth on its long axis.

torquing (tor'king). The twisting of a tooth into position, as in the correction of malposition.

torrefaction (tor-e-fak'shun) [L. *torrefac'tio*]. The act of roasting or parching.

torrefy (tor'e-fī) [L. *torrefac'ere*]. To parch, roast, or dry by the aid of heat.

torricellian vacuum (to-re-shel'e-an) [Evangelista Torricelli, Italian physicist, 1608-1647]. See *vacuum*.

torsiometer (tor-se-om'et-er) [L. *tor'sio* twist + *me'trum* measure]. A form of clinoscope for measuring the amount of rotation of the eyeball on the visual axis.

torsion (tor'shun) [L. *tor'sio*; *torque're* to twist]. 1. The act of twisting; the condition of being twisted. In dentistry, the condition of a tooth when it is turned on its long axis. 2. In ophthalmology, any rotation of the vertical corneal meridians. See under *balance*.

torsionometer (tor-shun-om'et-er) [*torsion* + Gr. *μετρον* measure]. An apparatus for estimating the degree of rotation of the spinal column.

torsive (tor'siv). Twisted.

torsiversion (tor-siv-er'shun). The condition of a tooth when it is turned or rotated on its long axis out of its normal position.

torso (tor'so). The trunk without the head or extremities.

torsoclusion (tor-so-klū'zhun) [L. *torque're* to twist + *clū'dere* to shut]. Acupressure combined with pressure of the bleeding vessel.

torso-occlusion (tor'so-ok-lū'zhun). The condition of a tooth when it is turned on its long axis so as to be out of its normal position.

torticollar (tor-tik-ol'ar). Pertaining to or affected with torticollis.

torticollis (tor-tik-ol'is) [L. *tor'tus* twisted + *coll'um* neck]. Wry-neck; a contracted state of the cervical muscles, producing twisting of the neck and an unnatural position of the head. **fixed t.**, an unnatural position of the head due to actual and persistent organic muscular shortening. **intermittent t.** Same as *spasmodic t.* **mental t.**, a form of tic, or habit-spasm, in which there is spasmodic contraction of the neck muscles, producing deviation of the head. This deviation usually ceases on the patient lying down, or it may be controlled by slight pressure. **rheumatic t.**, that which is due to rheumatism, chiefly of the sternomastoid and adjacent muscles. **spasmodic t.**, **t. spast'ica**, that which is due to spasm of certain muscles, occurring intermittently. **spurious t.**, twisting or stiffness of the neck due to caries of the cervical vertebrae. **symptomatic t.**, stiffness of the neck due to rheumatism.

tortipelvis (tor-te-pel'vis) [L. *tor'tus* twisted + *pel-vis*]. See *dystonia musculorum deformans*.

tortuous (tor'tu-us). Twisted; full of turns and twists.

Torula (tor'u-lah), pl. *toru'læ* [L. "roll"]. 1. A former genus (now a group) of yeasts which are spherical, non-spore bearing, and with slight fermentative power. 2. A genus of molds. **T. botryoides**, a fungus which by its growth produces grayish rather wooly spots on meat in cold storage. **t. of Pasteur**, a microorganism related to the yeast fungus and found in meconium.

toruliform, **toruloid** (tor'u-lif-orm, tor'u-loid). Resembling a torula; beaded.

torulosis (tor-u-lo'sis). A condition due to infection with *Torula*. The infection occurs most frequently in the nervous system, lungs, liver, kidneys, and spleen.

torus (to'rus) [L. a "knot"]. 1. A swelling; a bulging projection. 2. A solid developed by the revolution of a circle about any axis other than its diameter. **t. fronta'lis**, a protuberance in the middle line of the root of the nose, on the external surface of the skull. **t. ma'nus**, the metacarpus. **t. occipita'lis** [B N A], a rounded edge occasionally seen on the occipital bone in the region of the superior curved line. **t. palati'nus** [B N A], a protuberance on the hard palate at the union of the intermaxillary and palatamaxillary sutures. **t. tuba'rius** [B N A]. Same as *eustachian cushion*, under *cushion*. **t. u'teri**, a transverse ridge on the median line of the uterus where the peritoneum is reflected upon the posterior wall of the vagina.

Toti's operation (to'tēz) [Addeo Toti, contemporary Italian ophthalmologist]. Dacryocystorhinostomy.

totipotent (to-tip'o-tent). Totipotent.

totipotential (to-tip-o-ten'shal) [L. *to'tus* whole + *po'tens* able]. Capable of all: said of cells which can give rise to cells of all orders, i. e., the complete individual. Cf. *unipotential*.

touch (tutsh) [L. *tac'tus*]. 1. The sense by which contact with objects gives evidence as to certain of their qualities. 2. Palpation or exploration with the finger. **abdominal t.**, digital palpation of the abdomen. **t.-cell**, **t.-corpuscle**. See under *corpuscle*. **double t.**, digital examination of the rectum and vagina at the same time. **rectal t.**, exploration of the rectum with the finger. **vaginal t.**, digital exploration of the vagina. **vesical t.**, digital examination of the bladder.

tour de maitre (toor deh mātr) [Fr. "master's turn"]. A method of passing the sound or catheter into the male bladder or into the uterus. It is first introduced in a position with its stem parallel to the thighs and between them and its convexity upward, and then, by a sweep is brought to the ordinary position and carried on into the bladder. The motion is reversed in the uterus.

Tourette's disease (too-retz') [Georges Gilles de la Tourette, physician in Paris, born 1857]. See under *disease*.

tournesol (tur'ne-sol). Litmus.

tourniquet (toor'ne-ket) [Fr.]. An instrument for the compression of a blood-vessel for the purpose of controlling the circulation and preventing the access of blood to a part. Tourniquets are of various kinds, named chiefly from their inventors. **Dupuytren's t.**, a tourniquet consisting of a semicircular piece of metal with a head at one end; used for compressing the abdominal aorta. **Es-march's t.**, a tourniquet consisting of a piece of strong, flat rubber tubing, which, after the blood has been driven from the limb by an elastic bandage, is wound about the upper part of the limb so as to arrest the circulation. **field t.**, a padded strap to be buckled on and pressed down by a screw so as to compress an artery. **garrote t.**, Spanish windlass. **horseshoe t.**, one shaped like a horseshoe to press upon two points. **provisional t.**, one applied loosely, to be tightened as occasion may require. **Signorini's t.** Same as *field t.* **Spanish t.**, Spanish windlass.

tousey (tow'ze) [Sinclair Tousey, New York roentgenologist]. A unit of x-ray power; being the radiance which will produce on a photographic film an effect equal to that produced by a one candle-power incandescent electric light.

tow (tō). The coarser parts or fibers of flax: used in surgery.

towelette (tow-el-et'). A small towel for the surgeon's or obstetrician's use.

towel (tow'el-ing). Friction with a towel.

Townsend's mixture (towns'endz) [Joseph Townsend, British clergyman, 1739-1816]. See under *mixture*.

toxæmia (toks-e'me-ah). See *toxemia*.

toxalbumin (toks-al-bu'mik). Relating to or caused by toxalbumin.

toxalbumin (toks-al-bu'min). Any poisonous albumin, whether of bacterial or other origin. Some, like abrin, ricin, and phallin, are found in plant juices; others in serpent-venoms, bacterial cultures, etc. See under *toxin*.

toxalbumose (toks-al'bu-mös). A poisonous albumose.

toxamin (toks'am-in). Mellanby's name for a poisonous element supposed by him to exist in certain foods, such as cereals.

toxanemia (toks-an-e'me-ah) [Gr. *τοξικόν* poison + *anemia*]. Anemia due to a poison.

Toxascaris (toks-as'kar-is). A genus of parasitic nematodes of the family Ascaridae. **T. ca'nis**, the common roundworm of the dog. It closely resembles the roundworm of the cat (*Belascaris mystax*) and has been found in man. **T. leoni'na** is found commonly in lions, tigers, and other large Felidae, and it has been found in the domestic cat. **T. limba'ta**. See *T. canis*.

toxemia (toks-e'me-ah) [Gr. *τοξικόν* poison + *αἷμα* blood]. A general intoxication due to the absorption of bacterial products (toxins) formed at a local source of infection. **alimentary t.**, toxemia due to absorption from the alimentary canal of chemic poisons. **hydatid t.**, toxemia with urticaria caused by hydatid fluid which has escaped into the peritoneal cavity. **menstrual t.**, that which is due to the absorption of a poison from the altered blood of retained menses. **mucin t.**, toxemia with tetanic symptoms due to excision of the thyroid gland, whose function is supposed to remove certain toxic substances from the blood.

toxemic, toxæmic (toks-e'mik). Pertaining to or caused by toxemia.

toxenzyme (toks-en'zim) [*toxin* + *enzyme*]. Any poisonous enzyme.

toxic, toxical (toks'ik, toks'ik-al). Pertaining to, due to, or of the nature of, a poison.

toxicæmia (toks-is-e'me-ah). Toxemia.

toxicant (toks'ik-ant) [L. *tox'icans* poisoning]. 1. Poisonous. 2. A poisonous agent.

toxication (toks-ik-a'shun). Poisoning.

toxicemia (toks-is-e'me-ah). Toxemia.

toxicide (toks'is-id) [Gr. *τοξικόν* poison + L. *ca'dere* to kill]. Overcoming toxic agents; also a drug so acting.

toxicity (toks-is'it-e) [Gr. *τοξικόν* poison]. The quality of being poisonous, especially the degree of virulence of a toxic microbe or of a poison. It is expressed by a fraction indicating the ratio between the smallest amount that will cause an animal's death and the weight of that animal.

toxicodendrol (toks'ik-o-den'drol). A poisonous, non-volatile oil found in *Rhus toxicodendron*.

toxicodendron (toks'ik-o-den'dron) [Gr. *τοξικόν* poison + *δένδρον* tree]. The poisonous leaves of *Rhus toxicodendron*. See under *Rhus*.

toxicoderma (toks'ik-o-der'mah) [Gr. *τοξικόν* poison + *δέρμα* skin]. Any skin disease due to a poison.

toxicodermatitis (toks'ik-o-der-mat-i'tis). Dermatitis due to a poison.

toxicodermatosis (toks'ik-o-der-mat-o'sis). Toxicoderma.

toxicodermia (toks'ik-o-der'me-ah). Toxicoderma.

toxicodermatitis (toks'ik-o-der-mi'tis). Toxicodermatitis.

toxicogenic (toks'ik-o-jen'ik) [Gr. *τοξικόν* poison + *γεννᾶν* to produce]. Producing a poison.

toxicohemia (toks'ik-o-he'me-ah). Same as *toxemia*.

toxicoid (toks'ik-oid) [Gr. *τοξικόν* poison + *εἶδος* form]. Resembling a poison.

toxicologic (toks'ik-o-loj'ik). Pertaining to toxicology.

toxicologist (toks-ik-o-lo-jist). An expert in the knowledge and detection of poisons.

toxicology (toks-ik-o-lo-je) [Gr. *τοξικόν* poison + *λόγος* treatise]. The sum of what is known regarding poisons; the scientific study of poisons, their actions, their detection, and the treatment of the conditions produced by them.

toxicomania (toks'ik-o-ma'ne-ah) [Gr. *τοξικόν* poison + *μανία* madness]. 1. An intense desire for poisons or for intoxicants. 2. Same as *toxophobia*.

toxicomucin (toks'ik-o-mu'sin) [L. *tox'icus* poisonous + *mucus* slime]. A poisonous albuminoid substance derived from cultures of the tubercle bacillus.

toxicopathic (toks'ik-o-path'ik). Pertaining to toxicopathy.

toxicopathy (toks-ik-op'ath-e) [Gr. *τοξικόν* poison + *πάθος* disease]. Any disease induced by a poison.

toxicopectic (tok'sik-o-pek'tik). Toxicopexic.

toxicopexic (toks'ik-o-peks'ik) [Gr. *τοξικόν* poison + *πῆξις* fixation]. Fixing or neutralizing poison.

toxicopexis (tok'sik-o-peks'is). The fixing or neutralizing of a poison in the body.

toxicophidia (toks'ik-o-fid'e-ah) [Gr. *τοξικόν* poison + *ὄφεις* snake]. Venomous snakes collectively; thanatophidia.

toxicophobia (toks'ik-o-fö'be-ah) [Gr. *τοξικόν* poison + *φόβος* fear]. Morbid dread of poisons.

toxicophylaxin (toks'ik-o-fi-laks'in) [Gr. *τοξικόν* poison + *phylaxin*]. Any phylaxin which destroys the poisons produced by microorganisms.

toxicosis (toks-ik-o'sis) [Gr. *τοξικόν* poison]. Any diseased condition due to poisoning. **endogenic t.**, autointoxication. **exogenic t.**, poisoning by the ingestion of toxic material, as in the food. **retention t.**, that which is due to the non-excretion of noxious waste-products.

toxicosozin (toks'ik-o-so'zin). A defensive protein which counteracts a toxin.

toxicodermatitis (toks'e-der-mi'tis) [Gr. *τοξικόν* poison + *δέρμα* skin + *-ιτις* inflammation]. Any skin inflammation due to a poison.

toxiferous (toks-if'er-us) [L. *tox'icum* poison + *fer're* to bear]. Conveying or producing a poison.

toxigenic (toks-e-jen'ik). Producing or elaborating toxins.

toxignomic (toks-ig-nom'ik). Characteristic of the toxic action of a poison.

toxi-infection (toks-e-in-fek'shun). Toxinfection.

toxi-infectious (toks'e-in-fek'shus). Caused by infection with a toxin.

toximucin (toks-e-mu'sin). See *toxicomucin*.

toxin (toks'in) [Gr. *τοξικόν* poison]. Any poisonous albumin that is produced by bacterial action. The *true toxins* are soluble, thermolabile, secretory products of bacteria which are highly poisonous and which when injected into suitable animals in carefully graded doses incite the formation of specific substances called antitoxins which nullify the action of the toxin. The best known are those of diphtheria, tetanus, and botulism. Toxin-like substances are also found in some plants and in snake venom. The *endotoxins* are poisonous substances which are not soluble, but which seem to be attached to the bacterial body. They may be the poisonous portion of the protein molecule. **animal t.**, zoötoxin. **bacterial t.** See *true toxins*, above. **botulism t.**, the soluble toxin of *Clostridium botulinum*. **Coley's t.**, an unfiltered

mixture of erysipelas and prodigious cultures: injected for the treatment of inoperable malignant tumors. **diphtheria t.**, the soluble toxin of *Corynebacterium diphtheria*. **dysentery t.**, the soluble toxin of *Bacterium dysenteriae*. **exogenous t.** Same as *true toxins*, above. **extracellular t.**, a toxin excreted by a bacterial cell; an exotoxin. **fatigue t.**, a toxin formed in the body as a result of muscular effort; a kenotoxin. **fugo t.** See *fugotoxin*. **intracellular t.**, a toxin developed and retained within the bacterial cell. See under *toxin*. **Morpinami's scarlatina t.** See *scarlatina*. **normal t.**, the standard of toxin strength; a toxin of such strength that 0.01 c.c. will kill a guinea-pig of 250 grams in four days. **plant t.** See *phytoletoxin*. **primary t.**, an extracellular toxin immediately after secretion by the bacterial cell and before it has been changed by the albuminose of the body into a secondary toxin. **prodigious t.**, a toxin from cultures of *Erythrobacillus prodigiosus*; it is used in the treatment of malignant tumors. **secondary t.** See *primary t.* **soluble t.** See *true toxins*, above. **tetanus t.**, the soluble toxin of *Clostridium tetani*. **te-trodo t.** See *fugotoxin*. **true t.** See *true toxins*, above.

toxinan (toks'in-an). See under *toxin*.

toxin-antitoxin (toks'in-an'te-toks-in). A nearly neutral mixture of diphtheria toxin with its antitoxin. Such a mixture is used for vaccination against diphtheria, the mixture being in such proportion that the diphtheria toxin has 85 per cent. of its toxicity neutralized by the antitoxin. Called also *T.-A. mixture*.

toxinemia, toxinæmia (toks-in-e'me-ah) [*toxin* + Gr. *αἷμα* blood]. The poisoning of the blood with toxins.

toxoinfection (toks-in-fek'shun). Infection by toxins or other poisonous agents.

toxoinfectious (toks-in-fek'shus). Caused by infection with a toxin.

toxic (toks-in'ik) [Gr. *τοξικόν* poison]. Pertaining to or caused by a toxin.

toxicicide (toks-in'is-id) [*toxin* + L. *cædere* to kill]. Any agent destructive to toxins.

toxinoses (toks-in-o'sis). Any diseased condition due to the presence of a toxin.

toxin-toxoid (toks'in-toks'oid). A mixture of a toxin and a toxoid.

toxipeptone (toks-e-pep'tôn). A poisonous protein or albuminoid substance allied to peptone; especially one produced from peptones by the action of the *Vibrio cholerae*.

toxiphobia (toks-if-o'be-ah). Same as *toxicophobia*.

toxiphoric (toks-if-or'ik) [Gr. *τοξικόν* poison + *φέρειν* to bear]. Having an affinity for a toxin.

toxiresin (toks-e-rez'in). A poisonous resinous substance obtainable from digitoxin.

toxis (toks'is) [Gr. *τοξικόν* poison]. Poisoning; especially, poisoning by toxins.

toxitabellæ (tok-se-tab-el'e). Poison tablets. See under *tablet*.

toxicotherapy (toks-ith-er'ap-e). The therapeutic use of antitoxins.

toxituberculid (toks'e-tu-ber'ku-lid). A skin lesion attributed to the action of tuberculous toxin.

toxo-alexin (toks-o-al-ek'sin) [Gr. *τοξικόν* poison + *ἀλέειν* to ward off]. An alexin which tends to produce immunity to bacterial toxins, including toxozozins and toxophylaxins.

Toxocara canis. A nematode worm parasitic in the intestine of dogs and sometimes found in man.

toxogen (toks'o-jen). The anaphylactic antibody.

toxogenin (toks-oj'en-in) [Gr. *τοξικόν* poison + *γενᾶν* to produce]. A substance supposed to develop in the blood under the influence of the action of an injected antigen, which, though itself inactive, in the injection of more antigen produces anaphylaxis.

toxoglobulin (toks-o-glob'u-lin). A poisonous globulin.

toxoid (toks'oid) [Gr. *τοξικόν* poison + *εἶδος* form]. A transformation product of a toxin no longer toxic, but capable of uniting with receptors whether free (antitoxin) or attached to cells. A toxoid with a greater affinity for the cells than the antitoxin is called a *protoxoid*; one with the same affinity, a *syntoxoid*; one with less affinity, an *epitoxoid* or *toxov*.

toxo-infection (toks'o-in-fek'shun). Infection with a toxin.

toxo-infectious (toks'o-in-fek'shus). Same as *toxi-infectious*.

toxolecithid (tok-so-les'ith-id). Same as *toxolecithin*.

toxolecithin (tok-so-les'ith-in). A lecithin compounded with a toxin, as cobra venom.

toxolysin (tok-sol'is-in). Same as *antitoxin*.

toxomucin (tok-so-mu'sin) [Gr. *τοξικόν* poison + *μύκιν*]. Same as *toxicomucin*.

toxov, toxone (toks'on, -ôn). One of the diphtheric poisons with less affinity for antitoxin than has toxin and which produces not acute toxic death, but emaciation, paralysis, and a delayed death.

toxovoid (toks'o-noid). A toxone which is not toxic, but has the power of binding antitoxin.

toxovosis (toks-o-no'sis). A disease due to poisoning.

toxopeptone (toks-o-pep'tôn). See *toxipeptone*.

toxopexic (toks-o-peks'ik) [*toxin* + Gr. *πῆξις* fixation]. Fixing a toxin or poison in such a way as to make it harmless to the organism.

toxophile (tok'fo-fil) [*toxin* + Gr. *φιλεῖν* to love]. Easily susceptible to a poison; having an affinity for poisons or toxins.

toxophilous (toks-of'il-us). Same as *toxophile*.

toxophore group (tok'fo-fôr) [*toxin* + Gr. *φορῶς* bearing]. See *Ehrlich's side-chain theory*, under *theory*.

toxophorous (toks-of'or-us) [*toxin* + Gr. *φέρειν* to bear]. Causing the combination of a toxin with the cells of an organism.

toxophylaxin (toks'o-fi-laks'in) [Gr. *τοξικόν* poison + *φυλάξιν*]. Any phylaxin which destroys or counteracts the poisons produced by bacteria. See *phylaxin*.

Toxoplasma (toks-o-plaz'mah). A genus of *Hæmosporida*. **T. pyro'genes**, a species in the form of oval or crescentic bodies found in the cells of the spleen in tropical splenomegaly (Castellani, 1913). See *kala-azar*.

toxoprotein (toks-o-pro'te-in). A toxic protein or a mixture of a toxin and a protein.

toxozozin (toks-o-so'zin) [*toxin* + *sozin*]. Any sozin which destroys the poisons produced by microorganisms. See *sozin*.

toxynon (toks'in-on). Sodium acetaminomercuric benzoate: used like mercury.

Toynbee's corpuscles, experiment, law, etc. (toin'bēz) [Joseph Toynbee, English aurist, 1815-1866]. See *corpuscle, experiment, law, etc.*

T. P. An abbreviation for *tuberculin precipitation*. See *Calmette's tuberculin*, under *tuberculin*.

T. R. An abbreviation for *Tuberculin R*, or new tuberculin. See *tuberculin*.

Tr., tr. An abbreviation for *tincture*.

trabal (tra'bal). Pertaining to the trabs.

trabecula (tra-bek'u-lah), pl. *trabeculæ* [L.]. A septum which extends from an envelop into the inclosed substance, forming, with other trabeculæ, an essential part of the stroma of the various organs. **t. car'nææ** [B N A]. Same as *columnæ carneæ*. **t. cer'ebri**, the callosum. **t. cine'rea**, the gray, soft, or middle commissure of the

cerebrum. **t. corpo'rum cavernoso'rum**, the tracheae of the corpora cavernosa of the penis. **t. cra'nii, Rathke's t.**, a pair of longitudinal cranial bars of cartilage in the embryo, bounding the pituitary space, which become the sella turcica.

trabecular (tra-bek'u-lar). Pertaining to a trabecula.

trabecularism (tra-bek'u-lar-izm). The condition of having a trabecular structure.

trabeculate (tra-bek'u-lăt) [L. *trabec'ula* a small beam or bar]. Marked with cross-bars.

trabeculation (tra-bek-u-la'shun). The formation of trabeculae in a part.

trabs (trabz) [L. for "beam"]. The corpus callosum. Called also *trabs cerebri*.

trache, primitive (träs). See *primitive streak*, under *streak*.

tracer (tra'ser). A dissecting instrument for isolating vessels and nerves.

trachea (tra'ke-ah) [L.; Gr. *τραχεία* rough]. The wind-pipe; the cartilaginous and membranous tube descending from the larynx to the bronchi. **t. retractor**, an instrument for holding back the edges of the slit trachea during surgical operations. **scabbard t.**, a trachea which is flattened by approximation of its lateral walls.

tracheaectasy (tra''ke-ah-ek'tas-e) [Gr. *τραχεία* trachea + *ἐκτασις* extension]. Dilatation of the trachea.

tracheal (tra'ke-al) [L. *trachea'lis*]. Pertaining to the trachea.

trachealgia (tra-ke-al'je-ah) [Gr. *τραχεία* trachea + *ἔλγος* pain]. Pain in the trachea.

trachealis (tra-ke-a'lis). See *muscles*, table of.

tracheitis (tra-ke-i'tis) [Gr. *τραχεία* trachea + *-ιτις* inflammation]. Inflammation of the trachea.

trachelagra (tra-kel-ag'rah, tra-kel'ag-rah) [Gr. *τράχελος* neck + *ἄγρα* seizure]. Gout in the neck.

trachelectomomy (trak''el-ek-tom'o-pek-se) [Gr. *τράχηνλος* neck + *ἐκτομή* excision + *πῆξις* fixation]. Partial excision and fixation of the neck of the uterus.

trachelectomy (trak-el-ek'to-me) [Gr. *τράχηνλος* neck + *ἐκ* out + *τέμνειν* to cut]. Excision of the cervix uteri.

tracheleatoma (trak''el-em-at-o'mah) [Gr. *τράχηνλος* neck + *hematoma*]. A hematoma seated on the sternomastoid muscle.

trachelism, trachelismus (trak'el-izm, trak-el-i'z-mus) [Gr. *τραχηλισμός*]. Spasm of the neck muscles; spasmodic retraction of the head in epilepsy.

trachelitis (trak-el-i'tis) [Gr. *τράχηνλος* neck + *-ιτις* inflammation]. Same as *cervicitis*.

tracheal-acromialis (trak'el'o-ak-ro-me-a'lis) [Gr. *τράχηνλος* neck + *acromion*]. An occasional muscle in man, arising from the occipital bone and inserted in the acromion of the scapula.

trachelobregmatic (trak'el-o-breg-mat'ik) [Gr. *τράχηνλος* neck + *βρέγμα* bregma]. Pertaining to the neck and the bregma.

tracheoceale (trak'el-o-sēl). Same as *tracheocele*.

tracheloclavicularis (trak'el-o-klav-ik-u-la'ris). An occasional muscle arising from the cervical vertebra and inserted into the outer end of the clavicle.

trachelocyllosis (trak''el-o-sil-o'sis) [Gr. *τράχηνλος* neck + *κύλλωσις* crooking]. Torticollis.

trachelocytosis (trak''el-o-sir-to'sis) [Gr. *τράχηνλος* neck + *κυρτός* curved]. Same as *trachelokyphosis*.

trachelocystitis (trak''el-o-sis-ti'tis) [Gr. *τράχηνλος* neck + *κύστις* bladder + *-ιτις* inflammation]. Inflammation of the neck of the bladder.

trachelodynia (trak-el-o-din'e-ah) [Gr. *τράχηνλος* neck + *ὀδύνη* pain]. Pain in the neck.

trachelokyphosis (trak''el-o-ki-fo'sis) [Gr. *τράχη*

λος neck + *κύφωσις* kyphosis]. Anterior curvature of the cervical portion of the spine.

trachelologist (trak-el-o'l'o-jist). One skilled in trachelology.

trachelology (trak-el-o'l'o-je) [Gr. *τράχηνλος* neck + *λόγος* treatise]. The study of the neck and its diseases and injuries.

trachelomastoid (trak''el-o-mas'toid). See *muscles*, table of.

trachelomyitis (trak''el-o-mi-i'tis) [Gr. *τράχηνλος* neck + *μύς* muscle + *-ιτις* inflammation]. Inflammation of the muscles of the neck.

trachelo-occipitalis (trak''el-o-ok-sip-it-a'lis). The complexus muscle.

trachelopexia (trak''el-o-peks'e-ah). Trachelopexy.

trachelopexy (trak'el-o-peks-e) [Gr. *τράχηνλος* neck + *πῆξις* fixation]. Surgical fixation of the neck of the uterus to some other part.

tracheloplasty (trak'el-o-plas-te) [Gr. *τράχηνλος* neck + *πλάσσειν* to mold]. The plastic surgery of the uterine neck; surgical repair of defects of the neck of the uterus.

trachelorrhaphy (trak-el-or'a-fe) [Gr. *τράχηνλος* neck + *ραφή* suture]. The suturation of the lacerated cervix uteri.

tracheloschisis (tra-kel-os'kis-is) [Gr. *τράχηνλος* neck + *σχίσις* fissure]. Congenital fissure of the neck.

trachelosyringorrhaphy (tra''kel-o-si-ring-or'a-fe) [Gr. *τράχηνλος* neck + *σύριγξ* pipe + *ραφή* suture]. Trachelorrhaphy for fistula of the vagina.

trachelotomy (trak-el-ot'o-me) [Gr. *τράχηνλος* neck + *τέμνειν* to cut]. The surgical cutting of the uterine neck.

tracheo-aërocele (tra''ke-o-a-er'o-sēl) [Gr. *τραχεία* trachea + *ἀήρ* air + *κήλη* hernia]. A tracheal hernia containing air.

tracheobronchial (tra''ke-o-brong'ke-al). Pertaining to the trachea and bronchi.

tracheobronchitis (tra''ke-o-brong-ki'tis). Inflammation of the trachea and bronchi.

tracheobronchoscopy (tra''ke-o-bron-kos'ko-pe). Inspection of the interior of the trachea and bronchi.

tracheoceale (tra'ke-o-sēl) [Gr. *τραχεία* trachea + *κήλη* hernia]. Hernial protrusion of the tracheal mucous membrane.

tracheo-esophageal (tra''ke-o-e-so-faj'e-al). Pertaining to the trachea and esophagus.

tracheofissure (tra''ke-o-fish'er). The operation of splitting the trachea.

tracheofistulization (tra''ke-o-fis-tu-liz-a'shun). Intratracheal medication by means of puncture needles or cannulas.

tracheolaryngeal (tra''ke-o-lar-in'je-al). Pertaining to the trachea and larynx.

tracheolaryngotomy (tra''ke-o-lar-in-got'o-me) [*tracheotomy* + *laryngotomy*]. Incision of the trachea and larynx.

tracheopathia (tra-ke-o-path'e-ah) [*trachea* + Gr. *πάθος* disease]. Disease of the trachea. **t. osteoplas'tica**, a condition marked by the formation of a bony and cartilaginous deposit in the tracheal mucosa.

tracheopathy (tra-ke-op'ath-e). Tracheopathia.

tracheopharyngeal (tra''ke-o-far-in'je-al). Pertaining to the trachea and pharynx.

tracheophonosis (tra''ke-o-fo-ne'sis) [Gr. *τραχεία* trachea + *φωνήσις* sounding]. Auscultation of the heart at the sternal notch.

tracheophony (tra-ke-of'o-ne) [Gr. *τραχεία* trachea + *φωνή* voice]. A sound heard in auscultation over the trachea.

tracheoplasty (tra'ke-o-plas-te) [Gr. *τραχεία* trachea + *πλάσσειν* to mold]. Plastic operations upon the trachea.

tracheopyosis (tra''ke-o-pi-o'sis) [Gr. *τραχεία* trachea + *πύον* pus]. Purulent tracheitis.

tracheorrhagia (tra''ke-o-ra''je-ah) [Gr. *τραχεία* trachea + *ῥήγναι* to burst forth]. Hemorrhage from the trachea.

tracheoschisis (tra-ke-os'kis-is) [Gr. *τραχεία* trachea + *σχίσις* fissure]. Fissure of the trachea.

tracheoscopic (tra''ke-o-skop'ik). Pertaining to or of the character of tracheoscopy.

tracheoscopy (tra-ke-os'ko-pe) [Gr. *τραχεία* trachea + *σκοπεῖν* to view]. The inspection of the interior of the trachea. **percervical t.**, tracheoscopy through a previously made tracheotomy wound; low tracheoscopy. **peroral t.**, tracheoscopy by means of a tracheoscope passed through the mouth, between the vocal cords, and into the trachea; high tracheoscopy.

tracheostenosis (tra''ke-o-sten-o'sis) [Gr. *τραχεία* trachea + *στένωσις* stenosis]. Contraction or narrowing of the trachea.

tracheostomy (tra-ke-os'to-me) [Gr. *τραχεία* trachea + *στόμα* mouth]. The operative formation of an opening into the trachea through the neck.

tracheotome (tra'ke-o-tōm) [Gr. *τραχεία* trachea + *τέμνειν* to cut]. An instrument for use in incising the trachea.

tracheotomize (tra-ke-ot'o-miz). To perform tracheotomy upon.

tracheotomy (tra-ke-ot'o-me) [Gr. *τραχεία* trachea + *τέμνειν* to cut]. The formation of an artificial opening into the trachea; the operation of cutting into the trachea. **inferior t.**, that which is performed below the isthmus of the thyroid. **superior t.**, that in which an opening is made above the isthmus of the thyroid. **t.-tube**, a curved tube of metal for insertion into the incision made by tracheotomy.

trachitis (trak-i'tis) [Gr. *τραχεία* trachea + *-ιτις* inflammation]. Inflammation of the trachea.

trachoma (trak'o-mah), pl. *trachomata* [Gr. *τράχωμα*]. 1. Contagious granular conjunctivitis, or granular lids; a disease of the conjunctiva attended by the formation of small elevations on the conjunctiva of the lids and by atrophy, cicatricial contraction, and deformity of the lids. 2. Kraurosis vulvæ. **Arlt's t.**, granular conjunctivitis; trachoma. **t. bodies**. See *body*. **brawny t.**, general lymphoid infiltration of the conjunctiva without granulation. **t. deformans**, vulvitis with cicatricial deformity. **diffuse t.**, a form with large-sized granulations. **follicular t.**, **granular t.**, a form in which there are sago-like elevations on the conjunctiva of the lids. **papillary t.**, that in which there are red, papillary growths on the lids. **Türk's t.**, laryngitis sicca. **t. of vocal bands**, development of nodular swellings on the vocal cords. **t. vulvæ**, kraurosis vulvæ.

Trachoma follicles
Trachoma (Woolf).

bundle of nerve-fibers having the same origin, function, and termination. **alimentary t.**, the alimentary canal, or passage from the mouth to the anus. Called also *digestive t.* **ascending t's**, tracts of the nervous system that become affected with ascending degeneration after injury of any part of the tract or its connections. **ascending anterolateral t.**, **ascending ventrolateral t.**, one of the tracts which persist throughout the entire length of the myelon. **association t.**, a band of nerve-fibers connecting various parts of the same cerebral hemisphere. **Bechterew's t.**, a part of the tegmentum connecting the fillet and the mesial aspect of the superior olive. **bulbar t.**, any of the tracts of the medulla oblongata. **bulbospatial t.** Same as *olivospinal t.* **Burdach's t.**, the *cuneate fasciculus*. See under *fasciculus*. **central tegmental tract**. See *tegmental t.* **central. cerebellorubrospinal t.**, the nerve tract comprised between the dentate nucleus of the cerebellum and the red nucleus of the opposite side. **cerebellospinal t.** Same as *vestibulospinal t.* **cerebellotegmental t.**, bundles of nerve-fibers running from the nucleus fastigii to the medulla oblongata and to the brachium pontis. **Ciaglin-ski's t.**, a sensory tract of fibers in the gray commissure between the ventral border of the posterior columns and the central canal: supposed to conduct sensations of pain and heat. **Collier's t.**, the tegmental part of the median longitudinal tract. **comma-t.** See *fasciculus inter fascicularis*. **conariorhophyseal t.**, a portion of the cavity of the embryonic brain connecting the pineal body and the pituitary body. **cornucommissural t.**, a tract in the anterior part of the posterior column of the cord, extending through the sacral and lumbar regions. **corticobulbar t.**, a bundle of nerve-fibers running from the cerebral cortex to the motor nuclei of the cranial nerves. **corticopontine t's**, bundles of fibers running from the cerebral cortex to the nuclei of the pons. **corticorubral t.**, a bundle of nerve-fibers from the cerebral cortex to the red nucleus. **corticospinal t.**, pyramidal tract, fasciculus cerebrosplanis, a tract of fibers forming the voluntary motor path from the precentral gyrus of the cerebral cortex to the spinal cord. Just before these fibers enter the cord they decussate into lateral and ventral parts. The lateral or the *corticospinal tract* is called also *fasciculus cerebrosplanis lateralis* [B N A] and *lateral or crossed pyramidal tract*. The ventral *corticospinal tract* is called also *fasciculus cerebrosplanis anterior* [B N A], *ventral or direct pyramidal tract*, and *column of Türk*. **corticothalamic t.**, fibers uniting the cerebral cortex with the thalamus. **crossed marginal t.** See *fasciculus dorsa lateralis*. **crossed pyramidal t.** See under *corticospinal t.* **Deiters's t.** Same as *vestibulospinal t.* **descending t.**, any bundle of nerve-fibers which convey impulses toward the periphery. **descending anterolateral t.**, **descending ventrolateral t.**, a tract passing throughout the length of the myelon. **descending comma-t.**, a narrow zone near the center of the column of Burdach. **digestive t.**, the alimentary canal. **direct cerebellar t.** See under *spinocerebellar t.* **direct pyramidal t.**, the ventral corticospinal tract. **direct sensory t.**, a band of fibers passing from near the globose nucleus of the cerebellum to the outer wall of the fourth ventricle. **dorsolateral t.**, **direct cerebellar t.**, **direct lateral t.**, one of the ascending or sensory tracts of the spinal cord. **dorsomedian t.**, the column of Goll. **epicerebral lymph-t's**, lymph-tracts between the pia and the surface of the brain. **fastigiobulbar t's**, bundles of efferent fibers running from the nucleus fastigii to the medulla oblongata; called also *cerebellotegmental tracts of the bulb*. **fiber t.**, a bundle of fibers of the white substance of the spinal cord all of which have the same origin, termination, and function. **fillet t.**, the

continuation of Gowers's tract to the outside of the fillet. **fillet t.**, **lateral**, a tract leaving the lateral fillet at the level of the motor nucleus of the fifth nerve, situated between the nucleus and the superior olivary body on the mesial side of the motor root. **Flechsig's t.**, the dorsal spinocerebellar tract. **Foville's t.**, the direct cerebellar tract of the spinal cord. **frontopontine t.**, a tract of fibers arising from the pons varolii, and extending anteriorly to form part of the cerebral peduncle. **genito-urinary t.**, the genito-urinary organs in continuity. **Goll's t.**, fasciculus gracilis. **Gowers's t.** See *fasciculus anterolateralis superficialis*. **habenular t.**, a tract of fibers passing from the habenula to the mesial side of the red nucleus. **habenulopeduncular t.** See *fasciculus reticularis*. **Helweg's t.** Same as *olivospinal t.* **intermediolateral t.**, the intermediate process of Gowers; the lateral gray cornu of the cord. **internuncial t.**, a fiber tract connecting two nuclei or centers. **lateral medullary t.**, a fillet in the most lateral portion of the reticular field. **Lissauer's t.** See *fasciculus dorsolateralis*. **Löwenthal's t.** See *tectospinal t.* **lymph-t.**, a lymph-space or system of lymph-spaces, as in the brain. **mammillotegmental t.**, a branch from the mammillothalamic tract running caudally in the tegmentum of the mesencephalon. **mammillothalamic t.**, a stout bundle of fibers from the mammillary body to the anterior nucleus of the thalamus; called also *bundle of Vicq d'Azyr* and *fasciculus thalamomammillaris*. **Marchi's t.** Same as *tectospinal t.* **marginal t.**, **crossed**. Same as *Lissauer's t.* **mesencephalospinal t.** Same as *prepyramidal t.* **t. of Meynert**. See *fasciculus retroflexus*. **mixed lateral t.**, a tract of the spinal cord believed to contain both motor and sensory elements. **Monakow's t.**, the rubrospinal tract. **motor t.**, the path of a motor impulse going from the brain to a muscle. **olfactory t.**, the narrow portion of the olfactory lobe of the brain; the rhinencephalon. **olivospinal t.**, a crossed tract descending from the inferior olivary body of the medulla oblongata to the lower cervical or upper thoracic segments of the spinal cord. Called also *bulbosplinal t.*, *Helweg's t.*, *triangular t.*, and *Helwig's bundle*. **ophthalmic t.**, **optic t.**, the fibers between the visual centers and the optic chiasm. **optic t.**, **intracerebral**. See *sagittal medullary t.* **t. of Philippe-Gombault**. See *triangular t.* **pontocerebellar t.** Same as *brachium pontis*. **pontospinal t.** See *reticulospinal t.* **predorsal t.** See *tectospinal t.* **prepyramidal t.** See *rubrospinal t.* **principal t.**, the dorsal spinocerebellar tract. **projection t.** See *projection fibers*, *under fiber*. **pyramidal t.** See *corticospinal t.* **pyramidal t.**, **crossed**, a motor or descending tract in the lateral columns of the spinal cord. **pyramido-anterior t.** Same as *column of Türck*. **pyramidolateral t.**, the crossed pyramidal tract. **respiratory t.**, the respiratory organs in continuity. **reticulospinal t.**, fibers from the pons to the reticular formation of the brain stem. **rubroreticular t.**, fibers from the red nucleus to the reticular formation of the pons. **rubrospinal t.**, one of the descending tracts of the anterolateral column, running from the red nucleus through the lateral column of the spinal cord as far as the sacral portion. It forms a triangular area in the lateral columns, between the crossed pyramidal tract and the tract of Gowers. Called also *Monakow's bundle*, *fasciculus intermediolateralis*, and *prepyramidal t.* **sagittal t.**, **sagittal medullary t.**, a tract of the brain coming from the posterior third of the posterior limit of the internal capsule. Called also *intracerebral optic t.* **Schultze's t.** See *fasciculus interfascicularis*. **semilunar t.**, a tract of nerve-fibers in the white matter of the cerebellar hemisphere. **sensory t.**, any tract of nerve-fibers conveying sensory impulses. **septomarginal t.**, a bundle of fibers along the dorsal periphery of the

posterior funiculus in the thoracic region, and along the septum in the lumbar region. **t. solitariospinalis**, descending fibers from the nucleus of the tractus solitarius to the motor neurons. **t. solitarius**. See *fasciculus solitarius*. **spinocerebellar t's**, ascending tracts from the spinal cord to the cerebellum. The *dorsal spinocerebellar tract* (fasciculus cerebellospinalis, direct cerebellar tract, Flechsig's tract) is a bundle of fibers at the surface of the lateral funiculus just ventral to the posterior lateral sulcus. The *ventral spinocerebellar tract* forms the superficial portion of the fasciculus anterolateralis superficialis and is situated at the periphery of the lateral funiculus ventral to the dorsal spinocerebellar tract. **spinomuscular t.**, the motor cells of the oblongata and those of the spinal cord, and the nerve-fibers which originate in them. **spino-olivary t.**, an ascending tract of fibers arising from the posterior gray columns of the cord and running to the inferior olivary nucleus. **spinotectal t.**, fibers ascending from the posterior gray column of the cord to the tectum of the mesencephalon. **spinothalamic t.**, two ascending tracts from posterior column of the cord to the thalamus; the *lateral* one for sensory impulses of temperature and pain, the *ventral* one for sensory impulses of touch and pressure. **Spitzka's t.** Same as *Lissauer's t.* **strionigral t.**, a bundle of fibers from the corpus striatum to the substantia nigra. **sulcomarginal t.** Same as *fasciculus sulcomarginalis*. **sylvian t.**, the region of the brain about the sylvian fissure. **tectocerebellar t.**, a bundle of fibers from the tectum of the mesencephalon to the cerebellum. **tectospinal t.**, one of the descending tracts of the spinal cord extending from the tectum of the midbrain on one side, decussating, and passing down through the oblongata into the spinal cord. Called also *predorsal bundle*, *sulcomarginal t.*, *Löwenthal's t.*, and *Held's bundle*. **tegmental t.**, a tract of fibers in the tegmentum, back of the superior olivary body, believed to connect the latter with the midbrain. **tegmental t.**, **central**, a tract that begins near the dorsal accessory nucleus and passes cephalad in the midtegmentum. **tegmentospinal t.** Same as *reticulospinal t.* **temporocentral t.**, the structure that connects the temporal lobe with the central convolution. **temporocerebellar t.**, a tract of white fibers from the cortex of the temporal lobe to the cortex of the frontal lobe. **temporofrontal t.**, the structure which connects the temporal and frontal lobes. **temporopontine t.**, a tract of fibers from the temporal lobe to the pons. **thalamobulbar t.**, a tract of descending fibers from the thalamus to the bulb. **thalamocortical t.**, fibers from the thalamus to the cerebral cortex. **thalamo-olivary t.**, a bundle of fibers descending from the thalamus to the inferior olivary nucleus. **thalamospinal t.**, a bundle of fibers descending from the thalamus to the spinal cord. **triangular t.** See *olivospinal t.* **triangular t. of Philippe-Gombault**, a small strand of intersegmental fibers at the dorsomesal angle of the dorsal white column of the spinal cord in the sacral portion. **trigeminothalamic t.**, fibers from the trigeminal nerve to the thalamus. **Türck's direct pyramidal t.**, a descending motor tract in the ventral region of the myelon. **urinary t.**, the passage from the kidney to the urinary meatus. **uveal t.**, the iris, ciliary body, and choroid considered together. **vestibulocerebellar t.**, fibers of the vestibular nerve to the cortex of the cerebellum. **vestibulospinal t.**, a tract of fibers in the anterolateral ground-bundle of the cord in front of the prepyramidal tract. **t. of Vicq d'Azyr**. See *mammillothalamic t.*

tractate (trak'tät). To attract or to tend to come together.

tractellum (trak-tel'um), pl. *tractel'la* [L.]. An anterior locomotive flagellum.

traction (trak'shun) [L. *tract'io*]. The act of draw-

ing. **t.-aneurysm**, an aneurysm produced by traction on the aorta by a duct of Botalli that is incompletely atrophied. **axis-t.**, traction along an axis, as of the pelvis in obstetrics. **t.-diverticulum**. See *diverticulum*. **elastic t.**, traction by an elastic force or by means of an elastic appliance.

tractor (trak'tor) [L. "drawer"]. 1. An instrument for making traction. 2. A metallic appliance formerly drawn across the skin in the attempted cure of various disorders. Known also as *Perkins's t.* **Syms's t.**, a tube with an inflatable rubber bag at the end: used to bring down a prostate into the perineal incision.

traction (trak-tor-a'shun). An obsolete form of metallotherapy; the treatment of disease by metallic tractors; perkinism.

tractus (trak'tus). Latin for *tract*. **t. centra'lis**, any central tract. **t. iliotibia'lis** [B N A], the iliotibial band. **t. olfacto'rius** [B N A], olfactory tract. **t. opt'icus** [B N A], the optic tract. **t. solita'rius** [B N A], the solitary fasciculus. See *fasciculus*. **t. spira'lis foraminulen'tus**, the macula cribrosa quarta. **t. spira'lis ner'vi trigem'ini** [B N A], the ascending root of the trigeminal nerve.

tragacanth (trag'ak-anth) [Gr. *τράγος* goat + *ἀκανθα* thorn]. A gum exuding from various species of *Astragalus*, a shrub of the order *Legumino'sa*. Mixed with water it forms a gelatinous mass (*mucilago tragacanthæ*) that is used to suspend insoluble powders. It is also used as an emollient and in the preparation of troches. Dose of *pulvis tragacanthæ compos'itus* (which contains also sugar and gum arabic), 30 gr.-1 dr. (2-4 gm.). *Glycerinum tragacanthæ* is also prepared.

tragal (tra'gal). Pertaining to the tragus.

tragi (tra'gi). [B N A] The hairs at the opening of the external auditory meatus.

Tragia (tra'je-ah). A genus of poisonous euphorbiaceous plants: several species (*T. u'rens*, etc.) are weeds of the southern United States.

tragicus (traj'ik-us). See *muscles, table of*.

tragomachalia (trag'o-mas-kal'e-ah) [Gr. *τράγος* goat + *μασχαλή* axilla]. Odorous perspiration from the axilla.

tragophonia (trag-o-fō'ne-ah). Tragophony.

tragophony (tra-go'fo'ne) [Gr. *τράγος* goat + *φωνή* voice]. Same as *egophony*.

tragopodia (trag-o-po'de-ah) [Gr. *τράγος* goat + *ποῖς* foot]. Knock-knee.

tragus (tra'gus) [L.; Gr. *τράγος* goat]. 1. The cartilaginous projection before the external meatus of the ear. 2. [B N A] Singular of *tragi*.

train (trân). A continuous line of railway carriages drawn by a locomotive. **hospital t.**, army medical rolling stock consisting of a train of ten railway cars (eight for patients), with definite personnel and material, for transportation of sick and wounded from the line of communications to the interior. **sanitary t.**, an army medical organization composed of camp infirmaries, ambulance companies, and field hospitals commanded by a division surgeon.

trait (trât). In heredity, the same as *character*.

tractor (traj-ek'tor). An instrument for locating a bullet in a wound.

trance (trans). A profound or abnormal sleep, from which the patient cannot be aroused easily, and not due to organic disease. Voluntary movement is lost, though sensibility and consciousness may remain. It is usually due to hysteria, and may be induced by hypnotism. **t.-coma**, hypnotic lethargy. **death-t.**, that in which the patient appears to be dead. **hysteric t.**, trance occurring as a symptom of hysteria. **induced t.**, that which is mainly due to hysteria, but may be caused by hypnotism.

transanimation (trans-an-im-a'shun) [L. *trans*

across + *an'ima* breath]. Resuscitation of a still-born infant.

transaudient (trans-aw'de-ent). Permitting the passage of sound-waves.

transalent (trans-ka'lent) [L. *trans* through + *cal'ere* to be hot]. Permitting the passage of radiant heat.

transcondomoscropy (trans-kon-dom-os'ko-pe). Cystoscopy or endoscopy in which the instrument is introduced into the middle of a condom which has been pushed into the organ and filled with salt solution.

transcondyloid (trans-kon'dil-oid). Through the condyles.

transcortical (trans-kor'tik-al). Connecting two different parts of the cerebral cortex; also dependent on disease of the tracts connecting different parts of the cerebral cortex.

transdermic (trans-der'mik) [L. *trans* through + *der'ma* skin]. Passed through the skin.

transection (trans-ek'shun) [L. *trans* across + *sect'io* a cut]. A section made across a long axis; a cross-section.

transfer, transference (trans'fer, trans'fer-ens) [L. *trans* across + *fer're* to carry]. The passage or conveyance of a symptom or affection from one part to another; a kind of metastasis.

transfix (trans'fiks) [L. *trans* across + *fig'ere* to fix]. To pierce through and through.

transfixion (trans-fiks'shun). A cutting through, as in amputation.

transformation (trans-for-a'shun) [L. *trans* across + *ford're* to pierce]. The perforation or piercing of the fetal skull.

transformator (trans'for-a-tor). An instrument for making a transformation.

transformation (trans-for-ma'shun) [L. *trans* across + *forma'tio* formation]. Change of form or structure; degeneration.

transfusion (trans-fu'zhun) [L. *transfu'sio*]. The transfer of blood from one person to another; the introduction of blood from the vessels of another person; also the introduction into the blood-vessels of any substance, as saline solution. **arterial t.**, the transfer of arterial blood. **direct t.**, **immediate t.**, the transfer of blood from one person to another without exposing it to the air. **immuno-t.**, transfusion of blood to which a vaccine specific for the disease in question has been added. **indirect t.**, **mediate t.**, the transfer of blood from a cup to a blood-vessel. **peritoneal t.**, the introduction of blood-serum, salt solution, or the like, into the peritoneal cavity. **reciprocal t.**, transfusion in which blood is transferred from a person who has recovered from a contagious fever into the vessels of a person affected with the same fever, and the return of an equal amount of blood from the patient to the well person. **subcutaneous t.**, the introduction of a considerable quantity of fluid into the subcutaneous tissue. **vaccinating t.**, transfusion of blood into a patient ill with an infectious disease, the donor being a person who has recently recovered from the disease, and probably possesses a high grade of immunity. **venous t.**, the transfer of blood to a vein.

transgression (trans-gresh'un). A process by which a substance is passed from one medium to another, for both of which it has strong affinity, through a layer of an intervening medium for which it has no affinity and in which it may be almost insoluble.

transic (trans'ik). Pertaining to or affected with trance.

transiliac (trans-il'e-ak). Across or between two ilia.

transilient (trans-il'e-ent) [L. *trans* across + *sal'ire* to leap]. Leaping or passing across.

transillumination (trans-'il-u-min-a'shun) [L. *trans* across + *illumination*]. The inspection of the interior of a cavity by means of a strong light made to pass through its walls; the inside of some of the body cavities may also be made visible by means of the Roentgen rays.

transinsular (trans-'in-su-lar). Across the insula; crossing the insula.

transischiac (trans-is'ke-ak). Between the two ischia.

transisthmian (tranz-is'me-an). Across an isthmus, especially the isthmus of the gyrus fornicatus.

transitional epithelium (trans-ish'un-al). See *epithelium*.

transition-zone (trans-ish'un). See *zone*.

translation (trans-la'shun) [L. *trans* across + *fer're* to bear]. A removal or change of place.

translucent (trans-lu'sent) [L. *trans* across + *lucens* shining]. Somewhat transparent; diaphanous.

transmigration (trans-mig-ra'shun) [L. *trans* across + *migra'tio* migration]. 1. A wandering; especially a change of place from one side of the body to the other. 2. Diapedesis. **external t.**, the passage of an ovum from one ovary to the tube of the other side without going through its own oviduct. **internal t.**, the passage of an ovum from one oviduct to the other by way of the uterus.

transmission (trans-mish'un) [L. *trans* across + *mis'sio* a sending]. A transfer, as of a disease; the communication of inheritable qualities to offspring. **duplex t.**, the transmission of nervous impulses in two directions along a nerve.

transnormal (trans-nor'mal). More than normal.

transocular (trans-ok'u-lar) [L. *trans* across + *oc'ulus* eye]. Across the eye.

transonance (tran'so-nans) [L. *trans* across + *so'nans* sounding]. Transmission of a sound formed in one organ through the substance of another organ.

transparent (trans-par'ent) [L. *trans* through + *pa'rere* to appear]. Permitting the passage of rays of light, so that objects may be seen through the substance.

transperitoneal (trans-'per-it-ô-ne'al). Crossing the peritoneum; across the peritoneum.

transpinalis (trans-pi-na'lis). Any one of the muscles connecting the transverse processes of the vertebrae.

transpirable (trans-pi'rab-l) [L. *trans* through + *spira're* to exhale]. Permitting the passage of perspiration.

transpiration (trans-pi-ra'shun) [L. *trans* through + *spira'tio* exhalation]. The discharge of air, sweat, or vapor through the skin. **pulmonary t.**, the exhalation of water-vapor from the blood circulating through the lungs.

transplantar (trans-plan'tar) [L. *trans* across + *plan'ta* sole]. Across the sole.

transplantation (trans-plan-ta'shun) [L. *trans* across + *plan'ta're* to plant]. The grafting of tissues taken from the same body or from another. See *graft*. **syngenesioplactic t.** See *syngenesioplactic*. **tendon t.**, the operation of inserting a piece from the tendon of a sound muscle into the tendon of a paralyzed muscle.

transpleural (trans-plu'ral). Across the pleural sac.

transport (trans'port). 1. The removal of fat from the fat depots to the cells; the process of infiltration with fat. 2. A vessel used for the conveyance of soldiers; a troop-ship.

transposition (trans-po-zish'un) [L. *trans* across + *posi'tio* placement]. 1. Displacement of a viscus to the opposite side. 2. The operation of carrying a tissue-flap from one situation to another without severing its connection entirely until it is united at its new location.

transsection (trans-sek'shun). Transection.

transsegmental (trans-seg-men'tal). Extending across a segment of a limb.

transseptal (trans-sep'tal). Across or on the other side of a septum.

transtemporal (trans-tem'por-al). Crossing the temporal lobe.

transthalamic (trans-thal'am-ik). Crossing the optic thalamus.

transthermia (trans-ther'me-ah) [L. *trans* through + Gr. *thermē* heat]. Thermopenetration.

transthoracic (trans-tho-ras'ik). Through the thorax.

transthoracotomy (trans-tho-rak-ot'o-me) [L. *trans* across + *thorax* + Gr. *tomē* a cut]. The operation of cutting across the thorax.

transubstantiation (trans'ub-stan-she-a'shun) [L. *trans* across + *substantia* substance]. The substitution of one tissue by another.

transudate (trans'u-dat) [L. *trans* through + *suda're* to sweat]. Any substance which has passed through a membrane.

transudation (trans-u-da'shun) [L. *transuda'tio*]. The passage of serum or other fluid through a membrane.

transvaginal (trans-vaj'in-al). By way of the vagina.

transversalis (trans-ver-sa'lis) [L. *trans* across + *ver'tere*, *ver'sum* to turn]. See *muscles*, table of.

transverse (trans-vers') [L. *transver'sus*]. Placed crosswise.

transversectomy (trans-ver-sek'to-me) [*transverse* + Gr. *ektomē* excision]. Surgical removal of the transverse process of a vertebra.

transversion (trans-ver'zhun). The condition of a tooth when it is displaced from its proper numeric position in the jaw.

transverso-analis (trans-ver'so-a-na'lis). The transversus perinei muscle.

transversocostal (trans-ver'so-kos'tal). Costo-transverse.

transversospinalis (trans-ver'so-spi-na'lis). A series of muscular structures forming the deeper layer of the extensor dorsi communis muscle.

transverso-urethralis (trans-ver'so-u-re-thra'lis). The transverse fibers of the sphincter urethrae muscle.

transversus (trans-ver'sus). See *muscles*, table of.

transvestite (trans-ves'tit) [L. *trans* over + *vestitus* clothed]. A person who dresses in the clothes of the opposite sex.

transvestitism (trans-ves'tit-izm) [L. *transvestite*]. A perversion in which the patient dresses in the clothes of the opposite sex.

trapezial (trap-e'ze-al). Pertaining to a trapezium.

trapeziform (trap-ez'it-orm). Trapezoid.

trapeziometacarpal (trap-e'ze-o-met-ah-kar'pal). Connecting the trapezium and metacarpus.

trapezium (trap-e'ze-um) [L.; Gr. *τραπέζιον*]. 1. The first carpal bone on the thumb side of the distal row. 2. A transverse band of fibers in the lower part of the pons, surrounding the superior olivary nucleus. 3. The central white matter of the cerebellum.

trapezius (trap-e'ze-us), pl. *trapezii* [L.]. See *muscles*, table of.

trapezoid (trap-ez-oid) [L. *trapezoid'es*; Gr. *τραπέζοειδής* table-shaped]. Having the shape of a four-sided solid, with two sides parallel and two diverging. **t. bone** (or **t.**), the second carpal bone on the thumb side of the distal row.

trappistine (trap-is-tén') [made by clerics of the order of *Trappists*]. A liqueur or cordial made in France; said to be stomachic.

Trapp's coefficient, formula (traps) [Russian pharmacist, 1815-1908]. See *coefficient, formula*.

trash (trash). The trade name for powdered

poppy-leaves and stalks in which Bengal opium is packed for shipment.

Traube's curves, membrane, space (traw'bez) [Ludwig Traube, German physician, 1818-1876]. See under *curve, membrane, and space*.

trauma (traw'mah), pl. *trau'mata* [L.; Gr. *τράυμα* wound]. A wound or injury. **actual t.**, in dentistry, an actual alteration of tissue produced by dental dys harmony. **potential t.**, a dental dys harmony which has not yet produced alteration of tissue, but may do so at any time. **psychic t.**, an emotional shock that makes a lasting impression on the mind, especially the subconscious mind.

traumasthenia (traw-mas-the'ne-ah) [Gr. *τράυμα* wound + *ἀ* priv + *σθένος* strength]. Traumatic neurasthenia.

traumatic (traw-mat'ik) [Gr. *τραυματικός*]. Of, or pertaining to, or caused by, an injury.

traumaticin (traw-mat'is-in) [Gr. *τράυμα* wound]. A 10 per cent. solution of gutta-percha in chloroform: used as a vehicle for the cutaneous administration of medicines.

traumatism (traw'mat-izm) [Gr. *τραυματισμός*]. 1. A condition of the system due to an injury or wound. 2. A wound.

traumatocace (traw-mat-ok'as-e) [Gr. *τράυμα* wound + *κάκη* badness]. Traumatic gangrene.

traumatocomium (traw'mat-o-ko'me-um). A hospital for wounded.

traumatol (traw'mat-ol). Same as *iodocresol*.

traumatology (traw-mat-ol'o-je) [Gr. *τράυμα* wound + *λόγος* knowledge]. A scientific view of wounds and disability from injuries.

traumatonesis (traw-mat-on'e-sis). Suture of a wound.

traumatopathy (traw-mat-op'ath-e) [Gr. *τράυμα* wound + *πάθος* disease]. Any disease due to wound or injury.

traumatopnea, traumatopnoea (traw'mat-op-ne'ah) [Gr. *τράυμα* wound + *πνοή* breath]. A condition of partial asphyxia with collapse caused by traumatic opening of the pleura.

traumatopyra (traw'mat-o-pi'rah) [Gr. *τράυμα* wound + *πύρ* fever]. Traumatic fever.

traumatosis (traw-mat-o'sis). Traumatism.

traumatotropism (traw-mat-ro-pizm) [Gr. *τράυμα* wound + *τρόπος* turning]. The growth or movement of organisms in relation to injury.

travel-sickness (trav'el-sik-nes). Same as *carsickness*.

travois (trah-vwah'). A stretcher for the wounded drawn by a single animal, the rear end dragging upon the ground.

treacle (tre'ak-l) [L. *theriaca*]. Molasses, or syrupus fuscus. **Venice t.** See *theriaca andromachi*.

tread (tred). Injury of the coronet of a horse's hoof, due to striking with the shoe of the opposite side.

treatment (trēt'ment). The management and care of a patient or the combating of his disorder. **Abram's t.**, treatment of thoracic and abdominal aneurysm by percussing the seventh cervical spine. **active t.**, that which is directed immediately to the cure of a disease or injury. **Albertini's t.**, complete rest and abstinence from food in aneurysm of the aorta. **albumose t.**, treatment of typhoid fever by the intravenous injection of 1 c.c. of a 2-4 per cent. solution of deuto-albumose. **Allen t.**, treatment of diabetes by certain days of fasting, followed by a restricted diet and attended by a careful determination of the quantity of food which the patient can consume without producing glycosuria and glycemia. Called also *starvation t.* **antigen t.**, the production of active immunity by the injection of antigens, including bacteriotherapy, and the use of vaccine and tuberculins. **Apostoli's t.**, the electric treatment of uterine disease, the positive pole

being inserted into the uterus and the negative pole being applied externally. **autoserosal-varsan t.** See *Swift-Ellis t.* **autoserosus t.**, treatment of an infectious disease by inoculating the patient with his own serum. **Bacelli's t.**, treatment of tetanus by the intramuscular injection of carbolic acid, together with the use of enemata of chloral hydrate. **Balfour's t.**, treatment of aneurysm by potassium iodid, which lowers the arterial blood tension and produces contraction of the aneurysmal sac. **Banting t.**, treatment of obesity by a diet that is free from carbohydrate, but is rich in nitrogenous matters. **Baunscheidt's t.** See *Baunscheidtism*. **Beard's t.**, treatment of cancer by trypsin. **Beauperthuy's t.**, treatment of leprosy with bichlorid of mercury. **Bell t.**, treatment of cancer by injections of colloidal lead. **Bergeron's t.**, a method of treating tuberculosis of the lungs by injecting a mixture of hydrogen sulphid and carbon dioxid into the rectum. **Bergonié t.**, the application of general faradization for the reduction of corpulence. **Bier's t.** See *Bier's hyperemia*, under *hyperemia*. **Bier's combined t.**, treatment of surgical tuberculosis by artificial hyperemia, heliotherapy, and iodids. **Bird's t.**, treatment of bed-sore by mild galvanic currents. **Blanchard's t.**, the procedure of plugging tuberculous bone cavities with a mixture of white wax and vaselin. **Blumel's t.**, treatment of morphin habit in which the patient is put to bed and morphin stopped entirely. He is put on a liquid diet and receives three or four cathartic courses consisting of 5 gr. of blue mass with 5 compound cathartic pills at intervals of eighteen hours. Some hours later he is given castor oil and receives from two to four intravenous infusions a day of 1000 c.c. of 0 per cent. sodium chlorid solution. For first few days he is given chloral at bedtime to insure sleep. **Boeck's t.**, the treatment of lupus vulgaris by applying a preparation of pyrogallie acid, resorcinol, salicylic acid, gelatin, and talc. **Bouchardat's t.**, treatment of diabetes by use of a diet that excludes substances rich in carbohydrates, as sugar, milk, etc. **Brand t.**, a method of treating fever by immersing the patient in a bath of the temperature of the room (from 65° to 70° F.) every three hours when the rectal temperature reaches 102.2° F. The patient remains in the bath about fifteen minutes, during which time he is systematically rubbed. He is then put back to bed and dried between the sheets. Before entering the bath he is given stimulants, and cold water is applied to the head and face. **Brandt's t.**, treatment of diseases of the fallopian tubes by pressing out their contents into the uterus by massage. **Brown-Séquard t.** Same as *organothrapy*. **Bülau's t.**, the use of siphon drainage in treating empyema. **Calot t.**, treatment of Pott's disease by plaster jackets having an opening over the kyphos on which pressure is made by means of pads. **Cantani's t.**, treatment of cholera by the repeated injection into the bowel of a large quantity of water containing tannic acid and tincture of opium at a temperature of from 100° to 104° F. **Carosa t.**, treatment of puerperal sepsis by cleansing the uterine and vaginal tracts and injecting 50 to 75 per cent. alcohol into the uterine cavity. **Carrel t., Carrel-Dakin t.**, treatment of wounds on the following general principles: A very thorough opening up of the wound, with removal of all foreign material, dead or lacerated tissue, etc.; careful cleansing of the wound; irrigation of the wound with Dakin's solution which has been modified with sodium bicarbonate. The irrigation is repeated every two hours and is carried out by means of an arrangement of small elastic tubes connected with a single tube which is attached to an irrigating bottle. From the beginning of the treatment the behavior of the bacteria is determined by repeated examination of smears made from every part of the wound. **Castellani's t.**, treatment of elephantia-

sis by complete rest in bed, bandaging with a flannel or rubber bandage, and daily injections of fibrolysin. **causal t.**, treatment that is directed against the cause of a disease. **Cervello's t.**, placing the patient in an atmosphere filled with formalin vapor: for tuberculosis. **cholin t.**, treatment of cancer by the intravenous injection of borate of cholin in connection with the use of radio-active substances. Cf. *enzylol*. **Comby-Filatov t.**, the treatment of chorea with large doses of arsenic. **conservative t.**, treatment designed to conserve the vital powers until clear indications develop; also conservative surgery. **Cordier's t.**, treatment of sciatica by the injection of filtered air in the region of the sciatic nerve. **curative t.**, active treatment designed to cure an existing disease. **Dancel's t.**, a treatment of obesity by a diet containing as little water as possible. **Débove's t.**, treatment of tuberculosis by a special form of forced feeding. **dietetic t.**, treatment of disease by regulation of the diet. **drug t.**, treatment with drugs, as distinguished from treatment with physical means, such as diet, exercise, electricity, etc. **Durante's t.**, treatment of surgical tuberculosis by injecting iodine into the lesion. **Ebstein's t.**, treatment of obesity by a diet from which all carbohydrates are excluded, but in which nitrogenous and fatty matters are included. **Ehrlich-Hata t.** See *salvarsan*. **empiric t.**, treatment by means that experience has proved to be beneficial. **Erlangen t.**, treatment of deep-seated cancer by administering at one sitting a dose of high voltage x-ray lethal for the cancer cell, multiple small ports of entry being used. **Etappen t.**, treatment of bow-legs and knock-knee by plaster-of-Paris bandage and corrective wedging. **eveneration t.**, application of x-rays to internal structures after opening the abdomen and bringing the malignant area to the edges of the wound. **expectant t.**, that which leaves the cure mainly to nature, attempting little apart from relief of untoward symptoms. Called also *symptomatic t.* **Ferrier's t.**, treatment of tuberculosis by giving lime salts, calcium carbonate, calcium phosphate, sodium chlorid, and calcined magnesia. **Fichera's t.**, treatment of cancer by the hypodermic injection of autolyzed human fetal tissue. Fresh sterile human fetuses are ground up and placed in a flask of sterile physiologic salt solution in the proportion of 1 gm. of former to 20 cgm. of latter. Thymol or phenol is added and toluol is placed on top. The mixture is then incubated at 37° C. for two months. The emulsion is then ready for use. **Finsen t.**, treatment of lupus vulgaris by the direct application of rays of sunlight or electric light. **Fischer's t.** See *Fischer's solution*, under *solution*. **Flechsigs's t.**, for epilepsy, consists in the use of opium, followed by bromids. **Forlanini's t.**, the formation of an artificial pneumothorax for the treatment of pulmonary tuberculosis. **Fournier's t.**, treatment of syphilis by administering mercury for two months, then stopping the mercury for a month or more. This is followed by a period of alternate administration and stopping of the mercury. **Fowler-Murphy t.** See *Murphy's t.* (2d def.). **Frenkel's t.** See *Frenkel's movements*, under *movement*. **Friedmann t.**, treatment of tuberculosis by intravenous and intramuscular injection of living non-virulent tubercle bacilli from turtles. **Girard t.**, treatment of seasickness by the administration, hypodermically or by mouth, of $\frac{1}{15}$ gr. of atropin sulphate and $\frac{1}{60}$ gr. of strychnin sulphate. **Guelpha t.**, treatment of gout, rheumatism, and other auto-intoxications by fasting and free purging. **Guinard's t.**, application of calcium carbide to ulcerating tumors. **Hare's t.**, Anglo-Indian treatment of dysentery by rectal injections of hot water through a flexible tube passed above the sigmoid flexure. **Heiser's t.**, treatment of leprosy by the injection of a mixture containing 60 c.c. of chaulmoogra oil, 60 c.c. of camphorated oil, and 4 gr. of resorcin. **Huch-**

ard's t., treatment of dilatation of the stomach by a diet in which there is a strict limitation of the liquid element. **hygienic t.**, that in which the treatment mainly employed is directed to the restoration or maintenance of hygienic conditions. **Jacquet's biokinetic t.**, active gymnastics of the hand and fingers. **Karell t.**, treatment of heart and kidney disease by keeping the patient in bed and giving only 800 c.c. of milk daily for four or five days, the diet then being gradually increased until, on the thirtieth day, the regular diet is resumed. **Kaufmann's t.**, treatment of psychoneurosis by the application of powerful electric shocks and the giving of loud military orders to perform certain exercises. **Keating-Hart t.** See *fulguration*. **Killgren t.**, a system of medical gymnastics combined with passive exercise, friction, and vibrations, and laying special emphasis on the mechanical treatment of the nerves. **Kittel's t.**, massage and manipulation for the dispersion of the uratic deposits in gouty joints. **Klapp's creeping t.**, treatment of scoliosis by having the patients creep about on the floor, with exaggerated movements of the spine. **klopfent.**, a method of treating pulmonary tuberculosis by slapping the surface of the chest with a silver paper-cutter. **Koga t.**, treatment of thrombo-angiitis obliterans by diluting the blood by hypodermoclysis with normal salt solution. **Korányi's t.**, treatment of leukemia by the use of benzol (benzene). **Kromayer's t.**, treatment of syphilis by the inhalation of very finely divided mercury. **Lambotte's t.**, a method of extension in fractures of the extremities by means of an extensible steel frame fastened to the bone by steel pegs. **Lanceraux's t.**, treatment of internal aneurysm by injecting glycerin subcutaneously. **Landerer's t.**, injections of cinnamic acid for tuberculosis. **La Porte t.**, the treatment of chronic osteomyelitis by application over the infected areas of aluminum potassium nitrate in an oatmeal poultice. **Larat's t.**, treatment of diptheric paralysis of the palate by faradism. **Lenhartz t.**, treatment of gastric ulcer by feeding with an abundant diet, chiefly of proteins, given on the principle that the excess of acid is thereby neutralized and the healing of the ulcer facilitated. With the diet is combined absolute rest in bed. **Leube t.**, treatment of gastric ulcer by rest in bed, the daily use of lukewarm saline laxatives, the application of hot poultices and Preissnitz compresses to the abdomen, and a diet mainly of milk in increasing quantities, fortified later by the addition of cereals, and finally by meat. **light t.**, phototherapy. **Matas's t.**, treatment of neuralgia by the injection of alcohol under the nerve ganglions at the base of the skull. **medicinal t.**, that in which the treatment is mainly accomplished by the use of remedies. **Meltzer t.**, treatment of tetanus by injection into the spinal canal of a solution of magnesium sulphate. **Menciére's t.**, filling of a wound with a fluid that will hold the microbes in check until the patient can be transported and operated on. The fluid consists of 10 gm. each of guaiacol, eucalyptol, and balsam of Peru; 10 gm. of iodoform, 100 gm. of alcohol and ether to make up 1 liter. **Mitchell t.** See *Weir-Mitchell t.* **mixed t.**, treatment of syphilis with both potassium iodid and corrosive sublimate. **Møllgaard t.**, treatment of tuberculosis by sanocrysin in conjunction with a serum obtained from horses which have received injections of Dreyer's diaplyte tubercle bacilli. **moral t.**, therapeutic treatment which makes appeal to the moral sense and arouses the will. **Murphy's t.** 1. Treatment of pulmonary tuberculosis by injecting nitrogen gas into the pleural cavity in order to cause collapse of the lung and consequent obliteration of cavities in it; artificial pneumothorax. 2. Treatment of peritonitis by placing the patient in the Fowler position to favor drainage from the pelvis and abdomen, and then making continuous irriga-

tion of the lower bowel with physiologic salt solution administered slowly. **Nageli's t.**, treatment of epistaxis by stretching the cervical sympathetic nerve, which stimulates vasoconstriction. **Nauheim t.** Same as **Scholl's t.** **Neuber's t.**, treatment of tuberculosis of bones and joints by excising the carious tissue and filling the cavity with an emulsion of iodoform in glycerin. **Neuendorf t.**, treatment of rheumatoid arthritis by the mud-baths of Neuendorf, Germany. **Noesske's t.**, treatment of gangrene by incising the part and producing suction by means of a vacuum cup, so as to draw out the stagnant venous blood. **Nordrach t.**, a method of treating consumption by fresh air, rest, and an abundance of nourishing food. **oatmeal t.**, treatment of diabetes by restricting the protein of the diet and limiting the carbohydrates to oatmeal. **Ochsner t.**, treatment of appendicitis by securing peristaltic rest so that peritoneal adhesions may form. This is secured by abstention from food by the mouth and the use of gastric lavage and rectal irrigations, but no purgatives. **Oertel's t.**, treatment of heart disease, circulatory diseases, obesity, etc., by regulation of diet, diminution of fluid elements in the food, mountain-climbing and other systematic exercises, and by massage and Swedish movements. **Oppenheimer's t.**, a method of treating alcoholism and drug habit. **organ t.**, organotherapy. **palliative t.**, that which affords relief to pain and distress, but which does not attempt a cure. **Percy t.** See **Percy cautery**, under **cautery**. **Pilcz's t.**, the inoculation of paretic patients with the toxin of erysipelas for the purpose of inducing remission of the paresis. **Pincus weighting t.**, treatment of various gynecologic disorders by the use of an inclined plane, with moderate elevation of the pelvis and lower extremities and the use of various forms of compression. **Playfair's t.**, treatment by rest and feeding. **Plombières t.** See **Plombières douche**, under **douche**. **Politzer's t.**, treatment of disease of the middle ear by inflation performed by blowing air into the nostril while the patient goes through the movement of swallowing. The blowing is done by means of a rubber bag (Politzer's bag). **preventive t.**, **prophylactic t.**, that in which the aim is to prevent the occurrence of the disease. **Quintin t.**, the subcutaneous injection of seawater solution for the treatment of malnutrition, anemia, chronic indigestion, etc. **rational t.**, treatment which is based upon a knowledge of disease and the action of the remedies employed. **refrigerator t.**, treatment by having the patient spend several hours daily in a room at a temperature of 20° F. It acts as a stimulus to metabolic processes, and has been employed in tuberculosis and sleeping-sickness. **Ricord's t.**, treatment of syphilis by the administration of mercury for six months, followed by the administration of potassium iodid for three months. **Rogers's t.**, treatment of cholera by transfusion of saline solution and the oral administration of permanganates. **Rollier t.**, treatment of surgical tuberculosis by systematic exposure of the part to the rays of the sun. **salicyl t.**, treatment of rheumatism with salicylic acid or its derivatives. **Salisbury t.**, treatment of obesity by a diet of chopped beef-steak and hot water. **sand t.**, treatment with sand-baths. **Sceleth t.**, treatment of drug addiction by the use of saline cathartics and the following prescription: $\frac{1}{10}$ gr. scopolamin hydrobromid, $\frac{1}{10}$ gr. pilocarpin hydrobromid, $\frac{1}{2}$ gr. ethyl morphin hydrochlorid, 15 minims fluidextract of cascara sagrada, 35 minims alcohol, and enough water to make 1 fl.dr. **Schede's t.**, treatment of necrosis of bone by removing dead bone and granulation tissue, which permits the cavity to fill with blood. The resulting clot is kept moist by an aseptic dressing. **Schlösser's t.**, treatment of facial neuralgia by injections of 80 per cent. alcohol into the foramen, from which the nerve emerges. **Schöler's t.**, injection of tincture of

iodin into the vitreous body for detachment of the retina. **Schott's t.**, treatment of heart disease by the use of warm saline baths of Nauheim and systematically conducted exercise. **Schroth's t.**, treatment of obesity by the exclusion of water in any form as far as possible. **sewage t.**, any artificial process to which sewage is subjected in order to remove or so alter some of its constituents as to render it less offensive or dangerous and more fit to discharge into a public water-course. **Sippy t.**, treatment of gastric ulcer by neutralizing the free acid of the gastric juice. This treatment is designed to prevent further erosive action of the acid. **solar t.**, heliotherapy. **Spahlinger t.**, treatment of pulmonary tuberculosis based on, first, a destruction of tuberculous toxins by injecting various bacteriolytic and antitoxic serums, and second, a therapeutic vaccination with a series of tuberculins. **Spangler's t.**, treatment of epilepsy by the injection of rattlesnake venom. **specific t.**, treatment that is particularly adapted to the special disease being treated. **Spengler's t.**, treatment with Spengler's serum. See under **serum**. **starvation t.** See **Allen t.** **Stoker's t.**, treatment of bronchiectasis by the continuous inhalation of oxygen. **string-method t.**, the treatment of an esophageal stricture by passing a string up through it from below, through a gastric fistula, and then, by pulling the string up and down, cutting through the stricture so that a bougie may easily be passed. Called also **Abbe's string-method**. **Stroganoff's** or **Stroganov's t.**, the treatment of puerperal eclampsia by means of morphin, chloral hydrate, and chloroform, according to a definite scheme, the aim being to arrest the convulsions before they can develop. **supporting t.**, that in which the treatment is mainly directed to sustaining the strength of the patient. **surgical t.**, that in which surgical means are those chiefly employed. **Swift-Ellis t.**, treatment of general paresis by the intradural injection of salvarsanized serum, that is, the blood-serum of the patient taken after the injection of salvarsan. (*auto-salvarsan*). **symptomatic t.**, that in which the disease is left to its course and the symptoms treated as they arise. Called also **expectant t.** **Tallerman t.**, the localized application of superheated dry air in rheumatism, gout, sprains, neuritis, eczema, etc. **terrain t.**, treatment of weak heart, neurasthenia, corpulence, etc., by regular exercise, mountain-climbing, regulation of diet, etc. **thymus t.**, treatment of progressive muscular atrophy by the administration of extracts from the thymus gland. **thyroid t.**, treatment of disease by preparations of the thyroid gland of sheep or of man. **tonic t.** 1. Treatment with tonics. 2. Treatment of syphilis with small doses of mercury continued for a long period. **Towns-Lambert t.**, treatment of drug addiction by systematic purging, gradually reducing amount of the drug to which the patient is addicted, and the use of a mixture of 2 parts of 15 per cent. belladonna tincture and 1 part each of fluidextracts of hyoscyamus and xanthoxylum. **Tuffnell's t.**, treatment of aneurysm by absolute rest and starvation diet. **Valsalva's t.**, treatment of aneurysm by absolute rest, starvation diet, and bleeding. **Veit's t.**, treatment of puerperal eclampsia with large doses of morphin. **Vidal t.**, treatment of lupus vulgaris by scarification. **Wagner's t.**, subcutaneous injection into a patient with general paresis or other form of neurosyphilis of the blood of an untreated malaria patient. **Wagner-Jauregg t.**, treatment of dementia paralytica by the infection of the patient with malaria. **weighting t.** See **Pincus weighting t.** **Weir-Mitchell t.**, a method of treating neurasthenia, hysteria, etc., by absolute rest in bed, frequent and abundant feeding, and the systematic use of massage and electricity. **Weiss's t.**, treatment of gonorrhea by raising the temperature of the patient by means of Turkish baths. Called also

Weiss's fever therapy. **Welander's t.**, treatment of syphilis by the application of a jacket of flannel covered with gray ointment. **Widal t.**, treatment of circulatory disorders by excluding sodium chlorid as much as possible from the food. **Willlems's t.**, treatment of acute arthritis by early evacuation of the effusion or suppuration followed by immediate active movements of the joint. **Woodbridge t.**, a method of treating typhoid fever with small doses of calomel, podophyllin, and intestinal antiseptics. **Yeo's t.**, treatment of obesity by giving large amounts of hot drinks and withholding carbohydrates. **Ziemssen's t.**, treatment of anemia by subcutaneous injections of defibrinated human blood.

tree, bronchial (tre). The bronchi and their ramifications before they reach the lung substance. **toothache t.** See *Xanthoxylum americanum*.

trefusia (tre-fu'zhe-ah). A red powder prepared from defibrinated blood, and used in chlorosis.

trehala (tre-ha'lah). A manna-like substance deposited by an insect (*Larinus maculatus*) upon an Asiatic plant of the genus *Echinops*.

trehalose (tre-ha'los). A disaccharid, $C_{12}H_{22}O_{11}$, from manna, ergot, or from trehala. It is not digestible, but yields dextrose when hydrolyzed with acids.

Treitz's arch, fossa, hernia, muscle, etc. (trits) [Wenzel Treitz, Austrian physician, 1810-1872]. See under *arch, fossa, hernia, muscle*, etc.

Trélat's sign (tra-laz') [Ulysse Trélat, French surgeon, 1828-1890]. See under *sign*.

Trematoda (trem-at-o'dan), pl. [*Gr. τρεματώδης* pierced]. A class of the Platyhelminths which includes the flukes. They are found in domestic animals, fish, and sometimes in man.

trematode (trem-at-od). Any parasitic animal organism or species of the class *Trematoda*.

trembles (trem'blz). A disease of cattle and sheep in which the animal becomes weak and may suddenly stumble and fall. Persons who use milk or butter from an animal so affected are very susceptible to acidosis and coma. The condition seems to be caused by the cattle eating white snakeroot (*Eupatorium urticifolium*). Called also *slows* and *milk-sickness*.

tremelloid, tremellose (trem'el-oid, trem'el-ös). Like jelly.

tremogram (tre'mo-gram) [tremor + *Gr. γράμμα* mark]. The tracing or record made by a tremograph; a graphic tracing of a tremor.

tremograph (tre'mo-graf) [tremor + *Gr. γράφειν* to record]. An instrument for recording tremors.

tremophobia (tre-mo-fö-be-ah) [tremor + *Gr. φόβος* fear]. A morbid fear of trembling.

tremor (tre'mor) [L. from *tre'mere* to shake]. An involuntary trembling or quivering. **arsenic t.**, a tremor resulting from arsenic poisoning. **coarse t.**, a tremor in which the vibrations are slow. **continuous t.**, a persistent tremor resembling that of paralysis agitans. **t. cor'dis**, palpitation of the heart. **epileptoid t.**, intermittent clonic spasm with tremor. **fibrillary t.**, a fine rhythmic trembling which is due to alternate contraction of the different fibrils of a muscle; fibrillation. **fine t.**, a tremor in which the vibrations are rapid. **forced t.**, a movement persisting after voluntary motion, due to the intermittent stimulation of the nerve-centers. **hysteric t.**, tremor seen in hysteria, and dependent upon uncertain nervous impulse. **intention t.**, tremor on attempting voluntary motion; a tremor of the limbs characteristic of disseminated sclerosis. **intermittent t.**, tremor seen in hemiplegia or when attempts at voluntary movement are made. **kinetic t.**, a tremor occurring in a limb during active movement. **t. mercurialis**, a kind of paralysis agitans due to mercurial poisoning. **metallic t.**, a tremor seen in various metallic poisonings. **t.**

opiophagorum, the tremor of opium users. **passive t.**, a tremor occurring only when the patient is at rest. **persistent t.**, a tremor occurring whether the patient is at rest or in motion. **t. potato'rum**, "trembling of drinkers"; delirium tremens. **purring t.**, a thrill, like the purring of a cat, felt by the hand placed over the heart, and due to mitral stenosis. **Rendu's t.**, a hysteric intention tremor. **static t.**, a tremor occurring on effort to hold one of the limbs in a definite position. **striocerebellar t.**, a combined form of organic tremor with both striatal and cerebellar components. **t. tendinum**, "trembling of the tendons"; subsultus tendinum. **volitional t.**, a trembling of the entire body during voluntary effort; it is seen in multiple sclerosis.

tremulor (trem'u-lor). A machine for the administration of vibratory treatment.

tremulous (trem'u-lus) [*L. trem'ulus*]. Shaking, trembling, or quivering.

trench back. See *back*. **t. fever**. See *fever*. **t. foot**. See *foot*. **t. hand**. See *hand*. **t. leg**. See *trench shin*, under *shin*. **t. lung**. See under *lung*. **t. nephritis**. See *nephritis*. **t. shin**. See under *shin*.

Trendelenburg cannula, operation, position, symptom, test (tren-del'en-berg) [Friedrich Trendelenburg, surgeon in Leipsic, 1844-1925]. See *cannula, operation, position, symptom, and tests*.

trepan (tre'pan) [*Gr. τρέπανον* auger]. 1. An obsolete form of the trephine, resembling a carpenter's bit and brace. 2. To trephine.

trepanation (trep-an-a'shun) [*L. trepana'tio*]. An operation with the trepan; trephination.

trepanner (tre-pan'er). One who performs a trepanation.

treparsol (tre'par-sol). The formin derivative of meta-amino-para-oxyphenyl-arsenic acid; used in amebiasis.

trephination (tref-in-a'shun). The operation of trephining.

trephine (tre-fin') [*L. trephi'na*]. 1. A crown-saw for removing a circular disk or button of bone, chiefly from the skull. 2. To operate upon with the trephine. **Horsley's t.**, a trephine that may be taken apart and cleaned.

trephinement (tre-fin'ment). The act or process of trephining.

trephiner (tre-fi'ner). One who performs the operation of trephining.

trephocyte (tref'o-sit) [*Gr. τρέφειν* to feed + *κύτος* cell]. See *Seritoli's cell*, under *cell*.

trephone (tref'ōn) [*Gr. τρέφειν* to feed]. A hypothetical substance manufactured by certain cells of the body and used by other cells in the building up of their protoplasm (Carrel).

trepidant (trep'id-ant) [*L. trepidans* trembling]. Characterized by tremor.

trepidation (trep-id-a'she-o) [L.]. Trepidation. **t. cor'dis**, palpitation of the heart.

trepidation (trep-id-a'shun) [*L. trepida'tio*]. 1. A trembling or oscillatory movement. 2. Nervous anxiety and fear.

trepol (tre'pol). Tartrobismuthate of potassium and sodium in oily suspension; used for the treatment of syphilis. Dose of the 10 per cent. suspension in oil, 16-32 min. (1-2 c.c.).

Treponema (trep-o-ne'mah) [*Gr. τρέπειν* to turn + *νήμα* thread]. A genus of microorganisms of the order *Spirochetales*, consisting of exceedingly slender spiral rods, motile by means of flexuous bending of the body. **T. calligyrum**, a species resembling *T. pallidum*, but thicker and found in smegma and in condylomata. **T. macrodentum** and **T. microdentum** are found in the mouth, especially under the gums and in the throat. **T. mucosum**, a spirochete found in the pus from pyorrhea alveolaris. **T. pallidum**,

the causative organism of syphilis; called also *Spirocheta pallida*. **T. pertenue**, the causative organism of yaws; called also *Spirocheta pertenuis*.

treponemiasis (tre-po-ne-mi'as-is). Infection with treponema; syphilis.

treponemoidal (tre-p-o-nem-is-i'dal). Destroying treponema.

treponemosis (tre-po-nem-o'sis). Infection with treponema.

treposan (trep'o-san). A succinate of bismuth (containing 75 per cent. of metallic Bi) in a 10 per cent. oily suspension. Intramuscular dose in the treatment of syphilis 2 c.c., equivalent to 0.02 gm. of the drug.

treppe (trep'eh) [German "staircase"]. The phenomenon of gradual increase in the extent of muscular contraction following rapidly repeated stimulation (H. P. Bowditch, 1871).

Tresilian's sign (tre-sil'e-anz) [Frederick James Tresilian, contemporary English physician]. See *sign*.

tresis (tre'sis) [Gr. τρησις]. Perforation.

Treves's fold, operation (trêvs) [Sir Frederick Treves, English surgeon, 1853-1923]. See *fold* and *operation*.

tri- [Gr. τρεῖς; L. tres three]. A prefix meaning *three* or *thrice*.

triacetate (tri-as'et-ât). An acetate which contains three molecules of the acetic-acid radical.

triacetin (tri-as'et-in). An oily liquid, glyceryl triacetate, $C_3H_5(C_2H_3O_2)_3$, from cod-liver oil, fats, etc.

triacid (tri-as'id). A base capable of neutralizing three equivalents of monobasic acid.

triacol (tri'ak-ol). A solution of sodium, potassium, and ethylmorphin-guaiacol: used in lung affections.

triad (tri'ad) [L. tri'as; Gr. τριάς group of three]. 1. Any trivalent element. 2. Trivalent. 3. A group of three objects or signs. **Basedow's t.**, Merseburg triad. **Bezold's t.**, retarded bone-conduction, lessened perception of deep tones, and negative Rinne's sign, indicating otosclerosis. **Dieulafoy's t.**, hypersensitiveness of the skin, reflex muscular contraction, and tenderness at McBurney's point in appendicitis. **Grancher's t.**, lessened vesicular quality of breathing, skodaic resonance, and increased vocal fremitus: a syndrome of commencing pulmonary tuberculosis. **t. of Herz**. See *phrenocardia*. **Hutchinson's t.**, a syndrome of diffuse interstitial keratitis, labyrinthine disease, and Hutchinson teeth: seen in inherited syphilis. **t. of Luciani**, asthenia, atonia, and astasia, the three major symptoms of cerebellar disease. **Merseburg t.**, goiter, exophthalmos, and tachycardia, the three cardinal symptoms of Basedow's disease.

triakidekaphobia (tri-ah-ki'dek-af-o-be-ah) [Gr. τρεῖς three + kai and + δέκα ten + φόβος fear]. Morbid or superstitious dread of the number thirteen.

trial-case (tri'al-kās). A box or frame with a duly arranged set of trial-lenses.

trial-frame (tri'al-frām). 1. A device used in testing for color-blindness. 2. A frame for holding trial-lenses.

trial-lenses (tri'al-len'zes). A set of lenses used in testing the vision.

triallylamin (tri'al-il-am'in). A volatile, oily, basic liquid amin, $N(C_3H_5)_3 = C_9H_{15}N$.

triamin (tri-am'in). A compound containing three amino ($-NH_2$) groups.

triamylose (tri-am'il-ōs). A polymerized anhydrid of glucose, $(C_6H_{10}O_5)_3$, thought to be a constituent of starch.

triangle (tri'ang-l) [L. trian'gulum; tres three + angulus angle]. 1. A three-cornered area or figure. 2. A triangular bandage. **Alsbeg's t.**, a triangle formed by a line passing through the long axis of the femur, a second line passing through

the long axis of the neck of the femur, and a third line on a plane passing through the base of the head of the femur. It forms an equilateral triangle with its apex upward. The angle at the apex is known as *Alsbeg's angle*, or *angle of elevation*. **anterior t.**, that which is divided by the omohyoid below and the digastric above into the inferior carotid, superior carotid, and submaxillary triangle. **Assézat's t.**, a triangle bounded by lines joining the alveolar and basal points and the nasion. **auricular t.**, a triangle bounded by lines drawn from the tip of the auricle and the two ends of its base of insertion. **t. of auscultation**, the area limited by the lower edge of the trapezius, the latissimus dorsi, and the vertebral border of the scapula. **axillary t.**, the region made up of the inner aspect of the arm, the axilla, and the pectoral region. **Bonwill t.**, a triangle bounded by lines from the center of the alveolar ridge of the lower jaw to the condyloid process on either side and from one condyloid process to the other. **brachial t.**, the triangle situated on the under surface of the arm, the axilla, and the outer surface of the chest. **Bryant's t.**, the ileo-femoral triangle. **Calot's t.**, a triangle whose base is the cystic artery and whose apex is the angle formed by the junction of the cystic and hepatic ducts. **cardiohepatic t.**, the triangular space in the fifth intercostal space of the right side, separating the heart from the upper edge of the liver. **carotid t., inferior**, a triangle formed by the median line of the neck in front, the sternomastoid, and the anterior belly of the omohyoid muscle. Called also *t. of necessity*. **carotid t., superior**, one having the anterior belly of the omohyoid in front, the posterior belly of the digastric above, and the sternomastoid behind. Called also *t. of election*. **cephalic t.**, a triangle on the anteroposterior plane of the skull, between the lines from the occiput to the forehead and to the chin, and the third from the chin to the forehead. **cervical t's**. See *triangles of the neck*. **crural r.**, the triangular area formed by the lower abdominal, the inguinal and the genital region, and the inner aspect of the thighs. **digastric t.**, the submaxillary triangle. **t. of the elbow**, one on the front of the elbow, having the supinator longus on the outside and the pronator teres inside, the base being toward the humerus. **t. of election**. See *carotid t., superior*. **extravesical t.**, Pawlik's triangle. **facial t.**, one whose angles are the basion and the alveolar and nasal points. **Farabeuf's t.**, a triangle of the upper part of the neck, its sides being formed by the internal jugular vein and the facial vein, and its base by the hypoglossal nerve. **femoral t.** See *inguinal t.* **frontal t.**, one bounded by the maximum frontal diameter and lines to the glabella. **Garland's t.**, a triangular area of relative resonance in the lower back close to the spine on the diseased side in pleurisy with effusion. **Gombault-Philippe t.**, a triangular space formed in the conus medullaris by the fibers which form Flechsig's oval field higher up. **Grocco's t.** See *Grocco's sign*, under *sign*. **Grynfelt's t.**, a space in which lumbar hernia may occur, bounded by the twelfth rib and the lower border of the serratus posticus inferior above, by the anterior border of the quadratus lumborum behind, and by the posterior border of the obliquus internus in front. **Henke's t.**, a triangle between the descending portion of the inguinal fold and the lateral portion of the inguinal fold and the lateral border of the rectus muscle. **Hesselbach's t.**, one having the deep epigastric artery on the outside, Poupart's ligament below, and the margin of the rectus muscle on the inside. **hypoglossohyoid t.**, the triangular space in the subhyoid region, bounded above by the hypoglossal nerve, in front by the posterior border of the myohyoid muscle, behind and below by the tendon of the digastric muscle. Called also *Pinaud's t.* and *Pirogoff's t.* **iliofemoral t.**, one formed

Macewen's suprameatal triangle.

Triangles of the neck: *a*, Submaxillary triangle; *b*, superior carotid triangle; *c*, inferior carotid triangle; *d*, occipital triangle; *e*, supraclavicular triangle.

a, The lingual triangle.

Farabeuf's triangle.

a, Triangle of Petit.

Hesselbach's triangle (X): *a*, Deep epigastric artery; *b*, outer margin of rectus; *c*, Poupart's ligament.

a, The urogenital triangle; *b*, the rectal triangle.

a, *a*, Nélaton's line; *b*, Bryant's triangle.

Scarpa's triangle: *v*, Vein; *a*, artery; *n*, nerve.

A, Grocco's triangle of dullness; *B*, dullness of pleural effusion (Stevens).

by Nélaton's line, another through the superior iliac spine, and a third from this to the great trochanter. **infraclavicular t.**, one with the clavicle above, the upper border of the pectoralis major on the inside, and the anterior border of the deltoid on the outside. **inguinal t.**, one which has the sartorius on the outside, the adductor longus within, and Poupart's ligament above. Called also *Scarpa's t.* and *femoral t.* **Koranyi-Grocco t.** Same as *Grocco's sign*. See *sign*. **Labbe's t.**, a triangular area included between a horizontal line along the lower border of the cartilage of the ninth rib, the line of the false ribs, and the line of the liver. It is the area where the stomach lies in contact with the wall of the abdomen. **Langenbeck's t.**, a triangle having its apex at the anterior superior spine of the ilium, its base formed by the anatomic neck of the femur, and its external side by the external face of the great trochanter. **Lesser's t.**, a triangle with the hypoglossal nerve above and the two bellies of the digastricus on the other two sides. **Lesshaft's t.**, Grynfelt's triangle. **Lieu-taud's t.**, the trigonum vesicæ. **lingual t.** See illustration, p. 1261. **lumbocosto-abdominal t.**, a triangle between the obliquus externus muscle, the serratus posticus inferior, the erector spine, and the obliquus internus. **lymphoid t.**, Waldeyer's ring. See under *ring*. **Macewen's t.**, the suprarenal triangle. **Mal-gaigne's t.**, the superior carotid triangle. **medullary t.**, the internal capsule; a tract which connects the crura cerebri and the cerebral cortex. **t. of necessity.** See *carotid t., inferior*. **t's of the neck, anterior**, the two carotid and the submaxillary triangles together. **t's of the neck, posterior**, the occipital and subclavian triangles together. **occipital t.**, one with the sternomastoid muscle in front, the trapezius behind, and the omohyoid below. **occipital t., inferior**, one which has the bimastoid line as its base and theinion as its apex. **palatal p.**, a triangle limited by the greatest transverse diameter and lines from the ends of this diameter to the alveolar point. **paravertebral t.** Same as *Grocco's t.* See *Grocco's sign*, under *sign*. **Pawlik's t.**, a triangle within the vagina corresponding exactly with the vesical trigone, and bounded laterally by Pawlik's folds. **Petit's t.**, one with the crest of the ilium below and the obliquus externus and the latissimus dorsi on either side. **Pinaud's t.**, Pirogoff's t. See *hypoglossohyoid t.* **pubo-urethral t.**, a triangle in the perineum bounded externally by the ischiocavernosus muscle, internally by the bulbocavernosus muscle, and posteriorly by the transversus perinei. **Rauchfuss's t.** Same as *Grocco's sign*. See under *sign*. **rectal t.** See illustration, p. 1261. **Reil's t.** See *trigonum lemnisci*. **sacral t.**, the shallow depression overlying the sacrum. **Scarpa's t.**, the inguinal triangle. **sternocostal t.**, an area in the diaphragm between the costal and sternal parts where the muscle is lacking. **subclavian t.**, one having the posterior belly of the omohyoid above, the clavicle below, and the sternomastoid at the base. **subinguinal t.**, inguinal triangle. **submandibular t.**, submaxillary triangle. **submaxillary t.**, one with the lower jawbone above, the posterior belly of the digastricus and the stylohyoid below, and the median line of the neck in front. **submental t.**, a triangle bounded on either side by the anterior belly of the digastric muscle and below by the hyoid bone. **suboccipital t.**, one which lies between the rectus capitis posterior major and the obliquus superior and obliquus inferior triangle. **suprarenal t.**, a triangular space between the lower posterior edge of the root of the zygoma and the superior posterior edge of the opening of the external auditory meatus. Called also *Macewen's t.* **surgical t.**, any triangular area or region in which certain nerves, vessels, or organs are located. Such areas are established for reference in surgical operations.

umbilicomammillary t., a triangle having its base formed by the line joining the nipples and its apex at the umbilicus. **urogenital t.** See illustration, p. 1261. **vaginal t.**, Pawlik's triangle. **vesical t.** Same as *trigonum vesicæ*. **von Weber's t.**, the triangle on the sole of the foot formed by lines connecting the heads of the first metatarsal, the head of the fifth metatarsal, and the center of the under surface of the heel. **Wernicke's t.**, the posterior segment of the internal capsule; it is formed by Gratiolet's radiating fibers and by fibers from the pulvinar and external geniculatum.

triangular (tri-ang'u-lar) [L. *triangula'ris*]. Having three angles or corners.

triangularis (tri-ang-u-la'ris) [L.]. See *muscles, table of*.

Triatoma (tri-at-o'mah). See *Lamus*.

triatomic (tri-at-om'ik). Containing three atoms, or three replaceable hydrogen atoms.

tribade (trib-ād). A woman with a large clitoris who practices tribadism.

tribadism (trib-ad-izm) [Gr. *τρίβειν* to rub]. Mutual friction of the genitals between women.

tribady (trib-ad-e). Tribadism.

tribasic (tri-ba'sik) [L. *tres* three + *ba'sis* base]. Having three replaceable hydrogen atoms.

triboluminescence (tri'bo-lu-min-es'ens) [Gr. *τρίβειν* to rub + *luminescence*]. Luminescence caused by rubbing.

tribrachius (tri-bra'ke-us) [Gr. *τρί* three + *βραχίον* arm]. A monster-fetus with three arms.

tribromaloin (tri-bröm-al'o-in). A yellow, crystalline compound, $C_{17}H_{15}Br_3O_7$, of bromin and barbaloin.

tribrometanaphthol (tri-bröm-be-tah-naf'thol). A grayish powder, $C_{10}H_4Br_3OH$: used for disinfecting the hands.

tribromcannabinol (tri'bröm-kan-ab'in-ol). A bromin and cannabinol derivative; a brownish powder: hypnotic.

tribromhydrin (tri-bröm-hi'drin). A yellowish antiseptic and sedative fluid, $CH_2Br.CHBr.CH_2Br$; allyl tribromid. It is used in whooping-cough, hysteria, and asthma. Dose, 3-5 min. (0.2-0.3 c.c.).

tribromid (tri-bröm'id) [Gr. *τρεῖς* three + *bromid*]. A bromin compound containing three atoms of bromin to one of the base.

tribrommethane (tri-bröm-meth'an). Same as *bromoform*.

tribromnaphthol (tri-bröm-naf'tol). A bromin derivative of β -naphthol, $C_{10}H_4Br_3OH$: used as a germicide in wound treatment.

tribromphenol (tri-bröm-fe'nol). Same as *bromol. t.-bismuth*, xeroform.

tribromphenyl salicylate (tri-bröm-fen'il). Same as *tribromsalol*.

tribromresorcin (tri'bröm-re-sor'sin). A substance, $C_6HBr_3(OH)_2$, precipitated from bromin-water by resorcin in solution.

tribromsalol (tri-brom-sal'ol). Cordol; a salol derivative, $OH.C_6H_4.COO.C_6H_2Br_3$, or salol in which the hydrogen is replaced by three atoms of bromin. It is used like salol.

tributyryn (tri-bu'tir-in). A colorless fat, $C_8H_5(OCOCH_2CH_2CH_3)_3$, contained in cows' butter.

tricalcic (tri-kal'sik). Containing three atoms of calcium.

tricarbin (tri-kar'bin). A proprietary preparation of glycerin-carbonic ester, $C_3H_{10}O_6$: used as a diluent.

tricellular (tri-sel'u-lar). Three-celled.

tricephalus (tri-sel'al-us) [Gr. *τρεῖς* three + *κεφαλή* head]. A monster having three heads.

triceps (tri'seps) [L. *tres* three + *ca'put* head]. Having three heads. See *muscles, table of. t.*

su'ræ, the gastrocnemius and soleus muscles considered together.

triceptor (tri-sep'tor). An intermediary having three combining groups.

Tricercomonas (tri-ser-kom'o-nas). A parasite of man, probably the same as *Enteromonas*.

trichangiectasis (trik'an-je-ek'tas-is) [Gr. *θρίξ* hair + *ἀγγεῖον* vessel + *ἐκτασις* dilatation]. Dilatation of the capillary vessels.

trichatrophia (trik-at-ro'fe-ah) [Gr. *θρίξ* hair + *ἀτροφία* atrophy]. An atrophied condition of the hair-bulbs, leading to brittleness of the hair.

trichauxe, **trichauxis** (trik-awks'e, trik-awks'is) [Gr. *θρίξ* hair + *αὔξη* growth]. Hypertrichosis; excessive growth of the hair, in respect both to quantity and length.

trichesthesia (trik-es-the'ze-ah). Same as *trichesthesia*.

trichiasis (trik-i'as-is) [Gr. *τριχίασις*]. 1. A condition of ingrowing hairs about an orifice, or of ingrowing eyelashes. 2. The appearance of hair-like filaments in the urine. **t. of the anus**, a condition in which the hairs of the anus curve inward, causing irritation of the mucous membrane.

Trichina (trik-i'nah) [Gr. *τρίχινος* of hair]. A genus of nematode parasites of the family Trichinellidae. **T. spiralis**, one of the smallest of the parasitic nematodes, being only about 1.5 mm. in length. It is found coiled in a cyst in the muscles of the rat, pig, and man. When such meat is eaten the cyst dissolves, the parasite matures, deposits its larvæ in the deep mucosa, whence they get into the lymphatics, are carried to all parts of the body, and again encyst.

Trichinel'la spiralis. Same as *Trichina spiralis*.

trichinelliasis (trik-e-nel-i'a-sis). Trichinosis.

Trichinellidae (trik-in-el'id-e). A family of the Nematoda which contains two genera, *Trichiuris* and *Trichinella*.

trichinellosis (trik-e-nel-o'sis). Trichinosis.

trichiniasis (trik-in-i'as-is). Same as *trichinosis*.

trichiniferous (trik-in-if'er-us) [*trichina* + *L. ferre* to bear]. Containing trichine.

trichinization (trik'in-iz-a'shun). Infestation with *Trichina spiralis*.

trichinophobia (trik'in-o-f'o-be'ah) [*trichina* + *Gr. φόβος* fear]. Morbid dread of trichinosis.

trichinoscope (trik-i'no-skōp) [*trichina* + *Gr. σκοπεῖν* to view]. An instrument for ascertaining the presence of trichina.

trichinosis (trik-in-o'sis) [*L. trichina*]. A diseased condition due to infestation with trichinae. It is produced by eating undercooked pork containing *Trichina* (*Trichinella*) *spiralis*. It is attended in the early stages by diarrhea, nausea, colic, and fever, and later by stiffness, pain, swelling of the muscles, fever, sweating, and insomnia.

trichinous (trik'in-us). Affected with or containing trichinae.

trichite (tri'kit) [Gr. *θρίξ* hair]. 1. A Meyer's name for one of the radially arranged needle-shaped crystals composing a starch grain. 2. One of the needle-shaped plastids placed radially around the periphery of a protozoön.

trichitis (trik-i'tis) [Gr. *θρίξ* hair + *-itis* inflammation]. Inflammation of the hair-bulbs.

trichloracetic acid (tri-klor-as-e'tik). See *acid*.

trichloraldehyd (tri-klor-al'de-hid). See *chloral*.

trichlorobutylalcohol (tri-klor-bu-til-al'ko-hol) Chlorotone.

trichlorbutylaldehyd (tri-klor-bu-til-al'de-hid). Butylchloral.

trichlorethane (tri-klor-eth'an). Methylchloroform, a volatile liquid, CH_3CCl_3 , formed by chlorinating ethyl chlorid. It is used as an anesthetic.

trichlorhydrin (tri-klor-hi'drin). Allyl trichlorid, $\text{C}_3\text{H}_5\text{Cl}_3$: an anesthetic and hypnotic body.

trichlorid (tri-klo'rid). Any combination of three atoms of chlorin with one of another element.

trichlormethane (tri-klor-meth'an). Chloroform.

trichloromethylchloroformate (tri-klo'ro-meth'il-klo-ro-for'mät). $\text{CICO}_2\text{CCl}_3$. A lethal war gas. Called also *diphosgene* and *superpalite*.

trichloronitromethane (tri-klo'ro-ni-tro-meth'an). See *chloropicrin*.

trichloropropane (tri'klo-ro-pro'pän). Same as *trichlorhydrin*.

trichlorotrivinyl arsine (tri-klo'ro-tri-vi'nil). $(\text{CHCl}.\text{CH})_3\text{As}$. A war gas that causes sneezing.

trichlorophenol (tri-klo'fe-nol). A phenol derivative, $(\text{C}_6\text{H}_4\text{Cl}_3)\text{OH}$, derived from carbolic acid. It is antiseptic and disinfectant: used in powder like iodoform, or in a 5 per cent. aqueous solution. Called also *omal*.

tricho- [Gr. *θρίξ* hair]. A prefix denoting relation to, or likeness to, the hair.

tricho-aesthesia (trik-o-es-the'ze-ah). See *trichesthesia*.

trichobacteria (trik'o-bak-te're-ah) [Gr. *θρίξ* hair + *βακτήριον* rod]. 1. A group of bacteria including those forms which possess flagella. 2. The filamentous or thread-like bacteria.

trichobezoar (trik-o-be'zo-ar) [Gr. *θρίξ* hair + *bezoar*]. A hair-ball; a concretion within the stomach or intestines formed of hairs.

trichocardia (trik-o-kar'de-ah) [Gr. *θρίξ* hair + *καρδία* heart]. Hairy heart; a hairy appearance upon the heart, due to exudative pericarditis.

trichocephaliasis (trik'o-sef-al-i'as-is) [Gr. *θρίξ* hair + *κεφαλή* head]. Infestation with some species of *Trichocephalus*.

Trichocephalus (trik-o-sef'al-us) [Gr. *θρίξ* hair + *κεφαλή* head]. A genus of intestinal nematode parasites of the family Trichinellidae. **T. dispar**, **T. trichiura**, the species that principally infests the human subject. It is about 2 inches in length, the front portion of its body, the esophageal zone, being hair-like in slimmness. It inhabits the large intestine, and may cause diarrhea, vomiting, and nervous disorders, though it usually produces no symptoms. It is also known as *Trichuris trichiura*, *thread-worm*, or *whip-worm*.

T. dispar, **T. trichiura**, the species that principally infests the human subject. It is about 2 inches in length, the front portion of its body, the esophageal zone, being hair-like in slimmness. It inhabits the large intestine, and may cause diarrhea, vomiting, and nervous disorders, though it usually produces no symptoms. It is also known as *Trichuris trichiura*, *thread-worm*, or *whip-worm*.

Trichocephalus trichiura: A, Females; B, males. The posterior portion of the male is usually coiled as is shown in B. Photographs of mounted specimens. Natural size. (Todd.)

It inhabits the large intestine, and may cause diarrhea, vomiting, and nervous disorders, though it usually produces no symptoms. It is also known as *Trichuris trichiura*, *thread-worm*, or *whip-worm*.

trichoclasia (trik-ok'las-is) [Gr. *θρίξ* hair + *κλάσις* fracture]. Brittleness of the hair.

trichocryptosis (trik'o-krip-to'sis) [Gr. *θρίξ* hair + *κρυπτός* concealed]. Disease of the hair-follicles.

trichocyst (trik'o-sist) [Gr. *θρίξ* hair + *κύστις* bladder]. A cell-structure derived from the cytoplasm.

trichodangeitis (trik'o-dan-je-i'tis) [Gr. *τριχώδης* hair-like + *ἀγγεῖον* vessel + *-itis* inflammation]. Inflammation of the capillaries.

trichodarteriitis (trik'o-dar-ter-e'i'tis) [Gr. *τριχώδης* hair-like + *ἀρτηρία* artery + *-itis* inflammation]. Inflammation of the arterioles.

Trichodectes (trik-o-dek'tez). A genus of parasitic insects. **T. canis** is found in dogs and cats. **T. cli'max**, a biting louse of goats. **T. e'qui**, one of the biting lice found on horses. **T. herm'si**, a biting louse of goats. **T. la'tus**, the dog louse, found on dogs, especially puppies. **T. pilo'gus**, the horse louse. **T. sphærocephalus**, the red-headed sheep louse, found in the wool of sheep in Europe and America.

trichodophlebitis (trik''o-do-fle-bi'tis) [Gr. *τριχώδης* hair-like + *φλέψ* vein + *-itis* inflammation]. Inflammation of the venules.

tricho-epithelioma (trik''o-ep-ith-e-le-o'mah) [Gr. *θρίξ* hair + *epithelioma*]. A skin-tumor whose cell-growth starts in the follicles of the lanugo. **t. papillo-sum mul'tiplex**, an eruption of nodules and papules arising in the hair-follicles.

tricho-esthesia (trik''o-es-the-ze'ah) [Gr. *θρίξ* hair + *αἴσθησις* sensation]. The sense which one perceives when one of the hairs of the skin has been touched; hair sensibility.

tricho-esthesiometer (trik''o-es-the-ze-om'et'er) [Gr. *θρίξ* hair + *αἴσθησις* sensation + *μέτρον* measure]. An electric apparatus for measuring the hair sensibility, or the sensitiveness of the scalp by means of the hairs.

trichofibro-acanthoma (trik''o-fi''bro-ak-an-tho'mah). A tumor of the epithelium of the lanugo follicles and of the prickle-cell layer of the skin.

trichofibro-epithelioma (trik''o-fi''bro-ep-e-the-le-o'mah). A fibroma of the epithelium of the lanugo follicles.

trichogen (trik'o-jen). An agent which stimulates the growth of hair.

trichogenous (trik-oj'en-us) [Gr. *θρίξ* hair + *γενῶν* to produce]. Promoting the growth of the hair.

trichoglossia (trik-o-glos'e-ah) [Gr. *θρίξ* hair + *γλῶσσα* tongue]. A hairy state of the tongue due to a thickening of the papillae.

trichohyalin (trik-o-hi'al-in) [Gr. *θρίξ* hair + *hyalin*]. The hyalin of the hair.

trichoid (trik'oid) [Gr. *θρίξ* hair + *εἶδος* form]. Like or resembling a hair, or the hair.

trichokryptomania (trik''o-krip-to-ma'ne-ah) [Gr. *θρίξ* hair + *κρύπτος* crooked + *μανία* madness]. Same as *trichorhexomania*.

tricholabis, tricholabion (trik-o'lab-is, trik-o'la-be-on) [Gr.]. Tweezers for pulling out hairs.

tricholith (trik'o-lith) [Gr. *θρίξ* hair + *λίθος* stone]. A hairy concretion.

trichologia (trik-o-lo'je-ah) [Gr. *θρίξ* hair + *λέγειν* to pull]. The pulling out of the hair by delirious or insane patients.

trichology (trik-o'l'o-je) [Gr. *θρίξ* hair + *λόγος* treatise]. The sum of what is known regarding the hair.

trichoma (trik-o'mah) [Gr. *τρίχωμα* hairiness]. 1. Same as *entropion*. 2. Same as *plica polonica*.

trichomania (trik-o-ma'ne-ah). See *trichotillomania*.

Trichomas'tix cuniculi. A parasitic organism resembling a Trichomonad; found in rabbits.

trichomatose (trik-o'mat-ös). Pertaining to or affected with trichomatosis.

trichomatosis (trik''o-mat-o'sis). Plica polonica or other disease of the hair produced by fungi.

trichomatous (trik-om'at-us). Affected with, of the nature of, or pertaining to, trichoma.

Trichomonas (trik-om'o-nas) [Gr. *θρίξ* hair + *μονάς* unit]. A genus of parasitic flagellate protozoa occurring in the form of pear-shaped cells having three flagella in front, an undulating membrane, and a trailing flagellum. They cause a diarrhoeal disease in turkeys and may cause a diarrhoea in man. **T. augusta** (*Trichomonas angusta*) is found in the intestine of the frog. **T. buccalis**, a form found in the mouth and especially about the tartar of the teeth. **T. columbarum**, found in birds affected with diphtheria. **T. hominis**, a common parasite in the intestine of man, frequently found in diarrheal stools. **T. intestinalis**. Same as *T. hominis*. **T. muris**, a species found in the cecum of the rat. **T. pulmonalis**, a form, probably the same as *T. vagina*, occurring in the lungs of fetid bronchitis and gangrene of the lungs. **T. vagina**, a species found in the vagina in about 10 per cent.

of the cases examined and especially those with an acid secretion. It has also been found in the bladder and urethra of man.

trichomoniasis (tri-ko-mo-ni'as-is). Infestation with Trichomonas.

Trichomycetes (tri-ko-mi-se'tēs) [Gr. *θρίξ* hair + *μύκης* fungus]. A group of filamentous organisms intermediate between the bacteria and the higher fungi. The group includes actinomycetes, leptothrix, cladothrix, and nocardia.

trichomycetosis (tri''ko-mi-se-to'sis). Trichomycosis.

trichomycosis (trik''o-mi-ko'sis) [Gr. *θρίξ* hair + *μύκης* fungus]. Any disease of the hair due to a vegetable parasite. **t. axilla'ris**, trichonocardiasis. **t. favo'sa**, favus. **t. nodo'sa**, **t. nodula'ris**, a disease in which hard, fungous nodules are formed in the shaft of the hair. Called also *pedra*. **t. palmelli'na**, a disease of the hair in the armpits, on the pubes and the inner side of the thigh, marked by the formation of a jelly-like, yellowish mass on the hair. **t. pustulo'sa**, a parasitic hair disease of pustular nature.

trichon (trik'on). An autolyzed preparation of the trichophyton.

trichonocardiasis, trichonocardiosis (tri''ko-no-kar-di'as-is, -kar-de-o'sis). A disease of the pubic and axillary hair occurring in tropical regions and caused by a mold, *Nocardia tenuis*. It is marked by the formation on the hair-shaft of nodose ensheathing masses having a red, yellow, or black color.

trichonosis, trichonosus (trik-o-no'sis, trik-on'-o-sus) [Gr. *θρίξ* hair + *νόσος* disease]. Any disease of the hair. **t. furfura'cea**, tinea tonsurans. **t. versic'olor**, ringed hair.

trichopathic (trik-o-path'ik). Pertaining to disease of the hair.

trichopathophobia (tri''ko-path-o-fo-be'ah) [Gr. *θρίξ* hair + *πάθος* disease + *φόβος* fear]. Morbid anxiety with regard to the hair, its growth, disease, etc.

trichopathy (trik-op'ath-e) [Gr. *θρίξ* hair + *πάθος* disease]. Disease of the hair.

trichophagy (trik-of'aj-e) [Gr. *θρίξ* hair + *φαγείν* to eat]. Hair-eating; the practice or habit of eating hair.

trichophobia (trik-o-fo-be'ah) [Gr. *θρίξ* hair + *φόβος* fear]. Morbid dread of hair.

trichophytic (tri-ko-fit'ik). 1. Pertaining to trichophytosis. 2. Promoting growth of the hair.

trichophyten (tri-kof'it-in). A filtrate from cultures of the trichophyton microorganism: used in the trichophyton test. See under *tests*.

trichophytobezoar (tri''ko-fi''to-be'zor) [Gr. *θρίξ* hair + *βότρυς* plant + *βέζωρ*]. A bezoar composed of animal hair and vegetable fibers.

Trichophyton (trik-of'it-on) [Gr. *θρίξ* hair + *φύτον* plant]. A genus of fungoid organisms consisting of flat, branched

filaments and chains of spores. **T. acumina'tum**, a fragile endothrix commonly found in onychomycosis. **T. asteroi'des**, a species which produces pustular lesions and kerion formations. **T. cerebri'for'me**, a form of resistant endothrix found in cases of tinea sycosis. **T. crateri'for'me**, a resistant endothrix commonly found in cases of tinea tonsurans. **T. cru'ris**, a species found in ringworm of the groin and in eczemas of the hands and feet. **T. fla-**

Trichophyton (Rivas).

vum, an endothritic form of fungus. **T. megalosporon**, the large spored variety of trichophyton fungus. **T. metagraphyte**, an endoectothrix found in the horse, cow, dog, and sometimes in man. It causes a form of tinea sycosis. **T. microsporion**, the small-spored variety of trichophyton fungus. **T. ochraceum**, an ectothrix often found in erythematous scaly circles. **T. orientalis**, a species found in man in Japan. **T. probolurus**, this species has been found in sheep and in man. **T. rosaecum**, an ectothrix often found in incompletely circled lesions. **T. sabouraudi**, an endothrix which causes a form of tinea tonsurans. **T. subtilis**. See *T. instabilis*. **T. tonsurans**, the form causing tinea tonsurans. **T. violaceum**, a resistant endothrix found in tinea tonsurans and in onychomycosis. **T. vitrinus**, a species found in sheep and in man. Some of the specific names based on the cultural characteristics of the organisms are: *T. crateriforme*, *T. cerebriforme*, and *T. violaceum* are all resistant endoectothrices and the chief causal agents in tinea tonsurans; *T. acuminatum* is a fragile endothrix; this and *T. violaceum* are the chief causal agents in onychomycosis; *T. ochraceum* and *T. rosaecum* are endoectothrices.

trichophytosis (trik''o-fi-to'sis). The disease produced by trichophyton fungus. See *tinea trichophytina*. **t. capitis**, tinea tonsurans. **t. corporis**, tinea circinata. **t. cruris**, tinea cruris.

trichopoliosis (trik''o-pol-e-o'sis) [Gr. *θρίξ* hair + *πολίωσις* grayness]. Grayness of the hair.

trichoptilosis (trik''o-til-o'sis) [Gr. *θρίξ* hair + *πτίλον* feather]. 1. Trichorrhexis nodosa. 2. The condition in which the hairs are covered with feather-like projections.

trichorrhea, **trichorrhœa** (trik-or-e'ah) [Gr. *θρίξ* hair + *ῥοα* flow]. Rapid loss of the hair.

trichorrhexis (trik-or-eks'is) [Gr. *θρίξ* hair + *ῥήξις* fracture]. A condition in which the hair breaks off. **t. nodo'sa**, a disease of the hair characterized by the formation of swellings along the shaft of a hair, at which points it is liable to break. The disease is seen most frequently in the beard.

trichorhexomania (trik''o-rek-so-ma'ne-ah) [Gr. *θρίξ* hair + *ῥήξις* breaking + *μανία* madness]. The breaking off of the hair by pinching it with the finger-nail.

trichoschisis (trik-os'kis-is) [Gr. *θρίξ* hair + *σχίσις* splitting]. Splitting of the hair.

trichoscopy (trik-os'ko-pe) [Gr. *θρίξ* hair + *σκοπεῖν* to view]. Examination of the hair.

trichosis (trik-o'sis) [Gr. *τρίχσις*]. Any disease or abnormal growth of the hair. **t. carunculæ**, abnormal development of the hair on the lacrimal caruncle.

Trichosoma contortum (trik-o-so'mah con-tor'tum) [Gr. *θρίξ* hair + *σώμα* body]. A round-worm parasitic in domestic fowls.

Trichosporon (tri-kos'po-ron). A genus of fungus which produce trichomycosis nodosa. *T. zigant-eum*, a species which causes piedra in Columbia. *T. beigei* has been found in Europe.

trichosporosis (tri-ko-spo-ro'sis). Infestation with *Trichosporon*. See *trichomycosis* and *piedra*. **t. in'dica**, piedra occurring in India. **t. trop'ica**, piedra.

trichostach'is spinosa. Same as *ichthyosis thysanotrichica*.

Trichostrogylus (tri-ko-stron'jil-us). A genus comprising some of the species formerly included in the genus *Strongylus*. A genus of nematode worms of the family Strongylidae. *T. instabilis*, a species frequently present in sheep and goats and occasionally found in man. *T. orientalis*, a species found in Japan. *T. vitrinus*, a species found in sheep and occasionally in man.

trichosyphilis, **trichosyphilosis** (trik-o-sif'il-is, trik''o-sif-il-o'sis) [Gr. *θρίξ* hair + *syphilis*]. Any hair disease of syphilitic origin or nature.

Trichothecium (trik-o-the'se-um) [Gr. *θρίξ* hair + *θήκη* case]. A genus of mold fungi. **T. roseum** occurs in the human ear.

trichotillomania (trik''o-till-o-ma'ne-ah) [Gr. *θρίξ* hair + *τίλλειν* to pull + *μανία* madness]. The insane impulse to pull out one's own hair.

trichotomous (tri-kot'o-mus) [Gr. *τρίχια* threefold + *τόμη* cut]. Divided into three parts.

trichotoxin (tri-ko-toks'in). An antibody which has a toxic action on epithelial cells.

trichotrophy (trik-of'tro-fe) [Gr. *θρίξ* hair + *τροφή* nutrition]. Nutrition of the hair.

trichroic (tri-kro'ik) [Gr. *τρεῖς* three + *χρῶμα* color]. Exhibiting three different colors in three different aspects.

trichroism, **trichromatism** (tri'kro-izm, tri-kro'-mat-izm) [Gr. *τρεῖς* three + *χρῶμα* or *χρώμα* color]. The exhibition of three different colors in three different aspects.

trichromatic (tri-kro-mat'ik). Trichromic.

trichromic (tri-kro'mik) [Gr. *τρεῖς* three + *χρώμα* color]. Able to perceive the three primary colors.

trichuriasis (trik-u-ri'as-is). Same as *trichocephal-iasis*.

Trichu'ris trichiu'ra. Same as *Trichocephalus dispar*.

tricipital (tri-sip'it-al) [L. *tricip'itis* of the triceps]. 1. Pertaining to the triceps. 2. Having three heads.

tricorn (tri'korn) [L. *tres* three + *cor'nu* horn]. A lateral ventricle of the brain.

tricornute (tri-kor'nūt) [L. *tres* three + *cornu'us* horned]. Having three horns, cornua, or processes.

tricrosol, **trikresol** (tri-kre'sol). A clear, colorless, and strongly antiseptic and germicidal compound of the three cresols, CH₃.C₆H₄.OH. It is soluble in water, and is far more active than carbolic acid. Dose, $\frac{1}{2}$ -1½ gr. (0.033-0.099 gm.).

tricrosolamin, **trikresolamin** (tri'kre-sol-am'in). A disinfectant and antiseptic preparation of tricrosol, 10 parts, and ethylenediamin, 10 parts, dissolved in 500 parts of water.

tricrosyl sulfonate (tri-kres'il sul'fon-āt). A substance used in preparing creosochin.

tricrotic (tri-krot'ik) [Gr. *τρεῖς* three + *κρότος* beat]. Having three sphygmographic waves or elevations to one beat of the pulse.

tricrotism (tri'krot-izm). The quality of being tricrotic.

tricrospid (tri-kus'pid) [L. *tricus'pis*]. Having three points or cusps. **t. valve**. See under *valve*.

Trid. Abbreviation for *L. triduum*, three days.

trident, **tridentate** (tri'dent, tri-den'tāt). Three pronged.

tridermic (tri-der'mik) [Gr. *τρεῖς* three + *δέρμα* skin]. Derived from the ectoderm, endoderm, and mesoderm.

tridermogenesis (tri-der-mo-jen'es-is) [Gr. *τρεῖς* three + *δέρμα* skin + *γεν-* to form]. The stage in embryonic development marked by the formation of the three germ layers.

tridermoma (tri-der-mo'mah) [Gr. *τρεῖς* three + *δέρμα* skin + *ωμα* tumor]. A teratoma containing all three germ layers.

trielcon (tri-el'kon) [Gr. *τρεῖς* three + *ἐλκειν* to draw]. A three-branched hook for drawing bullets from wounds.

tri-elixiria (tri''el-iks-ir'e-ah). A proprietary preparation containing hops, valerian, etc.

triencephalus (tri-en-sef'al-us) [Gr. *τρεῖς* three + *ἐγκέφαλος* brain]. A monster-fetus having no organs of sight, hearing, or smell.

triethylamin (tri'eth-il-am'in). A somewhat poisonous, oily liquid ptomain, N(C₂H₅)₃, with an ammoniacal smell, derived from decaying fish.

trifacial (tri-fa'shal) [L. *trifacialis*]. The fifth cranial nerve; a nerve of the face. See *nerves*, *table of*.

triferrin (tri-fer'en). Iron paranucleinate. **over-adin t.**, a combination of overadin with triferrin; it is used in diseases of the female reproductive organs.

trifid (tri'fid) [L. *trifidus*, from *ter* thrice + *fin'dere* to split]. Three-cleft.

trifoliosis (tri-fol'e-o'sis). A disease of horses marked by irritation of the skin and of the mucous membrane of the mouth and by general disturbance. The disease is attributed to the eating of hybrid clover.

Trifolium (tri-fol'e-um) [L. *tres* three + *fo'lum* leaf]. A genus of leguminous plants; the clovers. **T. arven'se**, a species of clover of the north temperate zone; used homeopathically. **T. pratense**, the common red clover, is said to be antisyphilitic and useful in the treatment of cancer.

triformol (tri-for'mol). Same as *parafarm*.

trigastric (tri-gas'trik) [Gr. *τρεις* three + *γαστήρ* belly]. Having three bellies: said of a muscle.

trigemim (tri-jem'in). Dimethylaminoantipyrin butyl chloral hydrate, $C_{17}H_{24}N_2O_3Cl_3$. A derivative of pyrimidin and butylchloral hydrate: used as an analgesic and sedative in trigeminal neuralgia, headache, migraine, etc. Dose, 5-20 gr. (0.333-1.333 gm.).

trigeminal (tri-jem'in-al) [L. *tres* three + *gem'inus* twin]. 1. Triple. 2. Pertaining to the trigeminus.

trigeminus (tri-jem'in-us) [L. "triple"]. The trifacial or fifth nerve. See *nerves*, *table of*.

trigestia (tri-jes'te-ah). A proprietary combination of pepsin, bismuth, and nux vomica: tonic and digestant.

trigger area (trig'er). An area stimulation or irritation of which may cause physiologic or pathologic changes in another area. **t. finger**, a condition in which, in performing flexion or extension, there is a momentary spasmodic arrest of movement, followed by a snapping of the finger into place. **t. material**, a supposed material the decomposition of which produces the splitting up of the protoplasm that is concerned in the performance of a function. **t. point**. Same as *t. area*.

trigoccephalus (tri-go-sef'al-us). See *trigonocephalus*.

trigon, **trigone** (tri'gōn, Fr. *tre-gawn'*) [L. *trigo-num*]. A triangular patch or area. **t. of the bladder**. See *trigonum vesicæ*. **cerebral t.**, the fornix. **habenular t.** See *habenula*. **Henke's t.**, a triangular space above and external to the spine of the pubis, included between the outer edge of the rectus abdominis muscle and the inguinal furrow. **inguinal t.** 1. Henke's trigon. 2. Inguinal triangle. **Müller's t.**, a part of the tuber cinereum which bends over the optic chiasm. **olfactory t.**, the gray root of the olfactory tract. **Pawlik's t.**, a triangular series of folds on the anterior vaginal wall, corresponding to the trigon of the bladder.

trigonal (tri'go-nal). Triangular; pertaining to a trigon.

trigonellin (trig-o-nel'in). An alkaloid found in fenugreek and also in the urine of dogs to which nicotinic acid has been administered. It is a betaine of nicotinic acid, $C_8H_4N(CO.O)CH_3$.

trigonid (tri-gon'id). The first three cusps of a lower molar tooth.

trigonitis (trig-on-i'tis) [Gr. *τρίγωνον* triangle + *-itis* inflammation]. Inflammation or localized hyperemia of the trigon of the bladder.

trigonocephalic (trig'on-o-sef'al'ik). Pertaining to or exhibiting the characters of a trigonocephalus.

trigonocephalus (trig'on-o-sef'al-us) [Gr. *τρίγωνος* triangular + *κεφαλή* head]. A triangular

headed monster-fetus; a dolichocephalic fetus in which, from premature synostosis of the portions of the frontal bone, the front part of the head is compressed.

trigonotome (tri-go'no-tōm) [*trigonum* + Gr. *τομή* cut]. An instrument for cutting the trigonum of the bladder.

trigonum (tri-go'nūm) [L.; Gr. *τρίγωνον* triangle]. Any triangular space or patch. **t. acus'tici**, a triangular area on the floor of the fourth ventricle, bounded externally by the restiform body, internally by the hypoglossal triangle, and above by the striæ medullares acusticæ. **t. cerebra'le**, the fornix of the cerebrum. **t. cervica'le**. 1. A carotid triangle. 2. The basal portion of the posterior gray horn of the spinal cord. **t. clavopectora'le**, a triangle on the chest bounded by the clavicle, the pectoralis minor, and the thorax. **t. collatera'le** [B N A], an area in the pars centralis of the lateral ventricle of the brain between the posterior and descending horns. **t. coraco-acromia'le**, a triangle bounded by the coracoid process, the apex of the acromion, and the concave border of the clavicle. **t. dorsa'le**, the space between the anterior pair of corpora quadrigemina. **t. du'rūm**, the space between the anterior corpora quadrigemina. **t. femora'le** [B N A]. See *inguinal triangle*, under *triangle*. **t. haben'ulæ** [B N A], a triangular area in the optic thalamus, between the pulvinar, habenula, and midbrain. **t. hypoglos'si**, a whitish field on the floor of the fourth ventricle whence arises the twelfth cranial nerve. **t. interpeduncula're**, a space between the peduncles of the cerebral crura. **t. lemnis'ci** [B N A], a triangular region on the upper part of the outer side of the brachium conjunctivum. **t. lumba'le** [B N A]. See *Petit's triangle*, under *triangle*. **t. olfacto'rium** [B N A], the triangular area of gray matter between the roots of the olfactory tract. **t. omoclavicula're** [B N A], the subclavian triangle. **t. va'gl**. See *ala cinerea*. **t. ventric'uli**, trigonum collaterale. **t. vesicæ** [B N A], the triangular area of the interior of the bladder, between the opening of the ureters and the orifice of the urethra.

trihybrid (tri-hi'brid). A hybrid differing from the parents in three characters.

trihydrate (tri-hi'drāt). Trihydroxid; a compound containing three hydroxyl groups to one base.

trihydric (tri-hi'drik). Containing three hydrogen atoms that are replaceable by bases.

trihydrol (tri-hi'drol). The associated water or ice molecule, $(H_2O)_3$.

trihydroxid (tri-hi-droks'id). See *trihydrate*.

tri-iniodymus (tri'in-e-o-d'im-us) [Gr. *τρεις* three + *ὠλον* nape of the neck + *ἰδιμους* double]. A monster with a single body and three heads united behind.

tri-iodid (tri-i'o-did). A compound in which the iodine is combined with the base in the proportion of three to one.

tri-iodomethane (tri-i'o-o-do-meth'an). Iodoform. **triketohydrindenhydrate** (tri-ke'to-hi-drin-den-hi'drāt). See *ninhydrin*.

triketopurin (tri-ke-to-pu'rin). Uric acid.

trikresol (tri-kre'sol). See *tricresol*.

trilabe (tri'lab) [Gr. *τρεις* three + *λαβέ* to seize]. A three-pronged instrument for taking calculi from the bladder.

trilactine (tri-lak'tin). A proprietary culture of the *Bacillus bulgaricus* in liquid form.

trilaminar (tri-lam'in-ar). Consisting of three layers.

trilateral (tri-lat'er-al) [L. *tres* three + *la'tus* side]. Three-sided.

trilaurin (tri-law'rin). A crystalline glycerid, $C_3H_5(OC_{12}H_{25}O)_3$, forming the principal constit-

uent of coconut oil, and found in bayberry oil and palm-nut oil.

trilinolein (tri-lin-o'-le-in). A glycerid, $C_3H_5(OC_{18}H_{35}O)_3$, found in linseed oil, hempseed oil, sunflower oil, etc.

trill (tril). A tremulous utterance.

trillium (tri'l'e-in). A concentration prepared from *Trillium pendulum*, a North American plant: astringent, expectorant, and tonic. Dose, 2-4 gr. (0.133-0.25 gm.).

Trillium (tri'l'e-um). A genus of liliaceous plants. **T. erectum**, wake-robin; the rhizome contains trillin.

trilobate, trilobed (tri-lo'bāt, tri'lōbd) [L. *tri* three + *lobus* lobe]. Having three lobes.

trilocular (tri-lok'u-lar) [L. *tres* three + *loculus* cell]. Three-celled.

trimanual (tri-man'u-al) [L. *tres* three + *manus* hand]. Accomplished by the use of three hands.

Trimastigamöba (tri-mas-tig-am-e'bah). A form of ameba having three equal flagella in the flagellate stage. *T. philippen'sis* has been obtained in culture from city water.

trimastigate, trimastigote (tri-mas'tig-āt, -ot). Having three flagella.

trimenon (tri-me'nōn) [Gr. *τρι-* three + *μήν* month]. A period of three months.

trimensual (tri-men'su-al). Occurring every three months.

trimercuric (tri-mer-ku'rik). Containing three atoms of bivalent mercury.

trimethylamin (tri'meth-il-am'in). A colorless liquid ptomain, $(CH_3)_3N$, from various animal and vegetable tissues. It probably results from the decomposition of cholin, and has been used in gout, chorea, and rheumatism. **t. hydrochlorate**, a crystalline salt, has been used therapeutically for rheumatism and gout. Dose, 1-3 gr. (0.066-0.2 gm.).

trimethylendiamin (tri-meth'il-ēn-di-am'in). A deadly ptomain, $CH_2(CH_2.NH_2)_2$, from cultures of the cholera spirillum. It produces muscular tremors and convulsions.

trimethylethylene (tri-meth-il-eth'il-ēn). An anesthetic preparation, isoamylene, $(CH_3)_2C:CH:CH_3$, derived from tertiary amyl alcohol.

trimethoxybutyrobetain (tri-meth-il-oks'e-bu-ti'ro-be'ta-in). See *carnitin*.

trimethylxanthin (tri-meth-il-zan'thin). Same as *caffeine*.

trimorphous (tri-mor'fus) [Gr. *τρεῖς* three + *μορφή* form]. Crystallizing in three different forms.

trinegative (tri-neg'at-iv). Having three negative valencies.

trineural (tri-nu'ral). Pertaining to three nerves.

trineuric (tri-nu'rik) [Gr. *τρεῖς* three + *νευρικός* nervous]. Having three neurons.

trinitrate (tri-ni'trāt). A nitrate which contains three radicals of nitric acid.

trinitrin (tri-ni'trin). Same as *nitroglycerin*.

trinitrocellulose (tri'ni-tro-sel'u-lōs). Same as *pyroxilin*.

trinitrocresol (tri-ni-tro-kre'sol). An antiseptic and highly explosive compound, $(NO_2)_3C_6H(CH_3)OH$, formed by the action of concentrated nitric acid on coal-tar cresol.

trinitroglycerin (tri'ni-tro-glis'er-in). Nitroglycerin.

trinitrol (tri-ni'trol). Tetranitroerythritol, $C_4H_6(ONO)_4$.

trinitrophenol (tri'ni-tro-fe'nol). Picric acid.

trinitrotoluene (tri-ni-tro-to'l'u-ēn). A high explosive, $C_6H_2(NO_2)_3CH_3$, obtained by nitrating toluene. It produces in workers in ammunition factories a form of poisoning marked by dermatitis, gastritis with abdominal pain, vomiting, constipation, flatulence, and blood changes.

trinity (trin'it-e). A proprietary compound containing aconitin, digitin, and veratrin.

trinomial (tri-no'me-al) [L. *tri* three + *no'men* name]. Composed of three names.

trinophenon (tri-no-fe'nōn). An aqueous solution of picric acid: used in treatment of burns.

trinucleate (tri-nu'kle-āt). Having three nuclei.

trinucleotid (tri-nu'kle-o-tid). A nucleic acid made up of three mononucleotids, q v.

trioccephalus (tri-o-sef'al-us) [Gr. *τρεῖς* three + *κεφαλή* head]. A fetal monstrosity in which the structures of the mouth, nose, and eyes are wanting, the head being nearly a shapeless mass.

Triodontophorus (tri-o-don-tof'o-rus). A genus of nematode worms of the family Strongylides. *T. diminutulus*, a parasite frequently present in monkeys and occasionally found in man.

triolein (tri-o'-le-in). Ordinary olein. See *olein*.

trional (tri-o'-nal). A crystalline powder, diethylsulphonemethylethylmethane, $(C_2H_5)(CH_3)C(SO_2C_2H_5)_2$, a hypnotic resembling sulphonal. Dose, 10-30 gr. (0.66-2 gm.).

triorchid, triorchis (tri-or'kid, tri-or'kis) [Gr. *τρεῖς* three + *ὄρχις* testis]. A person who has three testicles.

triorchidism, triorchism (tri-or'kid-izm, tri-or'kizm). The condition of having three testicles.

triose (tri'ōs) [Gr. *τρεῖς* three]. A sugar that contains three atoms of carbon in the molecule.

triotonol (tri-o-to'no'l). A tonol containing sodium glycerophosphate, calcium glycerophosphate, and strychnin glycerophosphate.

trioxid (tri-oks'id). A compound containing three atoms of oxygen to one of another element.

trioxybenzophenon (tri-oks'e-ben-zo-fe'nōn). Salicylresorcin ketone; an antiseptic used in skin diseases and typhoid fever. Dose, 45-60 gr. (3-4 gm.).

trioxymethylene (tri-oks-e-meth'il-ēn). Paraform.

trioxypurin (tri-oks-e-pu'rin). Uric acid.

tripalmitin (tri-pal'mit-in). Ordinary palmitin. See *palmitin*.

tripara (tri-pa'rah) [L. *tres* three + *para* to produce]. A woman who has borne three children.

tripeptid, tripeptide (tri-pep'tid, -tid). A product of the union of three amino-acid radicals. They are formed during proteolytic digestion.

triphal (tri'fal). The sodium salt of auro-thiobenzimid-azolcarbonic acid: used for the treatment of tuberculosis.

triphasic (tri-fa'zik) [Gr. *τρεῖς* three + *φάσις* phase]. Triply varied or triply phasic: used in the record of experiments regarding the electromotive actions of muscles.

triphenamin (tri-fen-am'in). A compound of 2-6 parts of phenocoll, 0.4 part of phenocoll acetate, and 1 part of phenocoll salicylate: used for rheumatism.

triphenetol-guanidin hydrochlorid. A locally anesthetic agent: used in eye treatment in a weak solution.

triphenin (tri-fe'nin). Propionylphenetidin: an analgesic, hypnotic, and antipyretic agent in fine whitish crystals, $C_6H_4.C_2H_5O.NH.(CH_3.CH_2.CO)$, soluble in alcohol and ether and insoluble in water. It is used like phenacetin. Dose, 4-15 gr. (0.266-1 gm.).

triphenylalbumin (tri-fen-il-al-bu'min). See under *albumin*.

triphenylmethane (tri-fen-il-meth'an). $CH(C_6H_5)_3$. **t. dyes**, rosanilin, pararosanilin, and others.

triphenylstibinsulphid (tri-fen'il-stib'in-sul'fid). A sulphur preparation which sets free sulphur in a nascent state: used in skin diseases.

triphthemia (trif-the'me-ah) [Gr. *τρίφθορος* waste matter + *αἷμα* blood]. The retention of waste products in the blood. **t. carbonifera**, triph-

themia supposed to be due to excess in the use of starchy foods.

Tripier's amputation (trip-e-áz') [Léon Tripier, French surgeon, 1842-1891]. See *amputation*.

triple phosphate (trip'l). See *phosphate*.

triplegia (tri-plé'je-ah) [Gr. *τρι-* three + *πληγή* stroke]. Hemiplegia with paralysis of one limb on the opposite side.

triplet (trip'let). 1. Any one of three persons born at the same birth. 2. A combination of three lenses in a microscope.

triplex (tri'pleks) [Gr. *τριπλός* triple]. Triple or threefold. **t. pills**. See *pills*.

triploblastic (trip-lo-blas'tik) [Gr. *τριπλός* triple + *βλαστός* germ]. Having three germ-layers or blastodermic membranes: said of an embryo.

triploid (trip'loid). See *polyploid*.

triplopia (trip-lo'pe-ah) [Gr. *τριπλός* triple + *ὄψις* sight]. Disordered vision in which the objects seem seem tripled.

tripod (tri'pod) [Gr. *τρεῖς* three + *πούς* foot]. Anything having three feet or supports. **Haller's t.**, the celiac axis. **t. of life**. Same as *vital t.* **vital t.**, the brain, heart, and lungs: regarded as the triple support of life.

tripoli (trip'o-li). Decomposed limestone: used for polishing. Called also *rotten stone*.

tripositive (tri-pos'it-iv). Having three positive valencies.

Tripper-faden (trip'er-fah'den) [Ger.]. Gonorrheal threads.

triprosopus (tri-pros-o'pus) [Gr. *τρεῖς* three + *πρόσωπον* face]. A fetal monster having a triple face.

tripsis (trip'sis) [Gr. *τρίψις* rubbing]. 1. A trituration; the process of trituration. 2. The act of shampooing or of massage.

tripus (tri'pus) [Gr. *τρι-* three + *πούς* foot]. A monster-fetus with three feet.

triquetrous (tri-kwe'trus) [L. *triquetrus*]. Triangular; three-cornered.

triquetrum, os triquetrum (tri-kwe'trum, os tri-kwe'trum) [L.]. 1. The cuneiform bone of the carpus. 2. Any wormian bone.

triradial, triradiate (tri-ra'de-al, tri-ra'de-āt) [L. *tres* three + *radia'tus* rayed]. Having three rays; radiating in three directions.

triradiation (tri-ra-de-a'shun). Radiation in three directions.

trisaccharid (tri-sak'ar-id). A carbohydrate which contains three saccharid groups.

triskaidakaphobia (tris'ki-dek-of-o-be-ah) [Gr. *τρισκαίδεκα* thirteen + *φόβος* fear]. Morbid fear of the number thirteen.

trismic (triz'mik). Of the nature of or pertaining to trismus.

trismoid (triz'moid) [Gr. *τρισμός* trismus + *εἶδος* form]. A variety of trismus nascentium, said to be due to pressure on the occiput during birth.

trismus (triz'mus) [Gr. *τρισμός*]. Lock-jaw; a condition of tetanic spasm of the jaw muscles, causing them to be rigidly closed. **t. nascentium**, **t. neonatorum**, tetanus of young infants due to infection of the navel. **t. uteri**, spasmodic contraction of the uterus.

trinitrate (tris-ni'trat). Same as *trinitrate*.

trispalanchnic (tri-splangk'nik) [Gr. *τρεῖς* three + *σπλάγχνα* viscera]. Supplying the three great body-cavities and their viscera. **t. nerve**, the sympathetic system. See under *nerve*.

tristearin (tri-ste'ar-in). Ordinary stearin. See *stearin*.

tristichia (tri-stik'e-ah) [Gr. *τρι-* three + *στίχος* row]. The existence of three rows of eyelashes.

tristimania (tris-tim-a'ne-ah) [L. *tristis* sad + Gr. *μανία* madness]. Melancholia.

trisubstituted (tri-sub'stit-u-ted). Having three

molecules or atoms replaced by three other molecules or atoms.

trishulate (tri-sul'kāt). Having three furrows.

trisulphid (tri-sul'fid). A sulphur compound containing three atoms of sulphur to one of the base.

Trit. Abbreviation for L. *tritúra*, triturate.

tritanopia, tritanopsia (trit-an-o'pe-ah, trit-an-op'se-ah) [Gr. *τρεῖς* three + *anopsia*]. Violet-blindness, as indicating a defect in the third element necessary for color vision. See *deuteranopia* and *protanopia*.

trithiodoformaldehyd (trith-i'o-do-for-mal'de-hid). A crystalline derivative of hydrogen sulphid, formic acid, and lead formate.

tritica (trit'ik-ah). A proprietary preparation of *Agropyrum repens*: diuretic.

triticeoglossus (trit-is-e-o-glos'us). An occasionally occurring muscle extending from the arytenoid cartilage to the side of the tongue.

triticeous (tri-tish'e-us) [L. *triticeus*]. Resembling a grain of wheat. **t. nodule**. See *corpus triticeum*.

triticeum (tri-tis'e-um) [L.]. A nodule in the thyrohyoid ligament. See *corpus triticeum*.

Triticum (tri'tik-um) [L.]. A genus of grasses, including wheat. **T. repens** (*Agropyrum repens*) or couch-grass is diuretic, and is used in cystitis, pyelitis, irritable bladder, and gonorrhea. Dose of fluidextract, 1-4 fl.dr. (4-16 c.c.).

tritipalm (tri'te-pahm). A proprietary fluidextract of *Agropyrum repens* and *Serenoa serrulata*: a demulcent diuretic and genito-urinary tonic.

triticocone (tri'to-kōn) [Gr. *τρίτος* third + *κωνος* cone]. The distobuccal cusp of an upper premolar tooth.

triticoconid (tri-to-ko'nid). The distobuccal cusp of a lower premolar tooth.

tritrol (tri'tol). Any emulsion of an oil with the diastasic extract of malt.

triton (tri'ton). Trinitrotoluene.

tritropin (tri-to'pin). An alkaloid of opium, C₄₃H₅₄N₂O₇, crystallizing in scales and prisms.

tritotoxin (tri-to-toks'in). A toxin which unites less easily with the antitoxin than the prototoxin and deuterotoxin. See *deuterotoxin*, *hematoxin*, *heterotoxin*, *prototoxin*.

tritoxid (trit-oks'id). Same as *trioxid*.

Tritrichomonas (tri-trik-om'o-nas). A genus of trichomonads marked by having three anterior flagella.

triturable (trit'u-ra-bl). Susceptible of being triturated.

triturate (trit'u-rāt) [L. *tritúra*]. 1. To rub to a powder. 2. A triturated substance; a trituration.

trituration (trit-u-ra'shun) [L. *tritúra*]. 1. The reduction of solid bodies to a powder by continuous rubbing. 2. A triturated drug, especially one rubbed up with milk-sugar. **t. of elaterin**, a 10 per cent. trituration of elaterin. Dose, $\frac{1}{2}$ gr. (0.03 gm.).

triturium (trit-u're-um). A vessel for separating liquors of different densities.

trivalence (triv'al-ens). The condition or quality of being trivalent.

trivalent (triv'al-ent) [L. *tres* three + *valens* powerful]. 1. Uniting with or replacing three hydrogen atoms. 2. Capable of binding three different complements: said of an amboceptor.

trivalin (triv'al-in). A proprietary compound of valeric acid with morphin, caffeine, and cocain: has the analgesic and tonic effects of the alkaloids.

trivalve (triv'alv) [Gr. *τρεῖς* three + *valve*]. Having three valves or three blades, as a speculum.

trizonal (tri-zo'nal). Arranged in three zones.

trocar (tro'kar) [Fr. *trois-quarts* three-quarters]. A sharp-pointed instrument used with a cannula for tapping or piercing a cavity-wall in paracen-

tesis. **Duchenne's t.**, an instrument for removing small portions of tissue from deep parts for microscopic study. **Durham's t.**, **piloting t.**, a trocar for introducing a jointed tracheotomy tube. **rectal t.**, a curved trocar for tapping the bladder through the rectum.

troch. An abbreviation for *trochiscus*.

trochanter (tro-kan'ter) [L.; Gr. *τροχαντήρ* runner]. Either of the two processes below the neck of the femur. The *greater t.* is located at the outer side; the *lesser t.*, at the inner. **third t.**, **t. tertius**, the gluteal ridge of the femur when it is unusually prominent.

trochanterian, trochanteric (tro-kan-ter'e-an, tro-kan-ter'ik). Pertaining to a trochanter.

trochantin (tro-kan'tin). The lesser trochanter.

trochantinian (tro-kan-tin'e-an). Pertaining to the lesser trochanter.

troche (tro'ke) [Gr. *τροχή* cake]. A medicated tablet or disk; a trochiscus or lozenge. **t. of ammonium chlorid** contains ammonium chlorid, extract of glycyrrhiza, tragacanth, and sugar. **t. of cubeba** contains oleoresin of cubeba, oil of sassafras, extract of glycyrrhiza, and acacia. **t. of potassium chlorate** contains potassium chlorate, sugar, and tragacanth. **t. of sodium bicarbonate** contains sodium bicarbonate, sugar, and nutmeg. **t. of tannic acid** contains tannic acid, sugar, and tragacanth.

trochin (tro'kin) [L. *trochīnus*]. The lesser tuberosity of the humerus.

trochiscus (tro-kis'kus), pl. *trochis'chi* [L.; Gr. *τροχίσκος* disk]. A medicated tablet; a troche.

trochiter (trok'it-er). The greater tuberosity of the humerus.

trochiterian (trok-it-e're-an). Pertaining to the trochiter.

trochlea (trok'le-ah), pl. *troch'leæ* [L. "pulley"]. A pulley-shaped part or structure; specifically—
(a) The fibrocartilaginous pulley near the internal angular process of the frontal bone, through which the tendon of the obliquus oculi superior muscle passes.
(b) The inner articular process of the humerus, for articulation with the ulna. **t. humeri** [B N A]. See *trochlea* (b). **t. labyrinthi**, the cochlea. **t. phalangis** [B N A], the articular surface at the distal end of the first and second phalanx of the fingers and toes. **t. tali** [B N A], the articular surface of the ankle bone for articulation with the tibia.

trochlear (trok'le-ar) [L. *trochlea'ris*]. 1. Of the nature of or resembling a pulley. 2. Pertaining to a trochlea; also pertaining to the trochlear nerve.

trochleariform (trok-le-ar'if-orm). Pulley shaped.

trochlearis (trok-le-a'ris). See *muscles, table of*, and *nerves, table of*.

trochocardia (tro-ko-kar'de-ah) [Gr. *τροχός* wheel + *καρδιά* heart]. Displacement of the heart due to a rotatory movement on its axis.

trochocephalia, trochocephaly (tro'ko-sef-a'-le-ah, tro-ko-sef'al-e) [Gr. *τροχός* wheel + *κεφαλή* head]. A rounded appearance of the head caused by synostosis of the frontal and parietal bones.

trochoid (tro'koid) [Gr. *τροχός* wheel + *εἶδος* form]. Resembling a pivot or a pulley.

trochoides (tro-koï'dēz) [Gr. *τροχοειδής*, from *τροχός* wheel + *εἶδος* form]. A pivot-like joint; articulation by a pivot turning within a ring, or by a ring turning around a pivot.

trochiorhizocardia (trok-o-ri-zo-kar'de-ah). Trochocardia combined with rhizocardia.

Troisier's ganglion, sign (trwah-ze-āz') [Emil Troisier, French physician, 1844-1919]. See under *ganglion* and *sign*.

Trolard's veins (tro-lardz') [Paulin Trolard, French physician]. See *vein*.

trolley-buzz (tro'l'e-buz). A persistent buzzing sound said to be heard by persons who ride much in electric cars.

trolley-eye. Conjunctivitis in motormen of trolley cars, attributed to brass poisoning produced by rubbing the eyes after constant handling of the brass trolley brake.

trolley-sickness. A peculiar illness said to be caused by riding in electric cars.

Tröltsch's corpuscles (trél'tshes) [Anton Friedrich Tröltsch, German aurist, 1829-1890]. See under *corpuscle*.

Trombicula (trom-bik'u-lah). A genus of acarine mites. **T. akamushi**, the kedani mite, believed

Trombicula akamushi (Tanaka).

by some to transmit by its bite the infective agent of tsutsugamushi disease (q. v., under *disease*).

trombidiasis (trom-bid-e-i'as-is). Trombidiosis.

trombidiosis (trom-bid-e-o'sis). Infestation with *Trombidium* (*Leptus*) *irritans*. See *Leptus*.

Trombidium (trom-bid'e-um). A genus of acarid mites; the velvet mites. **T. akamushi**. Same as *Trombicula akamushi*. **T. holosericeum**, the common harvest mite of Europe. **T. irritans**. See *chigger* (2d def.). **T. muscae domesticae**, a red acarid parasite on the house-fly; also a homeopathic preparation of the same. **T. muscarum**. Same as *T. muscae domesticae*. **T. tlalsahuata**, a species in Mexico which burrows into the skin causing intense itching and painful little ulcers. **T. vandersandi** is the gonone of New Guinea which burrows into the skin. **T. wichmanni** is the gonone of Caledonia.

Trommer's test (trom'erz) [German chemist, 1806-1879]. See under *tests*.

tromomania (trom-o-ma'ne-ah) [Gr. *τρόμος* trembling + *μανία* madness]. Delirium tremens.

trona (tro'nah) [possible anagram of *natron*]. A crude soda salt; probably same as urao.

tropacocain (tro'pah-ko-ka'in). An alkaloid, benzoylpseudotropine, $C_{14}H_{14}NO_3$, from a Javanese plant resembling coca; also prepared from atropin and hyoscyamin. It is a local anesthetic, and is used like cocaine, especially in eye diseases, but is not mydriatic, and does not produce ischemia. It is applied in a 3 per cent. solution. The hydrochlorate is the salt most frequently employed.

tropæolin (tro-pe'o-lin). See *tropeolin*.

tropate (tro'pät). A salt of tropic acid.

tropein (tro-pe-in). Any ester of tropin; a compound of tropin with an organic acid. The natural mydriatic alkaloids are tropeins.

tropeolin (tro-pe'o-lin). One of a number of orange-red dyes. They are used as tests for acids, which turn them brown. It is resorcin azoparabenzene sulphonic acid and has a P_H range of 11.1 to 12.7. **t. D**. Same as *helianthin*. **t. G**. Same as *t. OO*. **t. O**, an indicator, the sodium salt of resorcinol-azobenzene-*para*-sulphonic acid, $(OH)_2C_6H_3N_2C_6H_4SO_2ONa$, with a P_H range of 11 to 12.6, being yellow at 11 and orange at 12.6. **t. OO**, an indicator, the sodium salt of diphenylamino-azobenzene-*para*-sulphonic acid, $C_6H_5NH-C_6H_4N_2C_6H_4SO_2ONa$, with a P_H range of 1.6 to 2.6, being red at 1.6 and yellow at 2.6. **t. OOO**, an indicator, the sodium salt of betanaphthol-azobenzene-*para*-sulphonic acid, $OH.C_{10}H_6N_2C_6H_4SO_2ONa$.

trophectoderm (trof-ek'to-derm) [Gr. τροφή nourishment + *ectoderm*]. The outer layer of cells of the early blastodermic vesicle; it develops into the trophoderm.

trophedema (trof-e-de'mah) [Gr. τροφή nourishment + *edema*]. A disease marked by permanent edema of the feet or legs.

trophema (tro-fe'mah) [Gr. τροφή nutrition + αἷμα blood]. The nourishing blood of the mucosa of the uterus.

trophesy (trof-es-e) [Gr. τροφή nourishment]. Defective nutrition due to disorder of the trophic nerves.

trophic (trof'ik) [Gr. τροφικός]. Of or pertaining to nutrition. **t. center**. See *center*.

trophicity (tro-fis'it-e). A trophic function or relation.

trophism (trōf'izm). Direct trophic influence.

trophoblast (trof'o-blast) [Gr. τροφή nourishment + βλαστός germ]. The epiblastic layers which line the chorionic villi in the fetal villi.

trophoblastoma (trof'o-blas-to'mah). Chorio-epithelioma.

trophochromatin (trof-o-kro'mat-in). Trophochromidia.

trophochromidia (trof'o-kro-mid'e-ah) [Gr. τροφή nutrition + *chromidia*]. Chromatin concerned with the nutrition of the cell rather than with reproduction. Cf. *idiochromidia*.

trophoderm (trof'o-derm) [Gr. τροφή nutrition + δέρμα skin]. A layer on the outside of the blastodermic vesicle, by which attachment is made to the uterine wall and nourishment obtained therefrom.

trophodynamics (trof-o-di-nam'iks) [Gr. τροφή nutrition + *dynamics*]. The study of the forces engaged in nutrition.

tropho-edema (trof'o-e-de'mah). Trophedema.

trophology (tro-fol'o-je) [Gr. τροφή nutrition + λόγος treatise]. The science of nutrition of the body.

trophoneurosis (trof'o-o-nu-ro'sis) [Gr. τροφή nourishment + *neurosis*]. 1. Any functional nervous disease due to the failure of nutrition from defective nerve influence. **disseminated t.**, scleroderma. **facial t.**, facial hemiatrophy. **lingual t.**, progressive hemiatrophy of the tongue. **mucular t.**, trophic alteration of muscular tissue, dependent on nervous derangement. **t. of Romberg**, facial hemiatrophy.

trophoneurotic (trof'o-o-nu-rof'ik). Pertaining to or of the nature of a trophoneurosis.

trophonine (trof'o-nin). A proprietary food from beef, eggs, and gluten.

trophonosis (trof-o-no'sis) [Gr. τροφή nutrition + νόσος disease]. Any disease or disorder due to nutritional causes.

trophonucleus (trof-o-nu'kle-us) [Gr. τροφή nutrition + *nucleus*]. That nucleus of a cell which is concerned with the nutritive function of the cell and not with its reproductive function.

trophopathia (trof-o-path'e-ah). Trophopathy.

trophopathy (trof-op'ath-e) [Gr. τροφή nourishment + πάθος suffering]. Any derangement of the nutrition.

trophoplasm (trof'o-plasm) [Gr. τροφή nourishment + πλάσμα something formed]. The achromatin of a cell: so called because it is supposed to take part in cell nutrition.

trophoplast (trof'o-plast) [Gr. τροφή nourishment + πλαστός formed]. A granular protoplasmic body; a plastid.

trophospongium (trof-o-spon'je-um) [Gr. τροφή nutrition + σπογγία sponge]. 1. A canalicular network in the cytoplasm of certain cells which is probably instrumental in the circulation of nutritive material. 2. The Golgi apparatus.

trophotaxis (trof-o-taks'is) [Gr. τροφή nutrition + τάξις arrangement]. The adjustment of cells in relation to a supply of food.

trophotherapy (trof-o-ther'ap-e) [Gr. τροφή nutrition + *therapy*]. Treatment of disease by dietetic measures.

trophotonos (trofot'o-nos) [Gr. τροφή nutrition + τόνος tension]. A rigid state of the flagella of a microorganism, resulting from improper nourishment.

trophotropism (trofot'rō-pizm) [Gr. τροφή nourishment + τρέπω to turn]. The chemotaxis of the nutritive matter of cells. **negative t.**, the aversion which certain cells display toward nutritive matters. **positive t.**, affinity on the part of certain cells for nutritive matters.

trophozoite (trof-o-zo'it) [Gr. τροφή nutrition + ζων animal]. A sporozoön in an early stage when it occupies an epithelial or blood-cell, being nourished by the cell. A trophozoite may develop by schizogony into a schizont, or by sporogony into a sporont.

tropical (trof'ik-al) [Gr. τροπικός turning]. Pertaining to the intertropical regions of the earth.

tropidin (trof'id-in). An oily, liquid base, $C_8H_{13}N$, with an odor like that of coniin, formed by the dehydration of tropin.

tropin (trof'pin). 1. A crystalline substance, $CH_3.N.C_6H_{10}.CHOH$, with a smell like tobacco, derivable from atropin and from various plants. 2. See *bacteriotropin*.

tropism (trof'pizm). [Gr. τροπή turn]. The tendency of a cell or organism to react in a definite manner in response to external stimuli. Chemotropism, phototropism, sitotropism, etc., are examples of this phenomenon.

tropometer (tro-pom'et-er) [Gr. τροπή twist + μέτρον measure]. 1. An instrument for measuring the rotation of the eyeball. 2. An instrument for measuring the twist or torsion of a long bone.

tropon (trof'on). A brownish powder prepared from vegetable and animal albumins: nutrient.

trotyl (tro'til). Same as *trinitrotoluene*.

Trousseau's phenomenon, sign (tru-sōz') [Armand Trousseau, French physician, 1801-1867]. See *phenomenon*. **T's spots**. Same as *tache cérébrale*.

troy ounce (troi). An ounce in troy weight, containing 480 grains. **t. weight**. See *weights and measures*.

true (tru). Actually existing; not false; real; as, true aneurysm, pains, pelvis, etc. See under the nouns.

truncal (trun'kal). Pertaining to the trunk.

truncate (trun'kät) [L. *trunca're, trunca'tus*]. 1. To amputate; to deprive of limbs. 2. Having the end cut squarely off.

truncus (trung'kus). Latin for *trunk*. **t. arterio'sus**, an arterial trunk, especially an artery connected with the fetal heart. It gives off the aortic arches and develops into the aortic and pulmonary arteries. **t. bronchomediastina'lis dexter** [B N A], a lymphatic trunk formed by union of lymphatics from the bronchial and mediastinal nodes of the right side and emptying into the right lymphatic duct. **t. corpo'ris callo'si** [B N A], the body of the corpus callosum. **t. costocervica'lis** [B N A], the beginning of the superior intercostal artery. **t. intestina'lis commu'nis**, the common intestinal lymphatic vessel. **t. jugula'ris** [B N A], the lymphatic duct which conveys the lymph from the head and neck. **t. lumbosacra'lis**, the lumbosacral cord. **t. lymphatic'us intestina'lis**, the efferent vessel of the lacteals and of the principal abdominal lymphatics, flowing to the receptaculum chyli. **t. lymphatic'us lumba'lis** (*right and left*), two large lymph-vessels of the loin and abdomen, flowing to the receptaculum chyli. **t. subcla'vius** [B N A], a lymphatic duct draining the left upper

extremity and emptying into the thoracic duct at the root of the neck. **t. thyreocervicalis** [B N A], the thyroid axis.

Trunecek's serum (troo'net-seks) [C. Trunecek, physician in Prague]. See under *serum*.

trunk (trungk) [L. *truncus*]. 1. The body considered apart from the head and limbs. 2. The main stem of a vessel or nerve. **sympathetic t.**, a strand of sympathetic nerves and ganglia extending along each side of the vertebral column.

trusion (tru'zhun) [L. *tru'dere* to shove]. A shoving or pushing. In dentistry, malposition of a tooth. **bimaxillary t.**, malposition of the teeth in both jaws. **bodily t.**, malposition of the entire tooth, crown and root. **coronal t.**, malposition of the crown of a tooth, the root being normally placed. **mandibular t.**, malposition of the mandibular teeth. **maxillary t.**, malposition of the maxillary teeth.

truss (trus). A device for retaining a reduced hernia in its place. **nasal t.**, a truss-like support for fractured nasal bones.

truxillins (trux'il-inz). Amorphous alkaloids prepared from coca leaves or made synthetically. They are methyl truxillyc ecgonin, $C_{28}H_{34}O_8N_2$.

trypaflavine (tri-pah-fla'vin). See *acriflavine*.

trypan-atoxyl (tri'pan-at-oks'il). A supposed body formed by a combination between atoxyl and some albuminous substance in the body of a patient affected with trypanosomiasis.

trypan blue, trypanblau (tri'pan blu, tri'pan-blaw). See under *blue*.

trypan red (tri-pan red). Same as *trypanroth*.

trypanid, trypanide (try'pan-id). An eruption occurring in trypanosomiasis.

trypanocidal (tri-pan-o-si'dal). Destructive to trypanosomes.

trypanocide (tri-pan'o-sid). An agent or drug that destroys trypanosomes.

trypanolysis (tri-pan-o'lis-is). The destruction of trypanosomes.

trypanolytic (tri-pan-o-lit'ik). Destructive to trypanosomes.

Trypanophis (tri-pan-o'fis). A parasite resembling *Trypanoplasma*, but with a very small kinetocore.

Trypanoplasma (tri'pan-o-plaz'mah). A genus of sporozoan parasites resembling trypanosoma, but having a posterior, as well as an anterior, whip. **T. abram'idis** is found in the bream (*Abramis brama*). **T. intestina'lis** is found in a salt-water fish, *Box Boops*. It was the first trypanosome-like organism to be found outside the blood. **T. trut'tæ** is found in the trout (*Salmo trutta*). **T. ventric'uli** is found in *Cyclopterus lumpus*.

trypanosan (tri-pan'o-san). A dye-stuff used in treating trypanosomiasis.

Trypanosoma (tri'pan-o-so'mah) [Gr. *τρίπανον* borer + *σώμα* body]. A genus of sporozoan parasites found in the blood plasma of man and animals, characterized by the delicate, undulatory membrane attached to the body and whip-like flagellum. Most species live part of their life cycle in insects or other invertebrate hosts where they undergo remarkable transformations: 1. They are rounded bodies resembling Leishmania. 2. They are elongated, with a flagellum at one end. 3. They have an undulating membrane for half their length like crithidia, and 4. The undulating membrane extends the entire length and they become typical trypanosomes. **T. americana'num**, a species infecting cattle in the United States. **T. a'vium**, a parasite 20 to 70 microns long found in the blood of birds, but apparently not pathogenic. **T. ber'berum**. Same as *T. evansi*. **T. bru'cei** occurs in the disease nagana or tsetse-fly disease of horses and cattle of central Africa. **T. calmet'ii**, a species found in the blood of a domestic fowl in

Tonkin. **T. cap'ræ**, a form found in goats in Africa; probably the same as *T. vivax*. **T. castella'ni**. See *T. gambiense*. **T. cazal'boui**, a species parasitic in the goat in French Guiana and is transmitted by the biting fly *Stomoxys bouffardi*. **T. confu'sum**. Same as *T. congolense*. **T. congolen'se**, a species causing Gambian horse sickness in Central Africa. **T. cru'zi**. Same as *Schizotrypanum cruzi*. **T. dimor'pha**, a species causing a disease of horses and other domestic animals in Gambia and other parts of Africa. It is transmitted by *Glossina palpalis* and perhaps by other species. **T. equi'num**, the species found in horses suffering from mal de caderas, a disease of central South America. **T. equiper'dum**, the species causing dourine in horses and asses. **T. esco'meli**, a species from Peru somewhat larger than *Schizotrypanum cruzi*. **T. evan'si**, found in the disease surra of mules and horses in India. **T. gambien'se**, found in the cerebrospinal fluid and the blood of man in cases of tropical splenomegaly, sleeping-sickness, and various cachectical fevers of warm countries. See *Congo trypanosomiasis*, under *trypanosomiasis*. **T. granulo'sum**, a species parasitic in the eel. Its intermediate host is the leech, *Hemiclepsis marginata*. **T. grus'sei**, a species found in horses and other domestic animals in Africa. **T. guyanen'se**, a species causing a fatal disease of cattle in French Guiana and Venezuela. **T. hip'picum**, the species causing a disease of horses and mules known in Panama as murrinias de caderas and as derrengadera de caderas. **T. hom'inis**. Same as *T. gambiense*. **T. inopina'tum**, a species parasitic in the frog and transmitted by a leech, *Helobdella algira*. **T. lew'isi**, a species found in the blood of the rat, and transmitted by a second host, the rat flea, *Ceratophyllus fasciatus*. **T. lu'is**, a protozoan resembling *Spirochaeta pal'lida*, found in syphilitic lesions. **T. macroca'num**. Same as *T. evansi*. **T. metacyclique**, a small and immature form of *T. granulosum*. **T. montgomery**. Same as *T. congolense*. **T. na'num**, a species causing disease in cattle along the White Nile: probably the same as *T. congolense*. **T. nigerien'se**, the form which causes sleeping-sickness in Nigeria. It is transmitted by *Glossina tachinoides* and is probably the same as *T. gambiense*. **T. noc'tuæ**, a species found in the blood of the little owl, being disseminated by the gnat, *Culex pipiens*. **T. peca'udi**, a species said to cause the disease baleri. See *baleri*. **T. rhodesien'se**, a species found in the antelope in Nyassaland in South Africa. It may be transmitted to man by the bite of *Glossina morsitans* and *G. palpalis*. It causes a form of sleeping-sickness (kaodzera). **T. rota-to'rium**, the type species of the genus, and found in the blood of several species of frogs. **T. rouge'ti**. Same as *T. equiper'dum*. **T. san'guinis**, a species discovered by David Gruby in 1843. **T. soudanen'se**, a species found in camels which causes tahaga. **T. thei'leri**, a species found in cattle affected with the disease galkietze. **T. triato'mæ**, a form very similar to *T. cruzi*. **T. uganden'se**. Same as *T. gambiense*. **T. uni-forme**. Same as *T. vivax*. **T. venezuelen'se**, a species causing a disease of horses in Venezuela called "peste-boba" or desranguera. **T. vivax**, a species causing souma in cattle, sheep, and goats throughout tropical Africa. Other species are: *T. annamen'se*, found in horses in Annam and Tonkin. *T. a'vium*, found in the wood owl. *T. blanchar'di*, found in the dormouse. *T. christopher'si*, found in a tick. *T. crice'ti*, found in the hamster. *T. cul'icis*, found in the mosquito. *T. damo'niae*, found in an Asiatic tortoise (*Damonie reversi*). *T. elephan'ti*, found in the elephant. *T. gra'vi*, found in *Glossina palpalis*. *T. pad'dæ*, found in the Java sparrow. *T. pilhon'si*, found in the boa. *T. togolen'se*, found in horses in Togoland. *T. tul'lochii*, found in *Glossina palpalis*.

trypanosomal (tri-pan-o-so'mal). Pertaining to or caused by trypanosomes.

trypanosomatic (tri-pan-o-so-mat'ik). Pertaining to or caused by trypanosomes.

trypanosomatosis (tri-pan'o-so-mat-o'sis). Trypanosomiasis.

trypanosome (tri-pan'o-sōm). Any individual of the genus *Trypanosoma*.

trypanosomiasis (tri-pan'o-so-mi'as-is). The diseased condition caused by the presence in the body of a parasite of the genus *Trypanosoma*. It is marked by fever, anemia, and erythema. **African t.**, Congo trypanosomiasis. **American t.**, **Brazilian t.** See *Chagas's disease*, under *disease*. **Congo t.**, a disease due to invasion with *Trypanosoma gambiense*, and common among the negroes in tropical Africa. The parasite is conveyed by the bite of the fly *Glossina palpalis* and *G. fuscipes*. The early stage of the disease (known as trypanosome fever) is ushered in by fever, chills, headache, and vomiting. There are then alternating periods of fever and apyrexia lasting for several months. This is followed by pains in the extremities, enlargement of the lymph-glands, and anemia. Later the central nervous system becomes involved, producing *sleeping-sickness*, when the patients become depressed, tremulous, lethargic, and somnolent, until finally they sleep all the time, become emaciated, and eventually die. The disease may last for years, but is always fatal after the nervous system has become involved. Sleeping sickness is also known as *African lethargy*, *neluván*, *negro lethargy*, and *marcolepsy*. **Cruz t.**, Chagas's disease. **Rhodesian t.** See *koodzera*. **South American t.**, Chagas's disease.

trypanosomic (tri-pan-o-so'mik). Pertaining to or infected with trypanosomes.

trypanosomicide (tri-pan-o-so'mi-sid) [*trypanosome* + L. *cædere*, to kill]. Destructive to trypanosomes.

trypanosomid, **trypanosomide** (tri-pan'o-so-mid). A skin eruption occurring in trypanosomiasis.

Trypanosomonas (tri-pan'o-so-mo'nas). *Trypanosoma*.

trypanotoxyl (tri-pan-o-tok'sil). A substance produced by mixing an emulsion of liver with a solution of atoxyl. It is directly toxic to trypanosomes.

Trypanozoön (tri-pan-o-zo'on). *Trypanosoma*.

trypanroth (tri'pan-roth). An acid, azo dye used as a vital stain and as a trypanocidal agent. It is $(\text{SO}_2\text{ONa})_2\text{C}_{10}\text{H}_4(\text{NH}_2)_2\text{N}:\text{N}:\text{C}_6\text{H}_4\text{C}_6\text{H}_3(\text{SO}_2\text{ONa})_2\text{N}:\text{N}:\text{C}_{10}\text{H}_4(\text{SO}_2\text{ONa})_2\text{NH}_2$.

trypanosan (tri-par'o-san). A preparation formed by introducing a halogen radical (e. g., chlorine) into the parafuchsin molecule: used by injection in trypanosomiasis.

tryparsamid (tri-par'sam-id). A colorless, odorless, crystalline powder which contains 24.6 per cent. of arsenic in organic combination. It is the sodium salt of normal phenyl-glycinamid-para-arsonic acid, $\text{NH}_2\text{CO}\cdot\text{CH}_2\cdot\text{NH}\cdot\text{C}\cdot\text{H}_5\cdot\text{AsO}(\text{OH})\text{ONH}_2$, and is used in the treatment of sleeping sickness and of neurosyphilis in doses of 8–50 gr. (0.5–3 gm.).

trypasafrol (tri-pas-af'rol). One of the safranin group of anilin dyes: believed to be useful in trypanosomiasis.

trypesis (trip'e-sis) [Gr. *τρυπησις*]. Trephination.

Trypocastellanellæ (tri'po-kas-tel-yan-el'e-e). A type of trypanosomes embracing the genera *Castellanella*, *Schizotrypanum*, and *Duttonella*.

trypochete (tri'po-kēt). A name given to *Döhle's inclusion bodies*. See under *body*.

trypsalin (trip'sal-in) [Gr. *τρίψω* a rubbing]. A proprietary digestant remedy.

trypsase (trip'sās). Trypsin considered as an enzyme or non-organized ferment.

trypsin (trip'sin) [Gr. *τρίψω* a rubbing]. The main proteolytic ferment of the pancreatic secretion, discovered by Willy Kühne in 1874. It changes

proteins into peptones. The steps of the change consist of the splitting of the protein into hemi-albumose and antialbumose, the latter of which is converted into antipeptone and the former changed into hemipeptone, which is finally split up into putrefactive matters, such as leucin and tyrosin. Trypsin has been used therapeutically. Dose, 5–10 gr. (0.333–0.666 gm.).

trypsinized (trip'sin-izd). Having its antitryptic power abolished: said of blood-serum which has been allowed to stand stagnant upon disintegrated leukocytes.

trypsinogen (trip-sin'o-jen) [*trypsin* + Gr. *γεννᾶν* to produce]. The zymogen occurring in the pancreas, from which trypsin is formed by splitting up during the secretion of the pancreatic juice into trypsin and a protein substance.

trypsogen (trip'so-jen). 1. Same as *trypsinogen*. 2. A tablet made from the enzyme of the islands of Langerhans with the tryptic and amylolytic ferments of the pancreas and 170 gr. of gold bromid and 380 gr. of arsenic bromid in each tablet. Used in diabetes and glycosuria and in neurasthenic conditions. Dose, 1–3 tablets.

tryptase (trip'tās). One of a class of enzymes which split native proteins to peptids in neutral or near neutral solutions.

tryptic (trip'tik) [Gr. *τρίψω* a rubbing]. Relating to or produced by trypsin.

tryptogen (trip'to-jen). A combination of digestive ferments with gold and arsenic bromids: used in diabetes.

tryptolysis (trip-tol'is-is) [*tryptone* + Gr. *λύσις* dissolution]. The splitting up of tryptone.

tryptolytic (trip-to-lit'ik). Splitting up tryptone; pertaining to the proteolytic properties of trypsin.

tryptone (trip'tōn). Any peptone produced by the digestion of albuminates by trypsin.

tryptonemia (trip-tō-ne'me-ah) [*tryptone* + Gr. *αἷμα* blood]. The presence of tryptones in the blood.

tryptophan (trip'to-fān). An amino-acid, $\text{C}_8\text{H}_5\text{N}\cdot\text{CH}_2\cdot\text{CH}\cdot\text{NH}_2\cdot\text{COOH}$, or indol aminopropionic acid, existing in proteins, from which it is set free by tryptic digestion. It is a chromogen giving a violet color with bromin and chlorin. Called also *proteinochromogen*. **t. test**. See under *test*.

T. S. An abbreviation for *test-solution*.

tsetse (tset'se). An African fly of the genus *Glossi'na*. See *Glossina*. **t.-fly disease**, trypanosomiasis.

Tsuga (tsu'gah). A genus of coniferous trees. *T. canadensis* affords Canada pitch.

tsutsugamushi disease. See under *disease*.

T. U. An abbreviation for *toxic unit*.

tua-tua (tu'ah-tu'ah). A plant, *Ja'tropa gossypifolia*, of South America and Africa, which is used in leprosy.

tub (tub). To treat by means of the cold bath.

tuba (tu'bah), L.; pl. *tu'bæ*. Latin for tube. **t. acustica**, **t. auditiva** [B N A], the eustachian tube. **t. eustachiana**, **t. eustachii**, the eustachian tube. **t. fallopi'na**, the fallopian tube. **t. uteri'na** [B N A], the fallopian tube.

tubage (tu'bāj). Intubation; the introduction of a tube into a cavity or canal.

tubal (tu'bal). Pertaining to a tube, as the fallopian tube or the eustachian tube.

tubarsyl (tu-bar'sil). A preparation of sodium amidophenylarsenate and old tuberculin: used in the treatment of tuberculosis.

tubba, **tubboe** (tub'ah, tub'o). Yaws attacking the soles and palms.

tube (tub) [L. *tuba*, *tubus*]. An elongated hollow cylindrical organ or instrument. **air-t.**, any tubular passage of the respiratory apparatus.

auditory t., the eustachian tube. **auscultatory t.**, a tubular instrument used in testing the sense of hearing. **Bellini's t's**, the connecting tubes of the kidney. See *tubule*, *uriniferous*. **Bellocoq's t.** See *Bellocoq's cannula*, under *cannula*. **Bochdalek's t's**, cecal cavities connected with the thyroglossal duct, together with which they usually disappear soon after birth. **Bouchut's t's**, a set of tubes for use in the intubation of the larynx. **Bowman's t's**, **corneal t's**, tubes formed artificially between the lamellæ of the cornea in the process of injection. **Buchner's t.**, the outer tube used in Buchner's method of anaerobic cultivation of microorganisms. **Carrel t.**, a combination of small-bore rubber tubes for conveying the antiseptic solution in the Carrel treatment. **t.-casts**. See *cast*. **cerebromedullary t.**, a tube of the embryo, formed by the inverted epiblast, from which the cerebrospinal axis is developed; the neural canal. **Chaussier's t.**, a trumpet-shaped tube for performing insufflation of the lungs. **collecting t's**. See *uriniferous tubules*, under *tubule*. **Coolidge t.**, a vacuum tube for the generation of x-rays in which the cathode consists of a spiral filament of incandescent tungsten, and the anode (the target) of massive tungsten. The hardness of the x-rays depends on the velocity with which the electrons emitted by the cathode strike the target. The velocity they acquire depends on the difference in potential between the cathode and the target. With a million volts the x-rays would be about as hard as the gamma-rays of radium. **corneal t.**, a tube-like passage sometimes seen between the layers of the cornea. **Crookes's t.**, an exhausted vacuum-tube in which the rarefaction is carried to such a degree that molecular actions have free play; it is used in obtaining Roentgen rays. See *Roentgen rays*. **Débove's t.**, a tube for lavage of the stomach, marked so as to show when it has reached that organ. **Depaul's t.**, a tube for performing insufflation of the lungs. **Dominici's t.**, a tube of silver for applying radium emanations which permits the passage of the β and γ rays only. **drainage-t.**, a tube used in surgery to facilitate the escape of fluids. **Durham's t.**, a jointed tracheotomy tube. **Es-march's t's**, tubes used in making roll-cultures of bacteria. **esophageal t.**, a soft, flexible tube for lavage of the stomach and forcible feeding. **eustachian t.**, the passage from the nasopharynx to the tympanum. It is from $1\frac{1}{2}$ to 2 inches long, and is made up of a bony part, situated in the temporal bone, and a cartilaginous part, ending in the pharynx. Its purpose is to equalize the air-pressure within the tympanum with that of the external air. **falloppian t.** See *oviduct*. **feeding t.**, a tube for introducing food into the stomach. **fermentation t.**, a U-shaped tube with one arm closed for determining gas production by bacteria. **Ferrein's t's**, the convoluted uriniferous tubules. **fusion t's**, a pair of tubes used in observing and cultivating the power of fusion in eyes affected with heterophoria. **Geissler's t.**, a tube containing a highly rarefied gas. **granulation-t.**, a laryngeal intubation tube with a large head which covers any granulations that may have been formed about the wound. **Guisez's t.**, a self-retaining rubber tube for use in cancer of the esophagus. **Henle's looped t's**. See *uriniferous tubules*, under *tubule*. **Hittorf t.**, Crookes's tube. **intubation t.**, **tracheotomy t.**, a breathing tube introduced after tracheotomy or laryngotomy. **Keidel t.**, a 5 c.c. bulb or ampule to which a hypodermic needle is attached by means of a rubber tube. The bulb is evacuated, the whole is sterilized and used for obtaining blood aseptically from a vein. **Kelly's t's**, the proctoscope and sigmoidoscope. **Killian's t's**, tubes for use in removing foreign bodies from the trachea and esophagus. **Kimpton-Brown t.**, a tube for per-

forming indirect transfusion of blood. It is a cylindrical tube terminating in a fine pipet at the lower end and having near the upper end an arm for the attachment of a simple ball hand-pump. The inside of the tube is coated with paraffin to prevent the blood from coagulating. **Kobelt's t's**, the remains of the tubules of the wolffian body in the paracphoron. **Leiter's t's**, flexible tubes of metal to be coiled about some part of the body: cold water is passed through them so as to reduce the temperature. **Martin's t.**, a drainage-tube with a cross-piece near the end to retain the tube in place. **medullary t.** Same as *neural t.* **Mett's t's**, small glass tubes filled with coagulated egg-white for testing peptic activity. **Miescher's t's**. See *Miescher's tubules*, under *tubule*. **Momburg's t.** See *Momburg's bell*, under *bell*. **Neuber's t's**, drainage-tubes of bone. **neural t.**, the epithelial tube developed from the neural plate and forming the central nervous system of the embryo; called also *medullary t.* **O'Beirne's t.**, a long, flexible tube for injecting fluids into the sigmoid flexure. **O'Dwyer's t.**, an intubation tube. **otopharyngeal t.**, the eustachian tube. **ovarian t's**. 1. Tube-like groups of immature ova embedded in the stroma of the ovary. Called also *Pflüger's t's*. 2. Ingrowths of the germ-epithelium of the wolffian bodies; from them is developed the cortex of the ovaries. **Paul-Mixer t.**, a large-calibered, flanged drainage-tube of glass used for temporary intestinal anastomosis. **Pflüger's t's**. 1. The ovarian tubes. 2. The salivary tubes. **Rainey's t's**. See *Meischer's tubules*, under *tubule*. **Rehfuß's t.** See *Rehfuß's test*, under *tests*. **Ruysch's t.**, a very small tubular opening on the nasal septum, just below and before the nasopalatine foramen: it is a relic of the fetal Jacobson's organ. **safety-t.**, a small portion of the upper end of the eustachian tube, which, being slightly open, permits a recoil of air from the tympanum when the drum-membrane is suddenly driven in, thus equalizing the pressure in the tympanic cavity from the pharynx. **salivary t's**, the interlobular ducts of the salivary glands. **Schachowa's spiral t.** See *uriniferous tubules*, under *tubule*. **Southey's t's**, cannulas of small caliber pushed by means of a trochar into the tissues to drain them. **sputum t.**, a graduated capillary tube for containing sputum to be rotated in the centrifuge. **stomach-t.**, a tube for feeding or for washing out the stomach. **tampon-t.**, a piece of stout rubber tubing wound with iodoform gauze. It is used in plugging the rectum to control oozing, and at the same time allow the escape of gas. **test-t.** See *test-tube*. **tracheotomy t.**, a curved tube to be inserted into the trachea through the opening made in tracheotomy. **uterine t.**, the fallopian tube. **vacuum-t.**, a glass tube from which the air has been exhausted. See *Crookes's t.* and *Geissler's t.* **Volvolini's t.**, a tube for keeping open an incision in the tympanic membrane. **West t.** See *West tube method*, under *method*.

tubectomy (tu-bek'to-me). Excision of a portion of the fallopian tube.

tuber (tu'ber), pl. *tu'bera* [L.]. An enlargement, knot, or swelling. **t. annula're**, the pons. **t. antérieur**. Same as *t. cinereum*. **t. calca'nei** [B N A], the tuberosity of the heel. **t. cine'reum** [B N A], an eminence of gray substance on the floor of the third ventricle, back of the optic tract. It is believed to be the location of the center for controlling body-heat. **t. coch'leæ**, the promontory of the tympanum. **dorsal t.**, the most posterior of the segments of the inferior vermis. Called also *t. posticum*. **eustachian t.**, a tuber on the wall of the labyrinth of the tympanum below the fenestra ovalis. **frontal t.**, the frontal eminence. **t. is'chii**, the tuberosity of the ischium. **t. maxilla're** [B N A], the tuberosity of the superior maxillary bone. **t. omen-**

ta'le [B N A], a prominence on the under surface of the left lobe of the liver, and also one on the middle of the pancreas, which project against the lesser omentum. **parietal t.**, the parietal eminence of the parietal bone. **t. posticum**. See *dorsal t.* **ra'dii**, bicipital tuberosity. **t. valvulæ**. Same as *t. vermis*. **t. vermis** [B N A], the posterior portion of the inferior vermis of the cerebellum. **t. zygomaticum**, a small prominence near the origin of the zygomatic process of the temporal bone.

tuberal (tu'ber-al). A solution of the extract of tubercle bacilli, given internally in tuberculosis.

tubercle (tu'ber-kl) [L. *tuberculum*]. 1. A nodule or small eminence; especially a solid elevation of the skin, larger in size than a papule. 2. A rough, rounded eminence on a bone. 3. Any mass of small, rounded nodules produced by the mycobacterium of tuberculosis. It is the characteristic lesion of tuberculosis, and consists of a translucent mass, gray in color, made up of small spheric cells which contain giant-cells and are surrounded by a layer of spindle-shaped connective-tissue cells known as *epithelioid cells*. Called also *miliary t.* and *gray t.* Tubercle sometimes has the form of a yellowish mass of cheesy matter, which is believed to be a degenerated form of the typical tubercle. This is known as *yellow t.* and *crude t.* **acoustic t.** See *tuberculum acusticum*. **adductor t.**, an eminence on the femur which gives attachment to the tendon of the adductor magnus. **amygdaloid t.**, a nodule on the roof of the descending cornu of the lateral ventricle. **anatomic t.** See *verruca necrogenica*. **anterior t.**, a tubercle situated at the front part of the extremity of the transverse process of certain vertebrae. **Babes's t's**, cellular aggregations in the medulla oblongata and the spinal ganglia in cases of rabies, and thought to be the characteristic lesions of the disease. **t. bacillus**. See *Mycobacterium tuberculosis*. **Carabelli t.**, a small tubercle occasionally seen on the lingual surface of a molar tooth. **carotid t.**, **Chassagnac's t.**, a nodule on the transverse process of the sixth cervical vertebra. **cervical t's**, two small eminences on the femur, a *superior* on the upper and anterior part of the neck at its junction with the great trochanter, and an *inferior* at the junction with the lesser trochanter. **condyloid t.**, a tubercle on the mandibular condyle for attachment of the external lateral ligament. **conglomerate t.**, a mass made up of many fused tubercles. **conoid t.**, a tubercle on the clavicle for the attachment of the conoid ligament. **crude t.** See *tubercle* (2d def.). **darwinian t.**, an eminence sometimes found on the edge of the helix, and conjectured by some to be a relic of a simioid ancestry. Called also *darwinian point*, *process*, or *tip*. **deltoid t.** 1. A prominence on the clavicle for the attachment of the deltoid muscle. 2. Same as *crest, deltid*. **dissection t.** See *verruca necrogenica*. **Farre's t's**, masses beneath the capsule of the liver, felt on palpation in certain cases of hepatic cancer. **fibrous t.**, a tubercle of bacillary origin which contains connective-tissue elements. **genial t.**, a nodule on either side of the middle line, on the inner surface of the lower jaw bone. **genital t.**, an eminence of fetal life in front of the cloaca: it becomes the penis or the clitoris. **Gerdy's t.**, the elevation on the tibia to which the tibialis anticus muscle is attached at its proximal end. **gray t.** 1. See *tubercle* (3d def.). 2. The tubercle of Rolando. **hippocampal t.**, an expansion of the hippocampus at its lower end, separating the fimbria from the fascia dentata. **His's t.**, a tubercle on the postero-inferior part of the pinna. **infraglenoid t.**, a tubercle on the axillary border of the scapula below the glenoid cavity giving attachment to the long head of the triceps muscle. **intervenous t.** Same as *Lower's t.* **intra-vascular t.**, a tubercle in the intima of a blood-

vessel. **jugular t.**, an elevation on the under surface of the occipital bone on either side of the foramen magnum. **labial t.**, the slight prominence on the edge of the center of the upper lip. **lacrimal t.**, a node on the superior maxillary bone where the lacrimal groove reaches the orbital surface. **laminated t.**, the nodule of the cerebellum. **Lisfranc's t.**, a tubercle for the scalenus anticus muscle on the first rib. Called also *scalene t.* **Lower's t.**, an eminence within the right auricle of the heart, between the orifices of the venæ cavæ. **lymphoid t.**, a miliary tubercle consisting of lymphoid cells. **mental t.**, a small prominence on the lower border of the mandible when it bends backward. **miliary t.** See *tubercle* (3d def.). **Montgomery's t's**, the enlarged sebaceous glands of the areola of the mamma as they are seen in late pregnancy and during lactation. **Morgagni's t.**, **olfactory t.**, the olfactory bulb. See *bulb*. **Neuber's t's**, drainage-tubes made of bone. **nuchal t.**, the prominence formed by the spinous process of the seventh cervical vertebra. **obturator t.**, either of two prominences on the margin of the pubic portion of the obturator foramen. **painful t.**, a tender and painful tubercle situated in the subcutaneous tissue about the joints and produced by the enlargement of the end of a sensory nerve. **papillary t.**, a projection of the spigelian lobe of the liver into the portal fissure. **pathological t.**, dissection tubercle. **pharyngeal t.**, an eminence on the basilar process of the occipital bone for the attachment of the superior constrictor of the pharynx. **plantar t.**, a prominence at the base of the metatarsal bone of the great toe to which is attached the tendon of the peroneus longus muscle. **posterior t.**, a tubercle on the posterior extremity of the lumbar and some of the thoracic vertebrae. **postmortem t.** See *verruca necrogenica*. **pterygoid t.**, a boss on the inner surface of the lower jaw bone; it attaches the internal pterygoid muscle. **rabic t's**, collections of round cells about the nerve-cells in rabies. **resorption t.**, a miliary tubercle in a lymph-vessel near another miliary tubercle. **t. of Rolando**, a rounded, gray mass under the surface of the lateral columns of the medulla oblongata. It is formed by the expansion of the caput cornu posterioris. **t. of Santorini**, the corniculum laryngis. **scalene t.** Same as *Lisfranc's t.* **supraglenoid t.**, a rough area just over the glenoid cavity of the scapula to which is attached the large head of the biceps muscle. **t. of the tibia**, an eminence upon the upper anterior surface of the tibia, to which the ligamentum patellæ is attached. **t. of the ulna**, a rough surface at the base of the coronoid process of the ulna, to which the brachialis anticus muscle is attached. **t's of a vertebra**, elevations (a *superior*, an *inferior*, and an *external*) upon the transverse process of the last dorsal vertebra, and represented on the lumbar vertebrae by more or less rudimentary structures. **yellow t.** See *tubercle* (3d def.). **zygomatic t.**, **t. of the zygoma**, an elevation on the anterior root of the zygoma, to which is attached the external lateral ligament of the inferior maxilla.

tubercula (tu-ber'ku-lah). Plural of *tuberculum*. **t. dentis** [B N A], the cusps of the crown of a molar or premolar tooth. **t. dolorosa**. See *painful tubercle*, under *tubercle*.

tubercular (tu-ber'ku-lar). Of, or pertaining to, or resembling tubercles or nodules; less correctly, the same as *tuberculous*.

tuberculase (tu-ber'ku-las). An extract of tubercle germs used for protective inoculation against tuberculosis.

tuberculated (tu-ber'ku-la-ted). Covered with tubercles; affected with tubercle.

tuberculation (tu-ber'ku-la-shun). The development of tubercles; the becoming affected with tubercles.

tuberculid, tuberculide (tu-ber'ku-lid, -lid). Any skin lesions of a tuberculous nature.

tuberculigenous (tu-ber-ku-lig'in-us) [*tubercle* + Gr. *γεννᾶν* to produce]. Causing tuberculosis.

tuberculin (tu-ber'ku-lin). A therapeutic and diagnostic preparation from cultures of the mycobacterium of tuberculosis; it is of various forms or modifications. Tuberculin is injected hypodermically for the treatment of tuberculosis, and also as a test for the existence of tuberculosis, patients affected with tuberculosis reacting differently from those who are free from it. See *tuberculin test*, under *tests*. **A.F.** See *albumose-free t.* and *old t.* **OT.** See *old t.* **PTO.** See *Spengler's t.* **TA** is obtained from tubercle bacilli by extracting with $\frac{1}{10}$ normal soda solution; much the same as the original tuberculin. **TAF.**, albumose-free tuberculin. **TBE.** See *bacillen emulsion t.* **TC** (*i. e.*, tuberculin, contagious), von Behring's name for tuberculin which is said to be taken up by the cells of the body and there transformed into an integral part of those cells; in this form it is called *TX*. **T. F.** See *t. filtrate*. **TO.** See *new t.* **TR.** See *new t.* **BE.** See *bacillen emulsion t.* **BF.** See *t. bouillon filtrate*. **albumose-free t.**, tuberculin free from albumose, used for the subcutaneous tuberculin test. **alkaline t.** See *TA*. **autogenous t.** See *autotuberculin*. **bacillen emulsion t.**, tubercle cultures are dried, ground, and suspended (1 gm.) in equal parts of water and glycerol (200 c.c.). It differs from new tuberculin in that the germs are not washed nor is the supernatant fluid (TO) from the first centrifugation discarded. Called also *BE*. **v.** **Behring's t.** 1. Same as *tuberculase*. 2. Same as *tulase*. **Beranek's t.**, tubercle cultures grown on a non-peptonized, 5 per cent. glycerin bouillon are filtered and the germs are extracted in 1 per cent. orthophosphoric acid by long-continued shaking. This extract (basitoxin) is mixed with an equal volume of the filtrate (acidotoxin) for use. **t. bouillon filtrate**, the clear glycerin bouillon in which tubercle cultures have been grown and from which they have been filtered out. It is not heated nor concentrated. Called also *Deny's tuberculin* and *BF*. **Buchner's t.** Same as *tuberculo-plasmin*. **Calmette's t.**, purified tuberculin, prepared by precipitating old tuberculin with alcohol, washing, dissolving in water, and filtering; used in Calmette's ophthalmoreaction. Called also *t. precipitation* and *TP*. **defatted t.** See *Dreyer's vaccine*, under *vaccine*. **Deny's t.** See *t. bouillon filtrate*. **diagnostic t.**, a tuberculin prepared from selected stock cultures of old tuberculin by partial concentration and addition of bovine tuberculin; called also *Moro's t.* **diaphyte t.** See *Dreyer's vaccine*, under *vaccine*. **Dixon's t.**, a tuberculin prepared by treating living tubercle cultures with ether and extracting in salt solution. **Dreyer's t.** See *Dreyer's vaccine*, under *vaccine*. **t. filtrate**, a tuberculin preparation made by precipitating and filtering the dissolved precipitate separately. Called also *T. F.* **Hirschfelder's t.** Same as *oxytuberculin*. **Klebs' t.** 1. Tuberculocidin. 2. Antipthysin. 3. Selenin. **Klemperer's t.**, a tuberculin prepared from cultures of bovine tuberculosis. **Koch's t.** See *new t.*, *old t.* **Landmann's t.** Same as *tuberculo*. **Maragliano's t.**, a tuberculin containing all the extracts of the tubercle bacillus that are soluble in water. **Maréchal's t.**, a mixture of old tuberculin and guaiacol. **Moro's t.** See *diagnostic t.* **new t.**, a suspension of the fragments of tubercle germs, freed from all soluble materials. Virulent cultures are washed, thoroughly dried, and then ground in a ball mill until no intact germs remain. They are then taken up in water and centrifugalized; the supernatant liquid, called Tuberculin Oberes (TO) is discarded and the residue is again dried, ground, taken up in water, and centrifugalized. This supernatant

liquid is the new tuberculin, and the residue, again ground and taken up in water, is added to it. This is repeated until there is no residue left. These mixed supernatant fluids form an opalescent colloid suspension. Twenty per cent. of glycerol is added as a preservative. It is known as Tuberculin Residue (Ruckstand) and is abbreviated to **TR**. **old t.**, the concentrated germ-free culture-medium (glycerin bouillon) in which tubercle cultures have grown. The cultures are sterilized by heat and concentrated by evaporation to one-tenth their original volume. The germs are filtered out and the filtrate is used. It is a clear brown stable liquid with a characteristic odor. **perlsucht t.** See *Spengler's t.* **purified t.** See *Calmette's t.* **residual t.**, **t. residue**, the sediment left after centrifuging an aqueous extract of triturated tubercle bacilli. **Rosenbach's t.**, tuberculin prepared from cultures which have been infected with *Trichophyton holosericum album*, which reduces the toxicity of the tubercle bacilli. **von Ruck's watery extract t.**, tubercle cultures are concentrated in vacuo at 55° C. to one-tenth volume and filtered. The filtrate is precipitated with an acid solution of sodium bismuth iodide. Filter, neutralize the filtrate, and filter again. Precipitate the filtrate with enough absolute alcohol to make 90 per cent. alcohol, filter, and make a 1 per cent. aqueous solution of the dry precipitate. **Selter's t.** Same as *vital t.* **Spengler's t.** 1. A preparation from the bacilli of bovine tuberculosis. 2. See *Spengler's immune bodies*, under *body*. **t. test.** See *tests*. **Thamm's t.**, tuberculo-albumin. **vacuum t.**, old tuberculin reduced in a vacuum to much less than its original volume. **Vaudremer's t.**, tuberculin prepared by macerating it in the ground up mycelia of *Aspergillus fumigatus*, which renders the tuberculin nearly free from toxicity. **vital t.**, a tuberculin prepared by triturating moist attenuated human tubercle bacilli; the preparation contains a few living tubercle bacilli of very slight virulence.

tuberculation (tu-ber-ku-lin-a'shun). Tuberculinization.

tuberculinization (tu-ber-ku-lin-iz-a'shun). Treatment by use of tuberculin or the application of the tuberculin test.

tuberculinose (tu-ber'ku-lin-ōs). A modified form of tuberculin.

tuberculinum (tu-ber-ku-lin'um). Tuberculin. **t. purum.** See *endotin*.

tuberculitis (tu'ber-ku-lit'is) [*L. tuberculum* + Gr. *-itis* inflammation]. Inflammation of or near a tubercle.

tuberculization (tu-ber'ku-liz-a'shun). 1. Treatment with tuberculin or its modifications. 2. The formation of or conversion into tubercle.

tuberculize (tu-ber'ku-liz). To infect with tuberculosis or to treat with tuberculin.

tuberculo-albumin (tu-ber'ku-lo-al-bu'min). A preparation very like tuberculase.

tuberculocele (tu-ber'ku-lo-sēl) [*tubercle* + Gr. *κήλη* tumor]. Tuberculous disease of the testicle.

tuberculocide (tu-ber'ku-lo-sid). Destructive to tubercle bacilli.

tuberculocidin (tu-ber'ku-lo-si'din). An albumose derived from tuberculin by treating it with platinum chlorid. It is used like tuberculin, but is said to be free from the objectionable characters of the latter.

tuberculoderma (tu-ber'ku-lo-der'mah). A tuberculous swelling or node of the skin.

tuberculo-fibroid (tu-ber'ku-lo-fi'broid). Characterized by tubercle that has undergone a fibroid degeneration.

tuberculo-fibrosis (tu-ber'ku-lo-fi-bro'sis). Fibroid phthisis.

tuberculoid (tu-ber'ku-loid). Resembling tuberculosis.

tuberculoidin (tu-ber-ku-loi'din). A form of modified tuberculin cleared of its bacilli by treatment with alcohol.

tuberculol (tu-ber'ku-lo-lol). A form of tuberculin free from secondary products, and containing culture fluid and bacterial cells.

tuberculoma (tu-ber-ku-lo'mah). A neoplasm caused by the bacillus of tuberculosis.

tuberculomania (tu-ber-ku-lo-ma'ne-ah) [*tuberculosis* + Gr. *mania* madness]. A morbid belief that one is affected with tuberculosis.

tuberculumucin (tu-ber'ku-lo-mu'sin). A substance resembling mucin prepared from old glycerine-peptone-bouillon cultures of tubercle bacilli by periodically removing the scum of zoöglea for a year: used in tuberculosis of the skin and glands.

tuberculumycetes (tu-ber-ku-lom'is-ēz) [*tuberculosis* + Gr. *mykēs* fungus]. A name for the group of bacteria including the *Mycobacterium tuberculosis* and similar bacteria.

tuberculonastin (tu-ber'ku-lo-nas'tin). A fatty substance or lipid derived from tubercle bacilli; said to produce immunity to tuberculosis when injected. Cf. *nastin*.

tuberculo-opsonic (tu-ber'ku-lo-op-son'ik). Pertaining to the opsonin of tubercle bacilli.

tuberculophobia (tu-ber'ku-lo-fō-be-ah) [*tuberculosis* + Gr. *phōbos* fear]. Morbid dread of tuberculosis.

tuberculoplasmin (tu-ber'ku-lo-plas'min). A filtered watery solution of the protoplasm of moist living tubercle germs extracted by hydraulic pressure.

tuberculo-protein (tu-ber'ku-lo-pro'te-in). A protein obtained from tubercle bacilli. See *von Ruck's vaccine* under *vaccine*.

tuberculosamin (tu-ber-ku-lo-sam'in). An amin occurring in tubercle bacilli.

tuberculosis (tu-ber-ku-lo'sis). An infectious disease caused by *Mycobacterium tuberculosis*, and characterized by the formation of tubercles in the tissues. These tubercles undergo caseous necrosis and tend to spread in all directions, more especially in the route of least resistance. Infection may also be disseminated throughout the body through the lymph- and blood-vessels. The degenerated tubercles break down, forming in the interior of the body cavities (vomicae) filled with a purulent liquid and degenerated matters. On a free surface it forms ulcers. Frequently the spread of the tuberculous focus is prevented by the formation of a capsule of fibrous tissue (encapsulation), due to plastic inflammation. Usually, however, there is a secondary infection with various pyogenic microorganisms, as the staphylococci and streptococci, resulting in diffuse suppuration. Various tissues and organs, as the lungs and the lymphatic system, are especially prone to infection; to a less extent the spleen, kidney, liver, intestines, and brain are liable to become infected. The muscular and fibrous tissues are more or less exempt. It is attended by symptoms due to the destruction it produces, and varying with the location of the infection. When not strictly localized, the general symptoms of septic infection are present, such as hectic fever, increasing emaciation, and night-sweats. **acute miliary t.**, general tuberculosis; an acute form of tuberculosis in which minute tubercles are formed in a number of organs of the body, due to dissemination of the bacilli throughout the body by the blood-stream. It is attended by irregular fever and cerebral symptoms, three forms—typhoid, pulmonary, and meningeal—being recognized. **anthracotic t.**, pneumoconiosis.

attenuated t., tuberculosis characterized by gummy and caseous skin complications, with a tendency to cold abscess. **avian t.**, tuberculosis in birds. See *chicken-t.* **basal t.**, tuberculosis situated in the lower part of the affected lung. **t. in the bones and joints**, produces strumous arthritis, or white swelling, and cold

abscess. **bovine t.**, tuberculosis of cattle. **cerebral t.**, tuberculous meningitis. **cestodic t.**, a disease simulating tuberculosis, but due to excessive infestation with cestode parasites. **chicken-t.**, **fowl-t.**, a variety of tuberculosis affecting chickens, ducks, etc., due to *Mycobacterium tuberculosis avium*, and producing tubercles made up principally of epithelioid cells. It may be communicated to animals and man. **t. conclamata**, unmistakable tuberculosis. **t. cutis**, tuberculosis of the skin. **disseminated t.**, acute miliary tuberculosis. **t. of the intestines** is marked by the formation of spreading ulcers, especially of the lymphoid tissue. It is attended by diarrhea, and sometimes produces cicatricial stricture. **t. of the kidney and bladder** is attended with hematuria and pyuria. **t. of the larynx** produces ulceration of the vocal cords and other parts of the larynx, and is attended by cough, dyspnea, hemoptysis, etc. **t. of the lungs**, or pulmonary phthisis, is marked by the development of cavities in the lungs, with bronchopneumonia or fibroid pneumonia. It is attended by dyspnea, cough, expectoration of purulent matter, and hemoptysis. These varieties are described as acute pulmonic phthisis, chronic ulcerative tuberculosis, and fibroid phthisis. See *phthisis*. **t. of the lymphatic glands**, or scrofula, causes caseous suppurative of the glands, and is frequently associated with coryza, conjunctivitis, and eczema of the scalp. It occurs especially in children. **lymphoid t.**, tuberculosis in which the lesion shows an infiltration of embryonic cells. **open t.**, any form of tuberculosis in which the bacilli are given off in the bodily excretions. **t. of the serous membranes** involves the pleura, peritoneum-pericardium, and cerebral meninges, producing in, inflammations of those structures. Other organs and structures, as the skin, stomach, tongue, heart, liver, etc., may be affected with it. **surgical t.**, tuberculosis of the bones, joints, or other parts which may be treated by surgical means. **t. verrucosa**, cutaneous tuberculosis in the form of wart-like lesions. The term includes verruca necrogenica and tuberculosis verrucosa cutis. **t. verrucosa cutis**, a disease of the skin characterized by warty growths and pustules and brownish patches. **zoögleic t.** See *pseudotuberculosis*.

tuberculo-therapy (tu-ber'ku-lo-ther'ap-e). Treatment of tuberculous patients by feeding with the raw flesh of animals affected by tuberculosis.

tuberculetotoxin (tu-ber'ku-lo-toks'in). Any toxin of the tubercle bacillus.

tuberculetotoxinidin (tu-ber'ku-lo-toks-oi'din). A chemically prepared of tubercle bacilli: used in treating incipient cases of tuberculosis.

tuberculetrophic (tu-ber'ku-lo-trof'ik) [*tubercle* + Gr. *trōphos* turning]. Combining chemically with the tubercle bacillus.

tuberculous (tu-ber'ku-lus). Pertaining to or affected with tuberculosis; caused by the *Mycobacterium tuberculosis*.

tuberculum (tu-ber'ku-lum), pl. *tubercula* [L.]. A tubercle. **t. acusticum** [B N A], a collection of nerve-cells behind the accessory auditory nucleus. **t. annulare**, the pons varoli. **t. anteriorius**. 1. The anterior prominent extremity of the thalamus. Called also *corpus album subrostrum*, one of the anterior pair of corpora quadrigemina. 2. The conic eminence on the front of the anterior arch of the atlas. **t. arthriticum**, a gouty concretion in a joint. **t. articulare** [B N A], eminentia articularis. **t. auriculæ** [darwin'i] [B N A]. See *darwinian tubercle*, under *tubercle*. **t. cineureum** [rolan'di] [B N A]. See *tubercle of Rolando*. **t. corniculatum** [santorini] [B N A], the corniculum laryngis. **t. costæ** [B N A], the tubercle of a rib. **t. cuneatum**, the bulbous end of the cuneate fasciculus in the medulla. **t. cuneiforme** [B N A], the cuneiform cartilage. **t.**

den'tis. Same as *tubercula dentis*. **t. doloro'sum**. Same as *painful tubercle*. See under *tubercle*. **t. ephip'pii**, the olivary body. **t. epiglotticum** [B N A], the cushion of the epiglottis. **t. genia'le**, genial tubercle. **t. hypoglos'si**, trigonum hypoglossi. **t. im'par**, a small tubercle in the middle line on the floor of the pharynx of the embryo, between the ends of the mandibular and hyoid arches; it is the first rudiment of the tongue. **t. intercondylo'id'eum** [B N A], the intercondyloid eminence. **t. interveno'sum** [B N A]. See *Lower's tubercle*, under *tubercle*. **t. jugula're** [B N A], jugular tubercle. **t. labia'le**, labial tubercle. See *tubercle*. **t. low'eri**. See *Lower's tubercle*, under *tubercle*. **t. ma'jus hu'meri** [B N A], the greater tuberosity of the humerus. **t. menta'le** [B N A]. See *mental tubercle*, under *tubercle*. **tubercula milia'ria**, milium. **t. mi'nus**, a tuberosity below the front of the head of the humerus, on which the subscapularis muscle is inserted. **t. obturato'rium** [B N A], obturator tubercle. **t. poste'rius**, the greater tuberosity of the humerus. **t. pub'icum** [B N A], the spine of the os pubis. **tubercula quadrigem'ina**, the corpora quadrigemina. **t. re'troloba're**, a small tubercle on the lower and posterior part of the external ear. **t. seba'cea**, milium. **t. sel'læ** [B N A], olivary eminence. **t. sep'ti**, a tubercle or prominence on the upper anterior part of the nasal septum. **t. supratrag'icum** [B N A], a small tubercle sometimes seen on the external ear, just above the tragus.

tubercument (tu-ber'ku-ment). A proprietary water-soluble derivative of tubercle bacilli: used in the serum diagnosis of active tuberculosis.

tuberon (tu'ber-on). An oily ketone from the volatile oil of tuberose.

tuberose (tu'ber-ös). Shaped like or resembling a tuber.

tuberositas (tu-ber-os'it-as) [L.]. Tuberosity.

tuberosity (tu-ber-os'it-e) [L. *tuberositas*]. A broad eminence situated on a bone. **bicipital t.**, the tuberosity on the anterior inner surface of the neck of the radius, for the insertion of the tendon of the biceps muscle. **coracoid t.**, the impression on the clavicle for the coracoid ligament. **costal t.**, the impression on the clavicle for the attachment of the rhomboid ligament. **cuboid t.**, an elevation on the external surface of the cuboid bone. **deltoid t.**, an eminence on the outer side of the shaft of the humerus for the attachment of the deltoid muscle. **t. of the femur**, either of two tuberosities (*internal and external*) above the condyles of the femur. **gluteal t.**, an elevation on the upper part of the shaft of the femur for the attachment of the gluteus maximus muscle. **t. of the humerus, greater**, a rough prominence below the outer part of the head of the humerus. To it are attached the supraspinous, infraspinous, and teres minor muscles. **t. of the humerus, lesser**, a tuberosity below the front of the head of the humerus, on which is inserted the subscapularis muscle. **iliac t.**, an eminence on the outer surface of the ala of the ilium for the attachment of the ^{anterior} sacro-iliac ligament. **t. of the ischiu'm**, a round knob projecting downward from the isch^{us}. It forms the point of the ischiu'm on which the ha' body rests in sitting. **malar t.**, the prom^{inence} of the malar bone. **radial t.**, bicipital tuber^{osity}. **t. of the tibia**, either of two tuberosities forming the sides of the head of the tibia.

tuberous (tu'ber-us). Same as *tuberose*.

tubiferous (tu-bif'er-us) [L. *tu'ber* + *fer're* to bear]. Having tubers; tuberous.

tubo-abdominal (tu'bo-ab-dom'in-al). Pertaining to the oviduct and the abdomen.

tubo-adenopexy (tu'bo-ad-neks'o-peks-e). The operation of suturing in a fixed position the uterine adnexa.

tubocurarin (tu'bo-ku-ra'rin). Same as *paracurarin*.

tuboligamentous (tu'bo-lig-am-en'tus). Pertaining to an oviduct and a broad ligament.

tubolytin (tu-bol'it-in). A preparation of tuberculin made without the use of heat or any chemical reagent which might injure the active principle; it is much less toxic than tuberculin.

tubo-ovarial, tubo-ovarian (tu'bo-o-va're-al, tu'bo-o-va're-an). Of or pertaining to an oviduct and ovary.

tubo-ovariotomy (tu'bo-o-va-re-ot'o-me). Excision of the ovaries and oviducts.

tuboperitoneal (tu'bo-per-it-o-ne'al). Pertaining to an oviduct and the peritoneum.

tuborrhæa (tu-bo-re'ah) [*tube* + Gr. *rhoi* flowing]. A condition marked by a discharge from the eustachian tube.

tubotympanal (tu-bo-tim'pan-al). Pertaining to the eustachian tube and the tympanum. See *canal*.

tubo-uterine (tu-bo-u'ter-in). Pertaining to the oviduct and the uterus.

tubovaginal (tu-bo-vaj'in-al). Pertaining to an oviduct and the vagina.

tubular (tu'bu-lar) [L. *tubula'ris*]. Shaped like a tube; of or pertaining to a tubule. **t. membrane**, the perineurium.

tubulature (tu'bu-la-tür) [L. *tu'ba* tube]. The tube of a receiver or retort.

tubule (tu'bül), pl. *tu'buli* [L. *tu'bulus*]. Any small tube. **Albarran's t's**, small branching tubules in the cervical part of the prostate gland. **collecting t.**, straight tube; any one of the tubules of the medulla of the kidney which, by their union, form the discharging tubules. See *kidney*. **conjunctival t's**, the curved canals which connect the collecting and discharging tubules with each other. **connecting t.**, an arching tubule of the kidney connecting the convoluted tubule and collecting tubule. **convoluted t.**, the coiled part of a uriniferous tubule. See *kidney*. **dental t's**, dentinal t's, undulating tubules in the substance of the dentin. **discharging t.**, any one of those renal tubules which open upon the papillæ of the calices. See *kidney*. **Ferrein's t's**, the tubules of the kidney which make up the pyramids of Ferrein. See *tube*. **Henle's t.**, the straight parts of a uriniferous tubule forming Henle's loop. **irregular t.**, **zigzag t.**, a portion of the cortical part of a uriniferous tubule. **Kobelt's t's**, the outer series of tubules in the parovarium; also a similar series in the male paradidymis. **Miescher's t's**, large elongated cysts in the muscles of subjects infested with sarcosporidia: the tubules contain the parasites. **Rainey's t.** Same as *Miescher's t's*. **secondary convoluted t.**, a coiled tubule connecting an irregular tubule with a straight tubule in the kidney. **segmental t's**, the tubules of the wolffian body. **seminiferous t's**, the minute folded ducts which make up most of the substance of the testicle. **spiral t.**, the coiled cortical portion of a uriniferous tubule. **straight t's**, the tubuli recti: twelve to twenty tubules which make up the corpus highmorianum of the testicle. **uriniferous t's**, the minute canals, made up of basement-membrane lined with epithelium, which form the substance of the kidneys. They begin in the cortex of the kidney as the *malpighian corpuscles*; continuing, they extend as tortuous canals (*first or proximal convoluted tubules*), then as spirals (*spiral tubules of Schachowia*) in the cortex, then down into the medulla and back again, forming the *descending and ascending limbs of Henle's loop*, then as zigzag tubes in the cortex (*irregular or zigzag tubules*), then in coils (*secondary or distal convoluted tubules*), then joining by curved tubules (*conjunctival tubules*) with other curved tubules to form in the medulla the straight tubes (*straight or collecting tubes*) which join other

straight tubes to form the *discharging tubes* or *ducts of Bellini*, which open in papillæ in the calices of the pelvis of the kidney. See *kidney*. **uriniparous t's**, those of the cortical portion of the kidney. **vertical t.**, the inner set of tubules in the parovarium.

tubulization (tu-bu-liz-a'shun). Foramitti's method of treating injured nerves by isolating the nerve-stump in an absorbable cylinder which serves as a guide for new-growth.

tubulocyst (tu'bu-lo-sist). Any cystic dilatation of an obsolete canal or functionless duct.

tubulodermoid (tu'bu-lo-der'moid). A dermoid tumor due to the persistence of a fetal tube.

tubuloracemose (tu'bu-lo-ras'em-ös). Both tubular and racemose, as, a *tubuloracemose* gland.

tubulosaccular (tu'bu-lo-sak'u-lar). Both tubular and saccular.

tubulous (tu'bu-lus). Containing tubules.

tubulus (tu'bu-lus) [L.]. A tubule.

tubus (tu'bus) [L.]. Tube.

Tuerck. See *Türk*.

Tuffier's operation, test (tef-e-az') Marin [Théodore Tuffier, surgeon in Paris, born 1857]. See *operation and tests*.

Tuffnell's diet, treatment (tu'felz) [Thomas Jolliffe Tuffnell, English surgeon, 1819-1885]. See *diet, treatment*.

tuft, malpighian or renal (tuft). Same as *malpighian body*. See *body*.

tugging, tracheal (tug'ing). A pulling sensation in the trachea, due to aneurysm of the arch of the aorta.

tularemia (tu-lar-e'me-ah) [*Tulare* a district in California, where the disease was first described]. A disease of rodents, resembling plague, which may be transmitted to man. It is caused by *Bacterium tularense*. In man the disease takes the form of an undulant fever, lasting several weeks, with much malaise and depression, and is transmitted by the deer-fly (*Chrysops discalis*), the stable fly (*Stomoxys calcitrans*), the squirrel flea (*Ceratophyllis acutus*), and the bedbug (*Cimex lectularius*); from certain rodents which are naturally infected, such as the ground squirrels of California and Utah, as well as ordinary rabbits and jackrabbits. The lymph-glands draining the bitten area become inflamed and swollen; they frequently suppurate so as to require incision. The disease was originally given the names of *deer-fly fever*, *Pahvant Valley plague*, *rabbit fever*, and *alkali disease*.

tulase (tu'läs). Von Behring's fluid, used by him in the treatment of tuberculosis.

tulipin (tu'lip-in). A poisonous alkaloid from the garden tulip: a sialogogue and stimulant. Dose, $\frac{1}{10}$ gr. (0.001-0.003 gm.).

tulip-tree (tu'lip-tre). A forest tree of North America, *Liriodendron tulipifera*. An aromatic stimulant, tonic, and antiperiodic. Dose of fluid-extract, 10-40 min. (0.666-2.666 c.c.).

Tully's powder (tu'lüz) [William Tully, American physician, 1785-1859]. See under *powder*.

tulose (tu'lös). Same as *tulase*.

Tulpius's valve (tu'lpe-us) [Nikolaas Tulpius, Dutch physician, 1593-1674]. See under *valve*.

tumbu fly (tum'boo). See *Cordylobia anthropophaga*.

tumefacient (tu-me-fa'shent) [L. *tumefaciens*]. Tending to cause or causing a swelling.

tumefaction (tu-me-fak'shun) [L. *tumefactio*]. A swelling; the state of being swollen, or the act of swelling; puffiness; edema.

tumenol (tu'men-ol). A syrupy oil (*t. oil*, *t. sulphone*): used like ichthyol; also a powder (*t. powder*, *t. sulphonic acid*); both are of a bituminous origin. **commercial t.**, a brown-black, acid

fluid from which tumenol oil and powder are prepared.

tumeur pileuse (too-mer'pe-luhz) [Fr.]. Hair ball. **tumid** (tu'mid) [L. *tu'midus*]. Swollen or edematous.

tumor (tu'mor) [L., from *tu'mere* to swell]. 1. Swelling; morbid enlargement. 2. A neoplasm. A mass of new tissue which persists and grows independently of its surrounding structures, and which has no physiologic use. Tumors are *innocent* or *malignant*. Malignant tumors tend to infiltrate the tissues; innocent tumors push the tissues aside, and are usually encapsulated; many malignant tumors tend to produce secondary growths in adjacent glands, and are disseminated throughout the body; they affect the general health, and usually, when removed, tend to recur. There are many theories regarding the origin of tumors. The *inclusion theory* holds that tumors are developed from embryonic cells which were produced in greater numbers than the fetus required, and remain gathered in a certain point until stimulated to growth and development by physiologic activity of the part or the application of irritation. Some tumors are believed to be hereditary. Irritation and injury are thought by many to be the active agents in originating tumors. Physiologic activity aids the development of some forms, and physiologic decline of others. **acute splenic t.**, a tumor resulting from acute splenitis. **adenoid t.** Same as *adenoma*. **adipose t.** Same as *lipoma*. **t. albus**, white swelling; tuberculosis of a bone or joint. **t. albus pyogenes**, a chronic inflammation of gunshot injuries of the bones and joints marked by great swelling of the capsule of the joint and surrounding soft parts which becomes converted into a gelatinous, edematous granulation tissue (A. Tietze). **benign t.**, any tumor not likely to recur after removal; an innocent tumor. **blood-t.**, a hematoma; also an aneurysm. **butyroid t.**, a collection of material in the mammary gland closely resembling butter. **cartilaginous t.**, an enchondroma. **cavernous t.** Same as *cavernoma*. **cellular t.**, a tumor made up chiefly of cells in a homogeneous stroma. **Cock's peculiar t.**, septic ulceration of a neglected sebaceous cyst of the scalp, simulating an epithelioma. **connective-tissue, t.** any tumor developed from some structure of the connective tissue, such as a lipoma, fibroma, glioma, chondroma, or sarcoma. **cystic t.**, one not solid, but more or less hollow. **dermoid t.**, a tumor which contains fatty cutaneous elements, and sometimes hair, nails, etc. **desmoid t.**, a hard, fibrous tumor. **eiloid t.**, a skin tumor having the look of a coil of intestine. **embryoplastic t.**, one due to the growth of persistent embryo-cells. **encysted t.**, a tumor inclosed in a membranous sac. **epithelial t.**, a tumor containing epithelium; an organoid tumor. **erectile t.**, one made up of erectile tissue. **Ewing's t.**, a form of bone sarcoma which usually involves the shaft of long bones, widening the shaft by spreading the lamellæ apart. **false t.**, one due to extravasation, exudation, echinococcus, or retained sebaceous matter. **fatty t.** See *lipoma*. **fibrocellular t.** See *fibroma*. **fibroid t.** Same as *fibroma*. **fibroplastic t.**, a variety of spindled sarcoma. **follicular t.**, a sebaceous cyst; dilated sebaceous follicle. **fungating t.**, a tumor with exuberant granulation. **glassblowers' t.**, tumor of the parotid gland occurring as an occupational disease in glass-blowers. **granulation t.**, a granuloma. **Grawitz's t's of the kidney**, hypernephroma; the tumors formerly known as adenomata of the kidney, but which Grawitz has shown to be an overgrowth of fetal inclusion in the midst of the kidney substance of particles of suprarenal glandular tissue. **Gubler's t.**, a tumor on the back of the wrist in cases of paralysis of the extensors of the hand. **gummy t.** Same as *gumma*. **het-**

erologous t., one made up of tissue which differs from that in which it grows. **histioid t.**, one which is formed of a single tissue resembling that of the surrounding parts. **homologous t.**, one whose absence resembles that of the surrounding parts. **hylic t.**, hyloma. **infiltrating t.**, a tumor which is not clearly marked off from the surrounding tissue. **innocent t.** See *benign t.* **ivory-like t.** Same as *osteoma eburneum*. **Krompecher's t.**, rodent ulcer. **Krukenberg's t.**, fibrosarcoma of the ovary which has undergone myxomatous degeneration; called also *fibrosarcoma mucocellulare carcinomatodes*. **lacteal t.**, a mammary abscess, or galactocoele. **lepidic t.**, lepidoma. **malignant t.**, one which is likely to recur and eventually to destroy life. **margaroid t.**, a cholesteatoma. **migrated t.**, migratory t., a tumor that has become detached from its original location and fixed in some other place or lies free in a cavity. **mixed t.**, one which combines the characteristics of two or more classes of tumors. **mucous t.**, a myxoma. **muscular t.**, a myoma. **Nélaton's t.**, a dermoid tumor of the wall of the abdomen. **oozing t.**, a rare disease, consisting of a large, flat tumor on one or both labia majora, divided with deep fissures, and discharging a large amount of acrid, offensive fluid. **organoid t.**, a tumor composed of complex tissues and resembling an organ, or viscus. **papillary t.**, a papilloma. **pearl t.** See *cholesteatoma*. **pearly t.**, an epidemic cyst of the lymphatic glands which occurs along the sheath of the carotid. **phantom-t.**, an abdominal swelling not due to a structural change, but to a neurosis; it is generally due to gaseous distention of the bowels. **Pott's puffy t.**, a circumscribed edema of the scalp associated with osteomyelitis of the skull bones. **pseudo-intraligamentous t.**, a kind of ovarian tumor simulating intraligamentous tumors, but in reality adherent to the posterior surface of the broad ligament. **ranine t.**, ranula. **Rokitansky's t.**, a kind of dropsy of the graafian follicle, forming a small, pedunculated cyst, and giving the ovary the appearance of a bunch of grapes. **sand-t.** Same as *psammoma*. **sebaceous t.**, a cyst formed by the retention of the secretions of a sebaceous gland. **splenic t.**, an enlarged spleen. **Steiner's t's.** See *Jeanselmie's nodules*, under *nodule*. **teratoid t.** Same as *teratoma*. **transition t.**, one which recurs after removal and then shows malignant characters. **tridermic t.**, a dermoid cyst derived from the three embryonic layers. **true t.**, any tumor produced by proliferation. **varicose t.**, a swelling of purple color, composed of dilated veins. **vascular t.** 1. An aneurysm. 2. An angioma. 3. A bleeding internal hemorrhoidal growth. **villous t.**, papilloma. **warty cicatricial t.**, a neoplasm which appears in a set of warty growths in parallel lines on the surface of a scar: it often breaks down and becomes what is known as Marjolin's ulcer. **Wilms' t.**, embryoma of the kidney.

tumoraffin (tu-mor-af'in) [tumor + *L. affinis* related]. Having a special affinity for tumor cells; oncotropic.

tumoricidin (tu-mor'si-din). A serum derived from animals that have been treated with injections of gonad substances. Used for the prevention of recurrence of malignant tumors after operation.

tumorous (tu'mor-us). Of the nature of a tumor. **tumultus** (tu-mul'tus) [L.]. Excessive organic action or motility.

Tun'ga pen'etrans. See *chigger*.

tungiasis (tung-gi'as-is). Infestation of the skin with *Tunga penetrans*.

tungstate (tung'stät). A salt of tungstic acid.

tungsten (tung'sten) [Swed. "heavy stone"]. A brittle metallic element; symbol, W (for *wolframium*); atomic weight, 184; specific gravity,

19.13. Calcium tungstate is employed in skiagraphy, and various tungsten compounds are used in chemistry as reagents.

tungstic acid (tung'stik). A compound, H_2WO_4 . **tunic** (tu'nik) [L. *tunica*]. An external lining membrane or coat. **Bichat's t.**, the intima of a blood-vessel. **Bruecke's t.** See *tunica nerva*. **Ruysch's t.**, the entochoroidea.

tunica (tu'nik-ah), pl. *tu'nicae*. Latin for *tunic*. **t. abdominalis**, the aponeurosis of the abdominal muscles in certain quadrupeds, as the horse. **t. adnata**, that portion of the conjunctiva that comes in contact with the eyeball. **t. adventitia** [B N A], the outer coat of an artery. See *artery*. **t. albuginea** [B N A], the sclerotic coat of the eye (*t. albuginea oculi*); also the fibrous coat of a testis (*t. albuginea testis*), or ovary (*t. albuginea ovarii*), or spleen (*t. albuginea leonis*). **t. conjunctiva bulbi**, the conjunctiva of the eyeball. **t. conjunctiva palpebrarum**, the conjunctiva of the lids. **t. dartos** [B N A]. See *dartos*. **t. elastica**, the middle elastic coat of an artery. **t. externa**, *intima*, *media*, the outer, inner, and middle coats of an artery. See *artery*. **t. fibrosa**. 1. A fibrous membrane. 2. The outer coat of the eye. **t. interna**, any internal coat. **t. media**, the middle muscular coat of arteries and veins. **t. muco'sa** [B N A], a mucous membrane. **t. nerea** of *Bruecke*, the retinal layers, exclusive of the rod-and-cone layer, with its fibers and nuclei. **t. propria**. 1. [B N A] The proper coat or layer of a part as distinguished from an investing membrane. 2. The membrane constituting the membranous labyrinth of the ear. 3. The deeper layer of the corium consisting of a network of fibers containing nerves, blood-vessels, glands, and hair follicles. Called also *reticular layer* and *stratum reticulare*. See under *skin*. **t. ruy-schia'na**. See *entochoroidea*. **t. serosa**, a serous membrane. **t. submucosa**, a submucous layer, as of the intestines. **t. vaginalis**, the serous covering of the testis, formed by a portion of the peritoneum which descends with the testicle and afterward forms a closed pouch investing the testicle. See *testicle*. **t. vasculo'sa**. 1. Same as *mesochoroidea*. 2. The vascular coat of the testis on the inner side of the tunica albuginea. See *testicle*. **t. vasculo'sa lentis**, the vascular envelop which incloses and nourishes the developing lens of the fetus. It consists of the *pupillary membrane* in the region of the pupil; the *capsulo-pupillary membrane* around the edge of the lens; and the *capsular membrane* at the back of the lens. **t. vasculo'sa oculi** [B N A], the middle or vascular coat of the eye, composed of the choroid, iris, and ciliary body.

tunicary (tu'nik-a-re). Pertaining to or possessing a tunic or enveloping membrane.

Tunicata (tu-nik-a'tah). A class of small animals with a sac-like body and a leathery tunic. They are intermediate between the invertebrates and true vertebrates.

tunicin (tu'nis-in). A substance resembling cellulose, derivable from certain of the lowest vertebrates, such as the tunicates or ascidians; animal cellulose.

tunnel, Corti's (tun'el). The canal of Corti; the canal formed by the conjoined arches of Corti and the basilar membrane. See *ear*.

tunnel-anemia. Same as *ankylostomiasis*.

tunnel-disease. Same as *caisson-disease*. See *disease*.

tuntun (tun'tun). Ankylostomiasis.

tupelo, tupola (tu'pel-o, tu'po-lah). The tree *Nyssa uniflora*, of the southern United States; also any tree or species of the genus *Nyssa*. From the spongy wood of the root surgeons' tents are prepared.

turacin (tu'ras-in). A red or crimson pigment from the feathers of the turakoo (*Turacus*), a bird of Africa. It contains over 5 per cent. of copper.

turaco-porphyrin (tu'rak-o-por'fir-in). A derivative from turacin: nearly identical with hematoporphyrin.

Turbellaria (ter-bel-a're-ah). The class of planarian worms.

turbinal (tur'bin-al) [L. *turbina'lis*, from *turbo* a top]. 1. Turbinated. 2. A turbinated bone; any one of the three bones situated on the outside of the nasal fossæ. They are the *superior* and *middle*, which form part of the ethmoid bone, and are, therefore, called *ethmoturbinal*, the *inferior* (or *maxilloturbinal*), and *sphenoid turbinal*, which constitutes part of the sphenoid. **t. bone**, **fourth**, the posterior part of the *superior middle* turbinate; unattached in about one-third of all cases: the *concha santorini*.

turbinate, turbinated (tur'bin-at, tur'bin-a-ted). Shaped like a top. **t. body**, **t. bone**. Same as *turbinal* (2).

turbinectomy (tur-bin-ek'to-me) [*turbinal* + Gr. *ἐκτομή* excision]. The surgical removal of a turbinate bone.

turbinotome (tur-bin'o-tōm). A cutting instrument for use in the removal or cutting of a turbinate bone.

turbinotomy (tur-bin-ot'o-me) [*turbinal* + Gr. *τομή* a cut]. The surgical cutting of a turbinate bone.

Türk's bundle, column, degeneration, trachoma (terks) [Ludwig Türk, neurologist in Vienna, 1810-1868]. See *bundle, column, degeneration*, and *trachoma*.

Turck's zone (terks) [Fenton B. Turck, New York physician, born 1857]. See *zona transformans*.

turf-board (terf'bōrd). A material made from peat-moss and used like moss-board.

turgescence (ter-jes'ens) [L. *turges'cens* swelling]. The distention or swelling of a part.

turgescient (ter-jes'ent) [L. *turges'cens*]. Swelling or beginning to swell.

turgid (ter'jid) [L. *tur'gidus*]. Swollen and congested.

turgidization (ter'jid-iz-a'shun). The distending of a tissue by the injection of fluid.

turgometer (ter-gom'et-er) [L. *tur'gor* swelling + Gr. *μέτρον* measure]. An instrument for measuring the amount of turgescence.

turgor (ter'gor) [L.]. The condition of being turgid; normal or other fullness. **t. vita'lis**, the normal fullness of the blood-vessels and capillaries. When the surrounding tissues lose their normal resistance, this turgor becomes preternaturally increased, and swelling results.

turicin (tu'ris-in). 1. A betaine, $\text{OH.C}_4\text{H}_6\text{N}(\text{CO.O})(\text{CH}_2)_2$, found in *Betonica officinalis* and in *Stachys silvatica*. An antidiarrheal preparation of tannin and glutinin.

turiopin (tu-ri-o'pin). An alcoholic extract of Austrian pine: used in bronchial affections.

Türk's cell, leukocyte, stain (terks) [Wilhelm Türk, Austrian physician, 1871-1916]. See under *leukocyte* and *stain*.

turkey-corn (ter'ke-korn). The plant *Dicentra canadensis*, of North America: its tubers are diuretic and resolvent. Dose of fluidextract, 10-40 min. (0.666-2.666 c.c.).

turmeric (ter'mer-ik). The rhizome of *Curcuma lon'ga*, a zingiberaceous plant of South America. It contains the alkaloid curcumin, a tincture of which and a paper prepared from it are used like litmus in testing. It is turned brownish by alkalis. Dose of fluidextract (as an aromatic stimulant), 15-20 min. (1-1.333 c.c.).

turmerol (ter'mer-ol). An oily alcohol derivable from the oil of turmeric; also the oil itself.

turning (ter'ming). Version in obstetric practice. See *version*.

turn of life (tern). Same as *menopause*.

Turnbull's blue. See under *blue*.

turnera (ter'ner-ah). See *damiana*.

turnsickness (tern'sik-nes). Same as *staggers*.

turnsol (turn'sol). Litmus.

turpentine (ter'pen-tin) [L. *terebin'thina*]. A liquid or concrete oleoresin obtained from *Pinus palustris* and other species of *Pinus*. It contains a volatile oil (oil of turpentine), to which its properties are due, and in which form it is generally used. It is stimulant, diuretic, anthelmintic, and in large doses laxative. It is used as a stimulant in the typhoid state, as a hemostatic in menorrhagia, intestinal hemorrhage, and purpura hemorrhagica, and as a laxative in chronic constipation by rectal injection. Externally it is applied in the form of liniment, ointment, etc. Dose of oil, 20-60 min. (1.333-4 c.c.).

Aleppo t., a variety from *Pinus halepensis*. **Bordeaux t.**, a variety from *Pinus maritima*. Called *galipot*. **Canada t.**, Canada balsam. See under *balsam*. Also a turpentine from *Pinus maritima*. **Carpathian t.**, a variety from *Pinus cem'bra*. **Chian t.**, a greenish oleoresin from *Pistacia terebinthus*, a tree of Mediterranean countries. It is sometimes prescribed for cancer. Dose, 3-5 gr. (0.2-0.333 gm.). **common t.**, the turpentine of *Pinus sylvestris*, *Pinus palustris*, and other species of pine. **Hungarian t.**, the turpentine of *Pinus pumil'io*. **larch t.** See *Venice t.* **oil of t.**, a volatile oil distilled from common turpentine: diuretic, anthelmintic, stimulant, and rubefacient. **Strassburg t.**, a turpentine from *Abies pectinata*, a European spruce or fir. **Venice t.**, a turpentine from the larch tree, *La'rix europæa*. Called also *larch t.* **white t.**, a turpentine from *Pinus palustris* and other species of pine.

turpentole (ter'pen-tōl). A light, purified petroleum spirit.

turpeth (ter'peth) [L. *turpe'thum*]. An East Indian plant, *Ipomæa turpe'thum*, resembling jalap; also its purgative root. **t. mineral** [L. *turpe'thum minera'le*], an old name for *hydrargyri subsul'phas flavus*, yellow basic sulphate of mercury, $\text{HgSO}_4\cdot 2\text{HgO}$; an active emetic and a powerful errhine: used in croup and for headache, etc.

turpethin (ter'peth-in). A purgative resin from turpeth.

turricephal (ter-is-ef'al-e). Same as *oxycephaly*.

turunda (tu-run'dah) [L.]. A surgeon's tent; also a suppository.

Tus., tus. Abbreviation for L. *tus'sis*, a cough.

tusk (tusk). An extremely large tooth projecting beyond the lips.

tussal (tus'al) [L. *tus'sis* cough]. Pertaining to a cough.

tussicula (tus-ik'u-lah) [L.]. A slight cough.

tussicular (tus-ik'u-lar) [L. *tussic'ula*, dim. of *tus'sis* cough]. Of or relating to a cough.

tussiculation (tus-ik-u-la'shun). A short, hacking cough.

Tussilago (tus-il-a'go), pl. *tussila'gines* [L.]. A genus of composite-flowered plants. The leaves of *T. far'fara*, or coltsfoot, are tonic, demulcent, and antiechic. *T. pelasi'tes* is a plant of Europe, butterbur, and its homeopathic preparation.

tussis (tus'is). Latin for *cough*. **t. convul'siva**, whooping-cough, or pertussis.

tussive (tus'iv). Pertaining or due to a cough.

tussol (tus'ol). Antipyrin mandelate, $\text{C}_7\text{H}_7\text{N}_2\cdot \text{O.C}_6\text{H}_5\text{CH.OH.COOH}$, a crystalline compound: used as a remedy for whooping-cough. Dose, 20-8 gr. (0.003-0.5 gm.).

tutamen (tu-ta'men), pl. *tutam'ina*. Latin for *defense* or *protection*. **tutam'ina cerebri** [L. "defenses of the brain"], the hair, scalp, skull, and meninges. **tutam'ina oc'uli**, the defenses or protecting appendages of the eye: the lids, lashes, etc.

tutocain (tu'to-ka-in). A local anesthetic, the hydrochlorid of para-aminobenzoyl-alpha-dimethyl-

- amino-betamethyl-gamabutanol, $\text{NH}_2\text{C}_6\text{H}_4\text{CO}_2\text{CH}(\text{CH}_3)\cdot\text{CH}(\text{CH}_3)\cdot\text{CH}_2\text{N}(\text{CH}_3)_2\cdot\text{HCl}$. It is non-irritating, only slightly toxic, and is used for infiltration and surface anesthesia.
- tutsan** (tut'san) [L. *to'tum* all + *sand're* to heal]. The plant *Hypericum androsaemum*, formerly prized as a vulnerary and aperient.
- Tuttle's mask, proctoscope** (tut'lz) [Edward G. Tuttle, surgeon in New York, 1857-1913]. See *mask* and *proctoscope*.
- tuyol** (tu'e-ol). A proprietary preparation from oil of *Chamaecyparis obtusa*: used as a genito-urinary antiseptic.
- TV**. Abbreviation for *tuberculin volutin*, a principle believed to exist in tubercle bacilli, and which has a zymogenic action.
- twang** (twang). A personal, and often nasal, quality of the voice.
- T wave**. See under *wave*.
- 'tween-brain** (twēn'brān). The interbrain, or thalamencephalon.
- twelfth nerve** (twelfth). The hypoglossal nerve. See *nerves, table of*.
- twilight sleep** (twi'lit). See under *sleep*.
- twilight state**. See under *state*.
- twinn** (twinn). One of two individuals born at the same birth. **allantoido-angiopagous t's**, twinn united by the umbilical vessels only. **t. cones**, cone-cells of the retina in which two cells are blended. **dichorial t's**, twinn each of which has its own membranes and placenta. **enzzygotic t's**, twinn developed from one zygote or fertilized ovum. Called also *monochorionic t's*. and *monophal t's*. **fraternal t's**, identical t's, two enzygotic twinn of the same sex. **hetero-ophal t's**. See *dichorial t's*. **t. labor**, tedious labor due to the presence of two fetuses. **monochorionic t's**. See *enzzygotic t's*. **omphalo-angiopagous t's**. Same as *allantoido-angiopagous t's*. **t. pole**, that part of a spiral-fibered nerve-cell from which both the straight and the spiral fibers spring.
- twinge** (twinn). A keen, darting pain.
- Twining's pill** (twi'ningz) [William Twining, British physician in India, 1813-1848]. See under *pill*.
- twitch** (twitsh). A simple unit of muscular effort.
- twitching, fascicular**. Quick twitching of larger groups of bundles of muscle-fibers. **fibrillar t.**, quick twitching of single bundles of muscle-fibers.
- twitch-up** (twitsh'up). A noose passed through a perforation in a board, used for compressing a part, as the lip of a horse, during slight operations.
- two-glass test**. See under *tests*.
- Twort's phenomenon** (tworts) [F. W. Twort, contemporary British bacteriologist]. See *Twort-d'Herelle phenomenon*, under *phenomenon*.
- TX**. The symbol for a derivative of TC, prepared by v. Behring. See under *tuberculin*.
- Ty**. Abbreviation for *type*.
- ty reflex**. See under *reflex*.
- tychastics** (ti-kas'tiks). The science of industrial accidents.
- Ty'deus moles'tus**. A very small mite which attacks man as do the harvest mites. It is found in Belgium.
- tylcalcin** (til-kal'sin). Calcium acetylsalicylate: used like aspirin.
- tylion** (til'e-on) [Gr. *τυλεῖον* knot]. The point on the anterior edge of the optic groove in the median line.
- tyllithin** (til-lith'in). Lithium acetylsalicylate: used like aspirin.
- tylmarin** (til'mar-in). Acetylorthocumaric acid, a crystalline antirheumatic powder. Dose, 3-10 gr. (0.2-0.66 gm.).
- tyloma** (ti-lo'mah) [Gr. *τύλος* knot + *-ωμα* tumor]. A callus or callosity.

- Tylophora asthmatica** (ti-lof'or-ah) [Gr. *τύλος* knot + *φορέιν* to bear]. An asclepiadaceous plant of South Asia. It is emetic, and is useful in dysentery and asthma. Emetic dose of powdered leaves, $\frac{1}{2}$ -2 gr. (0.01-0.13 gm.); emetic dose, 15-20 gr. (1-1.3 gm.).
- tylophorin** (ti-lof'or-in). An alkaloid from *Tylophora asthmatica*; emetic and antasthmatic.
- tylosis** (ti-lo'sis) [Gr. *τύλωσις*]. 1. The formation of calluses upon the skin. 2. A callus, or callosity. See *keratosis*. **t. lin'gue**. Same as *leukoplakia buccalis*.
- tylotic** (ti-ot'ik). Pertaining to or affected with tylosis.
- tympanal** (tim'pan-al). Pertaining to the tympanum.
- tympanectomy** (tim-pan-ek'to-me) [L. *tympanum* drum + Gr. *ἐκτομή* excision]. Excision of the membrane of the drum of the ear.
- tympania** (tim-pan'e-ah). Same as *tympanites*.
- tympanic** (tim-pan'ik) [L. *tympanicus*]. 1. Of or pertaining to the tympanum. 2. Bell-like; resonant.
- tympanichord** (tim-pan'ik-ord). The chorda tympani, a branch of the facial nerve which traverses the tympanum.
- tympanichordal** (tim'pan-ik-or'dal). Pertaining to the tympanichord.
- tympanicity** (tim-pan-is'it-e). A tympanic quality.
- tympanion** (tim-pan'e-on). The highest point (upper tympanion) and the lowest point (lower tympanion) on the tympanic ring.
- tympanism** (tim'pan-izm) [Gr. *τύμπανον* drum]. Distention with gas; tympanites.
- tympanites** (tim-pan-i'tēz) [Gr. *τύμπανιτης*, from *τύμπανον* drum]. Distention of the abdomen, due to the presence of gas or air in the intestine or in the peritoneal cavity, as in peritonitis and typhoid fever. **uterine t.**, physometra.
- tympanitic** (tim-pan-it'ik). 1. Pertaining to or affected with tympanites. 2. Bell-like, or tympanic.
- tympanitis** (tim-pan-i'tis) [Gr. *τύμπανον* drum + *-ιτις* inflammation]. Inflammation of the tympanum; otitis media.
- tympanocervical abscess** (tim'pan-o-ser'vik-al). See *abscess*.
- tympano-eustachian** (tim'pan-o-u-sta'ke-an). Pertaining to the tympanum and the eustachian tube.
- tympanohyal** (tim'pan-o-hi'al). 1. Pertaining to the tympanum and the hyoid arch. 2. A small bone or cartilage at the base of the styloid process. In early life it becomes a part of the temporal bone.
- tympanomalleal** (tim'pan-o-mal'e-al). Pertaining to the tympanic bone and the malleus.
- tympanomandibular** (tim'pan-o-man-dib'u-lar). Pertaining to the tympanum and the inferior maxilla. **t. cartilage**. See *Meckel's cartilage*.
- tympanomastoid abscess** (tim'pan-o-mas'toid). See *abscess*.
- tympanomastoiditis** (tim'pan-o-mas-toid-i'tis). Inflammation of the tympanum and mastoidea.
- tympanophonia** (tim'pan-o-fō-ne-ah) [*tympanum* + Gr. *φωνή* sound]. Autophony.
- tympanosquamosal** (tim'pan-o-skwa-mo-s'al). Pertaining to the tympanic bone and the squamosa.
- tympanostapedial** (tim'pan-o-sta-pe'de-al). Pertaining to the tympanum and the stapes.
- tympanotemporal** (tim'pan-o-tem'por-al). Pertaining to the tympanum and the region over the temporal bone.
- tympanotomy** (tim-pan-ot'o-me) [L. *tympanum* drum + Gr. *τέμνειν* to cut]. Surgical puncture of the membrana tympani.
- tympanous** (tim'pan-us). Pertaining to or marked by tympanism; distended with gas.

tyimpanum (tim'pan-um) [L. 1. The middle ear, or ear-drum. See *ear*. 2. Less correctly, the tympanic membrane.

tympany (tim'pan-e) [Gr. *τυμπανία*]. 1. Tympanites. 2. A tympanic, or bell-like, percussion-note. **bell-t.**, a modified tympanitic note heard on percussion of the chest in some cases of pneumothorax. **Skoda's t.**, **skodaic t.** Same as *skodaic resonance*. See *resonance*.

Tyndall phenomenon (tin'dal) [John Tyndall, British physicist, 1820-1893]. See *phenomenon*.

tyndallization (tin'dal-iz-a'shun) [John Tyndall, a British physicist, 1820-1893]. Same as *intermittent sterilization*. See under *sterilization*.

type (tip) [L. *ty'pus*; Gr. *τύπος* mark]. The general or prevailing character of any particular case of disease. **Aztec t.** See *Aztec idiocy*, under *idiocy*.

blood t's. See *blood typing*, under *typing*.

Charcot-Marie t., a hereditary form of progressive muscular atrophy which begins in the muscles of the feet and legs. **Duchenne-Aran t.**, progressive spinal muscular atrophy beginning in the hand. **Duchenne-Landouzy t.** Same as *Landouzy t.* **Eichhorst's t.**, the femorotibial type of progressive muscular atrophy with contraction of the toes. **Hayem's t.**, acute non-suppurative encephalitis. **Jager's test-t's.**, test-types consisting of ordinary letters: used for testing at near points. **Kalmuch t.**, Mongolian idiocy. **Landouzy t.**, **Landouzy-Déjérine t.**, progressive muscular atrophy of infants, beginning in the muscles of the face, shoulder, and arm. **Leichtenstern's t.**, encephalitis hemorrhagica. **Leyden-Moebius t.**, hereditary progressive muscular dystrophy beginning in the pelvic muscles. **Nothnagel's t.** See under *acroparesthesia*. **Putnam t.**, combined spinal sclerosis with pernicious anemia and cachexia. **Raymond t. of apoplexy**, ingravescent apoplexy marked by parasthesia of the hand on the side which is going to become paralyzed. **Remak's t.**, paralysis of the extensor muscles of the fingers and wrist. **Runeberg's t.**, progressive pernicious anemia with brief periods of apparent improvement. **scapulohumeral t.**, progressive spinal muscular atrophy beginning in the shoulder. **Schultze's t.** See under *acroparesthesia*. **Snellen's test-t's.**, a variety of test-types for oculists' use. **Strümpell's t.**, the familial type of lateral spinal sclerosis. **test-t's.**, letters of various sizes and shapes used in testing the visual power. **Tooth's t.**, the family or hereditary form of progressive muscular atrophy. **vesanic t.**, insanity due to primary disease of the mind and not to any external cause, as injury, poisoning, or disease of some other organ. It includes mania, melancholia, etc. **Werdnig-Hoffmann t.**, Werdnig-Hoffmann paralysis. See *paralysis*. **Zimmerlin's t.**, hereditary progressive muscular atrophy, beginning in the upper part of the body.

typembryo (ti-pem'bre-o). An embryo in that stage of development at which the characteristics of the type to which it belongs may be seen.

typewriters' backache (tip'ri-terz). Pain in the back occurring in typewriters.

typh, typh-fever (tif). Typhus and typhoid viewed together.

Typhaceæ (ti-fa'se-e). A group of bacteria comprising the *Bacillus typhosus* and forms related to it.

typhase (ti'fās). A ferment or enzyme formed by the bacillus of typhoid fever and capable of splitting up the latter.

typhemia (ti-fe'me-ah) [*typhus* + Gr. *αἷμα* blood]. The presence of typhoid bacilli in the blood.

typhia (ti'f-e-ah). Typhoid fever.

typhic (ti'fik). Pertaining to typhus or typhoid fever.

typhin (ti'fin). A mixture of nucleoprotein prepared from typhoid bacteria and histamin for the intravenous treatment of typhoid fever.

typhina (ti-fi'ne-ah). Relapsing fever.

typhization (tif-iz-a'shun). Induction of a diseased condition by exposure to the poison of typhus.

typhlatonia (tif-lat-o'ne-ah). Typhlatony.

typhlatony (tif-lat'o-ne) [Gr. *τυφλός* cecum + *αλόν*]. Inefficiency of the motor activity of the cecum.

typhlectasis (tif-lek'tas-is) [Gr. *τυφλός* cecum + *εκτασις* distention]. Distention of the cecum.

typhlectomy (tif-lek'to-me). Same as *cecectomy*.

typhleenteritis (tif'len-ter-i'tis) [Gr. *τυφλός* blind + *έντερον* intestine]. Inflammation of the cecum.

typhlitis (tif-li'tis) [Gr. *τυφλόν* cecum + *-ιτις* inflammation]. Inflammation of the cecum. The term was formerly used for the condition now called *appendicitis*.

typhlo-albuminuria (tif'lo-al-bu-min-u're-ah) [Gr. *τυφλόν* cecum]. Alimentary albuminuria proceeding from the cecum.

typhlocele (tif'lo-sel). Same as *cececele*.

typhlodidichitis (tif'lo-dik-lid-i'tis) [Gr. *τυφλόν* cecum + *διδυκίς* door + *-ιτις* inflammation]. Inflammation of the ileocecal valve.

typhlo-empyema (tif'lo-em-pi-e'mah) [Gr. *τυφλόν* cecum + *empyema*]. An abdominal abscess accompanying appendicitis.

typhlo-enteritis (tif'lo-en-ter-i'tis). Typhleenteritis.

typhlohepatitis (tif-lo-hep-at-i'tis). Infectious enterohepatitis of turkeys.

typhlolexia (tif-lo-leks'e-ah) [Gr. *τυφλός* blind + *λέξις* speech]. Word-blindness.

typhlolithiasis (tif'lo-lith-i'as-is) [Gr. *τυφλόν* cecum + *λίθος* stone]. The presence of calculi in the cecum.

typhlogy (tif-lo'l'o-je) [Gr. *τυφλός* blind + *λόγος* discourse]. The sum of what is known in regard to blindness.

typhlon (tif'lon) [Gr. *τυφλός* blind]. The cecum.

typhloplexia, typhlopepy (tif-lo-peks'e-ah, tif'lo-peks-e) [Gr. *τυφλός* blind + *πῆξις* fixation]. The operation of fixing the cecum to the abdominal wall for the relief of invagination.

typhloptosis (tif-lo-to'sis) [Gr. *τυφλόν* cecum + *πτῶσις* falling]. Displacement of the cecum downward.

typhlosis (tif-lo'sis) [Gr. *τυφλός* blind]. Blindness.

typhlosthenosis (tif'lo-sten-o'sis) [Gr. *τυφλόν* cecum + *στένωσις* narrowing]. Contraction of the cecum.

typhlostomy (tif-lo's-to-me) [Gr. *τυφλόν* cecum + *στόμα* mouth]. Colostomy in which the opening is made into the cecum.

typhloteritis (tif'lo-ter-i'tis). Same as *typhloenteritis*.

typhlotomy (tif-lot'o-me) [Gr. *τυφλόν* cecum + *τέμνω* to cut]. The operation of cutting into the cecum.

typhlo-ureterostomy (tif'lo-u-re-ter-os'to-me) [Gr. *τυφλόν* cecum + *ούρητήρ* ureter + *στόμα* mouth]. The operation of implanting the ureter into the cecum.

typhobacillosis (tif'fo-bas-il-o'sis) [*typhus* + *bacillus*]. The symptoms due to poisoning by the toxins of the *Bacillus typhosus*. **t. tuberculosis**, a condition due to tuberculous infection and exhibiting the symptoms of typhoid fever. It is frequently followed by tuberculosis of the viscera or lungs.

typhobacterin (ti-fa-bak'ter-in). See *typhoid vaccine*, under *vaccine*.

typhogenic (ti-fa-jo'en'ik). Causing typhus or typhoid fever.

typhohemia (ti-fa-he'me-ah) [*typhus* + Gr. *αἷμα* blood]. Putrefaction of the blood.

typhoid (ti'foid) [L. *typho'idēs*; Gr. *τύφος* stupor + *εἶδος* form]. Resembling typhus. **abenteric t.** See *typhoid fever*, under *fever*. **ambulatory**.

t. See *typhoid fever*, under *fever*. **apyretic t.** See *typhoid fever*, under *fever*. **bilious t.**, the icteric variety of relapsing fever. **t. carrier**, a carrier or distributor of live typhoid germs. The organisms frequently grow in the gall-bladder and are eliminated in the feces. **cholera t.**, the typhoid state sometimes coming on after the algid stage of cholera. It is occasionally attended by a skin eruption. **t. fever**. See *fever*. **Manchurian t.**, a disease seen in Manchuria during the Russo-Japanese War, distinct from typhoid, and resembling in its symptoms Brill's disease. **pellagra t.**, pellagra marked by moderate fever with mild delirium. **t. prophylactic**. See *typhoid vaccine*, under *vaccine*. **t. state**. See *state*. **subcontinuous t.**, a form of malarial disease simulating typhoid fever. **t. vaccine**. See under *vaccine*. **walking t.** See *typhoid fever*, under *fever*.

typhoidal (ti-foi'd'al). Resembling typhoid.

typhoidette (ti-foi'd-et'). A mild form of typhoid fever.

typhoidin (ti-foi-din). A ten-day culture of a single strain of *Bacillus typhosus* on glycerin broth evaporated to one-tenth volume (Gay and Force, 1914). It is also used in the cutaneous reaction for typhoid fever. See *typhoidin test*, under *tests*.

typhoin (ti-foi'in). A preparation of bacilli of typhoid injected hypodermically in typhoid fever. Dose, 10-50 gr. (0.65-3 gm.) daily.

typholumbricosis (ti'fo-lum-brik-o'sis). A fever resembling typhoid fever in its symptoms, but due to lumbricid worms such as *Ascaris*.

typholysin (ti-fol'is-in) [*typhoid* + Gr. *lysis* dissolution]. A lysin which destroys typhoid bacilli.

typhomalarial (ti'fo-mal-a're-al). Of malarial origin, but with typhoid symptoms. See *fever*.

typhomania (ti-fo-ma'ne-ah) [Gr. *tupos* stupor + *mania* madness]. The state of muttering delirium accompanying typhus or typhoid fever, and characteristic of the typhoid state.

typhonia (ti-fo'ne-ah). Same as *typhomania*.

Typhonium trilobatum (ti-fo'ne-um tri-lo-ba-tum) [L.]. An Asiatic plant, highly valued in oriental practice as a polychrest remedy.

typhopaludism (ti-fo-pal'u-dizm). Malarial fever with typhoid symptoms.

typhophor (ti'fo-for) [*typhoid* + *phoros* bearing]. A person who carries typhoid; a typhoid carrier. See *carrier*.

typhopneumonia (ti'fo-nu-mo'ne-ah). Pneumonia complicated with typhoid fever, or pneumonia with symptoms of typhoid.

typhoprotein (ti-fo-pro'te-in). A protein derived from several different strains of typhoid bacilli: used in the ophthalmic reaction for typhoid fever.

typhoremittent (ti'fo-re-mit'ent). Remittent and having typhoid symptoms.

typhorubeloid (ti-fo-ru'bel-oid). Typhoid fever with an eruption resembling that of measles.

typhose (ti'fos). Resembling typhoid fever.

typhosepsis (ti-fo-sep'sis) [Gr. *tupos* stupor + *seps* putrefaction]. The septic poisoning that occurs in typhoid.

typhosis (ti-fo'sis). Any typhus-like affection.

typhotoxin (ti-fo-toks'in). A deadly ptomain, $C_{17}H_{17}NO_2$, isomeric with gadinin, derived from cultures of typhoid-fever bacillus. It causes diarrhea, muscular paralysis, salivation, and dilatation of the pupil.

typhous (ti'fus). Pertaining to or like typhus.

typhus, t. fever (ti'fus) [Gr. *tupos* stupor]. A contagious fever characterized by a petechial eruption, high temperature, and great prostration. See under *fever*. **abdominal t.**, **t. abdominalis**, typhoid fever. **collapsing t.**, the im-pyeng of Corea; an infectious typhoid fever.

contagious t. of cattle, cattle plague. **t. icteroides**, yellow fever. **t. lævis/simus**, a very mild form of enteric fever. **t. recurrens**, relapsing fever. **t. siderans**, true typhus of a malignant and quickly fatal form.

typic, typical (tip'ik, tip'ik-al) [Gr. *τυπικός*]. Presenting the distinctive features of any type.

typing of blood (ty'ping). Determining the type of iso-agglutination in the blood of both donor and recipient before transfusion of blood. In this way a donor can be selected whose blood will mix with the recipient's blood without causing agglutination or hemolysis.

typoscope (ti'po-skop) [Gr. *typos* type + *skopein* to view]. An instrument to aid amblyopes and cataract patients in reading.

tyramin (ti-ram'in). An active principle of ergot, parahydroxyphenylethylamin, $OH.C_6H_4(CH_2)_2-NH_2$. It is the amin of tyrosin. It causes increase of blood-pressure, improves the action of the heart, and antagonizes the respiratory depression of morphin. Dose, $\frac{1}{4}$ - $\frac{3}{4}$ gr. (0.02-0.04 gm.). It has some oxytotic effect. **t. hydrochlorid**, the hydrochlorid of the base obtained synthetically.

tyrannism (tir'an-izm) [Gr. *τύραννος* tyrant]. Insane or morbid cruelty; also cruelty with sexual perversion.

tyratol (ti'rat-ol). Thymotal.

tyrein (ti're-in) [Gr. *τυρός* cheese]. The coagulated casein of milk.

tyremesis (ti-rem'es-is) [Gr. *τυρός* cheese + *έμεσις* vomiting]. The caseous vomiting of infants.

tyresin (ti-re'sin). A principle derivable from the venom of serpents and from the juice of mushrooms; it is said to be an antidote for snake-poisoning.

tyriasis (tir-i'as-is). Elephantiasis; also alopecia.

Tyrode's solution (ti'röd-z). See under *solution*.

tyrogenous (ti-roj'en-us) [Gr. *τυρός* cheese + *γεννάν* to produce]. Originating in cheese.

Tyroglyphus (ti-rog'lif-us) [Gr. *τυρός* cheese + *γλυφειν* to carve]. A genus of pale, soft-bodied acarids. **T. farinæ** is the flour mite, which is found in flour mills and granaries. **T. longior**, the species which causes copra itch. **T. siro**, the cheese-mite; said sometimes to produce gastritis and diarrhea in persons who eat cheese.

tyroid (ti'röid) [Gr. *τυρός* cheese + *είδος* form]. Caseous; resembling cheese.

tyroleucin (ti-ro-lu'sin) [Gr. *τυρός* cheese + *leucin*]. A substance, $C_{14}H_{22}N_2O_4$, from decomposed albumin.

tyroma (ti-ro'mah) [Gr. *τυρός* cheese + *-ωμα* tumor]. A caseous tumor; a new-growth or nodule of cheesy matter.

tyromatosis (ti-ro-mat-o'sis) [Gr. *τύρωμα* cheese]. Caseation.

tyrosal (ti'ro-sal). Same as *salipyrin*.

tyrosin (ti-ro'sin) [Gr. *τυρός* cheese]. A crystallizable amino-acid; $OH.C_6H_5.CH_2CHNH_2COOH$, or oxyphenylaminopropionic acid, a product of the putrefaction or the pancreatic digestion of proteins (Liebig, 1846). It is an essential constituent of any diet. It has been found in many organs of the body and appears in the urine in diseased conditions, particularly acute yellow atrophy of the liver. Injected subcutaneously it is an antidote to the poison of snake-venom.

tyrosinase (ti-ro'sin-äs). An oxidizing ferment in animal tissues, converting tyrosin into pigments similar to melanin.

tyrosinuria (ti'ro-sin-u're-ah) [*tyrosin* + Gr. *ουρον* urine]. The presence of tyrosin in urine.

tyrosin (ti-ro'sis) [Gr. *τυρός* cheese]. Cheesy degeneration or caseation.

Tyrothrix (ti'ro-thriks) [Gr. *τυρός* cheese + *θρίξ* hair]. A genus of schizomycetes, or bacilli, causing the coagulation of milk.

tyrototoxic (ti-ro-toks'ik-on) [Gr. τυρός cheese + τοξικόν poison]. A poisonous crystalline ptomain, $C_6H_5N.N.OH$, or diazobenzene hydroxid, sometimes occurring in stale milk, cheese, and ice-cream. When ingested, it causes vertigo, headache, vomiting, chills, muscular cramps, purging, prostration, and death.

tyrotoxin (ti-ro-toks'in) [Gr. τυρός cheese + toxin]. Any toxin developed in cheese or milk by a bacillus.

tyrotoxis (ti-ro-toks'izm) [Gr. τυρός cheese + τοξικόν poison]. Cheese-poisoning.

tyroxin (ti-roks'in). One of the derivatives of the decomposition of albumin.

Tyrrrell's fascia, hook (tir'elz) [Frederick Tyrrrell, English anatomist, 1797-1843]. See *fascia, hook*.

Tyson's glands (ti'sunz) [Edward Tyson, English physician and anatomist, 1649-1708]. See under *gland*.

tysonian (ti-so'ne-an). Named after the anatomist, Edward Tyson. See *Tyson's glands*, under *gland*.

TZ. The symbol for *tuberculin zymoplastiche*, or the dried residue of the portions of the tubercle bacilli which are soluble in alcohol.

tzetze (set'se). Same as *tselse*.

U

U. Abbreviation for *unit*; the symbol for *uranium*.

uabain (wah/ba-in). See *ouabain*.

uarthritis (u-ar-thri'tis). Gout due to excess of uric acid in the system.

uaterium (wat-e're-um) [Gr. οὖς ear]. A medical preparation for use in the ear.

uberous (u'ber-us). Prolific.

uberty (u'ber-te) [L. *u'ber* udder]. Fertility.

ucambin (oo-kam/bin). See *ukambin*.

udder (ud'er). The mammary gland of cattle and certain other animals.

Udranszky's test (oo-dran'skēz)[László Udranszky, Budapest physiologist, 1862-1914]. See under *tests*.

udrenin (ud-re'nin). A proprietary local anesthetic containing beta-eucain and adrenalin.

udruj (ud'ruj). An East Indian medicinal gum.

Uffelmann's test (oo'el-mahnz) [Jules Uffelmann, German physician, 1837-1894]. See under *tests*.

Uhlenhuth's test (oo'len-hoot) [Paul Uhlenhuth, German bacteriologist, born 1870]. See under *tests*.

Uthoff's sign (oot'hofs) [W. Uthoff, ophthalmologist in Breslau, born 1853]. See under *sign*.

uixi (wiks'e). The *Myrsitica platysperma*, a medicinal plant of South America.

ukambin (oo-kam/bin). A crystalline alkaloid from African arrow-poison having the effect of strophanthin, but more active. It is soluble in water and alcohol.

ula (u'lah) [Gr. οὖλον gum]. The gum; the gingiva.

ulemorrhagia. See *ulemorrhagia*.

ulagmnactesis (u-lag-an-ak-te'sis) [Gr. οὖλον gum + ἀγανάκτησις irritation]. Irritation or itching of the gums.

ulalgia (u-lal'je-ah) [Gr. οὖλον gum + ἄλγος pain]. Pain in the gums.

ulatrophia (u-lat-ro'fe-ah) [Gr. οὖλον gum + ἀτροφία atrophy]. See *ulatrophy*.

ulatrophy (u-lat-ro'fe) [*ulatrophia*]. Shrinkage of the gums; a form of pericementoclasia marked by a decrease in the bulk of the marginal and cemental gingiva with exposure of the cementum. **afunctional u.**, ulatrophy due to congenital malocclusion.

ulcer (ul'ser) [L. *ul'cus*]. An open sore other than a wound; a loss of substance on a cutaneous or mucous surface, causing gradual disintegration and necrosis of the tissues. **Aden u.** 1. A form of oriental sore or Aleppo boil. 2. An ulcer of the leg following beriberi. **adherent u.**, a skin ulcer the base of which adheres to the subcutaneous fascia. **Allingham's u.**, fissure of the anus. **amputating u.**, ulceration which encircles a part and destroys the tissues to the bone. **anamite u.**, an obstinate en-

demic sore of Indo-China; probably furunculosis orientalis. Called also *Cochin-China u.* **Annam u.**, an ulcer endemic in tropical parts of Asia, similar to Aleppo boil. **arrosion u.**, an annoying ulcer of the respiratory tract; usually tuberculous. **arterial u.**, an ulcer of the skin caused by disease of an artery. **atheromatous u.**, a loss of substance in the wall of an artery or in the endocardium, caused by the breaking down of an atheromatous patch or abscess. **atonic u.**, a chronic ulcer with unhealthy granulations. **autochthonous u.**, a chancre. **Bouveret u.**, an ulcer occurring in typhoid fever in the fauces just above and to the outer side of the tonsil. **callous u.** Same as *indolent u.* **carious u.**, a gangrenous sore. **chan-croidal u.** Same as *chancre*. **chrome u.**, an ulcer produced by chromium or its salts; seen in tanners and others working in chromium. **chronic u.** See *indolent u.* **Clark's u.**, corroding ulcer of the neck of the uterus. **Cochin-China u.** See *anamite u.* **cockscomb u.**, an ulcer with condylomatous outgrowths. **cold u.**, a small non-inflammatory ulcer of the extremities, sometimes gangrenous. It is due to imperfect nutrition, and is attended with coldness of the surface. **concealed u.**, destructive inflammation affecting some internal tissue. **constitutional u.**, one that is a local expression of a general disease, such as tuberculosis or pyemia. **cor-roding u.**, one which spreads by a gangrenous process. **corrosive u.**, gangrenous stomatitis. **crateriform u.**, a conic and swiftly growing epithelioma of the face, having a crater-like ulcer at the apex. **creeping u.**, a serpiginous ulcer. **Crombie's u.**, ulcer of the gum in sprue. **Cru-veilhier's u.**, simple gastric ulcer. See *ulcus ventriculi*. **Curling's u.**, an ulcer of the duodenum following a severe burn upon the surface of the body. **cystoscopic u.**, ulcer of the bladder due to injury by the cystoscope. **dendri-form u.**, ulcer of the cornea branching in various directions. **dental u.**, an ulcer on the tongue caused by irritation from the edge of a broken tooth. **diphtheric u.**, one the surface of which is partly or entirely covered by a diphtheric membrane. **endemic u.**, any form of ulcer prevailing in special districts or regions, like furunculosis orientalis. **erethistic u.** Same as *irritable u.* **fissurated u.**, a lacerated and ulcerated condition of the cervix uteri. **fissured u.**, a deep and more or less linear form of ulcer. **fistulous u.**, the ulcerated superficial end of a fistula. **follicular u.**, a small ulcer on the mucous membrane having its origin in a lymph-follicle. **fungous u.**, one covered by pale, fungus granulations, projecting above the level of the skin. Called also *weak u.* **Gaboon u.**, a variety of tropical ulcer occurring in the French Congo, Africa. **gastric u.**, an ulcer seated on the inner wall of the stomach. See *ulcus*

ventriculi. **gouty u.**, a superficial ulcer occurring over a gouty joint. **gummatous u.**, a broken-down superficial gumma. **gwaliar u.**, furunculus orientalis. **hard u.**, chancre. **healthy u.**, an ulcer which tends to progress toward a cure. It is attended with serous exudation, red, non-projecting, and painless granulations, and smooth, soft edges. **hemorrhagic u.**, one from which blood occasionally flows. **Hunner's u.**, a myositic ulcer of the bladder wall with normal cell infiltration; called also *pan-mural fibrosis*. **indolent u.**, one with an indurated and elevated edge and a non-granulating base, usually occurring on the leg, and nearly painless. Called also *chronic u.* and *callous u.* **inflamed u.**, one with edematous and painful borders and a purulent discharge. **intractable u.**, an indolent ulcer that resists treatment. **irritable u.**, one of which the surface and surrounding parts are red, tender, and painful. **Jacob's u.**, rodent ulcer; especially that of an eyelid. **Jeddah u.**, oriental boil. **Kocher's dilatation u.**, ulceration occurring in a greatly distended intestine or in the course of ileus. **Kurunigala u.**, pyosis tropica. **Lahore u.**, furunculus orientalis. **lupoid u.**, a skin ulcer that simulates or resembles lupus. **lymphatic u.**, one with an exudate resembling lymph. **Malabar u.**, phagedena tropica; probably the same as furunculus orientalis. **Marjolin's u.**, an ulcer seated upon an old cicatrix; it follows the breaking down of warty cicatricial tumors. **menstrual u.**, an ulcer which is the seat of vicarious menstruation. **mercurial u.**, an ulcer caused by mercurial poisoning. **Mooren's u.**, rodent ulcer of the cornea. **Mozambique u.**, an endemic ulcer of East Africa; apparently a form of oriental boil. **Parrot's u.**, the ulceration seen in thrush. **Pendinski u.**, furunculus orientalis. **Pendjeh u.**, an endemic ulcer of Turcomans in Penj Deh (Khorassan). **peptic u.**, an ulcer seated upon the mucous membrane of the stomach or duodenum. **perambulating u.** See *sloughing u.* **performing u.**, one which penetrates through the entire thickness of an organ, as the foot, or the wall of the stomach or intestine. **Persian u.**, a form of ulcer prevalent in Persia: supposed to be oriental boil. **phagedenic u.**, one which spreads rapidly and destructively, eating away the tissues, and marked by sloughing particles in the discharge. Called also *sloughing u.* **phlegmonous u.** Same as *inflamed u.* **Plant's u.**, Vincent's angina. See *angina*. **puddental u.** See *ulcerating granuloma of pudenda*, under *granuloma*. **putrid u.**, hospital gangrene. **rodent u.**, carcinomatous or epitheliomatous ulcer which gradually involves and eats away the soft tissues and bones. It is generally seated upon the face. **round u.** 1. A peptic ulcer of the stomach. See *ulcus ventriculi*. 2. A rapid ulceration of the uterus, probably malignant. **Saemisch's u.**, an infectious and serpiginous ulcer of the cornea. **scorbatic u.**, one due to a scorbutic taint. **serpiginous u.**, one which moves from place to place, healing in one part and extending in another. **simple u.**, a mild form of ulcer which is neither of septic origin nor the expression of a general disease. **sloughing u.** Same as *phagedenic u.* **stercoral u.**, an ulcer caused by the pressure of impacted feces; also a fistulous ulcer through which fecal matter escapes. **sublingual u.**, an ulcer on the frenum of the tongue, caused by the irritation of the lower incisor teeth, and sometimes occurring in whooping-cough. **symptomatic u.**, an ulcer that indicates some general disease. **Syrian u.**, diphtheria; also Aleppo boil, or furunculus orientalis. **tanner's u.** See *chrome u.* **Tashkend u.**, one of the crusted ulcers that are developed in Sartian disease, an endemic affection occurring in Tashkend in Asiatic Russia. **toe-nail u.**, onychia maligna, chiefly of the great toe. **traumatic u.**, one due to a local injury.

trophic u., an ulcer due to imperfect nutrition of the part. **trophoneurotic u.**, ulcer due to a nervous disease of central origin. **tropical u.** See *furunculus orientalis*. **tuberculous u.**, one due to the bacillus of tuberculosis. **Turkestan u.**, Sartian disease; probably furunculus orientalis. **unhealthy u.**, an ulcer which does not tend to progress to a cure. The term includes *callous u.*, *fungous u.*, and *phagedenic u.* **varicose u.**, one that is due to varicose veins. **venereal u.**, chancre. **veneroid u.**, a disease marked by the formation of ulcers about the vulva of persons who have not been exposed to venereal disease. The ulcers resemble chancre or chancroid. Called also *Welder's ulcer*. **warty u.** Same as *Marjolin's u.* **weak u.**, one with flabby, projecting, fungous granulations; a fungous ulcer. **Welder's u.** See *veneroid u.* **yemen u.**, Aden boil; furunculus orientalis. **Zambesi u.**, an ulcer endemic among laborers of the Zambesi valley. It occurs on the leg or foot and is not attended with constitutional symptoms. It is caused by the larva of a dipterous fly which burrows into the subcutaneous tissue.

ulcerate (ul'ser-āt) [L. *ulcera're*, *ulceratus*]. To become affected with ulceration.

ulceration (ul'ser-a'shun) [L. *ulcera'tio*]. 1. The formation of an ulcer. 2. An ulcer. **u. of Daguet**, ulceration of the uvula and other parts of the throat, seen in typhoid fever. **u. of the stomach**. See *ulcus ventriculi*.

ulcerative (ul'ser-ā-tiv). Pertaining to or of the nature of an ulcer.

ulcerine (ul'ser-ēn). A proprietary ointment for the treatment of x-ray burns.

ulcerocancer (ul'ser-o-kan'ser). Malignant ulcer of the pylorus.

ulceromembranous (ul'ser-o-mem'bran-us). Characterized by ulceration and by a membranous exudation.

ulcerous (ul'ser-us) [L. *ulcero'sus*]. 1. Of the nature of an ulcer. 2. Affected with ulceration.

ulcus (ul'kus), pl. *ul'cera*. Latin for *ulcer u.* **ambulans**, "perambulating ulcer." Same as *sloughing ulcer*, under *ulcer u.* **ambustiforme**, a chancre which resembles a simple excoriation. **u. cancro'sum**, cancer. **u. du'rūm**, "hard ulcer"; a true chancre. **u. ex'edens**. See *rodent ulcer*, under *ulcer u.* **phageden'icūm corro'dens**, a gangrenous phagedenic ulcer of the vaginal part of the uterus. **u. ro'dens**. See *rodent ulcer u.* **scorbuticūm**, an ulcer forming in scurvy. **u. ser'pens**. Same as *serpiginous ulcer u.* **ser'pens cor'neae**, a serpiginous ulcer of the cornea. **u. sim'plex**, a chancroid. **u. syphilit'icūm**, a chancre or other syphilitic sore. **u. ventric'uli**, ulceration of the stomach; a condition attended by pain, nausea, and vomiting, and due to obstruction of the blood-vessels. It occurs most frequently in young women, and is often brought on by eating. It may cause perforation of the serous coat of the stomach and prove fatal. Called also *round ulcer*, *perforating ulcer of the stomach*, *u. ventriculi rotundum*, and *u. ventriculi perforans*. **u. vulvæ acutūm**, a rapidly growing ulcer of the vulva, of non-venereal origin, and always associated with the presence of *Bacillus crassus*.

ulectomy (u-lek'to-me) [Gr. οὐλή scar + ἐκτομή excision]. Excision of scar tissue, i. e., in secondary iridectomy.

ulemorrhagia, **ulæmorrhagia** (u'lem-or-a'je-ah) [Gr. οὐλον gum + αἱμορραγία bleeding]. Bleeding or hemorrhage from the gums.

ulerythema (u'ler-ith-e'mah) [Gr. οὐλή scar + ἐρύθημα erythema]. An erythematous disease of the skin characterized by the formation of cicatrices and by atrophy. **u. acneifor'me**, a condition characterized by erythema and thickening of the skin about the hair-follicles. **u. centrif'ugum**, lupus erythematosus. **u. ophryo'genes**, a dis-

ease marked by erythema of the skin around the hair-follicles, which become filled with a plug of hardened epithelium. **u. sycosiforme**, a chronic inflammation of the hair-follicles of the beard, with destruction of the skin.

uletic (u-let'ik) [Gr. *οὔλον* gum]. Pertaining to the gums.

uletomy (u-let'o-me) [Gr. *οὐλή* scar + *τομή* a cutting]. Incision of a cicatrix.

ulexin (u-leks'in) [L. *u'lex* furze]. A diuretic and tonic alkaloid, $C_{11}H_{14}N_2O_6$, from the seeds of *Ulex europæa* (*Cytisus laburnum*), the furze, or gorse. Dose, $\frac{1}{10}$ to gr. (0.003-0.006 gm.).

uliginous (u-lij'in-us) [L. *uliginosus* moist]. Muddy or slimy.

ulitis (u-lit'is) [Gr. *οὔλον* gum + *-itis* inflammation]. Inflammation of the gums. **aphthous u.**, ulitis combined with aphthæ. **fungous u.**, ulitis in which the gums have a fungous appearance. **interstitial u.**, inflammation of the connective tissue of the gums around the teeth. **mercurial u.**, ulitis due to mercurialism. **scorbutic u.**, ulitis due to scurvy. **ulcerative u.**, ulitis with ulceration.

ullem (ul'em). A kind of dyspepsia occurring in Lapland.

ulmaren (ul'mar-en). An orange-colored mixture of salicylic acid esters of higher aliphatic alcohols: used externally in rheumatism and gout.

ulmin (ul'min). A principle, $C_{40}H_{10}O_{14}$, from elm-sap, peat, and other sources. See also *ulmic acid*, under *acid*.

Ulmus (ul'mus) [L. gen. *ul'mi* elm]. A genus of ulmaceous trees; the elms. The inner bark of *Ulmus fulva*, the slippery elm, is mucilaginous and demulcent, and is used in diarrhea, dysentery, and urinary diseases; also in the form of a poultice for inflammation.

ulna (ul'nah) [L.]. The inner and larger bone of the forearm, on the side opposite that of the thumb. It articulates with the head of the radius above and with the radius below.

ulnad (ul'nad). Toward the ulna.

ulnar (ul'nar) [L. *ulna'ris*]. Pertaining to the ulna; also pertaining to the ulnar nerve or the ulnar artery.

ulnare (ul-na're) [L.]. The cuneiform bone of the carpus.

ulnaris (ul-na'ris). See *muscles*, table of.

ulnen (ul'nen). Pertaining to the ulna alone.

ulnocarpal (ul-no-kar'pal). Pertaining to the ulna and carpus.

ulnoradial (ul-no-ra'de-al). Pertaining to the ulna and the radius.

ulocace (u-lok'as-e) [Gr. *οὔλον* gum + *κακή* badness]. Ulceration of the gums.

ulocarcinoma (u'lo-kar-sin-o'mah) [Gr. *οὔλον* gum + *carcinoma*]. Carcinoma of the gums.

ulodermatitis (u'lo-der-mat-i'tis) [Gr. *οὐλή* scar + *dermatitis*]. Inflammation of the skin, producing scars.

uloglossitis (u'lo-glos-i'tis) [Gr. *οὔλον* gum + *γλῶσσα* tongue]. Inflammation of the gums and the tongue.

uloid (u'loid) [Gr. *οὐλή* scar + *εἶδος* form]. 1. Resembling a scar, but not due to any lesion of the skin. 2. A spurious cicatrix; a scar-like spot due to a subcutaneous degeneration. It is seen in syphilis and lupus of the skin, and is also called *uloid cicatrix*.

uloncus (u-long'kus) [Gr. *οὔλον* gum + *δγκος* tumor]. A swelling or tumor of the gums.

ulorrhagia (u-lor-a'je-ah) [Gr. *οὔλον* gum + *ῥήγναι* to burst forth]. A sudden or free discharge of blood from the gums.

ulorrhæa, **ulorrhæa** (u-lor-e'ah) [Gr. *οὔλον* gum + *ῥοία* flow]. An oozing of blood from the gums.

ulosis (u-lo'sis) [Gr. *οὐλή* scar]. Cicatrization.

ulotic (u-lot'ik). Pertaining to a cicatrix; producing cicatrization.

ulotrichous (u-lot'rik-us) [Gr. *οὔλος* woolly + *τριξ* hair]. Having woolly hair.

ulsanin (ul-san'in) [L. *ul'cus* ulcer + *sana're* to heal]. A proprietary preparation of boric acid and iodine for the treatment of ulcers.

ultimate (ul'tim-ät) [L. *ul'timus* last]. The last or farthest; final or most remote.

ultimisternal (ul'tim-i-ster'nal). Pertaining to the xiphoid cartilage.

ultimum moriens (ul'tim-um mo're-enz) [L. "last to die"]. 1. The right auricle, said to be the last part of the body to move in dying. 2. The upper part of the trapezius muscle.

ult. præ. Abbreviation for L. *ul'timum præscriptus*, last prescribed.

ultra- [L. "beyond"]. A prefix denoting excess.

ultrabrachycephalic (ul'trah-brak'e-sef-al'ik). Having a cephalic index of more than 90.

ultradolichocephalic (ul'trah-dol'ik-o-sef-al'ik). Extremely dolichocephalic; having a cephalic index of not more than 64.

ultrafilter (ul'trah-fil'ter). An apparatus for performing ultrafiltration.

ultrafiltration (ul'trah-fil-tra'shun). Filtration by use of an ordinary filter that has been infiltrated with some colloidal substance, such as gelatin, and through which is forced, under pressure, the fluid that is to be filtered.

ultragaseous state (ul'trah-gaz'e-us). See under *radiant matter*.

ultraligation (ul'trah-li-ga'shun). Ligation of a vessel beyond the point of origin of a branch.

ultramicrobe (ul'trah-mi'kröb). An ultramicroscopic microorganism.

ultram micron (ul'trah-mi'kron). An ultramicroscopic particle less than one-fourth of a micron in diameter.

ultramicroscope (ul'trah-mi'kro-sköp). An attachment for a microscope by which colloid particles, the flagella of bacteria, spirochetes, the dancing granules in leukocytes, and other objects become visible. Light rays from the mirror of a compound microscope do not pass directly through the field to the eye, but are diverted and illuminate the objects from the side. Hence the objects appear light against a dark field.

ultramicroscopic (ul'trah-mik-ro-skop'ik). Too small to be seen with a microscope.

ultramicroscopy (ul'trah-mi-kros'ko-pe). The employment of the ultramicroscope.

ultraprophylaxis (ul'trah-pro-fil-ak'sis). Prophylaxis directed toward the prevention of diseased or abnormal children by regulation of the marriage of the unfit.

ultraquinin (ul'trah-kwin'in). An alkaloid from cuprea bark. Called also *homoquinin*.

ultra-red (ul'trah-red'). Same as *infra-red*.

ultrasterile (ul'trah-ster'il). More than sterile; containing neither visible microorganisms nor ultramicroscopic virus.

ultratoxon (ul'trah-tok'son). A toxon of the lowest degree of toxicity.

ultraviolet rays (ul'trah-vi'o-let). See under *ray*.

ultravirus (ul'trah-vi'rus). A virus which is ultramicroscopic, but which may be detected by inoculation test.

ultramotivity (ul'tro-mo-tiv'it-e) [L. *ul'tro* spontaneously]. Ability to move spontaneously.

Ultzmann's test (ooltz'mahnz) [Robert *Ultzmann*, German chemist, 1842-1889]. See under *tests*.

ululation (ul-u-la'shun) [L. *ulula're* to howl]. The loud crying or wailing of hysteric patients.

ulyptol (u-lip'tol). A proprietary antiseptic mixture of phenol, 1 part; eucalyptus oil, 1 part; and salicylic acid, 6 parts.

umb. Abbreviation for *L. umbilicus*, the navel.

umbelliferone (um-bel-īf'er-ōn). A crystalline compound, $C_6(OH, H, H, CH : CH, O, CH, H)$, derived from certain umbelliferous plants.

Umbellularia (um'bel-u-la're-ah) [L.]. A genus of laurineous trees. *U. californica* (bay- or spice-tree) has leaves which are used in diarrhea, colic, and headache. Dose of fluidextract, 10-30 min. (0.66-2 c.c.).

umbellulone (um-bel'u-lōn). A colorless liquid ketone, $C_{10}H_{14}O$, from the oil of *Umbellularia*.

umber (um'ber). A natural earth containing chiefly manganese, iron oxid, and silica: used as a pigment.

umbilectomy (um-bil-ek'to-me) [*umbilicus* + Gr. *ektomē* excision]. Excision of the umbilicus.

umbilical (um-bil'ik-al) [L. *umbilica'lis*]. Pertaining to the umbilicus.

umbilicate (um-bil'ik-āt) [L. *umbilica'tus*]. Shaped like or resembling the navel.

umbilicated (um-bil'ik-āt-ed). Marked by depressed and navel-like spots.

umbilication (um'bil-ik-a'shun). A navel-like depression or pit.

umbilicus (um-bil'ik-us) [L.]. The navel; the cicatrix which marks the site of the entry of the umbilical cord. **decidual u.**, a small cicatricial mark on the ovum in the early part of its stay in the uterus; supposed to mark the place of the closure of the decidua reflexa. **posterior u.** Same as *sinus, pilonidal*.

umbo (um'bo), pl. *umbo's* [L. "boss"]. The projecting center of any rounded surface; especially the apex of the membrana tympani (**u. tympani**).

umbrate (um'bo-nāt) [L. *umbo* a knob]. Knob-like; button-like; having a button-like, raised center.

umbrascopy (um-bras'ko-pe) [L. *um'bra* shade + Gr. *σκοπέω* to view]. Same as *skiascopy*.

unada (u-na'dah). A proprietary laxative diuretic, tonic, and antirheumatic preparation.

unavoidable hemorrhage (un-av-oi'da-bl hem'-or-āj). See *hemorrhage*.

unbalance (un-bal'ans). Lack or loss of the normal balance between paired parts or organs.

Uncaria (un-ka're-ah) [L.]. A genus of rubiaceous tropical plants. See *gambir*.

uncia (un'se-ah). Latin for ounce (q. v.) and for inch.

unciform (un'sif-orm) [L. *un'cus* hook + *for'ma* form]. Hooked; shaped like a hook. **u. bone**. See *unciforme*.

unciforme, os unciforme (os un'se-for'me) [L.]. The unciform bone; a bone at the ulnar edge of the carpus and in the distal row.

uncinal (un'sin-al). Uncinate.

Uncinaria (un-sin-a're-ah) [L. *un'cus* hook]. A genus of nematode worms. **U. americana**. Same as *Necator americanus*. **U. duodena'lis**. Same as *Ankylostoma duodenale*. **U. stenoceph'ala**, the hookworm found in dogs.

uncinariasis, uncinariosis (un-sin-ar-i'as-is, un-sin-ar-e-o'sis). See *ankylostomiasis*.

uncinariatic (un-sin-a-re-āt'ik). Relating to or affected with uncinariasis.

uncinate (un'sin-āt). Hooked or barred; unciform.

uncinatum (un-sin-a'tum) The unciform bone.

uncipressure (un'se-presh-ur) [L. *un'cus* hook + *pressu'ra* pressure]. Pressure with a hook to stay hemorrhage.

uncomplemented (un-kom'ple-men-ted). Not joined with complement, and therefore not active.

unconscious (un-kon'shus). Insensible; not receiving any sensory impressions and not having any subjective experiences. In Freudian terminology, the unconscious means that part of the mind which includes all thoughts and wishes which the

person possessing them cannot accept as belonging to himself, of which he therefore does not know and never can know except through some psychotherapeutic procedure, such as psycho-analysis.

unco-ossified (un-ko-os'if-id). Not united into one bone.

unction (unk'shun) [L. *un'ctio*]. An ointment; the application of an ointment; inunction.

unctuous (unk't'u-us). Greasy or oily.

uncus (ung'kus) [L. "a hook"]. A hook or hook-like structure. **u. gy'ri fornica'ti**, **u. gy'ri hippocam'pi** [B N A], the uncinate convolution.

undecalcified (un-de-kal'se-fid). Not decalcified.

undecane (un'de-kān). A colorless hydrocarbon, $CH_3(CH_2)_9CH_3$, formed by the action of hydriodic acid and phosphorus on undecylic acid.

undercut (un'der-kut). A side cut made in the cavity of a tooth which is being filled, made for the purpose of anchoring the filling.

underhorn (un'der-horn). The inferior cornu of the lateral ventricle.

underhung, underjawed (un'der-hung', un'der-jaw'd'). Having a prominent lower jaw.

understain (un'der-stān). To stain less deeply than usual.

undertoe (un'der-tō). A condition in which the great toe is displaced under the others.

undifferentiation (un-dif'er-en-she-a'shun). See *anaplasia*.

undine (un'din). A small glass flask for irrigating the eye.

undulant (un'du-lant) [L. *un'da* wave]. Characterized by wave-like fluctuations.

undulation (un-du-la'shun) [L. *undula'tio*]. A wave-like motion in any medium; a vibration.

jugular u. Same as *venous pulse*. **respiratory u.**, the variation of the blood-pressure curve due to respiration.

Undulina (un-du-li'nah). Same as *Trypanosoma*.

Ung., ung. An abbreviation for *L. unguen'tum*, ointment.

ungrol (un'grol). A preparation of glycerin, gelatin, and sublimin: used as a prophylactic for syphilis and gonorrhea.

ungual (un'gwāl) [L. *un'guis* nail]. Pertaining to the nails.

unguent (un'gwent) [L. *unguen'tum* ointment]. Any ointment, salve, or cerate. See *ointment*.

unguentene (un-gwen-tēn'). A proprietary antiseptic unguent for surgical use.

unguentin (un-gwen'tin). A proprietary antiseptic and soothing ointment consisting of alum ointment containing 2 per cent. of carbolic acid and 5 per cent. of ichthyol. It is recommended for use in burns and as a general surgical dressing.

unguentum (un-gwen'tum) [L.]. 1. An ointment. 2. Simple ointment: lard, 80 gm., mixed with 20 gm. of yellow wax. 3. A popular name for mercurial ointment; unguentum hydrargyri. **u. ægyptiacum**, a mixture of copper acetate and honey. **u. calaminæ**, "calamine ointment," an ointment prepared by mixing 1 part of prepared calamine with 5 parts of ointment. Called also *Turner's cerate* and *unguen'tum zin'ci carbona'tis (impuri)*. **u. camphoræ**, "camphor ointment," an ointment prepared from 2 parts of camphor, 1 part of white wax, and 6 parts of lard. **u. casei'ni**, an ointment of casein, soda, zinc oxid, and carbolic acid. **u. Credé**. See *Credé's ointment*, under *ointment*. **u. du'rum**, an ointment-base made of lanolin and hard and soft paraffin. **u. fus'cum**. See *brown ointment*, under *ointment*. **u. hydrarg'gyri**, a preparation made from 500 gm. of mercury, 250 gm. of lard, 230 gm. of suet, and 20 gm. of oleate of mercury, to make 1000 parts. This ointment, when rubbed on the surface of the body, produces, in consequence of its absorption, the general effects of

- mercury. It is also employed as a resolvent in local affections, as in the case of venereal buboes and of chronic glandular swellings. Called also *mercurial ointment* and *blue ointment*. **u. molle**, an ointment-base composed of lanolin and solid and liquid paraffin. **u. populeum**, poplar ointment; an obsolete or domestic medicine containing an extract from the poplar. **u. psoriat-icum**, an ointment of ichthyl, zymoidin, and chrysarobin. **u. zin'ci ox'idi**, melt together 15 gm. of paraffin and 65 gm. of white petrolatum and incorporate 20 gm. of zinc oxid in fine powder.
- unguiculate** (un-gwik'u-lăt) [*u. unguic'ulus* nail]. Provided with claws; resembling a claw.
- unguiculus** (ung-wik'u-lus). A small nail or claw.
- unguinal** (un'gwin-al) [*u. unguis* a nail]. Pertaining to a nail or to the nails; resembling a nail; pertaining to an unguis.
- unguis** (un'gwis) [*l.*]. 1. A nail of a finger or toe. 2. A collection of pus in the cornea; an onyx. 3. A nail-like part.
- ungula** (un'gu-lah) [*l.* "claw"]. 1. The hoof of an animal. 2. An instrument for extracting a dead fetus.
- Ungulata** (un-gu-la'tah). A class of animals, including those that have hoofs.
- uni-** [*l. u'nus* one]. A prefix meaning one.
- uniarticular** (u'ne-ar-tik'u-lar) [*l. u'nus* one + *artic'ulus* joint]. Pertaining to a single joint.
- uniaxial** (u-ne-aks'e-al) [*l. u'nus* one + *ax'is* axis]. 1. Having but one axis. 2. Developing in an axial direction only, as, *uniaxial* organism.
- unibasal** (u-nib-a'sal) [*l. u'nus* one + *ba'sis* base]. Having only one base.
- unicamerata** (u-nik-am'er-ăt) [*l. u'nus* one + *cam'era* chamber]. Having only one cavity.
- Unicell'ula can'cri**. Butlin's name for the cancer-cell regarded as the causative organism of cancer.
- unicellular** (u-ne-sel'u-lar) [*l. u'nus* one + *cel'lula* cell]. Made up of but a single cell.
- unicentral** (u-nis-en'tral) [*l. u'nus* one + *cen'trum* center]. Having a single center of growth.
- uniceps** (u'nis-eps) [*l. u'nus* one + *ca'put* head]. Having one head or origin: said of a muscle.
- uniceptor** (u'nis-ep-tor). A septon with a single combining group. See *Ehrlich's side-chain theory*, under *theory*.
- unicism** (u'nis-izm) [*l. uni'cus* single]. The obsolete opinion that there is but one kind of venereal virus.
- unicornous** (u-ne-kor'nus) [*l. unicolor'nis*]. Having but one cornu.
- unicorn-root** (u'nik-orn-rüt) [*l. unicolor'nis*, one-horned]. See *Aletris*.
- unicuspid, unicuspidate** (u-ne-kus'pid, u-ne-kus'pid-ăt). A tooth that has only one cusp.
- uniferate** (u-nif-o'răt) [*l. u'nus* one + *for'atus* pierced]. Having only one opening.
- uniflagellate** (u-nif-la'fel-ăt). Having one flagellum.
- unigerminal** (u-ne-je'r-min-al). Pertaining to a single germ.
- uniglandular** (u-ne-glan'du-lar). Affecting or containing one gland.
- unigravida** (u-nig-rav'id-ah) [*l. u'nus* one + *grav'ida* pregnant]. A woman pregnant for the first time.
- unilaminar** (u-ne-lam'in-ar). Having only one layer.
- unilateral** (u-nil-at'er-al) [*l. u'nus* one + *la'tus* side]. Affecting but one side.
- unilobar** (u-ne-lo'bar). Having only one lobe; consisting of a single lobe.
- unilocular** (u-nil-ok'u-lar) [*l. u'nus* one + *loculus*]. Having but one loculus or compartment.
- unifiltrated** (un-in-fil'tra-ted). Not filtrated.
- uninuclear, uninucleated** (u-ne-nu'kle-ar, u-ne-nu'kle-a-ted). Having but one nucleus.
- unioocular** (u-ne-ok'u-lar) [*l. u'nus* one + *oc'ulus* eye]. Pertaining to or affecting but one eye.
- union** (ün'yun) [*l. u'nio*]. The process of healing; the renewal of continuity in a broken bone or between the lips of a wound. See *healing*. **vicious u.**, union of the ends of a fractured bone so as to produce deformity.
- unioval, uniovular** (u-ne-o'val, u-ne-ov'u-lar) [*l. u'nus* one + *o'vum* egg]. Arising from one ovum: said of certain twin pregnancies.
- unipara** (u-nip'ah-rah) [*l. u'nus* one + *par'ere* to bear]. A woman who has borne but one child. Cf. *unigravida*.
- uniparental** (u'ne-par-en'tal). Pertaining to one of the parents only.
- uniparous** (u-nip'ar-us) [*l. u'nus* one + *par'ere* to produce]. Having given birth to but one child.
- unipolar** (u-nip-o'lar) [*l. u'nus* one + *po'lus* pole]. 1. Having but a single pole or process, as a nerve-cell. 2. Performed with one electric pole.
- unipotent** (u-nip'o-tent). Unipotent.
- unipotential** (u-nip-o-ten'shal) [*l. u'nus* one + *po'tens* able]. Capable in one way only: said of cells that can give rise to cells of one order only. Cf. *totipotential*.
- unirritable** (un-ir'it-ab-l). Not irritable; not capable of being stimulated.
- uniseptate** (u-nis-ep'tăt). Having only one septum.
- unisexuale** (u-ne-seks'u-al) [*l. u'nus* one + *sex'us* sex]. Of only one sex; having the sexual organs of one sex only.
- unit** (u'nit) [*l. u'nus* one]. 1. A single thing. 2. A quantity assumed as a standard of measurement. 3. Same as *gene*. **alexinic u.**, the smallest quantity of alexinic serum required to dissolve a given amount of red blood-corpuscles in the presence of an excess of hemolytic serum. **amboceptor u.**, the least quantity of amboceptor with which a definite amount of red blood-corpuscles will be dissolved by an excess of complement. **Angström's u.**, a unit of length, being one-ten-thousandth of a micron: used in expressing wave lengths of light. **antigen u.**, the least quantity of antigen which will fix one unit of complement so as to prevent hemolysis. **antitoxic u.**, a unit for expressing the strength of an antitoxin. The unit of diphtheria antitoxin is approximately the amount of antitoxin which will preserve the life of a guinea-pig weighing 250 gm. for at least four days after it is injected subcutaneously with a mixture of 100 times the minimum fatal dose of diphtheria toxin and the antitoxin. Practically, it is the equivalent of a standard unit preserved in Washington. The unit of tetanus antitoxin is approximately ten times the amount of tetanus antitoxin which will preserve the life of a guinea-pig weighing 350 gm. for at least ninety-six hours after the injection of a mixture of 100 minimum lethal doses of tetanus toxin and the antitoxin. **Behnken's u.**, a unit of Roentgen ray dosage, being that quantity which, when applied to 1 c.c. of air at 18° C. and 760 mm. Hg. of pressure, engenders sufficient electric conductivity to equal one electrostatic unit, as measured by the saturation current. **British thermal u.**, the amount of heat necessary to raise 1 pound of water 1 degree Fahrenheit. It equals 3.06 large calories. It is abbreviated B. T. U. **u. of capacity**. See *farad*. **cat u.**, that amount of a drug calculated per kilogram of cat which is just sufficient to kill when slowly and continuously injected into the vein (Hatcher). **C. G. S. u.**, any unit in the centimeter-gram-second system. **complement u.**, the least quantity of complement which will hemolyze a definite amount of red blood-corpuscles in the presence of an amboceptor unit. **u. of current**. See *ampere*. **u. of electricity**. See *ampere, coulomb, farad, ohm, volt, and watt*. **electromagnetic u's**, that system of units which is based on the fundamental definition of a unit

- magnetic pole as one which will repel an exactly similar pole with a force of one dyne when the poles are 1 cm. apart. **u. of electromotive force.** See *volt*. **electrostatic u's**, that system of units which is based on the fundamental definition of a unit charge as one which will repel a similar charge with a force of one dyne when the two charges are 1 cm. apart. **u. of force.** See *dyne*. **Hampson u.**, a unit of Roentgen-ray dosage; it is one-quarter of the erythema dose. **u. of heat**, the quantity of heat required to raise a kilogram of water one degree centigrade. See *calorie* and *therm.* **hemolytic u.**, the amount of inactivated immune serum which, in the presence of complement, will completely hemolyze 1 c.c. of a 5 per cent. emulsion of washed red blood-corpuscles. **Holzknicht u.**, a unit of roentgen-ray dosage equal to $\frac{1}{4}$ the erythema dose. **immunizing u.** See *antitoxic u.* **Kienboeck u.**, a unit of roentgen-ray dosage equal to $\frac{1}{10}$ of the erythema dose. **make u.**, a unit of emanation, being that quantity which produces a current of saturation equal to one-ten-thousandth of the electrostatic unit of current intensity. **pepsin u.**, a unit for measuring the proportion of pepsin in the gastric juice. **physiologic u.** Same as *micelle*. **u. of quantity.** See *coulomb*. **quantum u.** See *Planck's constant*, under *constant*. **u. of resistance.** See *ohm*. **toxic u.**, **toxin u.**, the smallest dose of diphtheria toxin which will kill a guinea-pig weighing about 250 gm. in from three to four days. **uranium u.**, a unit for measuring radio-activity, the activity of uranium being considered as 1. **urotoxic u.**, the smallest quantity of urotoxin which will kill an animal weighing 1 gm.
- unitary** (u'nit-a-re) [L. *unitas* oneness]. Composed of or pertaining to a single unit.
- unitubercular** (u'nī-tu-ber'ku-lar). Having one tubercle or cusp; said of a tooth.
- univalence** (u-niv'al-ens). The state or condition of being univalent.
- univalent** (u-niv'al-ent) [L. *unus* one + *valēre* to be strong]. Having a valence of one; replacing or combining with one hydrogen atom.
- unmedullated** (un-med'ū-la-ted). Not possessing a medulla: said of a nerve-fiber.
- Unna's dermatosis, paste** (oon'ah) [Paul Unna, dermatologist in Hamburg, born 1850]. See under *dermatosis* and *paste*.
- unnerving** (un-ner'ving). The removal of the nerves, as those of a horse's foot, for navicular disease.
- unof.** An abbreviation for *unofficial*.
- unofficial** (un-of-fish'al) [L. *un* not + *official*]. Not authorized by the established dispensaries and formularies.
- unorganized** (un-or'gan-izd). Not having organs; not developed into an organic structure.
- unorientation** (un-o-re-en-ta'shun). Extreme disorder of memory in which the person loses the ideas of place and time.
- unphysiologic** (un-fiz-e-o-loj'ik). Not in harmony with the laws of physiology.
- unpigmented** (un-pig'men-ted). Having no pigment.
- unpolarized** (un-po'lar-izd). Not polarized.
- unrest, peristaltic** (un-rest'). A state of muscular spasm of the stomach.
- unsaturated** (un-sat'ū-ra-ted). Not saturated: said of—(1) a menstruum which has not dissolved as much of the solid as it is capable of doing; (2) a chem. compound all the affinities of which are not satisfied.
- Unschuld's sign** (oon'shouldz) [Paul Unschuld, German internist, born 1835]. See under *sign*.
- unsex** (un-seks'). To spay, or deprive of the ovaries.
- unstriated** (un-strī'a-ted). Having no striations or striae.
- unstriped** (un-strīpt'). Same as *unstriated*.
- ununitd** (un-u-ni'ted). Not united.
- Unverricht's disease** (oon'ter-ikts) [Heinrich Unverricht, German physician, 1853-1912]. See *myoclonus epilepsy*, under *epilepsy*.
- unwell** (un-wel'). 1. Sick, or not well. 2. Menstruating.
- upas** (u'pas) [Javanese]. The poisonous Javanese tree, *Antiaris toxicaria*: it affords a resin called *bohan upas*. **u. tieutē** (te-u'ta), a deadly Javanese poison from *Strychnos tieutē*: it contains strychnin. Dose of extract, $\frac{1}{4}$ - $\frac{1}{2}$ gr. (0.016-0.033 gm.).
- upgrade** (up-grād). To raise the grade of a head of cattle by introducing a higher strain of blood.
- upsiloid** (up'sil-oid) [Gr. *ὕψιλον* letter *u* + *εἶδος* form]. Shaped like the letter *U* or *U*.
- Ur., ur.** Abbreviation for *urine*.
- urachal** (u'rak-al). Pertaining to the urachus.
- urachovesical** (u'rak-o-ves'ik-al). Pertaining to the urachus and the bladder.
- urachus** (u'rak-us) [Gr. *ὀρχαχός*]. A cord which extends from the apex of the bladder to the navel. It represents the remains of the canal in the fetus which joins the bladder with the allantois.
- uracil** (u'ras-il). A urcid, dihydroxypyrimidin, $C_4H_4O_2N_2$, obtained from nucleic acid.
- uracrasia** (u-rak-ra'se-ah) [Gr. *οὔρον* urine + *ἀκρασία* bad mixture]. A disordered state of the urine.
- uracratia** (u-rak-ra'she-ah) [Gr. *οὔρον* urine + *ἀκρασία* debility]. Enuresis; inability to retain the urine.
- uræmia** (u-re'me-ah). See *uremia*.
- uragogue** (u'rag-og) [Gr. *οὔρον* urine + *ἀγογός* leading]. Increasing urinary secretion.
- ural, uralum** (u'ral, u-ra'le-um). Chloralurethane; a bitter, crystalline oil or powder, $CCl_3CH(OH)NHCO_2C_2H_5$, insoluble in cold water, but soluble in alcohol and ether. It is used as a hypnotic. Dose, 15-45 gr. (1-3 gm.).
- uraline** (u'ral-in). Same as *ural*.
- uramil** (u'ram-il). A crystalline body, $CO(NH_2)CH_2NH_2$, or dialuramid, obtainable from uric acid, alloxantin, and other substances.
- uramin** (u-rām'in). Guanidin; a poisonous base, $NH_2C(NH_2)_2$, derivable from guanin.
- uranalysis** (u-ran'al'is-is) [Gr. *οὔρον* urine + *ἄνάλυσις*]. The chem. analysis of urine. See *urinalysis*.
- uran-gallein** (u-ran-gal'e-in). A combination of gallein and uranium: used as a stain for elastic tissue.
- uranidin** (u-ran'id-in). Any one of a group of yellow animal pigments.
- uranin** (u'ran-in). Fluorescein-sodium: injected into the veins of a living person, it causes the mucous membranes to become yellow in a few minutes. Injected after death, a similar discoloration takes place, but only after the lapse of at least one hour.
- uraniscochasma** (u-ran'is-ko-kaz'mah) [Gr. *οὐρανίσκος* palate + *χάσμα* cleft]. Fissure of the palate.
- uranisconitis** (u-ran'is-ko-ni'tis) [Gr. *οὐρανίσκος* palate + *-ιτις* inflammation]. Inflammation of the palate.
- uraniscoplasty** (u-ran-is'ko-plas-te). Same as *uranoplasty*.
- uraniscorrhaphy** (u'ran-is-ko-ra-fe) [Gr. *οὐρανίσκος* palate + *ραφή* seam]. Suture of a cleft-palate. Same as *staphylorrhaphy*.
- uraniscus** (u-ran-is'kus) [Gr. *οὐρανίσκος*]. The palate; the roof of the mouth.
- uranism** (u'ran-izm). Same as *urnism*.
- uranist** (u'ran-ist). A sexual pervers; an urning.
- uranium** (u-ra'ne-um) [L. *Uranus* a planet]. A hard and heavy metallic element; symbol, U;

atomic weight, 238.2; specific gravity, 18.7. Some of its compounds are medicinal. Uranium salts give off radio-active emanations. By the disintegration of uranium there is formed a series of radio-elements: uranium α , ionium, radium, radium-emanation, radiums A, B, C, D, E, and F. Uranium is also the progenitor of another group of elements, actinium, radio-actinium, actinium-emanation, and actiniums A, B, and C. See *table of radio-active elements*, p. 928. **u. acetate**, a yellow salt, $C_2H_3O_2 \cdot UO_2 \cdot 2H_2O$: to be used in coryza, in a snuff or wash, with great caution. **u.-ammonium fluoride**, a pale-yellow, crystalline powder, $UO_2F_2 \cdot 4NH_4 \cdot H_2O$: used in skiagraphy. **u. nitrate**, a yellow, crystalline, astringent substance, $(NO_3)_2 \cdot UO_2 \cdot 6H_2O$, principally used for diabetes and in sprays for throat diseases. Dose, $\frac{3}{8}$ -1 gr. (0.011-0.066 gm.). **u. x**, a radio-active matter contained in uranium.

uranoblen (u-ra'-no-blén). A proprietary preparation of silver with uranin: used in the form of bougies (called *caviblen rods*) in the treatment of gonorrhea.

uranoplastic (u''ran-o-plas'tik). Pertaining to uranoplasty.

uranoplasty (u'ran-o-plas-te) [Gr. *οὐρανός* palate + *πλάσσειν* to mold]. The plastic surgery of the palate; any plastic operation for the cure of cleft-palate.

uranoplegia (u-ran-o-ple'-je-ah) [Gr. *οὐρανός* palate + *πληγή* stroke]. Paralysis of the soft palate.

uranorrhaphy (u-ran-or'-a-fe) [Gr. *οὐρανός* palate + *ράφω* seam]. The surgical closure of a cleft-palate, especially of the hard palate. See *staphylorrhaphy*.

uranoschisis (u-ran-os'kis-is) [Gr. *οὐρανός* palate + *σχίσμα* fissure]. Fissure of the palate; cleft palate.

uranoschism (u-ran'o-skizm) [Gr. *οὐρανός* palate + *σχίσμα* cleft]. Fissure of the palate.

uranostaphyloplasty (u''ran-o-staf'il-o-plas-te). A plastic operation for repairing a defect of both the soft and hard palates.

uranostaphylorrhaphy (u''ran-o-staf-il-or'-a-fe) [Gr. *οὐρανός* palate + *σταφυλή* uvula + *ράφω* suture]. Closure of fissure of the hard and soft palates.

Uranotænia (u''ran-o-te'ne-ah). A genus of tropical mosquitos.

uranyl (u'ra-nil). Uranium dioxide, UO_2 . **u. acetate**, a yellow crystalline compound: used in coryza. **u. nitrate**, a greenish-yellow crystalline compound: used in diabetes. Dose $\frac{3}{8}$ - $\frac{1}{4}$ gr. (0.01-0.015 gm.).

urari (oo-rah're). 1. Same as *curare*. 2. More correctly, the arrow-poison of the Macusi Indians of the Amazon Valley. It is similar to, but not identical with, the curare (q. v.) of Venezuela and Colombia.

urarine (u-ra'rin). See *curarin*.

urarize (u'rar-iz). To put under the influence of urari.

uraroma (u-rar-o'mah) [Gr. *οὐρον* urine + *ἄρωμα* spice]. The spicy odor of urine.

urarthrits (u-rar-thri'tis). Gouty arthritis.

urase (u'ras). Same as *urease*.

uraseptine (u-ras-ep'tin). A proprietary urinary antiseptic containing piperazin, urotropin, helmetol, and benzoates of sodium and lithium.

urasin (u-ras'in). An enzyme derivable from urea by the action of various bacteria.

urasol (u'ra-sol). Acetyl methylene disalicylic acid, $CH_2(CH_3 \cdot COO \cdot C_6H_4 \cdot COOH)_2$: used as a diuretic, a solvent for uric acid, and an antiseptic. Dose, 5-8 gr. (0.33-0.5 gm.).

urate (u'rat) [L. *u'ras*]. Any salt of uric acid. Urates, especially that of sodium, are constituents of the urine, the blood, and of tophi, or calcareous concretions.

uratemia, uratæmia (u-rat-e'me-ah) [*urate* +

Gr. *αἷμα* blood]. The presence of urates in the blood.

uratic (u-ra'tik). Pertaining to urates or to gout.

uratalysis (u-ra-tol'is-is). The decomposition or splitting up of urates.

uratalytic (u-ra-to-lit'ik) [*urate* + Gr. *λύσις* dissolution]. Having the power of dissolving urates.

uratoma (u-rat-o'mah) [*urate* + Gr. *ωμα* tumor]. A tophus, or concretion made up of urates.

uratosiis (u-rat-o'sis). The deposition of crystalline urates in the tissues.

uraturia (u-rat-u're-ah) [L. *u'ras* a urate + Gr. *οὐρον* urine]. The presence of an excess of urates in the urine; lithuria.

urazin, urazine (u'raz-in). 1. A crystalline basic substance, $CO < \begin{smallmatrix} NH-NH \\ | \quad | \end{smallmatrix} > CO$, of the tetrazin class, derivable from two molecules of urea. 2. Effervescent granules containing citro-salicylate of piperazine for use in gout as a uric acid eliminant.

urazole (u'raz-öl). A crystalline compound, $(NH \cdot CO)_2NH$, formed by heating urea with hydrazin sulphate.

urceiform (er-se'if-orm) [L. *urceus* pitcher + *forma* shape]. Pitcher shaped.

urceolate (er-se-o-lät). Urceiform.

urea (u-re'ah). A white, crystallizable substance, the diamid of carbonic acid, $CO(NH_2)_2$, from the urine, blood, and lymph. It is the chief nitrogenous constituent of the urine, and is the final product of the decomposition of proteins in the body, being the form under which the nitrogen of the body is given off. It is believed to be formed in the liver out of amino-acids and other compounds of ammonia. Urea has been prescribed as a remedy for night-sweats and as a uric-acid solvent and diuretic. Dose, 5-10 gr. (0.333-0.666 gm.). **u. enzyme, u. ferment**, an enzyme producing the alkaline fermentation of the urine. See *urease*. **malu u.** Same as *veronal*. **malonyl u.** See *barbituric acid*. **mesoxalyl u.** See *alloxan*. **u. quinate** and **u. salicylate** are used in gouty conditions. **u. quinin**. See *quinin hydrochloro-carbamid*. **u.-stibamine**. See under *stibamine*.

ureabromin (u-re-ah-bro'min). A combination of calcium bromid and urea, containing 36 per cent. of bromin: used like bromin salts and said to be free from the objectional effects of the latter upon the kidneys.

urea-concentration test. See under *tests*.

ureagenetic (u-re'ah-jen-et'ik) [*urea* + Gr. *γεννᾶν* to produce]. Forming or producing urea.

ureal (u're-al). Pertaining to urea.

ureameter (u-re-am'et-er) [*urea* + L. *me'trum* measure]. An instrument used in determining the amount of urea present in the urine.

ureametry (u-re-am'et-re). The measurement of the urea present in the urine.

urease (u're-äs). A ferment first extracted by Takeuchi from soy bean. It is also found in mucous urine passed during inflammation of the bladder. It is formed by various microorganisms, and is capable of causing the decomposition of urea into ammonium carbonate, and hippuric acid into benzoic acid and glycolic. Called also *urea ferment*. **u. test**. See under *tests*.

urecchysis (u-rek'is-is) [Gr. *οὐρον* urine + *ἐκχυσίς* a pouring out]. The effusion of urine into the cellular tissue.

Urechites suberecta (u-rek'it-ěz sub-e-rek'tah). Savannah flower; an apocynaceous plant of tropical America, with poisonous and antipretic leaves. Dose of fluidextract, 2-10 min. (0.13-0.66 c.c.).

urechitin (u-rek'it-in). A poisonous glucosid, $C_{28}H_{42}O_8 + xH_2O$, from *Urech'ites suberecta*.

urechitoxin (u-rek-it-oks'in). A poisonous glucosid, $C_{13}H_{20}O_5$, from *Urech'ites suberecta*.

urecidin (u-re-si'din). A granular preparation of lemon-juice and lithium citrate: used for gout and uricacidemia.

uredema, urødema (u-re-de'mah) [Gr. *οὐρον* urine + *οἰδῆμα* swelling]. A puffy condition of the tissues due to their infiltration with extravasated urine.

uredo (u-re'do), pl. *ured'ines* [L.]. 1. An itching or burning sensation of the skin. 2. Urticaria.

ureid (u're-id). A compound of urea and an acid or aldehyd formed by the elimination of water. Those from one molecule of urea, as alloxan, are monoureids; those derived from two, as uric acid, are diureids.

urein (u-re'in). A yellowish, oily substance isolated from the urine, and said to be the principal organic constituent and the true cause of uremia. It has a specific gravity of 1.27, and mixes freely with water and alcohol.

urelcosis (u-rel-ko'sis) [Gr. *οὐρον* urine + *ἔλκος* ulceration]. 1. Ulceration of the urinary passages. 2. An ulcer due to derangement of the urinary apparatus.

uremia, urømia (u-re'me-ah) [Gr. *οὐρον* urine + *αἷμα* blood]. The presence of urinary constituents in the blood, and the toxic condition produced thereby. It is marked by nausea, vomiting, headache, vertigo, dimness of vision, coma or convulsions, and a urinous odor of the breath and perspiration. It is due to suppression or deficient secretion of the urine from any cause. **puerperal u.**, uremic poisoning following childbirth.

uremic (u-re'mik). Caused by or pertaining to uremia.

uremide (u'rem-id). An erythematous eruption due to uremic poisoning.

uremigenic (u-re-mij-en'ik). Caused by or due to uremia.

ureol (u're-ol). A preparation of urotropin, sodium benzoate, and lithium benzoate: used as a urinary antiseptic and diuretic.

ureometer (u-re-om'et-er). Same as *ureameter*.

ureometry (u-re-om'et-re). Same as *ureametry*.

ureosecretory (u-re-o-se'kre-to-re). Pertaining to the secretion of urea.

urerythrin (u-rer'ith-rin). Same as *uro-erythrin*.

uresiæsthesia, uresiæsthesia (u-re-se-es-the'sis) [Gr. *οὐρησις* urination + *αἰσθησις* sensation]. The normal impulse to pass the urine.

uresin (u-re'sin). The double citrate of urotropin and lithium citrate; a white, crystalline powder, used as a solvent for stone.

uresis (u-re'sis) [Gr. *οὐρησις*]. The passage of urine; urination.

uret (u'ret). The chemic group CH_2NO .

-uret [L. *ure'tum*]. A termination denoting a binary compound of sulphur, carbon, etc., with some other element. Obsolete. See *-id*.

uretal (u're'tal). Pertaining to a ureter.

ureter (u-re'ter) [Gr. *οὐρητήρ* ureter]. The fibromuscular tube which conveys the urine from the kidney to the bladder. It begins with the pelvis of the kidney, a funnel-like dilatation, and empties into the base of the bladder, being from sixteen to eighteen inches long. **truant u.**, a ureter which opens into the external meatus of the urethra instead of at its normal place.

ureteral (u-re'ter-al). Pertaining to or used upon the ureter.

ureteralgia (u're-ter-al'je-ah) [Gr. *οὐρητήρ* ureter + *ἄλγος* pain]. Pain in the ureter; neuralgia of the ureter.

uretercystoscope (u-re-ter-sis'to-skōp) [Gr. *οὐρητήρ* ureter + *κύστις* bladder + *σκοπεῖν* to examine]. An electric cystoscope with a long groove in its wall in which lies a catheter, which is inserted into the ureter.

ureterectasia (u-re'ter-ek-ta'se-ah). Ureterectasis.

ureterectasis (u-re-ter-ek'tas-is) [Gr. *οὐρητήρ* ureter + *ἐκτασις* distention]. Distention of the ureter.

ureterectomy (u're-ter-ek'to-me) [Gr. *οὐρητήρ* ureter + *ἐκτομή* excision]. The surgical removal of a ureter.

ureteric (u-re-ter'ik). Same as *ureteral*.

ureteritis (u're-ter-i'tis) [Gr. *οὐρητήρ* ureter + *-itis* inflammation]. Inflammation of a ureter.

ureterocoele (u-re'ter-o-sēl) [Gr. *οὐρητήρ* ureter + *κῆλη* hernia]. 1. Cystic dilatation of the lower end of the ureter. 2. Hernia of the ureter; hernia containing a ureter.

ureterocervical (u-re'ter-o-ser'vik-al). Pertaining to a ureter and to the cervix uteri, as, a *ureterocervical fistula*.

ureterocolostomy (u-re'ter-o-ko-lo'sto-me) [Gr. *οὐρητήρ* ureter + *κῶλον* colon + *στόμα* mouth]. The operation of implanting the ureter into the colon.

ureterocystanastomosis (u-re'ter-o-sis-tan-as-to-mo'sis). Transplantation of the ureter into the bladder; ureteroneocystostomy.

ureterocystoneostomy (u-re'ter-o-sis'to-ne-os'to-me) [Gr. *οὐρητήρ* ureter + *κύστις* bladder + *νεός* new + *στόμα* mouth]. Same as *ureteroneocystostomy*.

ureterocystoscope (u-re'ter-o-sis'to-skōp). A cystoscope with an appliance for catheterizing the ureters.

ureterocystostomy (u-re'ter-o-sis-tos'to-me) [Gr. *οὐρητήρ* ureter + *κύστις* bladder + *στόμα* mouth]. The artificial formation of an opening from the ureter to the bladder.

ureterodialysis (u-re'ter-o-di-al'is-is) [Gr. *οὐρητήρ* ureter + *διάλυσις* separation]. Rupture of a ureter.

uretero-enteric (u-re'ter-o-en-ter'ik). Connecting the ureter and the intestine.

uretero-enterostomy (u-re'ter-o-en-ter-os'to-me) [Gr. *οὐρητήρ* ureter + *ἐντερον* bowel + *στόμα* mouth]. The artificial formation of a passage from a ureter to the intestine.

ureterography (u-re-ter-og'raf-e) [Gr. *οὐρητήρ* ureter + *γράφειν* to write]. Radiography of the ureter after injection of an opaque medium into the ureter.

uretero-intestinal (u-re'ter-o-in-tes'tin-al). Pertaining to the ureter and intestine.

ureterolith (u-re'ter-o-lith) [Gr. *οὐρητήρ* ureter + *λίθος* stone]. A calculus lodged or formed in a ureter.

ureterolithiasis (u-re'ter-o-lith-i'as-is). The formation of a calculus in the ureter.

ureterolithotomy (u-re'ter-o-lith-ot'o-me) [Gr. *οὐρητήρ* ureter + *λίθος* stone + *τομή* cut]. The removal of a calculus from the ureter by incision.

ureterolysis (u-re-ter-ol'is-is) [Gr. *οὐρητήρ* ureter + *λύσις* dissolution]. 1. Rupture of the ureter. 2. Paralysis of the ureter.

ureteroneocystostomy (u-re'ter-o-ne'o-sis-tos'to-me) [Gr. *οὐρητήρ* ureter + *νεός* new + *κύστις* bladder + *στόμα* mouth]. The surgical formation of a communication between the ureter and a new portion of the bladder.

ureteroneopyelostomy (u-re'ter-o-ne'o-pi-el-os'to-me) [Gr. *οὐρητήρ* ureter + *νεός* new + *πέλος* pelvis + *στόμα* mouth]. An operation for cutting out a stricture of the ureter and inserting the upper end of the lower segment of the ureter into a new aperture into the pelvis of the kidney.

ureteronephrectomy (u-re'ter-o-nef-ek'to-me) [Gr. *οὐρητήρ* ureter + *νεφρός* kidney + *ἐκτομή* excision]. Extirpation of a kidney and its ureter.

ureterophlegma (u-re'ter-o-fleg'mah) [Gr. *οὐρητήρ* ureter + *φλέγμα* phlegm]. The presence of mucus in the ureter.

ureteroplasty (u-re'ter-o-plas-te) [Gr. *οὐρητήρ* ureter + *πλάσσειν* to form]. Plastic operation upon the ureter for widening a stricture.

ureteroproctostomy (u-re'ter-o-prok-tos'to-me) [Gr. *οὐρητήρ* ureter + *πρωκτός* anus + *στόμα* mouth]. The operation of forming an artificial passage between the ureter and the anus.

ureteropyelitis (u-re'ter-o-pi-el-i'tis) [Gr. *οὐρητήρ* ureter + *πέλος* pelvis]. Inflammation of a ureter and of the pelvis of a kidney.

ureteropyelography (u-re'ter-o-pi-el-og'raf-e). Radiography of the ureter and pelvis of the kidney. See *pyelography*.

ureteropyeloneostomy (u-re'ter-o-pi'el-o-neos'to-me) [Gr. *οὐρητήρ* ureter + *πέλος* pelvis + *νέος* new + *στόμα* mouth]. The surgical formation of a new passage from the pelvis of a kidney to the ureter.

ureteropyelonephritis (u-re'ter-o-pi'el-o-nef-ri'tis) [Gr. *οὐρητήρ* ureter + *πέλος* pelvis + *νεφρός* kidney + *-itis* inflammation]. Inflammation of the ureters and the pelvis of the kidney.

ureteropyelostomy (u-re'ter-o-pi-el-os'to-me). Ureteropyeloneostomy.

ureteropyosis (u-re'ter-o-pi-o'sis) [Gr. *οὐρητήρ* ureter + *πύον* pus]. Suppurative inflammation of the ureter.

ureterorectoneostomy (u-re'ter-o-rek'to-neos'to-me) [Gr. *οὐρητήρ* ureter + *rectum* + Gr. *νέος* new + *στόμα* mouth]. Ureterorectostomy.

ureterorectostomy (u-re'ter-o-rek-tos'to-me) [Gr. *οὐρητήρ* ureter + *rectum* + Gr. *στόμα* mouth]. The operation of implanting the ureter into the rectum so that it opens there.

ureterorrhagia (u-re'ter-or-a'je-ah) [Gr. *οὐρητήρ* ureter + *ρῆγνύναι* to burst forth]. A discharge of blood from the ureter.

ureterorrhaphy (u're-ter-or'a-fe) [Gr. *οὐρητήρ* ureter + *ραφή* suture]. The operation of suturing the ureter or fistula.

ureterosalingostomy (u-re'ter-o-sal-ping-os'to-me). See *salpingo-ureterostomy*.

ureterosigmoidostomy (u-re'ter-o-sig-moi-dos'to-me). The operation of implanting the ureter into the sigmoid flexure.

ureterostegnosis (u-re'ter-o-steg-no'sis) [Gr. *οὐρητήρ* ureter + *στεγνώσις* contraction]. See *ureterostenosis*.

ureterostenoma (u-re'ter-o-sten-o'mah) [Gr. *οὐρητήρ* ureter + *στένωμα* stricture]. Stricture of the ureter.

ureterostenosis (u-re'ter-o-ste-no'sis) [Gr. *οὐρητήρ* ureter + *στένωσις* constriction]. Stricture of the ureter.

ureterostoma (u're-ter-os'to-mah) [Gr. *οὐρητήρ* ureter + *στόμα* mouth]. 1. The vesical orifice of the ureter. 2. A ureteral fistula.

ureterostomosis (u-re'ter-o-sto-mo'sis). Ureterostomy.

ureterostomy (u're-ter-os'to-me) [Gr. *οὐρητήρ* ureter + *στόμα* mouth]. The formation of a permanent fistula through which a ureter may discharge its contents.

ureterotomy (u're-ter-ot'o-me) [Gr. *οὐρητήρ* ureter + *τομή* cut]. The surgical incision of a ureter.

ureterotrigono-enterostomy (u-re'ter-o-trigo'no-en-ter-os'to-me) [ureter + *trigone* + *enterostomy*]. Implantation into the intestine of the ureter with the part of the bladder wall surrounding its termination.

ureterotrigonosigmoidostomy (u-re'ter-o-trigo'no-sig-moi-dos'to-me) [ureter + *trigone* + *sigmoidostomy*]. Implantation into the sigmoid flexure of the ureter with that part of the bladder wall which surrounds its termination.

uretero-ureteral (u-re'ter-o-u-re'ter-al). Connecting two parts of the ureter.

uretero-ureterostomy (u-re'ter-o-u're-ter-os'to-me) [Gr. *οὐρητήρ* ureter + *ureterostomy*]. The splicing of the ends of a divided ureter; the formation of a passage from one ureter to another.

uretero-uterine (u-re'ter-o-u'ter-in). Pertaining to a ureter and the uterus.

ureterovaginal (u-re'ter-o-vaj'in-al). Pertaining to a ureter and the vagina.

urethan (u're-than). 1. Ethyl carbamate, $C_2H_5O \cdot CO \cdot NH_2$: a crystalline hypnotic, antipyretic, and antispasmodic. It is soluble in water, alcohol, ether, and chloroform. Dose, 10-15 gr. (0.66-1 gm.). 2. Any ester of carbamic acid.

urethra (u-re'thrā) [Gr. *οὐρήθρα*]. A membranous canal conveying urine from the bladder to the surface, and in the male conveying the seminal ejaculations. The **male urethra** extends from the neck of the bladder to the urinary meatus, measures 8 or 9 inches in length, and presents a double curve when the penis is flaccid. It is divided into three portions—the *prostatic*, the *membranous*, and the *spongy*. The *prostatic portion* runs from the base to the apex of the prostate gland; it is the largest portion of the canal in diameter, and $1\frac{1}{4}$ inches long. In its floor is a ridge, the *verumontanum*, or *caput gallinaginis*. On each side is a fossa, its floor showing the many openings of the prostatic ducts, called the *prostatic sinuses*. The *sinus pularis* is a depression beneath the middle lobe of the prostate, and in this or on its edges open the ejaculatory ducts. The *membranous urethra* is the smallest in diameter of any portion of the canal. It runs from the apex of the prostate to the bulb of the corpus spongiosum, being included between the layers of the triangular ligament. It is $1\frac{1}{4}$ inches in length. The *spongy portion* (or *penile urethra*), about 6 inches long, runs from the membranous portion to the meatus. It has a dilatation posteriorly and one anteriorly—the *fossa navicularis*. The ducts of Cowper's glands empty into the bulb. The *lacuna magna* is a mucous crypt in the roof of the vesicular fossa. The *meatus* is the anterior urethral orifice; it is a vertical slit, and is the narrowest part of the urethra. The **female urethra** is $1\frac{1}{2}$ inches long; it runs above the anterior vaginal wall, and pierces the triangular ligaments, as in the male. Its structure is similar to that of the male urethra. **u. mulie'** [B N A], the female urethra. **u. viri'** [B N A], the male urethra.

urethral (u-re'thrāl). Pertaining to the urethra.

urethralgia (u-re-thral'je-ah) [Gr. *οὐρήθρα* urethra + *ἄλγος* pain]. Pain in the urethra.

urethroscope (u-re'thras-kōp). See *urethroscope*.

urethratresia (u-re'thrat-re'zhe-ah) [urethra + *atresia*]. Imperforation of the urethra.

urethrectomy (u-re-threk'to-me) [Gr. *οὐρήθρα* urethra + *ἐκτομή* excision]. The surgical removal of the urethra or a part of it.

urethremphraxis (u-re-threm-fraks'is) [Gr. *οὐρήθρα* urethra + *ἐμφοραξίς* obstruction]. Obstruction of the urethra.

urethreurynter (u-rēth-ru-rin'ter) [Gr. *οὐρήθρα* urethra + *εὐρύναι* to make wide]. An instrument for dilating the urethra.

urethrism (u're-thrizm) [L. *urethritis*]. Irritability or chronic spasm of the urethra.

urethritis (u-re-thri'tis) [Gr. *οὐρήθρα* urethra + *-itis* inflammation]. Inflammation of the urethra. **anterior u.**, inflammation affecting the urethra in front of the anterior layer of the triangular ligament. **gonorrhoeal u.**, gonorrhea. **gouty u.**, urethritis due to gout. **non-specific u.**, simple urethritis. **u. petrificans**, urethritis with the formation of calcareous matter in the urethral wall. **posterior u.**, inflammation affecting the membranous and prostatic parts of the urethra. **prophylactic u.**, a mild urethritis resembling gleet that sometimes follows and is caused by the prophylactic irrigations used to pre-

vent venereal infections. **simple u.**, inflammation not due to a specific infection. **specific u.**, that due to infection with the gonococcus. **u. venerea**, gonorrhea.

urethroblennorrhea (u-re''thro-blen-o-re'ah). A purulent discharge from the urethra.

urethrobulbar (u-re''thro-bul'bar). Pertaining to the urethra and the bulb of the corpus spongiosum.

urethrocele (u-re''thro-sēl) [Gr. *οὐρήθρα* urethra + *κήλη* tumor]. 1. Prolapse of the female urethra through the meatus urinarius. 2. A thickening of the cellular tissue that surrounds the female urethra. 3. A diverticulum of the urethral walls encroaching upon the vaginal canal.

urethrocystitis (u-re''thro-sis-ti'tis). Inflammation of the urethra and bladder together.

urethrograph (u-re''thro-graf) [Gr. *οὐρήθρα* urethra + *γράφειν* to write]. An instrument for recording graphically the caliber of the urethra.

urethrometer (u-re''throm-et-er) [Gr. *οὐρήθρα* urethra + *μέτρον* measure]. An instrument for measuring the urethra.

urethrogenile (u-re''thro-pe'nīl). Pertaining to the urethra and the penis.

urethroperineal (u-re''thro-per-in'e'al). Pertaining to the urethra and the perineum.

urethroperineoscrotal (u-re''thro-per-in'e-o-skrō'tal). Pertaining to the urethra, perineum, and scrotum.

urethrophraxis (u-re''thro-fraks'is) [Gr. *οὐρήθρα* urethra + *φράσσειν* to obstruct]. Obstruction of the urethra.

urethrophyma (u-re''thro-fī'mah) [Gr. *οὐρήθρα* urethra + *φύμα* growth]. A tumor or growth in the urethra.

urethroplasty (u-re''thro-plas'te) [Gr. *οὐρήθρα* urethra + *πλάσσειν* to form]. Plastic surgery of the urethra; operative repair of a wound or defect in the urethra.

urethroprostatic (u-reth''ro-pros-tat'ik). Pertaining to the urethra and prostate.

urethrorrectal (u-re''thro-rek'tal). Pertaining to the urethra and the rectum.

urethrorrhagia (u-re''thror-a'je-ah) [Gr. *οὐρήθρα* urethra + *ῥηγνύναι* to burst out]. A flow of blood from the urethra.

urethrorrhaphy (u-re''thror'a-fe) [Gr. *οὐρήθρα* urethra + *ῥαφή* seam]. Saturation of the urethra; the closing of a urethral fistula by suture.

urethrorrhea, **urethrorrhœa** (u-re''thro-re'ah) [Gr. *οὐρήθρα* urethra + *ῥοία* flow]. An abnormal discharge from the urethra.

urethroscope (u-re''thros-kōp) [Gr. *οὐρήθρα* urethra + *σκοπεῖν* to view]. An instrument for viewing the interior of the urethra.

urethroscopic (u-re''thro-skop'ik). Pertaining to the urethroscope.

urethroscopy (u-re''thros'ko-pe) [Gr. *οὐρήθρα* urethra + *σκοπεῖν* to view]. Visual inspection of the interior of the urethra.

urethrosperm (u-re''thro-spazm) [Gr. *οὐρήθρα* urethra + *σπασμός* spasm]. Spasm of the muscular tissue of the urethra.

urethrostaxis (u-re''thro-staks'is) [Gr. *οὐρήθρα* urethra + *στάξις* dropping]. Oozing of blood from the urethra.

urethrostenosis (u-re''thro-ste-no'sis) [Gr. *οὐρήθρα* urethra + *στενός* stricture]. Stricture, or stenosis, of the urethra.

urethrostomy (u-re''thros'to-me) [Gr. *οὐρήθρα* urethra + *στόμα* mouth]. The formation of a permanent fistula opening into the urethra in cases of incurable stricture.

urethrotome (u-re''thro-tōm) [Gr. *οὐρήθρα* urethra + *τέμνειν* to cut]. An instrument for cutting a urethral stricture. **Maisonneuve's u.**, a urethrotome in which the knife is concealed until it reaches the stricture, when it may be exposed.

urethrotomy (u-re''throt'o-me) [Gr. *οὐρήθρα* urethra + *τέμνειν* to cut]. A cutting operation for curing a stricture of the urethra. It may be performed either externally or internally. **External urethrotomy** consists in opening the urethra from the outside. **Symes' operation** is the cutting of a stricture on a fine staff which has passed through it. In **Wheelhouse's** external urethrotomy the stricture is found by a staff, the urethra is opened in front of the constriction by cutting on the sound, which rests against the stricture; a fine probe is now passed through the stricture, which is divided by cutting on the probe. **Cock's** operation opens the urethra without a guide behind the stricture. **Internal urethrotomy** may be performed in two ways, viz.: Incising from before backward, as with the instrument of Maisonneuve; incising from behind forward, as with the urethrotome of S. W. Gross.

urethrovaginal (u-re''thro-vaj'in-al). Of or pertaining to the urethra and vagina.

urethrovessical (u-re''thro-ves'ik-al). Pertaining to the urethra and the bladder.

urethylan (u-reth'il-an). Same as *methylurethan*.

uretic (u-ret'ik) [L. *ur'icus*; Gr. *οὐρητικός*]. 1. Pertaining to the urine. 2. Diuretic.

Urginea (ur-jin'e-ah) [L.]. A genus of liliaceous plants. *U. maritima* affords squills. See *Scilla*.

urgosan (ur'go-san). A proprietary preparation for gonorrhea and cystitis, containing gonosan and hexamethylenamin.

urhidrosis (u-rid-ro'sis). Uridrosis.

urian (u're-an). Same as *urochrome*.

uric (u'rik) [L. *ur'icus*]. Pertaining to the urine. **u. acid**. See *acid*.

uricacidemia, **uricacidæmia** (u'rik-as-id-e'me-ah) [*uric acid* + Gr. *αἷμα* blood]. The accumulation of uric acid in the blood. See *lithemia*.

uricaciduria (u'rik-as-id-u're-ah) [*uric acid* + Gr. *οὖρον* urine]. The presence of an excess of uric acid in the urine, and the morbid state produced thereby. See *lithemia*.

uricase (u'rik-ās). An enzyme found in certain of the lower animals, which changes uric acid into allantoin.

uricedin (u-ris-e'din). A diuretic preparation of potassium citrate and phosphate, sodium sulphate and chlorid, and lithium citrate. It is a yellowish, granular compound, soluble in hot water and slowly soluble in cold. It is used to lessen the formation of uric acid in the system. Dose, 7-15 gr. (0.5-1 gm.).

uricemia, **uricæmia** (u-ris-e'me-ah). Same as *uricacidemia*.

uricolysis (u-rik-ol'is-is). The splitting up of uric acid.

uricolytic (u-rik-o-lit'ik) [*uric acid* + Gr. *λύσις* dissolution]. Splitting up uric acid into urea; said of an enzyme. **u. index**. See under *index*.

uricometer (u-rik-om'et-er) [*uric acid* + Gr. *μέτρον* measure]. An instrument for measuring the amount of uric acid in the urine. **Ruhemann's u.**, one based on the principle that uric acid will absorb iodine.

uricoxydase (u-rik-ok'sid-ās). An enzyme which oxidizes uric acid.

uricisol (u-rik'sol). A proprietary uric-acid solvent.

uridin (u'rid-in). A pentoside from nucleic acid. On hydrolysis it yields uracil and ribose.

uridrosis (u-rid-ro'sis) [Gr. *οὖρον* urine + *ἰδρῶς* sweat]. The presence of urinous materials in the sweat, such as uric acid, urea, etc. **u. crystal-lina**, a form in which crystals of uric acid are deposited upon the skin.

uriesthesis, **uriæsthesis** (u-re-es'the-sis). Same as *uresiæsthesis*.

uriform (u'rif-orm). A proprietary urinary antiseptic.

urina (u-rī'nah). Latin for *urine*. **u. chy'li**. See *u. cibi*. **u. ci'bi**, "urine of food," the urine secreted after a full meal. **u. cruen'ta**, bloody urine. **u. galacto'des**, urine of a milky color. **u. hyster'ica**, "hysterical urine," urine passed after an attack of hysteria. It is watery and of a pale color. **u. jumento'sa**, cloudy urine. **u. po'tus**, "urine of drink," urine secreted after copious drinking. **u. san'guinis**, "urine of the blood," urine passed after a night's rest, and so not influenced by food or drink. **u. spas'tica**. Same as *u. hysterica*.

urinable (u-rin-ab-l). Capable of being excreted in the urine.

urinaccelerator (u'rīn-ak-sel'er-a-tor). The accelerator urinary muscle.

urinæmia (u-rin-e'me-ah). See *urinemia*.

urinal (u'rīn-al) [L. *urina'lis* urinary]. A vessel or other receptacle for urine.

urinalysis (u-rin-al'is-is) [L. *urina* urine + Gr. *lysis* separation]. The chemic analysis of urine.

urinary (u'rīn-a-re). Pertaining to the urine; containing or secreting urine. **u. sediment**. See under *sediment*.

urinaserum (u-rin-a-se'rum). Serum from an animal into which has been injected albuminous urine from another animal. The serum will precipitate albuminous urine and pleuritic exudates of an animal of the same species as that from which the injected material was taken. It is used as a test for albumin in the urine.

urate (u'rīn-āt). To void or discharge urine.

urination (u-rin-a'shun). The discharge or passage of the urine; micturition. **precipitant u.**, a sudden and strong desire to urinate. **stuttering u.**, an intermittent flow of urine, due to vesical spasm.

urivative (u-rin-a-tiv). Diuretic.

urine (u'rīn) [L. *uri'na*]. The fluid secreted by the kidneys, stored in the bladder, and discharged by the urethra. Urine, in health, has an amber color, a slight acid reaction, a peculiar odor, and a bitter, saline taste. The average quantity secreted in twenty-four hours in a man in health is about 3 pints, or from 1200 to 1600 c.c. Specific gravity, about 1.024, varying from 1.005 to 1.030. One thousand parts of healthy urine contain about 960 parts of water and 40 parts of solid matter, which consists chiefly of urea, 23 parts; sodium chlorid, 11 parts; phosphoric acid, 2.3 parts; sulphuric acid, 1.3 parts; uric acid, 0.5 part; also hippuric acid, leukomains, urobilin, and certain organic salts. The abnormal matters found in the urine in various conditions include acetone, albumin, albumose, bile, blood, cystin, glucose, hemoglobin, fat, pus, spermatozoa, epithelial cells, mucous casts, etc. **anemic u.**, the urine of anemic persons. **Bence-Jones u.**, See *albumosuria*. **black u.**, urine colored black by melanin; melanuria. **chylous u.**, urine of a milky color from the presence of chyle or fat; chyluria. **crude u.**, light-colored, watery urine, which deposits little sediment. **diabetic u.**, that which contains an excess of sugar. **dyspeptic u.**, the urine in dyspepsia, frequently containing calcium oxalate crystals. **febrile u.**, strong, odorous, high-colored urine, such as is secreted in fever. **gouty u.**, scanty, high-colored urine containing large quantities of uric acid. **hysterical u.**, watery, light-colored urine secreted in large quantity. **milky u.** See *chyluria*. **nebulous u.**, urine that is cloudy from the presence of earthy phosphates. **nervous u.** Same as *hysterical u.* **residual u.**, the urine that remains in the bladder after urination in disease of the bladder and hypertrophy of the prostate.

urinemia, urinæmia (u-rin-e'me-ah) [L. *uri'na* urine + Gr. *aima* blood]. Contamination of the blood, due to the non-excretion of urinary materials. See *uremia*.

urine-mucoid (u-rin-mu'koid). A mucin-like substance found in the urine.

urinaserum (u-rin-se'rum). Urinaserum.

uriniferous (u-rin-if'er-us) [L. *uri'na* urine + *fer're* to bear]. Transporting or conveying the urine. **u. tubules**. See *tubules* and *kidney*.

urinific (u-rin-if'ik). Uriniparous.

uriniparous (u-rin-ip'ar-us) [L. *uri'na* urine + *par're* to produce]. Producing or elaborating urine.

urinocryoscopy (u-rī'no-kri-os'ko-pe). Cryoscopy of the urine.

urinod (u'rīn-od) [*urine* + *odor*]. A neutral ill-smelling substance, C_6H_8O , derived from urine and believed to be the substance that gives its peculiar odor to urine.

urinogenital (u'rīn-o-jen'it-al). Same as *urogenital*.

urinogenous (u-rin-oj'en-us). Of urinary origin.

urinoglucosometer (u'rīn-o-glu'ko-som'et-er). An instrument for measuring the glucose in the urine.

urinologist (u-rin-ol'o-jist). An expert in urinology.

urinology (u-rin-ol'o-je). Same as *urology*.

urinoma (u-rin-o'mah) [*urine* + Gr. *oma* tumor]. A cyst containing urine.

urinometer (u-rin-om'et-er) [L. *uri'na* urine + *me'trum* measure]. An instrument for determining the specific gravity of the urine.

urinometry (u-rin-om'et-re). The ascertainment of the specific gravity of the urine.

urinosecopy (u-rin-os'ko-pe). Same as *uroscopy*.

urinose, urinous (u'rīn-ös, u'rīn-us). Pertaining to the urine; containing urine.

urinosexual (u'rīn-o-seks'u-al). Genito-urinary.

urinserum (u'rīn-se-rum). Urinaserum.

uriseptin (u-ris-ep'tin). A solution of lithium methanate, containing formaldehyd and lithia; used as a genito-urinary antiseptic and diuretic.

urisolvent (u-ris-ol'vent). Dissolving uric acid.

urisolvin (u-ris-ol'vin). A uric-acid solvent remedy composed of acid lithium citrate and urea. Dose, 3 gr. (0.2 gm.).

uritis (u-rī'tis) [L. *ure're* to burn]. Dermatitis calicularis.

uritone (u-rīt-ōn). Same as *urotropin*.

urning (oor'ning) [Ger.]. A sexual pervert who has sexual pleasure with persons of the same sex.

urnism (oor'nizm). Homosexuality; sexual aberration in which the sexual object is a person of one's own sex.

uro-acidimeter (u'ro-as-id-im'et-er). An instrument for measuring the acidity of the urine.

uro-ammoniac (u'ro-am-o'ne-ak). Containing uric acid and ammonia, as, *uro-ammoniac* calculus.

uro-azotometer (u'ro-az-o-tom'et-er) [*urine* + *azotometer*]. An apparatus for measuring the nitrogenous matter of the urine.

Urobacillus (u-ro-bas'il-us) [Gr. *οὖρον* urine + *bacillus*]. The generic name for any bacillus found in the urine or in decomposing urine. **U. freudenreichii**, a bacillus occurring in the air, in abscesses, and in decomposing urea. **U. liquefaciens**, a pathogenic bacillus of the urine. **U. liquefaciens septicus**, a member of the *Proteus* group found in the bladder.

urobilin (u-ro-bi'lin) [Gr. *οὖρον* urine + L. *bi'lis* bile]. An amorphous, brownish pigment, $C_{39}H_{40}N_2O_7$ (normal u.), found in healthy urine, in the urine of fevers (*febrile u.*), or in the dark-colored urine of certain other diseases (*pathologic u.*). It is sometimes found in the blood. It is a reduced form of bilirubin.

urobilinemia, urobilinæmia (u'ro-bi-lin-e'me-ah) [*urobilin* + Gr. *aima* blood]. The presence of urobilin in the blood.

Acid sodium urate crystals.

Acid calcium phosphate crystals.

Leucin-spheres and tyrosin-needles.

Crystals of triple phosphate (ammonium-magnesium phosphate).

Various forms of crystals of calcium oxalate.

Cholesterin-plates and fat-crystals (needles).

Various forms of uric-acid crystals.

Ammonium urate crystals.

urobilinicterus (u-ro-bil-in-ik'ter-us). A brownish coloration of the skin due to the deposit of urobilin in the tissues.

urobilinogen (u'ro-bi-lin'o-jen) [*urobilin* + Gr. *γεννᾶν* to produce]. A chromogen whose decomposition produces urobilin.

urobilinogenemia (u-ro-bil-in'o-jen-e'me-ah). Presence of urobilinogen in the blood.

urobilinogenuria (u-ro-bil-in'o-jen-u're-ah). Presence of urobilinogen in the urine.

urobilinoid (u-ro-bil'in-oid). Resembling urobilin.

urobilinoiden (u-ro-bil-in-oi'din). A reduction product of hematin, resembling urobilin, sometimes found in the urine.

urobilinuria (u'ro-bi-lin-u're-ah) [*urobilin* + Gr. *οὖρον* urine]. The presence of an excess of urobilin in the urine.

urocanin (u-ro-ka'nin) [Gr. *οὖρον* urine + L. *canis* dog]. A base, $C_{11}H_{10}N_4O$, derivable from urocaninic acid, $C_{12}H_{12}N_4O_4$, a crystalline substance sometimes occurring in the urine of dogs.

urocele (u'ro-sēl) [Gr. *οὖρον* urine + *κῆλη* tumor]. Distention of the scrotum with extravasated urine.

urocheras (u-rok'er-as) [Gr. *οὖρον* urine + *χέρας* gravel]. Same as *uropsammis*.

urochesia (u-ro-ke'ze-ah) [Gr. *οὖρον* urine + *χέειν* to defecate]. The discharge of urine through the anus.

urochrome (u'ro-krōm) [Gr. *οὖρον* urine + *χρῶμα* color]. A yellow, amorphous pigment of the urine, which gives the urine its yellow color.

urochromogen (u-ro-krō'mo-jen). A low oxidation product found in the urine, which on further oxidation becomes urochrome. **u. reaction.** See *Moritz-Weisz test*, under *test*.

urocinetic (u'ro-sin-et'ik). See *urokinetic*.

urocital (u'ro-sit'al). A white powder, theobromin and sodium citrate: used as a diuretic.

uroclepsia (u-ro-klep'se-ah) [Gr. *οὖρον* urine + *κλέπτειν* to steal]. The unconscious escape of urine.

urocol (u'ro-kol). A preparation of urea quinate and colchicin: used in gout.

urocrisia (u-ro-kriz'e-ah) [Gr. *οὖρον* urine + *κρίνειν* to judge]. Diagnosis by observing or examining the urine.

urocrisis (u-rok'ris-is) [Gr. *οὖρον* urine + *κρίσις* crisis]. A crisis marked by a free discharge of urine.

urocriterion (u'ro-kri-te're-on) [Gr. *οὖρον* urine + *κριτήριον* test]. A symptom observed in the inspection of the urine.

urocyanin (u-ro-si'an-in) [Gr. *οὖρον* urine + *κύανος* blue]. Same as *uroglauzin*.

urocyanogen (u'ro-si-an'o-jen) [Gr. *οὖρον* urine + *κύανος* blue + *γεννᾶν* to produce]. A blue pigment of the urine, especially of that of cholera patients.

urocyanosis (u'ro-si-an-o'sis) [Gr. *οὖρον* urine + *κύανος* blue]. Indicanuria.

urocyst (u'ro-sist) [Gr. *οὖρον* urine + *κύστις* bladder]. The urinary bladder.

urocystic (u-ro-sis'tik). Pertaining to the urinary bladder.

urocystis (u-ro-sis'tis) [L.]. Same as *urocyst*.

Urocys'tis trit'ici. A fungus which causes flag smut of wheat in Australia.

urocystitis (u'ro-sis-ti'tis) [Gr. *οὖρον* urine + *κύστις* bladder + *-ιτις* inflammation]. Inflammation of the urinary bladder.

urodialysis (u'ro-di-al'i-sis) [Gr. *οὖρον* urine + *διάλυσις* cessation]. Partial or complete suppression of the urine.

urodochium (u-ro-do'ke-um, u'ro-do-ki'um) [Gr. *οὖρον* urine + *δοχείον* holder]. A urinal.

urodonal (u-rod'o-nal). A proprietary mixture of sidonal, lysidin, and hexamethylenamin: a uric-acid solvent.

urodynia (u-ro-din'e-ah) [Gr. *οὖρον* urine + *δύσσειν* pain]. Pain in the discharge of urine.

uroedema (u-re-de'mah). See *uredema*.

uro-erythrin (u-ro-er'ith-rin) [Gr. *οὖρον* urine + *ἐρυθρός* red]. A dark-reddish coloring-matter found in the urine. It gives the red color seen in deposits of urates.

urofuschin (u-ro-fus'in). A pigment of the urine which is the precursor of hematoporphyrin.

urofuscohematin (u'ro-fus-ko-hem'at-in) [Gr. *οὖρον* urine + L. *fus'cus* tawny + *hematin*]. A reddish-brown pigment from the urine in certain diseases.

urogaster (u-ro-gas'ter) [Gr. *οὖρον* urine + *γαστήρ* stomach]. The urinary intestine; a part of the allantoic cavity of the embryo.

urogenin (u-ro'jen-in). A proprietary compound of theobromin, hippuric acid, and lithium: used as a diuretic.

urogenital (u-ro-jen'it-al). Pertaining to the urinary and genital apparatus.

urogenous (u-ro'jen-us) [Gr. *οὖρον* urine + *γεννᾶν* to produce]. Producing urine.

uroglauzin (u'ro-glaw'sin) [Gr. *οὖρον* urine + *γλαυκός* green]. Indigo-blue occurring in the urine. It is due to oxidation of a colorless chromogen in the urine, and is seen in conditions such as scarlet fever.

Uroglena (u-ro-gle'nah). A genus of free-swimming, flagellate protozoans, which sometimes impart a fishy odor to a water-supply.

urography (u-ro'graf-e). Radiography of any part of the urinary tract which has been rendered opaque by some opaque medium.

urogravimeter (u'ro-grav-im'et-er) [Gr. *οὖρον* urine + L. *gravis* heavy + *metrum* measure]. Same as *urinometer*.

urohematin (u-ro-hem'at-in) [Gr. *οὖρον* urine + *hematin*]. The coloring-matter or pigments of the urine: regarded as identical with hematin.

urohematonephrosis (u'ro-hem'at-o-nef-ro'sis) [Gr. *οὖρον* urine + *αἷμα* blood + *νεφρός* kidney]. Distention of the kidney with urine and blood.

urohematoporphyrin (u'ro-hem'at-o-por'fir-in). Hematoporphyrin derived from the urine.

urohypertensin (u-ro-hi-per-ten'sin). A mixture of bases obtained from the urine, which, when injected into the blood, produces a rise of arterial blood-pressure.

urokinetic (u'ro-kin-et'ik) [Gr. *οὖρον* urine + *κίνησις* movement]. Caused by a reflex from the urinary organs: said of a form of dyspepsia.

urol (u'rol). A compound, $C_7H_{12}O_8 \cdot 2CO(NH_2)_2$, or urea quinate: used as a diuretic and in gout.

urolagnia (u-ro-lag-ne-ah) [Gr. *οὖρον* urine + *λαγνεία* lust]. Sexual excitement produced by seeing urine or by watching a person urinating.

urolite, urolith (u'ro-lit, u'ro-lith) [Gr. *οὖρον* urine + *λίθος* stone]. A urinary calculus or stone.

urolithiasis (u'ro-lith-i'as-is) [Gr. *οὖρον* urine + *λίθιασις* lithiasis]. The formation of urinary calculi; also the diseased condition associated with the presence of urinary calculi.

urolithic (u-ro-lith'ik). Pertaining to urinary calculi.

urolithology (u'ro-lith-ol'o-je) [*urolith* + Gr. *λόγος* treatise]. The sum of knowledge regarding urinary calculi.

urolog (u'ro-log). A urologist.

urologic (u-ro-loj'ik). Pertaining to urology.

urologist (u-ro'l'o-jist). A physician who makes a specialty of urology and the urinary apparatus.

urology (u-ro'l'o-je) [Gr. *οὖρον* urine + *λόγος* treatise]. That department of medicine which has to do with the urine and the urinary tract. As now

used this term includes the genito-urinary tract, male and female.

urolutein (u-ro-lu'te-in) [Gr. οὔρον urine + *lutēus* yellow]. A yellow pigment of the urine.

uromancy (u'ro-man-se) [Gr. οὔρον urine + *μαντεία* a divination]. Prognostication or prognosis by the inspection of urine.

uromantia (u-ro-man'she-ah). Uromancy.

uromelanin (u-ro-mel'an-in) [Gr. οὔρον urine + μέλας black]. A black pigment, $C_{18}H_{15}N_7O_{10}$, sometimes found in urine. It results from the decomposition of urochrome.

uromelus (u-rom'el-us) [Gr. οὐρά tail + μέλος limb]. A monster-fetus with the legs fused and one foot.

urometer (u-rom'et-er) [Gr. οὔρον urine + μέτρον measure]. Same as *urinometer*.

uron (u'ron). A proprietary diuretic and genito-urinary antiseptic.

uronicus (u-rong'kus) [Gr. οὔρον urine + ὄγκος tumor]. A swelling containing urine.

Urone'ma cauda'tum. A species of ciliate found in the feces in a case of dysentery.

uronephrosis (u'ro-nef-ro'sis) [Gr. οὔρον urine + νεφρός kidney]. An abnormal distention of the pelvis and tubules of the kidney with urine.

uroneutrin (u-ro-nu'trin). A proprietary genito-urinary antiseptic for internal use.

urology (u-ro-nol'o-je). Same as *urology*.

urophanic (u-ro-fan'ik) [Gr. οὔρον urine + φαίνω to appear]. Appearing in the urine.

urophain, **urophaein** (u-ro-fe'in) [Gr. οὔρον urine + φαῖος gray]. An odoriferous gray pigment of the urine.

uropherin (u-rof'er-in) [Gr. οὔρον urine + φέρω to carry]. A white powder, theobromin and lithium benzoate, $C_7H_7N_4O_2Li + C_6H_5.COOLi$, soluble in 5 parts of water. It is used as a diuretic in nephritis, heart disease, etc. Dose, 15 gr. (1 gm.). **u. benzoate**, a white powder, a mixture of lithium benzoate and theobromin. It is used as a nerve-stimulant and diuretic. Dose, 15 gr. (1 gm.). **u. salicylate**, a compound of lithium salicylate and lithium theobromin, $C_7H_7N_4O_2Li + OH.C_6H_4.COOLi$. It is an effective diuretic and nerve stimulant.

urophosphometer (u'ro-fos-fom'et-er). An instrument for measuring the quantity of phosphorus in the urine.

urophthisis (u-rof'this-is) [Gr. οὔρον urine + φθίσις a wasting]. Diabetes mellitus.

uropittin (u-ro-pit'in) [Gr. οὔρον urine + πίττα pitch]. A resinous product, $C_9H_{10}N_2O_3$, of the decomposition of urochrome.

uropiania (u-ro-pla'ne-ah) [Gr. οὔρον urine + πλάνη wandering]. The presence of urine in, or its discharge from, organs not of the urogenital tract.

uropoiesis (u'ro-poi-e'sis) [Gr. οὔρον urine + ποιέω to make]. The secretion of the urine.

uropoietic (u'ro-poi-et'ik). Pertaining to or concerned in the secretion of the urine.

uropsammus (u-ro-sam'us) [Gr. οὔρον urine + ψάμμος sand]. Sediment or gravel in the urine.

uroptysis (u-rop'tis-is) [Gr. οὔρον urine + πύσις spitting]. The spitting or coughing up of urine.

uropurgol (u-ro-per'gol). See *helimol*.

uropurol (u-ro-pu'rol). A proprietary urinary antiseptic.

uropouretre (u'ro-pi'o-u-re'ter) [Gr. οὔρον urine + πόνος pus + οὐρητήρ ureter]. A collection of urine and pus in the ureter.

uro-reaction (u'ro-re-ak'shun). See *Malmajde's test*, under *tests*.

urorhythmography (u'ro-rith-mog'raf-e) [Gr. οὔρον urine + ρυθμός rhythm + γράφω to write]. Graphic registration of the ejaculation of the renal secretion from the ureter mouths.

urorosein (u-ro-ro'ze-in). Same as *urorhodin*.

uroroseinogen (u'ro-ro-se-in'o-jen). Same as *urorhodinogen*.

urorrhagia (u-ror-a'je-ah) [Gr. οὔρον urine + ῥηγνύω to burst forth]. An excessive flow of urine; diabetes.

urorrhæa, **urorrhæa** (u-ror-e'ah) [Gr. οὔρον urine + ῥοία flow]. An involuntary discharge of urine; enuresis.

urorhodin (u-ror-o'din) [Gr. οὔρον urine + ῥόδον rose]. A rose-colored pigment found in the urine after the ingestion of scatol and after adding strong HCl to the urine. It may be indol acetic acid.

urorhodinogen (u'ro-ro-din'o-jen) [*urorhodin* + Gr. γεννᾶν to produce]. A chromogen in the urine which, on decomposition, yields urorhodin.

urorubin (u-ro-ru'bin) [Gr. οὔρον urine + *L. ru'ber* red]. A red pigment derivable from the urine by the action of hydrochloric acid.

urorubrohematin (u'ro-ru-bro-hem'at-in) [Gr. οὔρον urine + *L. ru'ber* red + *hematin*]. A red pigment rarely found in the urine in certain constitutional diseases, as leprosy.

urosaccharometry (u'ro-sak-ar-om'et-re) [*urine* + *saccharometry*]. The measurement or estimation of sugar in the urine.

urosacin (u-ro'sa-sin). Same as *urorhodin*.

urosanol (u-ro-sa-nol). A preparation of protargol and gelatin: used in urethritis.

uroscheoele (u-ro'ske-o-sēl) [Gr. οὔρον urine + σχοινίον scrotum + κήλη tumor]. Same as *urocele*.

uroschesis (u-ro's'kes-is) [Gr. οὔρον urine + σχέσις holding]. Retention of the urine.

uroscopic (u-ro-skop'ik). Pertaining to uroscopy.

uroscopy (u-ro'sko-pe) [Gr. οὔρον urine + σκοπεῖν to view]. Diagnostic examination of the urine.

urosemiology (u'ro-se-mi-o'l'o-je) [Gr. οὔρον urine + *semiology*]. Diagnostic study of the urine.

urosepsin (u-ro-sep'sin) [Gr. οὔρον urine + σήψις decay]. An aseptic poison arising from urine in the tissues.

urosepsis (u-ro-sep'sis) [Gr. οὔρον urine + σήψις decay]. Septic poisoning from the absorption and decomposition of urinary substances in the tissues.

uroseptic (u-ro-sep'tik). Pertaining to or marked by urosepsis.

urosin (u-ro-sin). A proprietary uric-acid solvent in tablets, each containing quinic acid, 0.5 gm.; lithium citrate, 0.15 gm.; sugar, 0.3 gm.

urosis (u-ro'sis) [Gr. οὔρον urine]. Any disease of the urinary apparatus.

urospectrin (u-ro-spek'trin) [Gr. οὔρον urine + *spectrum*]. One of the pigments of normal urine; a substance obtainable from certain specimens of urine allied to hematoporphyrin.

urostealth (u-ro-ste'al-ith) [Gr. οὔρον urine + στέαρ fat + λίθος stone]. A fatty constituent of certain urinary calculi; a urinary calculus having fatty constituents.

urotheobromin (u'ro-the-o-bro'min). Same as *paraxanthin*.

urotoxia, **urotoxy** (u-ro-toks'e-ah, u'ro-toks-e) [Gr. οὔρον urine + τοξικόν poison]. 1. The toxicity of the urine; also the toxic substance of the urine (Bouchard). 2. The unit of the toxicity of the urine or a quantity sufficient to kill 1 kilogram of living substance.

urotoxic (u-ro-toks'ik) [Gr. οὔρον urine + τοξικόν poison]. Pertaining to the toxic materials of the urine. **u. coefficient**. See *coefficient*.

urotoxicity (u'ro-toks-is'it-e). The toxic quality of the urine.

urotoxin (u-ro-toks'in). The toxic or poisonous principle of the urine.

urotoxy (u'ro-toks-e). See *urotoxia*.

urotropin (u-ro't-ro-pin). Hexamethylenamin or hexamethylenetetramin, $(\text{CH}_2)_6\text{N}_4 = \text{C}_6\text{H}_{12}\text{N}_4$, a crystalline substance, soluble in water, slightly so in alcohol, and nearly insoluble in ether. It is diuretic and a solvent of uric acid; used as a diuretic in pyelitis and cystitis and to sterilize the urine in the body in typhoid fever. Dose, 7-30 gr. (0.5-2 gm.). When used in a concentration of more than 1 per cent. as an accelerator in vulcanizing rubber it causes a dermatitis among the workers.

uroureter (u-ro-u-re'ter) [Gr. *ōpov* urine + *ureter*]. Distention of the ureter with urine.

uroxanthin (u-ro-zan'thin) [Gr. *ōpov* urine + *ξανθός* yellow]. A yellow pigment of normal urine convertible into indigo blue.

uroxin (u-roks'in) [Gr. *ōpov* urine + *ὀξύς* sharp]. Same as *alloxanthin*.

urrhodin (u-ro'din). See *urorrhodin*.

ursal (ur'sal). A urea and salicylic acid compound: antirheumatic. Dose, 5-20 gr. (0.333-1.333 gm.).

ursin (ur'sin). Same as *arbutin*.

ursol (ur'sol). A dangerous hair dye containing paraphenylenediamin.

ursone (ur'son). A crystallizable principle, $\text{C}_{30}\text{H}_{52}\text{O}_8$, from *Arctostaphylos uva-ursi* and other ericaceous plants.

Urtica (er-ti'kah) [L.]. A genus of plants, including the true or typical nettles; plants covered with stinging hairs and secreting a poisonous fluid. **U. dioica**, a stinging nettle of temperate regions having stimulant, diuretic, and hemostatic properties; also its homeopathic preparation.

urtica (er-ti'kah) [L., a "nettle"]. A wheal or pomphus.

urticant (er'tik-ant). Causing an itching or stinging sensation.

urticaria (er-tik-a're-ah) [L.]. Nettle-rash, or hives; a skin disease characterized by the sudden appearance of smooth, slightly elevated patches, which are usually whiter than the surrounding skin and attended by severe itching. The eruption rarely lasts longer than two days. It may, however, exist in a chronic form. The disorder often arises from irritation of the gastro-intestinal, pulmonary, or urinary mucous membrane. The ingestion of certain foods, such as shell-fish, is apt to produce it. Menstruation or mental emotion may also be a cause. **u. bullo'sa**, **u. vesiculo'sa**, an eruption of transient bullae or vesicles. **u. confer'ta**, a form in which the lesions occur in groups. **u. endem'ica**, a variety caused by certain species of caterpillar, and occurring as an endemic. **epidemic u.**, a severe form ascribed to caterpillar poisoning. **u. facti'tia**. Same as *autographism*. **u. gigan'tea**, urticaria marked by large, soft swellings, chiefly about the face and eyes; angioneurotic edema. Called also *giant u.* and *u. œdematosa*. **u. hæmorrhagi'ca**. Same as *purpura urticans*. **u. maculo'sa**, a form in which the wheals retain their red color. **u. mariti'ma**, a form due to salt-water bathing. **u. medicamento'sa**, a form due to the use of certain drugs. **u. œdemato'sa**, a form marked by a suddenly appearing edematous swelling of the skin and subcutaneous tissue of very large area. Called also *giant u.* **u. papulo'sa**, urticaria with a papulous eruption, leaving a solid papule after the eruption has disappeared. It chiefly affects children. Called also *lichen urticatus*. **u. per'stans**, a form in which the wheals remain. **u. pigmento'sa**, a form which leaves the skin marked with permanent pigmented stains. It occurs in early infant life, and is a very rare disease. **u. sola'ris**, urticaria produced by exposure to sunlight. **u. subcuta'nea**, a form with swellings, due to subcutaneous edema. **u. tubero'sa**, angioneurotic edema. **u. vesiculo'sa**, a kind characterized by an eruption of blisters and vesicles.

urticarial (er-tik-a're-al). Same as *urticarius*.

urticarius (er-tik-a're-us). Pertaining to or of the nature of urticaria.

urticate (er'tik-ät). 1. Marked by the presence of wheals. 2. To perform urtication.

urtication (er-tik-a'shun) [L. *ur'tica* a nettle]. 1. The flogging of a part with green nettles for their revulsive or stimulant effect. 2. A burning sensation as of stinging with nettles.

urystamin (u-ris'tam-in). Urotropin lithium benzoate: a uric-acid solvent.

usane (u'sän). A local anesthetic for use in dentistry.

Usnea barbata (us'ne-ah bar-ba'tah). A large lichen growing on forest trees; also its homeopathic preparation.

U. S. P., U. S. Phar. Abbreviations for *United States Pharmacopœia*.

ustilagin (us-til'aj-in). A bitter crystalline alkaloid from ustilago.

Ustilago (us-til-a'go) [L.]. A genus of mold-like fungi of the order Basidiomycetes, called smuts, parasitic on other plants. **U. hypody'tes** is thought by some to cause friente. **U. may'dis**, the smut of maize, is used like ergot. Dose of fluidextract, 15-60 min. (1-4 c.c.).

ustion (us'tshun) [L. *us'tio*]. Burning with the actual cautery.

ustulation (us-tu-la'shun) [L. *ustula're* to scorch]. The drying of a moist drug by heat.

ustus (us'tus). Latin for *burnt* or *calcined*.

usustatus (u-su'sta-tus) [L. *usus* used + *status* position]. The ordinary erect or standing posture usual to an animal.

uta (oo'tah). A skin disease occurring in Peru. It resembles lupus, and is caused by a species of *Leishmania*. **u. hembra**, dermal leishmaniasis of the ulcerative type. **u. macho**, dermal leishmaniasis of the tubercle type.

Ut. dict. Abbreviation for *L. ut dictum*, as directed.

Utend. Abbreviation for *L. utendus*, to be used.

uteralgia (u-ter-al'je-ah) [L. *uterus* womb + Gr. *άλγος* pain]. Pain in the uterus; metralgia.

uteramin (u-ter-am'in). Same as *systogene*.

uterectomy (u-ter-ek'to-me). Same as *hysterec-tomy*.

uterin (u'ter-in). Bell's name for a supposed substance secreted by the uterus, and which, when excreted in excess, causes menstruation.

uterine (u'ter-in) [L. *uteri'nus*]. Of or pertaining to the uterus.

uterismus (u-ter-iz'mus). Uterine pain.

uteritis (u-ter-i'tis). Inflammation of the womb; metritis.

utero-abdominal (u'ter-o-ab-dom'in-al). Pertaining to the uterus and the abdomen.

uterocele (u'ter-o-sel) [uterus + Gr. *κήλη* hernia]. Presence of the uterus in a hernial sac.

utero-cervical (u'ter-o-ser'vik-al). Pertaining to the uterus and the cervix uteri.

uterocystostomy (u'ter-o-sis-tos'to-me) [uterus + Gr. *κύστις*, bladder + *στόμα* mouth]. The operation of forming an anastomosis between the uterine cervix and the bladder.

uterofixation (u'ter-o-fiks-a'shun). Same as *hysteropexy*.

uterogestation (u'tter-o-jes-ta'shun) [L. *uterus* womb + *gesta'tio* a carrying]. 1. Uterine pregnancy; any pregnancy which is not extra-uterine. 2. The full period or time of normal pregnancy.

uterol (u'ter-ol). A preparation of black haw, hydrastis, aletris, etc.: used as a sedative and antispasmodic in uterine disorders.

uterolith (u'ter-ol-lith) [L. *uterus* + Gr. *λίθος* stone]. A uterine calculus.

uterologist (u-ter-ol'o-jist). One who practices both gynecology and obstetrics.

uterology (u-ter-ol'-o-je) [L. *uterus* + Gr. *λόγος* treatise]. Gynecology and obstetrics combined.

uteromania (u'ter-o-ma'ne-ah). Same as *nymphomania*.

uterometer (u-ter-om'-et-er). An instrument for measuring the uterus.

utero-ovarian (u'ter-o-o-va're-an). Pertaining to the uterus and ovary.

uteroparietal (u'ter-o-par-i-et'al). Pertaining to the uterus and the abdominal wall.

uteropelvic (u'ter-o-pel'vik). Pertaining to the uterus and the pelvic ligaments.

uteropexy (u'ter-o-peks-e). Same as *hysteropexy*.

uteroplacental (u'ter-o-plas-en'tal). Pertaining to the uterus and the placenta.

uteroplasty (u'ter-o-plas-te). Any plastic operation on the uterus.

uterosacral (u'ter-o-sa'kral). Pertaining to the uterus and the sacrum.

uterosclerosis (u'ter-o-skle-ro'sis). Sclerosis of the uterus.

uteroscope (u'ter-o-sköp) [*uterus* + Gr. *σκοπεῖν* to view]. An instrument for viewing the interior of the uterus.

uterotome (u'ter-o-töm). Same as *hysterotome*.

uterotomy (u-ter-ot'-o-me). Same as *hysterotomy*.

uterotonic (u-ter-o-ton'ik). Giving muscular tone to the uterus.

uterotractor (u'ter-o-trak'tor). A kind of traction-forceps with thick lateral projections on the back of its jaws. It is inserted into the cavity of the uterus and opened, serving to draw the organ down in operation for hysterectomy.

uterotubal (u'ter-o-tu'bal). Pertaining to the uterus and the oviducts.

uterovaginal (u'ter-o-va'in'al). Pertaining to the uterus and the vagina.

uteroventral (u'ter-o-ven'tral). Pertaining to the uterus and the cavity of the abdomen.

uterovesical (u'ter-o-ves'ik-al). Pertaining to the uterus and the bladder.

uterus (u'ter-us) [L. "womb"]. The womb; a hollow muscular organ, the abode and place of nourishment of the embryo and fetus. It is a pear-shaped structure, about 3 inches in length, consisting of a broad, flattened part (*body*) above and a narrow, cylindric part (*cervix*) below. Its cavity opens into the vagina below, and into the fallopian tubes on either side above. It is held in place by a broad ligament, a transverse fold of peritoneum which incloses it on either side, and by various ligaments, such as the round ligaments, the recto-uterine ligaments, and the vesico-uterine ligaments. It is made up of a peritoneal coat, a middle layer of unstriated muscular fibers which constitutes most of its thickness, and a mucous coat, which contains numerous mucous follicles or uterine (utricular) glands, and is lined by ciliated epithelium. The glands of the cervix are known as the nabothian glands. **u. acollis**, a uterus in which the vaginal portion is absent. **u. arcuatus**, a uterus with a depressed fundus. **u. bicameratus vetularum**, a uterus in which both the external and internal os are closed, and a catarrhal discharge accumulates in the body and in the cervix, giving the organ a peculiar double swelling. **u. bicornis**, one with two horns. **u. biforis**, one in which the external os is divided by a septum. **u. bilocularis**, one the cavity of which is divided into two parts by a partition. **u. bipartitus**. Same as *u. bilocularis*. **u. cordiformis**, a heart-shaped uterus. **u. didelphys**, either of two distinct uteri occurring side by side in the same individual. **duplex u.**, a double uterus; normal in marsupial mammals, and rarely seen in the human subject. **gravid u.**, the pregnant uterus. **u. incudiformis**, a uterus bicornis which is broad between the two horns.

irritable u., one affected with neuralgia or hysteralgia. **u. masculinus**, the sinus pularis in the male urethra. **u. parvicollis**, a uterus in which the cervical portion is very small.

Piscacek u., pregnancy in one cornu of the uterus. **u. septus**. Same as *u. bilocularis*. **u. unicornis**, one with only one cornu, one lateral half being undeveloped or imperfectly developed.

utricle (u'trik-l) [L. *utriculus*, dim. of *uter* a little bag]. 1. The larger of the two sacs of the membranous labyrinth of the ear. Called also *utriculus vestibuli* and *sacculus communis*. 2. The sinus pularis. **prostatic u.**, the remains of the müllerian duct in the male. It is inclosed between the prostate and pelvic connective tissue and opens into the urethra. **urethral u.**, prostatic utricle.

utricular (u'trik-u-lar). 1. Pertaining to a utricle. 2. Resembling a bladder.

utriculitis (u'trik-u-li'tis). Inflammation of the sinus pularis.

utriculoplasty (u'trik-u-lo-plas-te). The operation of excising a wedge-shaped piece of the whole thickness of the uterine wall, the two halves remaining being then sutured together so as to form a miniature uterus or "utriculus."

utriculosaccular (u'trik-u-lo-sak'u-lar). Pertaining to the utricle and saccule of the labyrinth.

utriculus (u'trik-u-lus). Latin for *utricle*. **u. masculinus**, **u. prostaticus**. Same as *sinus pularis*.

utriform (u'trif-orm). Having the shape of a bottle.

utropin (u'tro-pin). Same as *urotropin*.

uva (u'vah), pl. *uvæ* [L. "grape"]. The raisin; the dried fruit of *Vitis vinifera*, grape-vine.

u. pasæ, dried grapes or raisins. **u. pasæ minores**, commercial currants; a variety of small raisins. **u. ursi** [L. "bear's grapes"], the leaves of *Arctostaphylos uva-ursi*, or bearberry, a trailing ericaceous shrub. The leaves contain the glucosid *arbutin*, and are tonic, astringent, diuretic, and anthelmintic. It is used in cystitis, strangury, irritation of the bladder, and pyelitis. Dose, $\frac{1}{4}$ -1 dr. (0.97-4 gm.); of extract, 5-15 gr. (0.333-1 gm.); of fluidextract, 10-60 min. (0.666-4 c.c.).

uvæformis (u'væ-for'mis) [L.]. The middle layer of the choroid coat.

uvea (u've-ah) [L.]. 1. Formerly the posterior surface of the iris. 2. In present use, the iris, ciliary body, and choroid considered together, and forming the pigmentary layer of the eye.

uveal (u've-al). Pertaining to the uvea. **u. tract**, the uvea.

uveitic (u-ve-it'ik). Pertaining to or of the nature of uveitis.

uveitis (u-ve-i'tis) [*uvea* + Gr. *-itis* inflammation]. Inflammation of the uvea. **anterior u.**, keratitis involving the front part of the uvea.

uveoparotid fever (u'væ-o-par-ot'id). See under *fever*.

uveoplasty (u've-o-plas-te). Plastic operation of the uvea.

uviform (u'vi-form) [L. *uva* grape + *forma* form]. Having the form of a grape.

uvioi (u've-ol). A lamp for supplying ultraviolet rays for therapeutic purposes.

uvioize (u've-ol-iz). To subject to the action of ultraviolet rays.

uvula (u'vu-lah) [L. "little grape"]. 1. The pendulum of the palate; a small, fleshy mass hanging from the soft palate above the root of the tongue, and composed of the levator and tensor palati and azygos uvulæ muscles, connective tissue, and mucous membrane. 2. The uvula cerebelli. **bifid u.**, a split uvula. **u. cerebelli**, the intertonsillar lobe of the cerebellum. **Lieutaud's u.**, a longitudinal ridge on the trigon of the bladder.

u. palati'na [B N A]. See *uvula* (1st def.). **u. ver'mis** [B N A], *uvula cerebelli*. **u. ves'icæ** [B N A], a small eminence at the apex of the trigone of the bladder, projecting into the orifice of the urethra.
uvulaptosis (u'vu-lap-to'sis). See *uvuloptosis*.
uvular (u'vu-lar). Pertaining to the uvula.
uvularis (u-u-la'ris). The azygos *uvulæ* muscle.
uvulatome (u'vu-lat-ōm). See *uvulotome*.
uvulotomy (u-vu-lat'o-me). Uvulotomy.
uvulitis (u-vu-li'tis). Inflammation of the uvula.

uvuloptosis (u'vu-lop-to'sis) [*uvula* + Gr. *πτῶσις* falling]. Falling of the palate: a relaxed and pendulous condition of the palate; staphyloptosis.
uvulotome (u'vu-lo-tōm) [*uvula* + Gr. *τέμνω* to cut]. An instrument for cutting off the uvula.
uvulotomy (u-vu-lot'o-me). The operation of cutting off the uvula or a part of it.
uzara (u-zah'rah). The root of an African plant: used by the natives in diarrhea and dysentery.
uzaron (u'zar-on). A proprietary purified extract of uzara.

V

V. An abbreviation for *vision* or *visual acuity*; also the symbol for *vanadium*.

v. Abbreviation for *voll*.

Va. Abbreviation for *visual acuteness*.

vaccigenous (vak-sij'en-us) [*vaccine* + Gr. *γενῶν* to produce]. Producing vaccine.

vaccin (vak'sin). Same as *vaccine*.

vaccina (vak-si'nah). See *vaccinia*.

vaccinable (vak-sin'a-bl). Susceptible of being successfully vaccinated.

vaccinal (vak'sin-al) [L. *vaccīnus*]. 1. Pertaining to *vaccinia* or to vaccination. 2. Having protective qualities when used by way of inoculation.
v. fever, the slight fever that often occurs after vaccination.

vaccinate (vak'sin-āt). 1. To inoculate with vaccine virus. 2. To inoculate with any virus so as to procure immunity against any disease.

vaccination (vak-sin-a'shun) [L. *vacca* cow]. 1. The act or process of vaccinating; protective inoculation against small-pox by inoculation with vaccinal virus. It is performed by placing lymph from the *vaccinia* vesicles of a cow or of a man upon the denuded or scarified skin. In a few days a small papule appears at the site of inoculation, followed in a few more days by a vesicle. After about eight days the vesicle becomes pustular and surrounded by a red, inflammatory area. About two weeks after inoculation a scab is formed, which, falling off, leaves a pitted, permanent scar. Sometimes the progress of the inoculation is attended with slight constitutional symptoms, and occasionally a general symptom (*vaccine rash*) is developed. 2. The application of a bacterial vaccine. It may be a *cutaneous v.*, in which case the bacterial culture is vigorously rubbed into the epilated skin; a *transcutaneous v.*, in which case the culture is vigorously rubbed into the epilated and scarified skin; or it may be a *subcutaneous v.*, in which the culture is injected under the skin.
animal v. See *bovine v.* **anthracic v.**, inoculation of an animal with attenuated cultures of the anthrax bacillus. **antirabic v.**, protective inoculation with antirabic vaccine. **antityphoid v.**, protective inoculation with typhoid vaccine. **arm-to-arm v.**, inoculation of a person's arm with vaccine taken from the arm of another. **bacterial v.**, inoculation with a bacterial vaccine. **bovine v.**, vaccination with lymph obtained from the calf. **compulsory v.**, vaccination required by law. **intra-uterine v.**, immunity to variola transmitted to the fetus by the mother who has been vaccinated during pregnancy. **Ponndorf's v.**, immunization by making scarifications in the skin of the arm, stopping just short of the capillary layer. Then a concentrated solution of tuberculin is dropped into the malpighian layer of the skin opened up by the scratches. **stock v.**, vaccination with stock cultures of the type of germ concerned in the infection being

treated. **toxin-antitoxin v.** See *toxin-antitoxin*.

vaccinationist (vak-sin-a'shun-ist). One who defends the practice of vaccination.

vaccinator (vak'sin-a-tor). 1. One who vaccinates. 2. An instrument for use in vaccination.

vaccine (vak'sēn) [L. *vaccīnus*]. 1. Pertaining to the cow. 2. Vaccinal. 3. Lymph, scab, or any substance containing the virus of cow-pox; lymph taken from a vesicle of cow-pox and used in inoculating that disease. 4. Any material for preventive inoculation; particularly a preparation of a bacillus or its toxins which, on introduction into the body, produces active immunization by the formation of antibodies. See *bacterial v.* **acne v.**, a vaccine prepared from acne bacilli: used in mild forms of acne. **anthrax v.**, anthrax cultures attenuated by growing them at 42° C. for varying lengths of time and injected into horses, cattle, sheep, and goats to protect them against anthrax. It is a triple vaccine: No. 1 is the weakest and is given first; Nos. 2 and 3 are progressively stronger and are given at intervals of twelve days apart. **antirabic v.**, an emulsion of the spinal cords of rabbits that have died as a result of the subdural injection of fixed rabies virus: used for the preventive treatment of rabies. **antityphoid v.** See *typhoid v.* **aqueous v.**, a vaccine in which the vehicle is physiologic salt solution. **autogenous v.**, a vaccine prepared from bacteria which have been freshly isolated from the lesion of the patient who is to be treated with it. **autosenitized v.**, a vaccine sensitized by the patient's own serum. **bacterial v.**, a standardized suspension of bacteria in physiologic salt solution or in oil which is injected to increase the active immunity of the patient to that organism or organisms. Called also *bacterin*. **Bandi and Terni's v.** See *Terni and Bandi's v.* **Besredka's v.** Same as *sensitized v.* **blackleg v.**, fresh muscle tissue from a blackleg tumor, ground, dried, and attenuated by heat. It is injected into cattle to protect them from blackleg. **bovine v.**, vaccine derived from the cow. **Calmette's v.**, a vaccine designed to prevent the development of tuberculosis in infants born of tuberculous parents. It is prepared from an extremely virulent strain of bovine tuberculosis which by prolonged cultivation has been deprived of its power of initiating tuberculosis. **Caronia's v.**, a vaccine for prophylaxis in scarlet fever. **Castellani's v's.** See *pentavaccine* and *tetravaccine*. **Chantemesse's v.**, a monovalent antityphoid vaccine. **cholera v.**, a bacterial vaccine prepared in various ways from cultures of the *Vibrio cholerae* and used as a prophylactic. **Claypool and Gay's v.** See *Gay and Claypool's v.* **corresponding v.**, a vaccine prepared from bacteria of the species causing the disease, but not from the patient himself. **cowpox v.** See *vaccine virus*, under *virus*. **Danysz's v.**, a polyvalent vaccine of all the organisms growing in the intestines: used as an

anti-anaphylactic in asthma and certain skin and gastro-intestinal diseases. **defatted v.** See *Dreyer's v.* **defatted tubercle v.** See *Dreyer's v.* **Dessy's v.**, a vaccine for typhoid fever composed of over forty strains of *Bacterium typhosum* grown for forty-eight hours on alkaline agar and emulsified in normal saline solution. **detoxicated v.**, a vaccine whose toxic properties have been removed; the non-toxic fraction of a vaccine. **Dreyer's v.**, a vaccine for tuberculosis prepared by treating tubercle germs with formaldehyd and then extracting them with acetone. This removes lipid material to such an extent that the germs become non-acid-fast, Gram-negative, and more readily absorbable. Called also *defatted v.*, *diaplyte* or *Dreyer's antigen*, *tuberculin*, or *vaccine*. **Dreyer's tubercle v.** Same as *Dreyer's vaccine*. **Friedländer's v.**, one prepared from the Friedländer bacillus: it is used in chronic nasal catarrh and chronic gleet. **Gay and Claypool's v.**, a mixed polyvalent typhoid vaccine, sensitized by an antityphoid serum, killed and precipitated by alcohol and extracted with carbolated saline solution to remove endotoxins. The dried residue is used as a typhoid prophylactic in doses of 0.1 mg. **Gilman-Coca v.**, a cancer vaccine consisting of an emulsion of the living tumor cells of the patient removed at operation. **glycerinated v.**, vaccine material purified by treatment with glycerin. **gonococcus v.**, a bacterial vaccine made from cultures of *Neisseria gonorrhæa* and used in the treatment of gonorrhea. **Haffkine's v.** 1. Old sterile bouillon cultures of *Pasteurella pestis* injected to prevent plague. 2. Live attenuated cultures of *Vibrio cholerae* injected to prevent Asiatic cholera. **heterogenous v.**, one prepared from material taken from some other individual than the one who is to be inoculated with it. **homologous v.** Same as *autogenous v.* **humanized v.**, vaccine obtained from vaccinia vesicles in man. **hydrophobia v.**, rabies vaccine. **jennerian v.** Same as *vaccine virus*. **killed v.** See under *bacterial v.* **Kolle's cholera v.**, a bacterial vaccine consisting of killed cultures of the cholera vibrio and used as a prophylactic. **Kolle's plague v.**, sterile suspensions of *Pasteurella pestis*. The germs are grown on agar and killed by heating to 70° C. for one hour. **Kolle and Strong's v.**, consists of living cultures of *Pasteurella pestis* of greatly reduced virulence. **lipodysentery v.**, a lipovaccine for dysentery. **lipopneumococcus v.**, a lipovaccine for pneumococcus infection. **living v.** See under *bacterial v.* **Lustig and Galeotti's v.**, a sterile preparation of the plague germs. They are dissolved in a 1 per cent. solution of caustic soda which is then neutralized with 1 per cent. acetic acid. The precipitate is dried and dissolved in weak sodium bicarbonate solution. The dose is 0.0133 gm. of the dry precipitate. **v.-lymph.** Same as *vaccine*. **Martinotti's v.**, an antituberculous vaccine containing, among other things, a protein substance derived from a culture of tubercle bacilli, which functions as an antigen, causing the production of specific antibodies. **Marx's v.**, an antityphoid vaccine. **meningococcic v.**, a bacterial vaccine prepared from cultures of *Neisseria meningitidis* and used as a prophylactic. **mixed v.**, a bacterial vaccine prepared from more than one species of bacteria. **multipartial v.** Same as *polyvalent v.* **multivalent v.** Same as *polyvalent v.* **Nicollé and Blaizot's v.** See *dmezon*. **paratyphoid v.**, a vaccine similar to typhoid vaccine, but made from cultures of *Bacterium paratyphosum*, A and B. **plague v.**, a bacterial vaccine made from cultures of *Pasteurella pestis* and used as a prophylactic. **pneumococcus v.**, a bacterial vaccine prepared in various ways from cultures of *Diplococcus pneumonia* (usually Types I, II, and III), and used as a prophylactic. **polyvalent v.**, a bacterial vaccine made from cultures of several strains of the same species of bacteria.

Ponndorf's v., a mixed vaccine of tubercle bacilli and the endotoxins of streptococci, staphylococci, pneumococci, and influenza bacilli. It is administered by being injected, after scarification of the skin, into the lateral surface of the arm. **pure v.** See *univalent v.* **rabies v.**, material prepared from the spinal cords of rabbits killed by subdural injections of fixed virus. It is used for treating patients infected or contaminated with rabies virus. For methods of preparation see *Pasteur's method*, *Harris's method*, and *Terrell's method*, under *method*. **v.-rash.** See *vaccination*. **sensitized v.**, a vaccine consisting of bacteria which have been immersed in their specific immune serum. Such a vaccine is believed to cause no negative phase, but only a slight local reaction and to facilitate the antibody formation. Called also *serobacterin*. **smallpox v.**, vaccine virus. **staphylococcus v.**, a bacterial vaccine prepared from one or more strains of staphylococci and used in the treatment of furunculosis and other suppurative conditions. **stock v.**, a vaccine made from cultures constantly kept on hand in the laboratory. **streptococcus v.**, a bacterial vaccine made from cultures of streptococci and used in the treatment of various streptococcal infections. **Strong's cholera v.**, a preparation of the nucleoproteins of the cholera vibrio and used as a prophylactic. **TAB v.** See *triple v.* **Terni and Bandi's v.**, the peritoneal exudate of rabbits or guinea-pigs which have been inoculated with *Pasteurella pestis*. At death the exudate is removed, incubated, heated to kill the germs, and a preservative added. **triple v.**, a bacterial vaccine containing the organisms of typhoid and the two paratyphoids. **typhoid v.**, a suspension of killed cultures of *Bacterium typhosum* in physiologic salt solution or in oils. It has been extensively used as a prophylactic against typhoid fever in armies since the Boer War and among civilians. The standard doses are: for the first dose, 500 million germs, and for the second and third doses, 1000 million each. **univalent v.**, a vaccine containing only one variety of organism in pure culture. Called also *pure v.* **Vincent's v.**, a typhoid vaccine containing ten strains of the typhoid bacillus. **v. virus.** See under *virus*. **von Ruck's v.**, a preparation containing in each cubic centimeter 10 mg. of the protein of tubercle bacilli and a small amount of fatty extractives: used for immunizing against tuberculosis. **Wright's v.**, a monovalent typhoid vaccine containing only one strain, the Rawling strain.

vaccinella (vak-sin-el'ah). A spurious and ineffective form of vaccinia.

vaccineurin (vak-sin-u'rin). A proprietary autolysate of staphylococci and *Serratia marcescens* (*Bacillus prodigiosus*) for injection in non-specific therapy.

vaccinia (vak-sin'e-ah) [L., from *vac'ca* cow]. Cowpox; a disease of cattle regarded as a form of smallpox. When communicated to man, usually by vaccination, it confers a greater or less degree of immunity against smallpox. The course of the disease in man is described under *vaccination*.

vacciniculturist (vak''sin-ik-ul'tūr-ist). One who raises heifers and uses them for the production of vaccine.

vaccinifer (vak-sin'if-er) [*vaccine* + L. *fer're* to carry]. The individual from whom a vaccine is taken.

vacciniform (vak-sin'if-orm). Resembling vaccinia, or cowpox.

vaccinín (vak'sin-in). The inoculable principle by which cowpox is communicated.

vaccinínium (vak-sin-i-num). A homeopathic remedy prepared from vaccine virus.

vacciniola (vak-sin-e-o'lah) [diminutive of *vaccinia*]. A secondary form of vesicle appearing

after vaccination, and resembling the rash of smallpox.

vaccinization (vak''sin-iz-a'shun). Vaccination persistently repeated until the virus has no perceptible effect.

vaccinogen (vak-sin-o'-jen). A source from which vaccine is derived.

vaccinogenous (vak-sin-oj'en-us). Producing vaccine.

vaccinoid (vak'sin-oid). Spurious or modified vaccinia.

vaccinophobia (vak''sin-o-fō-be-ah) [*vaccine* + Gr. *phōbos* fear]. Perverse and morbid dread of vaccination.

vaccinostyle (vak-sin-o'-stil). A small lance used in vaccination.

vaccinossyphilis (vak''sin-o-sif'il-is). Syphilis following inoculation with impure vaccine.

vaccinotherapeutics, vaccinothrapy (vak''sin-o-ther-ap-u'tiks, -ther'ap-e). Therapeutic use of bacterial vaccines.

vaccinum variolæ. The U. S. P. name for vaccine virus.

vaccinurin (vak-sin'u-rin). An autolysate of staphylococci and *Bacillus prodigiosus* used in the non-specific treatment of neuralgia and neuritis.

vacuolar (vak'u-o-lar). Pertaining to a vacuole; characterized by the presence of vacuoles.

vacuolated (vak'u-o-la-ted). Pertaining to or characterized by vacuoles.

vacuolation (vak''u-o-la'shun). The process of forming vacuoles; the condition of being vacuolated.

vacuole (vak'u-ol) [L. *vacuus* empty]. Any space or cavity formed in the protoplasm of a cell. **Barrier's v's**, peribronchitic abscesses. **contractile v.**, a small cavity containing watery fluid, seen in the protoplasm of certain unicellular organisms. It gradually increases in size and then collapses. Its function is thought to be respiratory or excretory.

vacuolization (vak''u-o-liz-a'shun). Same as *vacuolation*.

vacuum (vak'u-um) [L.]. A space devoid of air or of other gas; a space from which the air has been exhausted. **high v.**, a vacuum in which the attenuation is extreme. **torricellian v.**, the vacuum in a barometric tube. **uteroplacental v.**, the vacuum between the placenta and the wall of the uterus, produced by traction for detachment of the placenta.

vadum (va'dum) [L. "ford"]. An elevation within a cerebral fissure, rendering it more or less shallow.

vagabonds' disease or pigmentation (vag'ab-ondz). See under *disease*.

vagal (va'gal). Pertaining to the vagus nerve.

vagi (va'gi). Plural of *vagus*.

vagina (vaj-i'nah) [L.]. 1. A sheath. 2. The canal from the slit of the vulva to the cervix uteri which receives the penis in copulation. In the virgin adult it is 2 to 2½ inches on the anterior wall, 3 to 3½ inches on the posterior wall. The anterior and posterior walls are in contact. Its upper extremity embraces the cervix uteri, the posterior wall reaching the cervix higher up than does the anterior wall. Anteriorly and posteriorly there are a median ridge and the columnæ vaginae, and running out from the columnæ on either side are transverse folds or rugæ. The *hymen* is a crescentic or circular mucous fold which constricts its entrance. When the hymen is ruptured, warty eminences mark its site—the carunculæ myrtiformes. The vagina has three coats: 1. Outer, or fibro-elastic. 2. Middle, or muscular. 3. Mucous, or internal. The circular muscular fibers near the entrance constitute the vaginal sphincter. **v. bul'bi**, the capsule of Tenon.

v. cellulosa, the connective-tissue sheath of a nerve or muscle. **v. cor'dis**, the pericardium. **v. fem'oris**, the fascia lata of the thigh. **v. fibro'sa tendin'is** [B N A], the fibrous sheath of a tendon. **vaginæ fix'ura**. Same as *vaginofixation*. **v. mucosa**, a synovial sheath. **v. mucosa ten'dinis** [B N A], a vaginal synovial membrane. **v. mus'culi rec'ti abdom'inis**, the sheath of the rectus. **vaginæ ner'vi op'tici** [B N A], the sheaths of the optic nerve. **v. oc'uli**, Tenon's capsule. **v. p'ilii**, a hair-sheath. **v. proces'sus styloidei** [B N A], the vaginal process of the temporal bone. **v. synovialis**, a synovial sheath. **v. ten'dinis** [B N A], the sheath of a tendon.

vaginal (vaj'in-al). 1. Of the nature of a sheath; ensheathing. 2. Pertaining to the vagina.

vaginalectomy (vaj'in-al-ek'to-me). Same as *vaginectomy*.

vaginalitis (vaj'in-al-i'tis). Inflammation of the tunica vaginalis testis.

vaginapexy (vaj-in-ap-eks'e). Same as *colpopexy*.

vaginate (vaj'in-āt) [L. *vagina'tus* sheathed]. Provided with a sheath.

vaginectomy (vaj-in-ek'to-me). Resection of the tunica vaginalis.

vaginicoline (vaj-in-ik'o-lin) [L. *vagi'na* sheath + *col'ere* to inhabit]. Living in the vagina; used of certain microorganisms.

vaginismus (vaj-in-iz'mus) [L.]. Painful spasm of the vagina due to local hyperesthesia. It is distinguished as *superficial* and *deep*, according as the seat is at the entrance of the vagina, or probably in the bulbocavernosus muscle, or in the levator ani muscle. **mental v.**, extreme aversion to coitus on the part of a woman, attended with contraction of the muscles when the act is attempted. **perineal v.**, spasm of the perineal muscles. **posterior v.**, vaginismus caused by spasm of the levator ani muscle. **vul-var v.**, vaginismus caused by spasm of the constrictor vaginae muscle.

vaginitis (vaj-in-i'tis) [*vagina* + Gr. *-itis* inflammation]. 1. Inflammation of the vagina. It is marked by pain and by a purulent leukorrheal discharge. 2. Inflammation of a sheath. **v. adhæ'siva**. See *senile v.* **contagious granular v.** Same as *v. verrucosa*. **diphtheric v.**, diphtheric inflammation of the vagina. **emphysematous v.**, a variety marked by the formation of gas in the meshes of the connective tissue. Called also *gaseous v.* **granular v.**, the most common variety, in which the papillæ are enlarged and infiltrated with small cells. **senile v.**, vaginitis occurring in old age and marked by the formation of raw patches, which often adhere (*v. adhæs'iva*) to apposed surfaces, causing obliteration of the vaginal canal. **v. test'is**, peridymitis. **v. verrucosa**, an infectious inflammation of the vagina in cows, prevalent in European countries, and caused by the streptococcus of Ostertag. Called also *colpitis granulosa*.

vagino-abdominal (vaj'in-o-ab-dom'in-al). Pertaining to the vagina and the abdomen.

vaginocele (vaj'in-o-sēl) [*vagina* + Gr. *κῆλη* hernia]. Colpocele.

vaginodynia (vaj'in-o-din'e-ah) [*vagina* + Gr. *ōdōn* pain]. Pain in the vagina.

vaginofixation (vaj'in-o-fiks-a'shun). 1. The fixation of an abnormally movable vagina. 2. The suturing of the fundus of the uterus to the vaginal peritoneum in cases of retroflexion. Called also *vaginal hysteropexy*.

vaginolabial (vaj'in-o-la-be-al). Pertaining to the vagina and the labia.

vaginometer (vaj-in-om'et-er) [*vagina* + Gr. *μέτρον* measure]. An instrument for measuring the length and diameter of the vagina.

vaginomycosis (vaj'in-o-mi-ko'sis) [*vagina* +

Gr. *μύκης* fungus]. A diseased state of the vagina due to a plant-growth, chiefly *Lep'tothrix vagina-lis*.

vaginoperineal (vaj''in-o-per-in-e'al). Pertaining to the vagina and perineum.

vaginoperineorrhaphy (vaj''in-o-per-e-ne-or'-af-e). The operation of suturing the divided or ruptured vagina and perineum.

vaginoperineotomy (vaj''in-o-per-in-e-ot'o-me). The operation of dividing the vagina and perineum in order to secure enlargement of the vulvovaginal outlet.

vaginoperitoneal (vaj''in-o-per''it-o-ne'al). Pertaining to the vagina and peritoneum.

vaginopexy (va-jí-no-peks-e) [*vagina* + Gr. *πῆξις* fixation]. The operation of suturing the vagina to the abdominal wall in cases of vaginal relaxation.

vaginoplasty (vaj-i'no-plas-te) [*vagina* + Gr. *πλάσσειν* to form]. Plastic surgery on the vagina.

vaginoscope (vaj'in-o-skóp) [*vagina* + *σκοπέιν* to view]. A vaginal speculum.

vaginoscopy (vaj-in-os'ko-pe) [*vagina* + Gr. *σκοπέιν* to inspect]. Inspection of the vagina.

vaginotome (vaj-i'no-tóm). An instrument for incision or division of the vagina.

vaginotomy (vaj-in-ot'o-me) [*vagina* + Gr. *τέμνειν* to cut]. Surgical incision of the vaginal wall.

vagino vesical (vaj''in-o-ves'ik-al). Pertaining to the vagina and bladder.

vaginovulvar (vaj''in-o-vul'var). Vulvovaginal.

vagitis (va-gí'tis). Inflammation of the vagus.

vagitus (vaj'it-us) [L.]. The cry of an infant. **v. uerthinus**, the crying of a child at or just before birth. **v. vagina'lis**, the crying of a child while its head is still within the vagina.

vago-accessorius (va''go-ak-ses-o're-us) [L.]. The vagus and accessory portion of the spinal accessory nerves regarded as together forming one nerve.

vagoglossopharyngeal (va''go-glos''o-far-in'je-al). Pertaining to the vagus and glossopharyngeal nerves.

vagogram (va'go-gram) [*vagus* + Gr. *γράμμα* mark]. A tracing showing the electrical variations of the vagus nerve; called also *electrovagogram*.

vagolysis (va-gol'is-is) [*vagus* + Gr. *λύσις* loosing]. The operation of tearing off the esophageal branches of the vagus from the esophagus for the relief of cardiospasm.

vagomimetic (va''go-mim-et'ik). Having an effect which resembles that of stimulated vagus action.

vagosympathetic (va''go-sim-path-et'ik). The vagus and cervical sympathetic together.

vagotomy (va-got'o-me) [L. *va'gus* wandering + Gr. *τέμνειν* to cut]. The operation of cutting the vagus nerve.

vagotonia, vagotomy (va-go-to'ne-ah, va-got'o-ne) [*vagus* + Gr. *τόνος* tension]. Hyperexcitability of the vagus nerve.

vagotonic (vag-o-ton'ik). Pertaining to or characterized by vagotonia.

vagotrope (va'go-trōp). Same as *vagotropic*.

vagotropic (va-go-trop'ik). Having an effect on the vagus nerve.

vagotropism (va-got'ro-pizm) [*vagus* + Gr. *τροπή* a turning]. Affinity of a drug or poison for the vagus nerve.

vagrant (va'grant) [L. *va'grans*, from *vaga're* to wander]. 1. Wandering; moving from one place to another. 2. A vagabond.

vagus (va'gus) [L. "wandering"], pl. *va'gi*. The pneumogastric nerve. See *nerves*, table of. **v. area**, an area on the floor of the fourth ventricle in which the vagus nerve has its origin. **v. pneumonia**. See *pneumonia*.

Vahlkampfia (vahl-kamp'fe-ah). A genus of

amebæ in which there is no flagellate stage of development.

valamin (val'am-in). The valerian ester of amylene hydrate, (CH₃)₂.C₃H₅.CO.O.C₆H₅. It has hypnotic and sedative properties.

valence, valency (va'lens, va'en-se) [L. *valen'tia* strength]. The power possessed by an element or radical of combining with hydrogen or of replacing it in a chemical compound. Cf. *quantivalence*. **v. value**, the number obtained by multiplying the lowering of the freezing-point in degrees by the amount of urine in cubic centimeters.

valent (va'lent). See *quantivalent*.

Valentin's corpuscles, ganglion (val'en-tinz) [Gabriel Gustav *Valentin*, German physician, 1810-1883; or Michael Bernard *Valentin*, a German naturalist, 1657-1726]. See *corpuscle, ganglion*.

Valentine's position (val'en-tinz) [Ferdinand C. *Valentine*, surgeon in New York, 1851-1909]. See *position*.

valeral, valeraldehyde (val'e-ral, val-e-ral'dē-hid). A mobile liquid, (C₄H₈CHO), with an irritating odor. Produced by oxidization of amyl alcohol.

valerate (val'er-ät). Valerianate.

valerene (val'er-ēn). See *amylene*.

valerian (va-le're-an) [L. *valeria'na*]. Any plant of the genus *Valeria'na*. The roots and rhizome of *Valeria'na officina'lis*, of Europe, are antispasmodic and nerve stimulant, and are used in nervousness and hysteria. Dose of abstract, 5-15 gr. (0.333-1 gm.); of extract, 5-10 gr. (0.333-0.666 gm.); of fluidextract, 10-30 min. (0.666-2 c.c.); of volatile oil, 2-5 min. (0.133-0.333 c.c.); of tincture, $\frac{1}{2}$ -2 dr. (2-8 c.c.); of ammoniated tincture, $\frac{1}{2}$ -2 dr. (2-8 c.c.). **Greek v.**, the European plant, *Polemonium caruleum*, or Jacob's-ladder: used as an application to ulcers, and vaunted as a cure for hydrophobia.

valerianate (va-le're-an-ät). Any salt of valerianic acid.

valerianic acid (val-e-re-an'ik). See *acid*.

valeric (val-e'rik). A preparation of valerian.

valeridin (val'er'id-in). A crystalline valerian and phenidin preparation, isovalerylparaphenitidin, C₆H₄(OC₂H₅)NH.CO.C₄H₉, occurring in white needles: a nerve sedative. Dose, 8-15 gr. (0.5-1 gm.).

valerobromin (val'er-o-bro'min). A proprietary salt containing valeric acid and bromids: used in neurasthenia, epilepsy, insomnia, and nervous disorders.

valerol (val'er-ol). A clear oily substance, C₁₂-H₁₀O₂(C₄H₁₀O), from valerian. It has a strong, unpleasant odor.

valerydin (val'er'id-in). Valeridin.

valerylene (val'er-il-ēn). A hydrocarbon of the acetylene series, CH₃.C:C.C₂H₅.

valeryloxybutyrein (val'er-il-oks''e-bu-ter-e'in). Same as *quietol*.

valetudinarian (val''e-tu-din-a're-an) [L. *valetu-dina'rius*]. An invalid; a feeble person.

valetudinarianism (val''e-tu-din-a're-an-izm). An infirm or feeble habit of body.

valgoid (val'goid) [*valgus* + Gr. *είδος* form]. Resembling the valgus.

valgus (val'gus) [L.]. 1. Same as *talipes valgus*. 2. Knock-kneed; a knock-kneed person. **spuri-ous v.**, splay-foot; a flat, broad foot.

validol (val'id-ol). A clear, syrupy liquid, C₄H₉.CO₂C₁₀H₁₉, the valeric-acid ester of menthol: anæsthetic and antihysterical. Dose, 3-5 min. (0.18-0.333 c.c.). **camphorated v.**, a solution of camphor in validol.

valin (val'in). An amino-acid produced by the digestion or hydrolytic decomposition of proteins. It is alpha-amino-isovalerianic acid, (CH₃)₂.CH.CH-(NH₂).COOH.

valisan (val'is-an). Same as *bromalol*.

vallate (val'at) [L. *vallatus* walled]. Having a wall or rim; cup-shaped.

vallecula (val-ek'u-lah) [L. "a depression"]. 1. Any depression or furrow. 2. The glosso-epiglottidean pouch. **v. cerebelli** [B N A], the longitudinal fissure of the cerebellum. **v. epiglottica** [B N A], a depression between the lateral and median glosso-epiglottic folds on each side. **v. ova'ta**, the fissure of the liver which contains the gall-bladder. **v. syl'vii**, a depression of the surface of the fetal brain which becomes developed into the fissure of Sylvius. **v. un'guis**, the socket for the root of the nail.

valledol (val'ed-ol). A preparation of the gum of mistletoe berries: used in menstrual disorders and postpartum hemorrhage. Dose, 1 gr. (0.6 gm.), several times daily; subcutaneously, 50 gr. (0.001 gm.).

Valleix's points (vahl-az') [François Louis Valleix, French physician, 1807-1855]. See under *point*.

Vallet's mass (val-az'). Mass of iron carbonate.

valley of the cerebellum (val'e). See *vallecula cerebelli*.

Valli-Ritter law (val-e-rit'er). See *Ritter-Valli law*, under *law*.

vallis (val'is) [L. "valley"]. The vallecule cerebelli.

val'lum un'guis [L.]. [B N A] The wall of a nail.

valofin (val'o-fin). A proprietary analgesic preparation consisting of a distillate of valerian root and peppermint leaves.

valoid (val'oid) [L. *valere* to be equal]. A fluid-extract equal weights of which and of the drug from which it is prepared contain an equal amount of the active principle of the drug. Called also *equivalent extract*.

valonia (val-o'ne-ah) [Ital. *vallonia*; Gr. *βάλανος* acorn]. The acorn-cups of *Quercus ægilops*: strongly astringent.

Valsalva's experiment (val-sal'vahz) [named from Antonio Maria Valsalva, an Italian anatomist, 1666-1723]. Inflation of the eustachian tube by closing the nose and mouth and employing a forcible expiration. **V's sinus**. See *sinus*.

valsol (val'sol). An ointment-base; a mixture of the various oxygenized solid hydrocarbons.

value, buffer. The ability of a fluid such as the blood to absorb small amounts of acids or of alkalis without much change in its hydrogen-ion concentration. **fuel v.**, the potential heat energy of the food. **globular v.**, the percentage of hemoglobin in a red corpuscle. It is represented by a fraction, the numerator of which represents the quantity of hemoglobin and the denominator the amount of the red corpuscles. **liminal v.**, **threshold v.**, that intensity of a stimulus which produces a just noticeable impression.

valval, valvar (val'val, val'var). Pertaining to a valve.

valvate (val'vāt). Pertaining to or having valves.

valve (valv) [L. *val'va*]. A fold in a canal or passage which prevents the reflux of its contents: it is in three segments. **Amussat's v's**. Same as *Heister's v's*. **aortic v.**, the semilunar valve at the aortic orifice of the heart. **auriculoventricular v's**, the mitral and tricuspid valves of the heart. **Baughin's v.**, the ileocecal valve. **Béraud's v.**, a valve said to occur at the bottom of the lacrimal sac, over the entrance to the nasal duct. **bicuspid v's**, the valves between the left auricle and left ventricle. **Bochdalek's v.**, a fold within the lacrimal duct near the punctum lacrimale. **caval v.**, eustachian valve. **v. of colon**, the ileocecal valve. **coronary v.**, the valve at the entrance of the coronary sinus into the right auricle. **eustachian v.**, a semilunar fold within the right auricle of the heart, between the orifice of the postcava and the auriculoventricular opening. **Foltz's v.** [J. C. E. Foltz, French ophthalmic surgeon, 1822-1876], the fold of membrane at the lacrimal canalic-

ulus. **Gerlach's v.**, a circular fold which sometimes surrounds the orifice of the vermiform appendix. **Guérin's v.** Same as *valvula fossa navicularis*. **Hasner's v.**, a kind of valve at the meatal end of the nasal duct. **Heister's v's**, folds of the mucosa in the cystic duct and in the neck of the gall-bladder. **Holokenius's v's**, crescentic ridges on the inner surface of the umbilical vessels. **Houston's v's**, folds of mucous membrane in the rectum. **Huschke's v.**, a crescentic fold in the lacrimal duct near its junction with the lacrimal sac. **ileocecical v.**, the fold at the junction of the ileum and cecum. Called also *v. of Bauhin* and *valvula coli* (B. N. A.). **v. of inferior vena cava**. Same as *eustachian v.* **Kerkring's v's**, the valvula conniventes. **Krause's v.** See *Béraud's v.* **Mercier's v.**, a fold which sometimes partially closes the vesical orifice of the ureter. **mitral v's**, the valves between the left auricle and the left ventricle. **Morgagni's v's**, the folds of the rectal mucosa which form the sinuses of Morgagni. **O'Beirne's v.**, O'Beirne's sphincter. See under *sphincter*. **pulmonary v.**, the valve at the junction of the pulmonary artery and the right ventricle. **pyloric v.**, the mucous fold at the pylorus. **Rosenmüller's v.** See *Huschke's v.* **semilunar v's**, the valves which guard the entrances to the aorta (*aortic semilunar v.*) and the pulmonary artery (*pulmonic semilunar v.*). **spiral v. of Heister**. See *Heister's v's*. **Taillefer's v.**, a fold of the mucous membrane of the nasal duct near the middle of its course. **Tarinus' v.** See *velum medullare posticum*. **v.-test**. See *test*. **Thebesius' v's**, the coronary valves. **tricuspid v's**, the valves which control the opening from the right auricle to the right ventricle. **v. of Tulpus**, the ileocecal valve. **v. of Varolius**, the ileocecal valve. **v. of Vieussens**, the superior medullary velum; the transparent roof of the anterior part of the fourth ventricle. **Willis's v.**, the valve of Vieussens.

valved (val'vd). Having valves; opening by valves.

valviform (val'vif-orm) [L. *val'va* valve + *forma* shape]. Shaped like a valve.

valvotomy (val-vot'o-me) [L. *val'va* valve + Gr. *τομή* cut]. The operation of cutting a valve; especially, Houston's valves of the rectum or the mitral valves of the heart.

valvula (val'vu-lah), pl. *val'vulae* [L.]. A little valve. **v. co'li** [B N A], the ileocecal valve. See *valve*. **valvulae conniventes** [L. "closing valves"], the transverse mucous folds in the small intestine. **v. foram'inis ova'lis** [B N A], a fold extending into the left auricle from the edge of the foramen ovale of the fetus. **v. fos'-sæ navicular'is** [B N A], a fold of mucous membrane occasionally occurring in the roof of the fossa navicularis of the urethra. Called also *Guérin's fold* or *valve*. **v. mitra'-lis**, mitral valve. **v. proce'ssus vermifor'-mis** [B N A], a fold of mucous membrane at the opening into the cecum of the canal of the vermiform appendix. **v. pylo'ri** [B N A]. See *pyloric valve*. **v. semiluna'ris** [B N A], the semilunar valve. **v. si'nus corona'rii** [thebe'sii] [B N A], the coronary valve. See under *valve*. **v. spira'lis** [B N A], Heister's valve. See *valve*. **v. tricuspidalis** [B N A], the tricuspid valve. **val'vulae vagi'næ**, the hymen. **v. ve'næ ca'-væ** [eustach'i]. See *eustachian valve*, under *valve*. **v. vestib'uli sinis'tra**, one of the two thin folds bordering the opening of the venous sinus reunions into the right auricle of the embryonic heart. It disappears, but the other fold develops into the eustachian and thebesian valves.

Portion of the wall of the small intestine laid open to show the valvulae conniventes (Brinton).

- valvular** (val'vu-lar). Pertaining to, affecting, or of the nature of, a valve.
- valvulitis** (val-vu-'lītis). Inflammation of a valve or valvula, especially a valve of the heart.
- valvulotome** (val'vu-lo-tōm). An instrument for cutting a valve. Cf. *valvotomy*.
- valvulotomy** (val-vu-'lō-'mē). Valvotomy.
- valyl** (val'il). Valerianic acid diethylamid, $\text{CH}_3(\text{CH}_2)_3\text{CO.N}(\text{C}_2\text{H}_5)_2$, a liquid with a strong odor; used in hysteria and other nervous disorders. Daily dose, 2-5 min. (0.12-0.33 c.c.).
- valylene** (val'il-ēn). A hydrocarbon, C_8H_6 .
- valzin** (val'zin). Same as *sucrol*.
- vamianine** (vam-e-an'in). A proprietary preparation for the treatment of syphilis and chronic skin affections.
- vampire** (vam'pir). A blood-sucking bat, *Desmodus rufus*; also *Diphylla ecauda'ta*, a bat of similar habits; both South American.
- vampirism** (vam'pir-izm). Violation of a corpse, either by sexual intercourse with it (necrophily) or by mutilation for the purpose of exciting sexual feelings (necrosadism).
- vanadarsin** (van-ad-ar'sin). A proprietary vanadium arsenic preparation.
- vanadate** (van'ad-āt). Any salt of vanadic acid.
- vanadin** (van'ad-in). A proprietary solution said to contain vanadium and sodium chlorate; antiseptic; used in tuberculosis. Dose, 2-10 min. (0.12-0.666 c.c.).
- vanadium** (van-a'de-um) [*Vanadis*, a Norse deity]. A rare, gray, metallic element; symbol, V.; atomic weight, 51.
- vanadiumism** (van-a'de-um-izm). A chronic intoxication caused by absorption of vanadium: seen in workers in that metal or its compounds.
- vanadozon** (van-ad'o-zon). A preparation of vanadic anhydrid and sodium chlorid.
- van Buren's disease** (van bu'renz) [William Holme van Buren, American surgeon, 1819-1883]. Hardening of the corpora cavernosa.
- van Deen's test** [Izaak van Deen, Dutch physician, 1804-1860]. See *Deen's test*, under *tests*.
- Vandellia** (van-del'e-ah) [after one Vandell]. A genus of scrophularinaceous herbs. *V. diffusa*, a South American plant, is purgative, emetic, cholagogue, and antipyretic.
- van den Bergh's test** [A. A. Hijmans van den Bergh, contemporary Dutch physician]. See under *tests*.
- van der Velden's test** (van der vel'denz) [Reinhardt van der Velden, German physician, born 1851]. See under *tests*.
- van Ermengem's stain** (van er'meng-ems) [Emile P. van Ermengem, Belgian bacteriologist, born 1851]. See under *stains*, table of.
- van Gehuchten's method** (van-ga-hook'tenz) [Arthur van Gehuchten, Belgian anatomist, 1861-1915]. See *method*.
- Vanghetti's prosthesis** (vahn-get'ēz). See *prosthesis*.
- van Gieson's stain** (van ge'sonz) [Ira van Gieson, New York neuropathologist, 1865-1913]. See under *stains*, table of.
- van Hook's operation** [Weller van Hook, Chicago surgeon, contemporary]. Uretero-ureterostomy.
- van Hoorne's canal** (van horn) [Jean van Hoorne, Dutch anatomist, 1621-1670]. The thoracic duct.
- Vanilla** (van-il'ah) [L.]. A genus of climbing orchidaceous plants of hot climates. The fruit of *V. planifolia*, of Mexico, are the vanilla-beans, which contain vanilla and are used as a flavor and a mild stimulant: it is said to be aphrodisiac.
- false v.**, a fragrant North American composite-flowered plant, *Liatris odoratis'sima*; used in making toilet-waters and in flavoring tobacco.
- vanillin** (van-il'in). An aromatic, crystallizable principle, $\text{CH}_3\text{O.C}_6\text{H}_5(\text{OH}).\text{CHO}$, from vanilla. It may be prepared from eugenol and from coniferin and is soluble in alcohol, ether, glycerin, and chloroform, but only slightly in water. It is used as a flavoring agent and gastric stimulant. **v.-paraphenetidin**, a crystalline derivative of vanillin and paraphenetidin, $\text{CH}_3\text{O.C}_6\text{H}_4(\text{OH}).\text{CH.N.C}_6\text{H}_4.\text{OC}_2\text{H}_5$; styptic, antineuralgic, and hypnotic.
- vanillism** (van-il'izm). Symptoms of dermatitis, coryza, and malaise seen in those handling raw vanilla and caused by a species of mite (tyroglyphid).
- Vanin plague**. See *parangi*.
- vanoline** (van-o-lin). A proprietary remedy for skin diseases.
- van Slyke's formula, method, test** (van-shiks') [Donald D. van Slyke, contemporary American chemist]. See under *formula*, *method*, and *tests*.
- van Slyke and Cullen's method**. See under *method*.
- van Swieten's solution** (van swe'tenz) [Gérard van Swieten, Dutch physician, 1700-1772]. See under *solution*.
- van't Hoff's law, rule** (vant hof') [Jacobus Hendricus van't Hoff, Dutch chemist in Berlin, 1852-1911]. See under *law* and *rule*.
- Vanzetti's sign** (vahn-tset'ēz) [Tito Vanzetti, Italian surgeon, 1809-1888]. See under *sign*.
- vapo-aural massage** (va-po-aw'ral). A vapor and massage treatment for the ear.
- vapocain** (va-po-ka'in). A proprietary toothache cure containing 15 per cent. of cocaine hydrochlorid.
- vapocauterization** (va'po-kaw'-'ter-iz-a'shun). Cauterization by means of steam or other hot vapor.
- vaporesolin** (va-po-kres'o-lin). An antiseptic remedy for the treatment of diphtheria and whooping-cough by inhalation. It contains cresols, which are volatilized by heat.
- vapopulmonary massage** (va-po-pul'mo-na-re). A massage and vapor treatment for the lungs.
- vapor** (va'por), pl. *vapo'res* [L.]; English pl. *va'pors*. A Latin word signifying steam, gas, or exhalation.
- vaporarium** (va-po-a're-um) [L.]. An apparatus for treating certain diseases by the local application of heat and cold.
- vaporish** (va'por-ish). Splenetic or hysterical.
- vaporium** (va-po're-um) [L.]. An apparatus for treating disease by the local application of heat or cold.
- vaporization** (va'por-iz-a'shun). 1. The conversion of a solid or liquid into a vapor without chemical change. 2. Treatment by vapors.
- vaporize** (va'por-iz). To convert into vapor or to be transformed into vapor.
- vaporole** (va'po-rōl). A glass capsule containing a single dose of a volatile drug, the vapor of which is to be inhaled.
- vapors** (va'perz). Hypochondriasis or hysterical depression of spirits.
- Vaquez's disease** (vak-āz') [H. Vaquez, contemporary French physician]. See under *disease*.
- var**. Abbreviation for *variety*.
- varalette** (var-al-et'). A proprietary form of compressed effervescent tablet.
- vargol** (var'gol). A proprietary preparation of silver and a derived albumin: used in 10 to 25 per cent. solution in gonorrhea, conjunctivitis, laryngitis, etc.
- variable** (va're-ab-l) [*in statistics*]. One of the separate numeric values from which a curve of variability can be constructed.
- variate** (va'ri-āt). See *variable*.
- variation** (va-re-a'shun). Deviation in characters in an individual from those typical of the group to which it belongs; also, deviation in characters of the offspring from those of its parents. **continuous v.**, a series of small variations. **in-**

born v., one which arises from changes in the germ and not from the somatic cells. **meristic v.**, variation in the number of parts in the offspring.

varication (var-ik-a'shun). 1. The formation of a varix. 2. A varicose condition.

varicella (var-is-el'ah) [L.]. Chickenpox; an acute contagious disease, principally of young children, marked by slight fever and an eruption of macular vesicles, which appear in crops, and are superficial and rarely umbilicated. They rarely become pustular, but dry up, and are only occasionally followed by scars. The duration of the disease is about a week, during which time it runs a very mild course. **v. gangræno'sa**, a rare form of chickenpox in which the eruption leads to a gangrenous ulceration. Called also *dermatitis gangrænosa infantum*. **v. inocula'ta**, the inoculation of children with virus from a fresh clear vesicle of chickenpox; usually no general symptoms develop. **pustular v.**, varioloid. **vaccination v.** Same as *v. inoculata*.

varicellation (var-is-el-a'shun). Prophylactic inoculation with the virus of varicella.

varicelliform (var-is-el'if-orm). Shaped like the vesicles of varicella.

varicelloid (var-is-el'oid) [*varicella* + Gr. *είδος* form]. Resembling varicella.

varices (var'is-ēs) [L.]. Plural of *varix*.

variciform (var-is'if-orm) [*va'rix* varix + *for'ma* form]. Resembling a varix; varicose.

varicoblepharon (var'ik-o-blef'ar-on) [L. *va'rix* varix + Gr. *βλέφαρον* eyelid]. A varicose swelling of the eyelid.

varicocele (var'ik-o-sēl) [L. *va'rix* varix + Gr. *κῆλη* tumor]. A varicose condition of the veins of the spermatic cord, forming a swelling that feels like a bag of worms, and accompanied by a dragging pain. **ovarian v.**, a varicose state of the veins of the broad ligament. **pelvic v.**, varicose condition of the veins of the broad ligament. **utero-ovarian v.**, a varicose condition of the veins of the pampiniform plexus of the female.

varicocelelectomy (var'ik-o-se-lek'to-me) [*varicocele* + Gr. *ἐκτομή* excision]. The excision of a part of the scrotum and the enlarged veins for varicocele.

varicoid (var'ik-oid) [L. *va'rix* varix + Gr. *είδος* form]. Resembling a varix.

varicole (var'ik-ōl). 1. Same as *varicocele*. 2. Bismuth iodoresorcin sulphionate, used in the form of suppositories for hemorrhoids.

varicomphalus (var-ik-om'fal-us) [L. *va'rix* swollen vein + Gr. *ὄμφαλος* navel]. A varicose tumor at the navel.

varicose (var'ik-ōs) [L. *varicosus*]. Of the nature of or pertaining to a varix; unnaturally swollen: said of a vein.

varicosis (var-ik-o'sis) [L.]. A varicose condition of the veins of any part.

varicosity (var-ik-os'it-e). 1. A varicose condition; the quality or fact of being varicose. 2. A varix or varicose vein.

varicotomy (var-ik-o'to-me) [L. *va'rix* varix + Gr. *τέμνειν* to cut]. The excision of a varix or of a varicose vein.

varicula (var-ik'u-lah) [L.]. A varix of the conjunctiva.

variola (var-i'o-lah) [L.]. Smallpox; an acute infectious disease characterized by vomiting, lumbar pains, an eruption which is first papular, then vesicular, and finally pustular, and by fever which is marked by a distinct remission, beginning with the eruption and continuing until the latter becomes pustular. The disease may be due to a chlamydozoan. The period of incubation is about twelve days, and the eruption consists in infiltration of cells into the skin, which cells undergo liquefaction, with the production of

suppuration. The eruption begins about the third or fourth day, with the formation of small red spots on the forehead, face, and wrists. These change into smooth, round papules, which feel like shot under the skin. This eruption spreads over the body, and about the third day the papules become converted into vesicles with a depression or umbilication at the top. The vesicles gradually become converted into pustules, which increase in size and dry up and break, forming soft, yellow crusts, which have a peculiar offensive odor. After a week the scabs fall off, leaving pitted scars or pock-marks. **black v.** Same as *hemorrhagic v.* **bovine v.** Same as *vaccinia*. **coherent v.**, a kind in which the pustules cohere at the edges, but do not become confluent. **confluent v.**, a severe form in which the pustules become more or less confluent. **v. crystalli'na**, chickenpox. **discrete v.**, a form in which the pustules remain more or less distinct. **equine v.** See *horse pox*, under *pox*. **hemorrhagic v.**, a form in which hemorrhage occurs into the vesicles or from the mucous surfaces. **v. inser'ta**, smallpox acquired by inoculation. **malignant v.**, a severe and very fatal form of hemorrhagic variola. **v. milia'ris**, smallpox with an eruption of small vesicles. **modified v.** Same as *varioloid*. **ovine v.**, *ovinia*; the smallpox of sheep. **v. pemphigo'sa**, smallpox with an eruption of large blebs. **v. siliquo'sa**, smallpox in which the contents of the pustules become absorbed, leaving the walls empty. **v. ve'ta**, simple and unmodified smallpox. **v. verruco'sa**, wart-pox, a variety in which the eruption does not pass beyond the papular stage.

variolar (var-i'o-lar). Pertaining to smallpox.

Variolaria amara (va're-o-la're-ah am-a'rah). A febrifugal and anthelmintic lichen of the old world.

variolate (va're-o-lāt). Having the nature or appearance of smallpox.

variolation (va're-o-la'shun). Inoculation with the virus of unmodified smallpox. **bovine v.**, inoculation of a calf with smallpox.

variolic (var-e-o'lik). Variolar.

varioliform (va-re-o'lif-orm). Resembling smallpox.

variolinum (va're-o-li'nūm). A homeopathic remedy prepared from the virus of smallpox.

variolization (va're-o-liz-a'shun). See *variolation*.

varioloid (va're-o-loid'). A modified and mild form of smallpox occurring in a patient who has had a previous attack or has been vaccinated.

v.-varicella. Same as *amaas*.

variolous (va-re'o-lus). Pertaining to or of the nature of smallpox.

variolo vaccine (var-e'o-lo-vak'sin). 1. Pertaining to vaccine or bovine variola. 2. A virus obtained by vaccinating the heifer with the virus of smallpox.

variolo vaccinia (var-e'o-lo-vak-sin'e-ah). Cowpox in the heifer caused by inoculation with smallpox.

variscope (va'ris-kōp). A variety of chromophotograph.

varis (var-is'). A lump on the inner surface of a horse's hind leg.

varix (va'riks), pl. *var'ices* [L.]. An enlarged and tortuous vein. **aneurysmal v.**, **aneurysmoid v.**, a form of arteriovenous aneurysm in which the blood flows directly into a neighboring vein

Varices of the leg.

without the intervention of a connecting sac. **arterial v.**, a cirsoid aneurysm or varicose artery. **gelatinous v.**, a nodular state of the umbilical cord. **v. lymphaticus**, an enlarged and tortuous lymphatic vessel, due usually to the presence of *Filaria sanguinis hominis*. **turbinal v.**, a dilated condition of the veins of the turbinates.

varnish (va'nish). A resinous solution in oil or alcohol, having a limited use in surgery. **benzoin v.** See *Woeßler's solution*, under *solution*. **black v.**, **Burmese v.**, **Martaban v.**, a varnish produced in Burma from *Melanorrhæa usitata*, a terebinthaceous tree. **piny v.** See *Vateria indica*. **v.-tree**, *Rhus coriaria*, a European tree: highly astringent; also *R. vernix*, which yields Japan varnish.

varolian (va-ro'le-an). 1. Pertaining to the pons varolii. 2. Described by or named in honor of Costanzo Varoli (*Varolius*), Italian anatomist and surgeon, 1542-1575.

varoma (va-ro'mah). A proprietary vaporizing disinfectant.

varus (va'rus) [L.]. 1. Having the legs bent outward; bow-legged. 2. Same as *talipes varus*. 3. A blotch or wheek on the face.

vas (vas), pl. *va'sa* [L.]. A vessel; especially a blood-vessel or lymphatic duct. **v. aberrans**. 1. A blind tube sometimes connected with the epididymis or vas deferens. 2. Any anomalous or unusual vessel. **v. aberrans**, **Roth's**, an occasionally occurring diverticulum of the rete testis. **v. deferens**, the excretory duct of the testicle, passing from the testis to the ejaculatory duct. **v. pro-minens** [B N A], a blood-vessel on the accessory spiral ligament of the cochlea. **v. spirale**, a blood-vessel on the under side of the basilar membrane.

vasa (va'sah) [L.]. Plural of *vas*. **v. aberrantia**, **hepatica**, the aberrant vessels of the liver. **v. afferentia**, the lymphatic vessels which enter a gland. **v. auris interna**, vessels of the internal ear. **v. brevia**, the small branches of the splenic artery going to the stomach. **v. efferentia**. 1. The lymphatics which have lymph-glands connected with them. 2. The excretory ducts of the testicle. See *testicle*. **v. intestinales tenues**, branches of the superior mesenteric artery to the small intestine. **v. lymphatica**, lymphatic vessels. **v. prævia**, a condition in which the blood-vessels of the umbilical cord where they enter the placenta present in front of the fetal head in labor. **v. propria of Jungbluth**, vessels situated beneath the amnion of the early embryo. **v. recta**. 1. The straight tubes going to the seminiferous tubules. 2. See *testicle*. **v. sanguinea integumentii communis**, the vessels of the external skin. **v. sanguinea retina**, the blood-vessels of the retina. **v. serosa**, capillary blood-vessels. **v. vasorum** [B N A], the small nutrient arteries and veins in the walls of the larger blood-vessels. **v. vorticosæ**, the stellate veins of the choroid.

vasal (va'sal). Pertaining to a vas or to a vessel.

vasalum (vas-a'le-um). True vascular tissue, such as is found in closed or vascular organs.

vascular (vas'ku-lar). Pertaining to or full of vessels.

vascularity (vas-ku-lar'it-e). The condition of being vascular.

vascularization (vas'ku-lar-iz-a'tion). The process of becoming vascular.

vascularize (vas'ku-lar-iz). To supply with vessels.

vasculature (vas'ku-la-chûr). The disposal of blood-vessels in a part.

vasculin (vas'ku-lin). An extract from vascular tissue.

vasculitis (vas-ku-li'tis) [L. *vasculum* vessel + Gr. *-itis* inflammation]. Inflammation of a vessel.

vasculogenesis (vas'ku-lo-jen'es-is) [L. *vasculum*

vessel + Gr. *γένεσις* formation]. The development of the vascular system.

vasculomotor (vas'ku-lo-mo'tor). Effecting movement of the walls of vessels.

vasculum (vas'ku-lum) [L.]. A small vessel. **v. aberrans**. Same as *vas aberrans*.

vasectomy (vas-ek'to-me) [L. *vas* vessel + Gr. *ἐκτομή* excision]. Surgical removal of the vas deferens, or of a portion of it.

vaselin (vas-el-in). A variety of petrolatum. See *petrolatum*. **vaselinum adustum saponatum**, an ointment of petrolatum with 1 per cent. of sodium stearate and 1 to 2 per cent. of pyroxylin; said to be identical with naftalan: used in skin diseases. **liquid v.** Same as *petrolatum liquidum*.

"Vaseline" (vas-el-ēn). A proprietary trademark name for a number of petroleum preparations.

vaselon (vas-el-on). An ointment basis, said to be a solution of stearin and margarin in a mineral oil; proprietary.

vasenol (vas'e-nol). A proprietary emulsifiable ointment-base.

vasicin (vas'is-in). A microbicidal alkaloid from *Adhatoda vasica*, a plant of South Asia: useful in bronchitis, etc.

vasifactive (va-sif-ak'tiv) [L. *vas* vessel + *facere* to make]. Forming new blood-vessels or vascular tissue. See *cell*.

vasiform (va'sif-orm) [L. *vas* vessel + *forma* form]. Having the appearance of a vessel.

vasitis (vas-i'tis). Inflammation of the vas deferens.

vasoconstriction (va'so-kon-strik'shun). The diminution of the caliber of vessels, whether or not due to nerve influence.

vasoconstrictive (va'so-kon-strik'tiv). Causing constriction of the blood-vessels.

vasoconstrictor (va'so-kon-strik'tor). 1. Causing constriction of the blood-vessels. 2. A vaso-motor nerve or a drug which causes constriction of the blood-vessels.

vasocorona (va'so-ko-ro'nah) [L. *vas* vessel + *corona* crown]. The arterial vessels which pass radially from the spinal cord to its periphery.

vasodentin (va-so-den'tin) [L. *vas* vessel + *dens* tooth]. Dentin provided with blood-vessels.

vasodermol (va-so-der'mol). A proprietary fluid made from hydrocarbons and used as a vehicle for sulphur, iodine, mesotan, etc., as a cutaneous application.

vasodilatation (va'so-di-la-ta'shun). Dilatation of a vessel. **reflex v.**, reflex diastole. See *diastole*.

vasodilatin (va'so-di-la'tin). A substance supposed to exist in organic extracts and to cause vascular dilatation.

vasodilator (va'so-di-la'tor). 1. Causing dilatation of the blood-vessels. 2. Any nerve or drug which causes dilatation of the blood-vessels.

vaso-epididymostomy (va'zo-ep-e-did-e-mos'to-me). Operative formation of a communication between the vas deferens and the epididymis.

vasofactive, vasoformative (va-so-fak'tiv, va-so-for'ma-tiv). Same as *vasifactive*.

vasoganglion (va-so-gang'le-on). Any vascular ganglion or rete.

vasogen (vas'o-jen). A proprietary ointment-base: said to contain olein, vaselin, vaselin oil, etc.

vasohypertonic (va'so-hi-per-ton'ik). Same as *vasoconstrictor*.

vasohypotonic (va'so-hi-po-ton'ik). Same as *vasodilator*.

vaso-inhibitor (va'so-in-hib'it-or). Any agent or drug which inhibits the action of the vasomotor nerves.

vaso-inhibitory (va'so-in-hib'it-or-e). Hindering the action of the vasomotor nerves.

vasol (va'sol). 1. A form of atomizer. 2. A proprietary liquid petroleum oil combined with ammonium oleate.

vasoligation (va''so-li-ga'shun). Ligation of the vas deferens.

vasoligature (va-so-lig'at-ūr). Vasoligation.

vaso-liniment (va''so-lin'im-ent). Same as *parogen*.

vasomotion (va-so-mo'shun) [L. *vas* vessel + *mo'tio* movement]. The contraction or dilatation of the caliber of a vessel.

vasomotor (va-so-mo'tor) [L. *vas* vessel + *mo'tor* mover]. 1. Presiding over the movements of the walls of blood-vessels; that is, their expansion (vasodilatation) or contraction (vasoconstriction). 2. Any agent or nerve that effects vasomotion.

vasomotorial, vasomotory (va''so-mo-to're-al, va-so-mo-to'r-e). Pertaining to or affecting vasomotion.

vasoneurosis (vas-o-nu-ro'sis). Angioneurosis.

vasoparesis (va-so-par'es-is) [L. *vas* vessel + Gr. *πάρεσις* relaxation]. Partial paralysis of vasomotor nerves.

vasopuncture (vas'o-punk-tūr). Puncture of the vas deferens.

vasosection (va-so-sek'shun) [L. *vas* vessel + *sec'tio* a cutting]. The severing of the vasa deferentia.

vasosensory (va-so-sen'sor-e). Supplying sensory filaments to the vessels.

vasospasm (vas'o-spazm). Spasm of the blood-vessels.

vasospastic (va-so-spas'tik) [L. *vas* vessel + *spastic*]. Same as *angiospastic*.

vasostimulant (va-so-stim'u-lant). Stimulating or arousing vasomotor action.

vasostomy (va-zos'to-me) [*vas* deferens + Gr. *στόμα* mouth]. The operation of forming an opening into the vas deferens.

vasothion (va-so'the-on). Vasogen containing 10 per cent. of sulphur: used in skin diseases.

vasothrombin (va-so-throm'bin) [L. *vas* vessel + *thrombin*]. A fibrin factor similar to leukothrombin, except that it is formed by the endothelial cells which unites with hepatothrombin to form thrombin.

vasotomy (va-sot'o-me) [L. *vas* vessel + Gr. *τομή* a cut]. Incision of the vas deferens.

vasotonic (va-so-ton'ik) [L. *vas* vessel + Gr. *τόνος* tone]. Concerned in regulating the tone or tension of the vessels.

vasotonin (va-so-to'nin). A combination of yohimbine and urethane, used for lowering the blood-pressure. Dose, 15 min. (1 c.c.) subcutaneously.

vasotribe (va'so-trib). Same as *angiotribe*.

vasotripsy (va'so-trip-se) [L. *vas* vessel + *τρίψω* crushing]. Same as *angiotripsy*.

vasotrophic (va-so-trof'ik) [L. *vas* vessel + Gr. *τροφή* nutrition]. Affecting nutrition through the alteration of the caliber of the blood-vessels.

vasovagal (va-so-va'gal). Vasomotor.

vasovesiculectomy (va''so-ves-ik-u-lek'to-me). Excision of the vas deferens and seminal vesicles.

vasovesiculitis (va''so-ves-ik-u-li'tis). Inflammation of the vasa deferentia and seminal vesicles.

vastus (vas'tus) [L. "great, vast"]. See *muscles*, table of. *v. lateralis*. Same as *vastus externus* (in *muscles*, table of). *v. medialis*. Same as *vastus internus*.

Vater's ampulla, corpuscles, papilla (fah'terz) [Abraham Vater, German anatomist, 1684-1751]. See *ampulla*, *corpuscle*, *papilla*.

Vateria indica (vat-e're-ah in'dik-ah) [named for A. Vater]. An East Indian tree which affords Indian copal, piny varnish, white dammar, or Indian anise: used as a varnish, candle-stuff, and medicine.

Vaughan and Novy's test [Victor C. Vaughan, pathologist in Ann Arbor, Michigan, born 1851; Frederick G. Novy, bacteriologist in Ann Arbor, Michigan, born 1864]. See under *tests*.

vault (vawlt). A dome-like or arch-like structure.

V. C. A symbol for the acuity of color vision.

V. D. Abbreviation for *venereal disease*.

V. D. G. Abbreviation for *venereal disease—gonorrhea*.

V. D. H. Abbreviation for *valvular disease of the heart*.

V. D. S. Abbreviation for *venereal disease—syphilis*.

veal (vēl). The flesh of the calf considered as food. **bob v.**, veal of very young calves, i. e., of calves under six weeks of age.

veal-skin. A skin eruption resembling veal in appearance.

vection (vek'shun) [L. *vec'tio* a carrying]. The carrying of disease germs from an infected person to a well person. It is *circumferential*, *indirect*, or *mediate* when carried by an intermediate host; *direct*, *immediate*, or *radial* when transferred directly from one person to another.

vectis (vek'tis) [L. from *ve'here* to carry]. A curved lever for making traction upon the fetal head in labor.

vector (vek'tor) [L. "one who carries," from *ve'here* vectus to carry]. A carrier, especially the animal host that carries protozoal disease germs from one human host to another. **biologic v.**, a vector in which the disease germs undergo an essential phase of their life cycle. **mechanical v.**, **passive v.**, any vector other than a biologic vector.

vectorial (vek-to're-al). Pertaining to a vector.

Vedder's medium (ved'erz) [Col. E. B. Vedder, U. S. Army Surgeon]. See under *medium*.

vegetable (vej'et-ab-l) [L. *vegetab'ilis* quickening]. 1. Pertaining to or derived from plants. 2. Any plant or species of plant.

vegetal (vej'et-al). 1. Pertaining to plants or to a plant. 2. Common to animals and plants alike.

vegetality (vej-et-al'it-e). The aggregate of phenomena that are common to animals and plants.

vegetarian (vej-et-a're-an). One whose food is exclusively of vegetable origin.

vegetarianism (vej-et-a're-an-izm). The opinion and practice which restrict man's food to substances of vegetable origin.

vegetation (vej-et-a'shun) [L. *vegeta'tio*]. Any plant-like fungoid neoplasm or growth; a luxuriant fungus-like growth of pathologic tissue. **adenoid v.**, fungus-like growths of lymphoid tissue in the nasopharynx. **dendritic v.**, the shaggy appearance of a villous cancer; also the arachnoidal tufts and villous neoplasms on the pleura and other serous membranes.

vegetative (vej'et-a-tiv). Concerned with growth and with nutrition; also functioning involuntarily or unconsciously. **v. disorder**, a disorder of nutrition. **v. system**, the sympathetic nervous system. See under *system*.

vegeto-alkali (veg'et-o-al'kal-i). An alkaloid.

vegeto-animal (vej'et-o-an'im-al). Common to plants and animals.

Vehic. Abbreviation for L. *vehic'ulum*, a vehicle.

vehicle (ve'hik-l) [L. *vehic'ulum*]. 1. An excipient. 2. Any medium through which an impulse is propagated.

veil (vāl) [L. *velum*]. 1. Same as *velum*. 2. A caul or piece of the amniotic sac occasionally covering the face of a new-born child. 3. A slight huskiness in the voice of a singer. **Hottentot v.** See *velamen vulvae*. **Jackson's v.** See *Jackson's membrane*, under *membrane*.

VEINS

Frontal Section of Cerebrum showing Veins that form the Sinuses (after Henle).—1, internal carotid artery; 2, abducens nerve; 3, third branch of trigeminal nerve; 4, falx cerebri; 5, tentorium cerebelli; Str, transverse sinus; Sss, Ssi, superior and inferior sagittal sinuses; Si, sinus tentorii; Sc, cavernous sinus; Sps, superior petrosal sinus; So, occipital sinus; cic, internal cerebral vein.

VEINS

Venous Sinuses at Base of Skull (after Henle).—1, section of falx cerebri; 2, optic nerve; 3, internal carotid artery; 4, oculomotor nerve; 5, dorsum sellae; 6, nerves protruding from the jugular foramen; Sss, Ssi, superior and inferior sagittal sinus; Sia, Ssp, anterior and posterior intercavernous sinuses; Ssp, sphenoparietal sinus; Sc, cavernous sinus; Sps, Spi, superior and inferior petrosal sinuses; Str, Str, transverse sinus; So, occipital sinus; Pb, basilar plexus.

The Internal Jugular and Common Facial Veins and their Branches (after Henle).—The zygoma and the left side of the inferior maxilla, together with the masseter, have been removed. 1, pterygoid muscle; 2, styloglossus muscle; 3, sublingual gland; 4, hyoglossus muscle; 5, geniohyoid muscle; 6, mylohyoid muscle; 7, sternohyoid muscle; 8, thyrohyoid muscle; 9, omohyoid muscle; 10, stylohyoid muscle; 11, stylopharyngeus muscle; 12, stylopharyngeus muscle; fa, je, internal and external jugular veins; ph, pharyngeal vein; dl, dorsal vein of tongue; l, lingual vein; tsu, superior thyroid vein; fc, common facial vein; fa, anterior facial vein; fa', superficial, and fa'', deep branches of same; f, frontal vein; a, angular vein; os, superior ophthalmic vein; n, nasal vein; lbs, superior labial vein; pp, posterior facial vein; sp', superficial and deep branches of same; tps, tpm, tpr, superficial, middle, and deep temporal veins; pp, pterygoid plexus; oi, inferior ophthalmic vein; sca, anterior jugular vein.

Innominate Vein and its Branches (after Henle).—1, mylohyoid muscle; 2, root of tongue; 3, larynx; 4, thyroid gland; 5, trachea; sc, superior vena cava; Abd, Abs, right and left innominate veins; sc, subclavian vein; ji, je, internal and external jugular veins; fa', fa'', superior and inferior thyroid vein; cvp, deep cervical vein; v, vertebral vein; mmi, internal mammary; sc, superior intercostal vein; sca, anterior jugular vein; * thyroid plexus.

vein (vān) [L. *ve'na*]. A vessel which conveys the blood to or toward the heart. All veins except the pulmonary carry dark, venous blood. Veins, like arteries, have three coats, an *inner*, *middle*, and *outer*, but the coats are not so thick, and they collapse when the vessel is cut. Many veins, especially the superficial, have *valves* formed of reduplications of their lining membrane. The larger arteries have deep veins, generally included in the same sheath, while such vessels as the

brachial and radial have two veins each, the *vena comites*. The superficial veins, which are usually unaccompanied by arteries, run between the layers of the superficial fascia and terminate in the deep veins. Venous channels within the skull, formed by separation of layers of dura mater, are called sinuses. Veins belong to either the (1) pulmonary system; (2) systemic system; or (3) portal system, the latter being a part of the systemic system.

A TABLE OF THE VEINS

afferent v's. The vessels which convey the venous blood of the kidney; the emulgent veins.

anastomotic v., great. A vein arising on the parietal lobe of the cerebrum, running along the horizontal limb of the fissure of Sylvius, and opening into the cavernous sinus. Called also *Troldard's v.*

anastomotic v., posterior. A vein that establishes communication between the cavernous and lateral sinuses. Called also *Labbe's v.*

angular v. One formed by the frontal and supra-orbital veins; at the side of the root of the nose it takes the name of *facial vein*.

arciform v's. Veins of the kidney gathering the blood from the capillaries surrounding the tubules and joining in a series of arches over the bases of the renal pyramids.

auditory v's. Vessels which accompany the arteries of the vestibule and receive those of the cochlea at the base of the modiolus, terminating in the superior petrosal sinus.

auricular v., posterior. Begins in a plexus on the side of the head, descends behind the external ear, and joins the temporomaxillary vein to form the external jugular.

axillary v. Formed by the *venæ comites* of the brachial artery and the basilic vein; it receives the cephalic vein and is continued by the subclavian.

azygos v., left lower (*ve'na azygos mi'nor*). Arises from the left ascending lumbar or left renal vein; receives various intercostal, esophageal, and mediastinal veins, and joins the right azygos.

azygos v., left upper. Receives several intercostal veins and goes to the left lower or right azygos.

azygos v., right (*ve'na azygos ma'jor*). Commences usually from the right ascending lumbar vein; receives the left azygos, several esophageal, mediastinal, and pericardial veins, the right bronchial, etc., and goes to the precava.

basilar v. Crosses over the crus cerebri and joins with Galen's veins.

basilic v. Formed by the union of the median basilic and common ulnar: passes to the axillary vein.

basilic v., median. A vein of the forearm formed by division of the median vein: joins the common ulnar to form the basilic vein.

basivertebral v's (*ve'nae ba'sis vertebra'rum*). Lie in large channels in the vertebral bodies, emerge from the bodies on their dorsal surfaces, and join a transverse trunk connecting the anterior longitudinal spinal veins.

brachial v's. One on either side of the brachial artery: they join the basilic to form the axillary vein.

brachiocephalic v's. The innominate veins.

Breschet's v's. The veins of the diploë.

bronchial v's, left and right. Return the blood of the systemic circulation from the substance of the lungs: they usually join the azygos major and minor.

buccal v. Arises in the buccinator muscle and goes to the pterygoid plexus.

Burow's v. A vein formed by the two inferior

epigastric veins and a branch from the bladder: it joins the portal vein.

cardiac v., anterior or great. Rises near the heart's apex and passes to the great coronary sinus.

cardiac v's, left. Three or four small vessels arising on the posterior surface of the left ventricle and opening into the great coronary sinus.

cardiac v's, right. Three or four small vessels which collect the blood from the anterior surface of the right ventricle and pour it into the great coronary sinus.

cardinal v's. The four main veins of the earliest embryonic life: they convey the blood to the heart. Some give this name to the two ascending veins only.

cephalic v. A vein of the forearm and arm formed by the union of the radial and median cephalic: it terminates in the axillary vein.

cephalic v., median. A vein of the forearm formed by the division of the median vein: it joins the radial to form the cephalic vein.

cerebellar v's. Veins on the surface of the cerebellum, and are in three sets: the *superior*, going to the straight sinus and *venæ galeni*; the *inferior*, to the lateral sinuses; and the *lateral anterior*, to the superior petrosal sinus.

cerebral v's, deep. The *venæ galeni*, or ventricular veins, one in either hemisphere, formed by the union of the choroid and striatal veins: they unite and go to the straight sinus.

cerebral v's, inferior. Veins of the lower part of the outer and the under surface of the cerebral hemispheres, which pass to the cavernous, superior petrosal, and lateral sinuses.

cerebral v's, median. Arise on the mesial surface of either hemisphere.

cerebral v., middle. A large vein arising on the under surface of the temporosphenoid lobe, running along the fissure of Sylvius, and going to the cavernous sinus.

cerebral v's, superficial. Eight to twelve pairs are joined by the median cerebral veins and open into the superior longitudinal sinus.

cervical v., ascending. The companion of the ascending cervical artery.

cervical v., deep. Passes with the deep cervical artery between the semispinalis colli and complexus muscles to the vertebral vein.

choroid v. Runs along the outer border of the choroid plexus and joins the striatal vein.

ciliary v's. 1. Veins on the outer surface of the choroid; the *venæ vorticose*. 2. A set of veins that accompany the ciliary arteries.

circular v. A large vein which runs around the placenta, near its edge.

circumflex iliac v's. Veins (*deep and superficial*) that accompany the deep and superficial circumflex iliac arteries.

conarial v. Arises in a plexus of venules over the conarium and flows to the subcerebral vein.

coronary v. A vein of the stomach, begins near the pylorus, passes along the lesser curvature of the stomach to the esophageal opening, enters

the folds of the lesser omentum, and ends in the portal vein.

corpora striata, v's of the, striatal v's. Veins (one on each side) formed by small vessels from the corpus striatum and optic thalamus, overlaid by the bony band of Tarinus, and each terminating in the vein of Galen of its own side.

cuvierian v's. Same as *cardinal v's*.

cystic v. A branch of the portal vein coming from the gall-bladder.

dental v., inferior. A branch of the pterygoid plexus from regions supplied by the inferior dental arteries.

diploëtic v's. Four veins of the diploë: the frontal, anterior, and posterior temporal, and occipital.

dorsal v. (of the penis). A large vein of the groove of the dorsum of the penis; its two main branches unite, pass through the triangular ligament as one vein, then fork, and enter the prostatic plexus.

dorsales nasi v's. Small veins of the dorsum of the nose flowing to the nasal arch.

dorsispinal v's. A great network of veins from the integument and muscles of the back, surrounding the processes and laminae of all the vertebrae: they flow to the vessels of the veins of the spinal canal, and the vertebral, intercostal, lumbar, and sacral veins.

emissary v. Any one of the small veins which connect the intracranial sinuses with the veins outside the skull, passing through the various foramina.

emulgent v's. The afferent veins of the kidneys. See *afferent v's*.

epigastric v's, deep. Two veins which accompany the deep epigastric artery: they unite into a single trunk before their termination in the external iliac vein.

epigastric v., superficial. A vein which joins the long saphena at the saphenous opening.

extraspinal v's. The dorsispinal veins.

facial v. Arises from a plexus of temporal branches on the anterior part of the skull; descends as the frontal along the middle of the forehead; at the root of the nose the nasal arch joins it to its fellow; it then runs down by the root of the nose as the angular, passes beneath the zygomatic muscles, and becomes the facial; descends along the anterior border of the masseter, crosses the body of the lower jaw to the submaxillary gland, and terminates in the internal jugular vein. Branches: Inferior palpebral, labial, buccal, masseteric, ranine, inferior palatine, and submaxillary veins.

femoral v., common. Accompanies the femoral artery, and at Poupart's ligament takes the name of external iliac vein.

femoral v., deep. Accompanies the femoral artery, and joins the superficial femoral to form the common femoral vein.

femoral v., superficial. The largest branch of the common femoral.

frontal v's. A pair of veins which arise in a plexus on the anterior part of the scalp: each vein runs down the middle line of the forehead, and being joined by the supra-orbital at the root of the nose, forms the angular vein.

Galen's v's. 1. The deep cerebral or ventricular veins. 2. The anterior cardiac vein.

gastric v's. The veins of the stomach: of these the *coronary* is the largest, and the *pyloric* next in size.

gastro-epiploic v's. Two veins of the stomach and epiploën flowing to the superior mesenteric: the right gastro-epiploic sometimes opens into the splenic vein.

gluteal v. Passes through the sacrosciatic foramen in company with the gluteal artery.

hemiazygos v's. Small vessels accessory to the azygos veins.

hemorrhoidal v's. A plexus of veins around the lower rectum, in three sets: the *superior* join the inferior mesenteric, and the *middle* and *inferior* the internal iliac vein.

hepatic v's. Three large veins of the liver tributary to the postcava.

iliac v., common. Formed by the confluence of the external and internal iliac veins. The right and left common iliacs unite to form the postcava.

iliac v's, deep circumflex. Two veins which accompany the deep epigastric artery: they usually unite into a single trunk and flow into the external iliac vein.

iliac v., external. A branch of the common iliac, itself the upward extension of the common femoral vein.

iliolumbar v. A vein which accompanies the ilio-lumbar artery, anastomoses with the lumbar and deep circumflex iliac veins, and empties into the hypogastric vein.

innominate v's. Two large veins formed by the union of the internal jugular and subclavian at each side of the root of the neck. The *right innominate vein* is $1\frac{1}{4}$ inches long, lies external to the innominate artery, and unites with the left innominate to form the superior cava. Branches: Right vertebral vein, right internal mammary vein, right inferior thyroid. Receives also the ductus lymphaticus dexter. The *left innominate* runs horizontally across the roots of the three great aortic branches, and unites with the right innominate at the right side of the mediastinum. Branches: Left vertebral vein, left inferior thyroid vein, left internal mammary vein, and superior intercostal vein. Receives also the thoracic duct.

intercostal superior v. Formed by the union of five or six left upper intercostal veins. It communicates below with the azygos minor, and terminates above in the left innominate vein.

interosseous v's. Veins of the hands and feet corresponding to the interosseous arteries.

intralobular v. A vessel in the center of each lobule of the liver, opening into the sublobular vein.

intraspinal v's. The veins within the spinal canal, including the meningorachidian and medullary veins.

jugular v., anterior. Arises by several branches from the submaxillary region and opens into the external vein.

jugular v., external. Formed by the posterior division of the temporomaxillary and the posterior auricular veins.

jugular v., internal. Arises from the lateral and inferior petrosal sinuses, and with the subclavian forms the innominate vein: it receives several large veins of the head.

jugular v., posterior external. Commences in the occipital region, runs down the back of the neck, and opens into the external jugular.

Kohlrausch's v's. Superficial veins of the penis passing from its under surface to the dorsal vein.

Labbe's v. The posterior anastomosing vein of the cerebral cortex.

Marshall's oblique v. The relic of the left duct of Chuvier, remaining as a vein of the heart substance, and joining the coronary sinus.

masseteric v's. Veins accompanying the masseteric artery and emptying into the pterygoid plexus.

mastoid v. A vein of junction between the lateral sinus and the occipital vein. It passes through the mastoid foramen.

maxillary v., internal. Arises from the pterygoid plexus, passes back behind the neck of the lower jaw, and joins the temporal vein, the common trunk being the temporomaxillary vein.

median v. Passes between the anterior ulnar and radial veins. At the bend of the elbow it receives

VEINS

VEINS

Scheme of the Veins of the Body (after Henle).—The veins in the anterior portion of the body are given in outline, those of the intestine are shaded. *cs*, vena cava superior; *ci*, vena cava inferior; *Abd*, *Abs*, right and left innominate veins; *Sd*, *Ss*, right and left subclavian; *ji*, internal jugular vein; *ti*, inferior thyroid vein; *mmi*, internal mammary vein; *ts*, superior intercostal vein; *ax*, azygos vein; *ha*, small azygos vein; *haa*, left upper azygos vein; *ic*, intercostal vein; *d*, dorsal branch of same; *ia*, anterior intercostal branch of the internal mammary vein; *h*, hepatic vein; *lb*, lumbar vein; *vp*, portal vein; *Aid*, *Ais*, right and left common iliac veins; *sm*, middle sacral vein; *J*, iliac vein; *H*, hypogastric vein; *C*, femoral vein; *ei*, inferior epigastric vein.

Veins and Arteries of the Thoracic and Abdominal Cavities (after Henle).—1, root of right lung; 2, section of diaphragm; 3, suprarenal body; 4, kidney; 5, psoas magnus muscle; 6, quadratus lumborum muscle; *Aa*, descending aorta; *aA*, arch of aorta; *Ab*, innominate artery; *cs*, left carotid artery; *Sr*, left subclavian artery; *c*, celiac artery; *mes*, *mei*, superior and inferior mesenteric arteries; *cs*, *ci*, superior and inferior venae cavae; *Abd*, *Abs*, right and left innominate veins; *S*, subclavian vein; *je*, *ji*, external and internal jugular; *ax*, azygos vein; *ic*, intercostal vein; *h*, hepatic veins; *phr*, phrenic vein and artery; *sr*, suprarenal vein; *r*, renal artery and vein; *lb*, lumbar vein; *spi*, internal spermatic artery and vein; *sm*, middle sacral artery and vein; *ai*, common iliac artery and vein; *H*, hypogastric artery and vein; *I*, iliac artery and vein.

Veins of the Fetus (about four weeks old).—*je*, *je'*, right and left primitive jugular veins; *Cuv*, *Cuv'*, right and left duct of Cuvier; *Car*, *car'*, right and left cardinal veins in which the intercostals of either side empty; *ci*, vena cava inferior; *Dv*, ductus venosus; *Pt*, portal vein; *u*, umbilical vein; *o*, omphalomesenteric vein; *I*, *I'*, right and left iliac; *H*, *H'*, right and left hypogastric.

Veins of the Fetus (after establishment of placental circulation).—*je*, *je'*, right and left primitive jugular veins; *Sd*, *Ss*, right and left subclavian veins; *ji*, *ji'*, right and left internal jugular veins; *Abd*, lower end of right external jugular vein; *Abs*, transverse jugular vein; *Cuv*, *Cuv'*, right and left duct of Cuvier; *ax*, azygos vein; *ha*, small azygos vein; *car'*, left cardinal vein; *ci*, inferior vena cava; *Dv*, ductus venosus; *Pt*, portal vein; *u*, umbilical vein; *mes*, superior mesenteric vein; *ai*, *ai'*, right and left common iliac; *I*, *I'*, right and left iliac; *H*, *H'*, right and left hypogastric.

VEINS

VEINS

The Portal Vein and its Branches (after Henle).—The liver and stomach are turned up; the transverse colon has been removed. 1, liver; 2, gall-bladder; 3, stomach; 4, pancreas; 5, spleen; 6, duodenum; 7, small intestine; 8, cecum; 9, ascending colon; 10, descending colon; 11, rectum; *vp*, portal vein; *mes*, *mei*, superior and inferior mesenteric veins; *li*, splenic vein; *gb*, gastric veins; *ged*, *ges*, right and left gastro-epiploic veins; *i*, intestinal branches; *cd*, colica dextra; *csi*, colica sinistra; *hi*, internal hemorrhoidal; *cv*, coronary vein of stomach; *cy*, cystic vein.

Veins of the Pelvis (after Henle).—1, left corpus cavernosum of the penis; 2, urethra; 3, section of internal obturator muscle; 4, buttock; 5, bladder; 6, vas deferens; *ci*, inferior vena cava; *Aid*, *Ais*, right and left common iliac veins; *Hd*, *Hs*, right and left hypogastric veins; *Cd*, right crural vein; *sm*, middle sacral vein; *g*, gluteal vein; *sl*, lateral sacral vein; *isc*, sciatic vein; *pui*, right internal pudic vein; *pui'*, left internal pudic vein; *dp*, dorsal vein of penis; *prp*, branch to deep structures of penis; *Ppi*, pubic plexus; *pys*, vesical plexus; *o*, obturator veins; *ei*, inferior epigastric veins.

Superficial Veins of Lower Limb (after Henle).—*C*, femoral vein; *Sam*, *Sap*, internal and external saphenous veins; *Rd*, dorsal rete of foot; *pl*, plantar vein.

Superficial Veins of Upper Limb (after Quain).—1, cephalic vein; 2, basilic vein; 3, radial vein; 4, median cephalic vein; 5, median vein; 6, median basilic vein; 7, anterior ulnar vein; 8, posterior ulnar vein.

- a branch from the deep veins. Divides into two branches, viz., the *median cephalic*, which passes obliquely outward to join the cephalic vein; the *median basilic*, which passes obliquely inward to join the basilic vein.
- medullispinal v's.** The veins of the spinal cord proper, mostly lying in a plexus between the pia and arachnoid.
- meningorachidian v's.** Pass between the vertebral theca and the vertebrae. In front they form two trunks—longitudinal spinal sinuses—which run the whole length of the column on each side of the posterior common ligament. A transverse trunk on the body of each vertebra passes beneath the ligament and joins these two trunks, and also receives the basivertebral veins. The meningorachidian veins pass anteriorly through the anterior condyloid foramina, and so communicate with the internal jugulars. In the neck they empty into the vertebral veins; in the chest, into the intercostal; and in the loins and pelvis, into the lumbar and sacral veins.
- mesenteric v., inferior.** Receives the inferior hemorrhoidal veins and the blood from the sigmoid flexure and descending colon, and terminates in the splenic vein.
- mesenteric v., superior.** Formed by branches collecting the blood from the capillaries of the superior mesenteric artery. These branches form a large trunk, which unites with the splenic vein in the formation of the portal vein.
- oblique v.** See *Marshall's oblique v.*
- omphalomesenteric v's.** Two important fetal veins of the portal circulation.
- ophthalmic v.** A large vein which connects the angular vein at the inner angle of the orbit with the cavernous sinus.
- ovarian v's.** These correspond to the spermatic veins of the male. The right ovarian empties into the vena cava, and the left ovarian into the left renal vein.
- parietal v.** A branch of the superior longitudinal sinus from the pericranium and scalp.
- petrosal v.** The sinus petrosus.
- popliteal v.** Formed by the anterior and posterior tibial veins, ascends through the popliteal space, and, after piercing the adductor magnus, becomes the femoral vein.
- portal v.** Takes the blood of the superior mesenteric, splenic, gastric, and cystic veins to the liver and distributes it to that organ, from which it is taken by the hepatic veins to the postcava.
- pulmonary v's.** Four veins which return the arterialized blood from the lungs to the left auricle of the heart.
- radial v.** Extends from the dorsum of the wrist, and at the bend of the elbow unites with the median cephalic to form the cephalic vein.
- renal v.** Extends from the hilum of the kidney to the postcava.
- Retzius's v's.** Veins from the walls of the intestines to the branches of the vena cava.
- Rosenthal's v's.** The basilar veins.
- Ruysch's v's.** Same as *Retzius's v's.*
- salvatella v.** A vein from the little finger.
- Santorini's v's.** Veins from the scalp to the cerebral sinuses.
- saphenous v., external or short.** Extends from the dorsum of the foot to the popliteal vein, between the heads of the gastrocnemius.
- saphenous v., internal or long.** Begins at the inner side of the dorsum of the foot and passes upon the inner side of the leg and thigh to the femoral vein, $1\frac{1}{2}$ inches below Poupart's ligament.
- Sappey's v's.** Accessory portal veins.
- spermatic v.** Passes from the back of the testis through the pampiniform plexus, the right going to the postcava, and the left to the left renal vein.
- splenic v.** A large vessel passing from the spleen and adjacent parts to the portal vein.
- Stenson's v's.** Venae vorticosae.
- subclavian v.** A continuation of the axillary, extends from the lower border of the first rib to the inner ends of the sternoclavicular articulation, and unites with the internal jugular to form the innominate vein. It receives the anterior and external jugulars.
- sublobular v's.** Small veins of the liver around which the bases of the lobules are clustered.
- sylvian v.** A vein which runs along the fissure of Sylvius and crosses the hemisphere.
- temporal v.** Arises by a minute plexus on the side and vertex of the scalp, and with the internal maxillary forms the temporomaxillary.
- temporal v., middle.** A large tributary of the temporal vein coming from the temporal muscle.
- temporomaxillary v.** Formed by the union of the temporal and internal maxillary, and becomes the external jugular at the lower border of the parotid gland, after passing through it. Branches: Anterior auricular, mesenteric, transverse facial, parotid, and posterior auricular.
- Thebesius, v's of.** Numerous small venules which carry blood from the heart substance into the right auricle.
- thyroid v's, inferior.** Two in number, one on each side, receive blood from the thyroid gland. The right vein terminates in the right innominate; the left vein, in the left innominate.
- thyroid v., superior.** A branch of the internal jugular.
- Trolard's v.** The great anastomotic vein. See *anastomotic v.*
- ulnar v.** The principal vein of the anterior and ulnar aspects of the forearm. It is formed by the anterior and posterior ulnar veins, and with the median basilic forms the basilic vein.
- ulnar v., anterior.** Rises on the palmar surface of the hand and wrist, and passes to the ulnar vein.
- ulnar v., posterior.** Passes from the dorsal surface of the wrist, and near the elbow unites with its anterior fellow to form the ulnar vein.
- umbilical v.** A vessel which conveys the blood from the placenta to the fetus, going to the postcava. After birth it becomes the round ligament of the liver.
- vertebral v.** Lies in the canal formed by the foramina of the transverse processes of the cervical vertebrae. It terminates in the innominate vein on each side. Branches: Posterior condyloid, muscular, cervical meningorachidian, superficial cervical, deep cervical.
- vesalian v.** A vessel which connects the pterygoid plexus with the cavernous sinus.
- Vieussens's v's.** The small superficial coronary veins of the heart.
- vitelline v's.** Fetal veins going from the yolk-sac to the sinus venosus.
- vortex v's.** Four venous trunks with tributary whorls in the superficial layer of the choroid of the eye.
- Zuckerkindl's v.** A small vessel by which the ethmoid veins and those of the nose communicate with the veins of the cerebrum.

velamen (ve-la'men) [L. "veil"]. Any membrane, velum, meninx, or tegument. **v. vul'væ**, the Hottentot veil or pudendal apron.

velamentous (vel-am-en'tus) [L. *vela'men* veil]. Membranous and pendent, like a veil.

velamentum (ve-lam-en'tum), pl. *velamen'ta* [L.]. Any covering, velum, or envelope.

velar (ve'lar) [L. *vela'ris*]. Pertaining to a velum, especially to the velum of the palate.

Veldt sore (velt). See under *sore*.

veliform (vel'if-orm). Velamentous.

Vella's fistula (ve'lahz) [Luigi *Vella*, Italian physiologist, 1825-1886]. See under *fistula*.

vellication (vel-ik-a'shun) [L. *vellica'tio*]. A twitching of the muscles.

vellolin (vel'o-lin). A proprietary purified wool-fat.

vellosin (vel-o'sin). A poisonous agent occurring in yellow crystals, $C_{22}H_{28}N_2O_4$, from the bark of *Geissospermum vello'sii*, or perreira: its physiologic action is said to be not unlike that of brucin.

vel'us oli'væ inferio'ris. A narrow band of tangential fibers surrounding the inferior olive.

velopural (ve-lop'u-ral). An ointment base composed of soap and olive oil.

velosynthesis (vel-o-sin'thes-is) [L. *vel'um* veil + Gr. *σύνθεσις*, a putting together]. Same as *staphylorrhaphy*.

Velpeau's bandage, deformity, hernia, mixture (vel-pōz') [Alfred Armand Louis Marie *Velpeau*, surgeon in Paris, 1795-1867]. See *bandage, deformity*, etc.

velum (ve'lum) [L. "veil"]. Any veil or veil-like organ. **anterior v.**, **superior v.**, the valve of Viessens. **artificial v.**, an appliance, generally composed of vulcanite, used in the mechanic treatment of fissure of the soft palate. **Baker's v.**, an obturator used in cleft-palate. **inferior or posterior medullary v.**, the commissure of the flocculi of the cerebellar hemisphere, forming part of the floor of the fourth ventricle. **v. interpos'itum**, the membranous roof of the third ventricle. **v. medulla're ante'rius** [B N A]. See *Viessens's valve*. **v. medulla're posti'cum**, a thin white lamina in front of the nodule of the vermis of the cerebellum, and forming a part of the roof of the fourth ventricle; the valve of Tarinus. **v. pala'ti**, the soft palate. **v. pendulum pala'ti**, the pendulous and posterior portion of the soft palate; the uvula or pendulum of the palate. **v. of Tari'nus**, the inferior or posterior medullary velum. **v. transver'sum**, a transverse fold of the tela chorioidea marking the boundary between the diencephalon and the telencephalon in the embryonic brain.

velvene (vel'vën). A proprietary cosmetic and skin remedy.

velvrl (vel'vril). A preparation of nitrocellulose with nitrated oil. It forms, when hardened, an elastic film, and is used for covering operation wounds. It is soluble only in acetone.

vena (ve'nah), pl. *ve'næ* [L.]. A vein. See *vein*. **venæ adhe'n'tes**, fetal veins conveying arterial blood from the umbilical and omphalomesenteric veins to the liver. **v. anon'yma** [B N A], innominate vein. **v. az'ygus** [B N A], **v. az'ygus ma'jor**, **v. az'ygus dex'tra**, the principal vein which connects the precava with the postcava. **v. az'ygus mi'nor**, **v. hemiaz'ygus**, the principal vein on the left side going from the postcava to the precava. **v. basil'ica** [B N A], the basilic vein. **venæ basivertebra'lis** [B N A], the veins from the body of a vertebra. **venæ ca'væ**, the two great venous trunks of the body: the precava, or vena cava descendens, and the postcava, or vena cava ascendens. **v. cephal'ica** [B N A]. See *cephalic vein*, under *vein*. **venæ com'ites**, the veins which accompany an artery. **venæ cor'dis**

min'imæ [B N A]. See *vena thebesii*. **venæ gale'ni**, two veins of the cerebrum which discharge themselves into the straight sinus. **v. gale'ni cor'dis**, a vein in the right side of the septal wall of the heart. Its opening in the auricle is one of the foramina thebesii. **v. por'ta**, the portal vein. See *vein*. **venæ revehen'tes**, fetal veins which return the blood from the liver to the umbilical vein. **venæ stella'tæ** [B N A], the stars of Verheyen; a star-shaped plexus of veins beneath the capsule of the kidney whence the interlobular veins arise. Called the *stellate veins*. **venæ thebe'sii**, the foramina of Thebesius: small veins conveying blood from the heart substance into the right auricle. Called also *venæ cordis minime*. **venæ vortico'sæ** [B N A], the venous network of the choroid.

venation (ve-na'shun) [L. *ve'na* vein]. The manner of distribution of the veins of a part.

venenation (ven-e-na'shun) [L. *venen'um* poison]. Poisoning; a condition of being poisoned.

venene (ve'nën). The poisonous element of snake venom.

veneniferous (ven-e-nif'er-us) [L. *venen'um* poison + *fer're* to bear]. Carrying poison.

venenific (ven-e-nif'ik) [L. *venen'um* poison + *fa'cere* to make]. Forming poison.

Venousa (ven-e-no'sah), pl. [L. *veneno'sus* poisonous]. Venomous snakes collectively; Thanatophidia.

venenosaliavary (ven'en-o-sal'iv-a-re). Same as *venenosaliavary*.

venenous (ven'e-nus) [L. *veneno'sus*]. Poisonous or toxic.

venepuncture (ven'e-punk-tür). See *venipuncture*.

venereal (ve-ne're-al) [L. *venere'us*]. Due to or propagated by sexual intercourse, as, *venereal disease*. **v. wart**. See *verruca acuminata*.

venereologist (ve-ne-re-ol'o-jist). A practitioner who specializes in venereal disease.

venereophobia (ve-ne're-o-fō-be'ah) [*venereal* + Gr. *φόβος* fear]. Morbid dread of venereal infection.

venerology (ven-er-ol'o-je) [*venereal* + Gr. *λόγος* treatise]. The study or science of venereal diseases.

venery (ven'er-e) [L. *venere'us* pertaining to Venus]. Coitus; sexual intercourse.

venesection (ven-e-sek'shun) [L. *ve'na* vein + *sectio* cutting]. The opening of a vein for the purpose of letting blood; phlebotomy.

venesuture (ven-e-su'tür). Suture of a vein.

venin, venine (ven'in). Same as *venene*.

veniplex (ven'e-pleks) [L. *ve'na* vein + *plex'us* plexus]. A venous plexus.

venipuncture (ven'e-punk-tür) [L. *ve'na* vein + *puncture*]. The surgical or therapeutic puncture of a vein.

venisuture (ven'e-su'tcher) [L. *ve'na* vein + *sutura* stitch]. The suture of a vein.

veno-auricular (ve'no-aw-rik'u-lar). Pertaining to the vena cava and the auricle, as, *veno-auricular junction*.

venoclysis (ve-nok'lis-is) [L. *ve'na* vein + Gr. *κλύσις* injection]. The injection of medicinal or nutrient fluid in a vein.

venodine (ven'o-din). An iodine preparation for intravenous use.

venogen (ven'o-jen). A substance that is changed into venene.

venom (ven'um) [L. *venen'um* poison]. A poison; especially one normally secreted by a serpent, insect, or other animal. **v.-globulin**. See under *globulin*. **v.-peptone**. See under *peptone*. **snake v.**, the venom of snakes contains hemotoxins, hemagglutinins, neurotoxins, leukotoxins, and endotheliotoxins.

venomization (ven'um-iz-a'shun). Treatment of a substance with snake venom.

- venomosalivary** (ven''o-mo-sal'iv-a-re). Secret-ing a poisonous saliva.
- venomotor** (ve-no-mo'tor). Causing constriction or dilatation of the veins.
- venoperitoneostomy** (ve''no-per''it-o-ne-os'to-me) [L. *ve'na* vein + *peritonium* + Gr. *veós* new + *stóma* opening]. Anastomosis of the saphenous vein with the peritoneum for permanent drainage of the abdomen in ascites. Called also *Ruotie's operation*.
- venopressor** (ve'no-pres-or). Pertaining to venous blood-pressure.
- venosclerosis** (ve''no-skle-ro'sis). Sclerosis of the veins; especially those of the rectum: usually syphilitic; phlebosclerosis.
- venose** (ve'nós). Provided with veins.
- venosinal** (ve-no-si'nal). Pertaining to the vena cava and the auricular sinus of the heart, as, *veno-sinal* bands.
- venosity** (ve-nos'it-e). 1. Excess of venous blood in a part. 2. A plentiful supply of blood-vessels or of venous blood.
- venous** (ve'nus) [L. *veno'sus*]. Of or pertaining to the veins.
- venovenostomy** (ve''no-ve-nos'to-me) [L. *ve'na* vein + *stóma* mouth]. Anastomosis of a vein into a vein.
- venostoria** (ven-sto're-ah). A proprietary food-preparation.
- vent** (vent) [OFr. *fente* slit]. 1. Any opening or outlet; especially the anus. 2. An opening that discharges pus. 3. Free discharge.
- venter** (ven'ter), pl. *ven'tres* [L. "belly"]. 1. The stomach or belly; also the uterus. 2. Any belly-shaped part; a hollowed part. **v. anterior**, the anterior belly of a muscle or part. **v. ilii**, the inner concave surface of the ilium. **v. l'mus**, the abdomen. **v. me'dius**, the thoracic cavity. **v. poste'rior**, the posterior belly of a muscle or part. **v. propen'dens**. 1. Pendulous abdomen. 2. Anterior version of the uterus. **v. scap'ulæ**, the sub-scapular fossa. **v. supre'mus**, the cranial cavity.
- ventilation** (ven-til-a'shun) [L. *ventilatio*]. The process or act of supplying a house or room continuously with fresh air. **downward v.**, that in which the outlets have places lower than those of the inlets. **exhausting v.**, ventilation by means of the exhausting fan or by some other process which withdraws the foul air. **natural v.**, ventilation effected without any special appliance to render it certain. **plenum v.**, the supply of fresh air to a building by fan-blowers. **upward v.**, that which introduces air below the place of its withdrawal. **vacuum v.**, that which is effected by the forced extraction of air.
- ventouse** (vaw-too'z) [Fr.]. A cupping-glass.
- ventrad** (ven'trad) [L. *ven'ter* belly + *ad* to]. Toward a belly, venter, or ventral aspect.
- ventral** (ven'tral) [L. *ventralis*]. Pertaining to the belly or to a venter; abdominal. **v. aspect**, the aspect directed toward the belly.
- ventralward** (ven'tral-ward). Same as *ventrad*.
- ventricle** (ven'trik'l) [L. *ventriculus*]. Any small cavity; especially either one of the two lower (right and left) cavities of the heart; any one of the various cavities of the brain. **v. of Arantius**, the lower end of the fourth ventricle. **v's of the brain**, the cavities within the brain, including the two *lateral*, the *third*, the *fourth*, and the *fifth* ventricles. **calossal v.**, the space between either labium cerebri. **v. of the cord**, the central canal of the spinal cord. **Duncan's v.**, the fifth ventricle. **fifth v.**, the narrow space between the layers of the septum lucidum. **fourth v.**, a space which represents the primitive cavity of the hind-brain: it has the pons and oblongata in front, while the cerebellum lies dorsad. **Galen's v.**, the sacculus laryngis. **v's of the heart**, one of the pair of cavities constituting the lower portion of the heart. That on the left side (**left**
- v.**) propels the blood through the arteries; that on the right side (**right v.**) forces the blood through the pulmonary artery into the lungs. See *heart*. **Krause's v.** See *terminal v.* **v. of the larynx**, the space between the true and the false vocal cords. **lateral v.**, the space in each hemisphere representing the cavity of the original central vesicle. **Morgagni's v.**, the sacculus laryngis. **v. of the myelon**, the central cavity of the spinal cord. **optic v.**, the cavity of an optic lobe of the brain. **pineal v.**, the cavity beneath or within the pineal body. Called also *recessus pinealis*. **sixth v.** See *Verga's v.* **Sylvius's v.**, the fifth ventricle. **terminal v.**, a sac-like expansion of the central canal of the spinal cord within the conus terminalis. **third v.**, the space between the optic thalami which represents the cavity of the embryonic forebrain. **Verga's v.**, an occasional space between the callosum and the fornix. Called also *sixth v.* **Vioussens's v.**, the fifth ventricle.
- ventricolumna** (ven''tre-ko-lum'nah). Ventricle-cornu.
- ventricornu** (ven-tre-kor'nu) [L. *ven'ter* belly + *cor'nu* horn]. The anterior ventral cornu of gray matter of the spinal cord.
- ventricornual** (ven-tre-kor'nu-al). Pertaining to the ventricornu.
- ventricose** (ven'trik-ös). Having an inflation or belly on one side.
- ventricular** (ven'trik-u-lar). Pertaining to a ventricle.
- ventricularis** (ven'trik-u-la'ris). The thyro-epiglottideus muscle.
- ventriculocordectomy** (ven'trik''u-lo-kor-dek'to-me). Chevalier Jackson operation for laryngeal stenosis with bilateral recurrent paralysis, done by excising with the punch forceps the entire ventricular floor anterior to the vocal process and antero-external surface of the arytenoid.
- ventriculography** (ven'trik-u-log'raf-e) [L. *ventriculus* ventricle + Gr. *γράφειν* to print]. Roentgenography of the brain following the injection of air into the cerebral vesicles: employed for the diagnosis of brain tumors.
- ventriculometry** (ven'trik-u-lom'et-re) [ventricle + Gr. *μετρέειν* to measure]. The measurement of the intraventricular (intracranial) pressure.
- ventriculoscopy** (ven'trik-u-los'ko-pe) [ventricle + Gr. *σκοπεῖν* to examine]. Direct examination of the cerebral ventricles by means of an endoscope or cystoscope.
- ventriculus** (ven'trik'u-lus). Latin for *ventricle* and for *stomach*. **v. cor'dis**, the ventricle of the heart. **v. laryngis** (*Morgagni*) [B N A], the ventricle of the larynx. **v. quartus** [B N A], the fourth ventricle. See under *ventricle*. **v. terminalis** [B N A], a dilatation of the lower part of the conus terminalis. **v. tertius** [B N A], the third ventricle.
- ventricumbent** (ven-tre-kum'bent) [L. *ven'ter* belly + *cum'bere* to lie]. Lying upon the belly; prone.
- ventriduct** (ven'tre-duk't) [L. *ven'ter* belly + *ducere* to draw]. To bring or carry ventrad.
- ventriduction** (ven-tre-duk'shun). The act of drawing a part ventrad.
- ventrifixation** (ven''tre-fiks-a'shun) [L. *ven'ter* belly + *fixare* to fix]. The stitching of a viscus to the abdominal wall.
- ventrifixure** (ven'tre-fiks-ür) [L. *ventrifix'ura*]. Same as *ventrifixation*.
- ventrimesal** (ven-trim-e'sal). Pertaining to the ventrimeson.
- ventrimeson** (ven-trim'es-on) [L. *ven'ter* belly + Gr. *μέσος* middle]. The middle line on the ventral surface.
- ventripyramid** (ven-tre-pir'am-id). The ventral pyramid of the oblongata.

- ventrocystorhaphy** (ven'tro-sis-tor'a-fe) [L. *ven'ter* abdomen + *cystorrhaphy*]. The stitching of a cyst, or of the bladder, to the abdominal wall.
- ventrodorsad** (ven-tro-dor'sad). From the ventral toward the dorsal aspect.
- ventrodorsal** (ven-tro-dor'sal). Pertaining to the ventral and dorsal surfaces.
- ventrofixation** (ven-tro-fiks-a'shun). See *ventri-fixation*.
- ventrohysteropexy** (ven-tro-his'ter-o-peks-e). Ventrofixation of the uterus.
- ventro-inguinal** (ven-tro-ing'win-al). Pertaining to the abdomen and the inguinal region.
- ventrolateral** (ven-tro-lat'er-al). Both ventral and lateral, as, *ventrolateral* tracts of the spinal cord. **v. mass** or **muscle**. See under *mass*.
- ventromedian** (ven-tro-me'de-an). Both ventral and median.
- ventromyel** (ven-tro-mi'el) [L. *ven'ter* belly + Gr. *μυελός* marrow]. The anterior (ventral) portion of the spinal cord.
- ventroposterior** (ven-tro-pos-te're-or). Situated on the lower hinder part of an organ.
- ventroptosis, ventropotisis** (ven-trop-to'se-ah, ven-trop-to'sis) [L. *ven'ter* abdomen + Gr. *πτῶσις* falling]. Gastroptosis.
- ventroscopy** (ven-tros'ko-pe) [L. *ven'ter* abdomen + Gr. *σκοπεῖν* to view]. Illumination of the abdominal cavity for purposes of examination.
- ventrose** (ven'trōs) [L. *ventro'sus*]. Having a belly-like expansion.
- ventrosuspension** (ven'tro-sus-pen'shun). The cure of uterine retroposition by fixing the uterus to the abdominal wall. Same as *ventrofixation*.
- ventrotomy** (ven-trot'o-me) [L. *ven'ter* belly + Gr. *τομή* a cut]. Same as *laparotomy* or *celiotomy*.
- ventrovesicofixation** (ven'tro-ves'ik-o-fiks-a'shun) [L. *ven'ter* belly + *vesi'ca* bladder + *fixa'tio* fastening]. The operation of suturing the uterus to the bladder and the abdominal wall. Called also *hystero-cystopexy*.
- venula** (ven'u-lah). See *venule*.
- venule** (ven'ul) [L. *ven'ula*]. A venous radicle or minute vein.
- Venus's collar**. See *melanoleukoderma colli*.
- veraserol** (ve-ras-e'rol). A proprietary preparation of menthol and formaldehyd; used in nasal conditions.
- veratralbin** (ver-at-ral'bin). An alkaloid from *Veratrum album*.
- veratria** (ve-at'ri-re-ah). Same as *veratrin*.
- veratridin** (ver-at'rid-in). One of the alkaloids of veratrin, $C_{37}H_{53}O_{11}N$.
- veratriin** (ve-rat're-in). A proprietary powdered concentration from *Veratrum viride*. Dose, $\frac{1}{16}$ – $\frac{1}{8}$ gr. (0.004–0.033 gm.).
- veratrin** (ve-ra'trin). A poisonous alkaloidal mixture from the seed of *Asagra'a officina'lis*. It is an irritant, stimulant, and heart depressant, and produces violent sneezing; used, for the most part, externally as a counterirritant in neuralgia and rheumatism, in the form of an ointment. Dose, $\frac{1}{64}$ – $\frac{1}{16}$ gr. (0.001–0.006 gm.). **crystallized v.**, **cevidan**.
- veratrinize, veratrize** (ve-rat'rin-iz, ver-at-riz). To bring under the influence of veratrin.
- veratroidin** (ven-at-roi'din). A crystallizable base, $C_{32}H_{53}NO_9$, from *Veratrum album* and *V. viride*; it is a powerful nerve stimulant and cardiac inhibitor.
- veratrol** (ver-at-rol). An antipyretic oily principle, pyrocatechin dimethyl ester, $C_8H_4(OCH_3)_2$, derivable from veratric acid; used externally it lowers the temperature, and is safer than guaiacol, but much more caustic.
- veratrone** (ver-at-rōn). A proprietary liquid preparation of veratrum viride.
- Veratrum** (ver-a'trum) [L.]. A genus of poisonous liliaceous plants. *V. al'bum*, white hellebore, has an emetic, errhine, and cathartic rhizome: used externally as an antipruritic and parasiticide. Dose of tincture, 5–10 min. (0.333–0.666 c.c.). *V. vir'ide*, the green hellebore of North America, and its sedative and depressant rhizome and roots. It contains *jervin*, a depressant of the heart and vasomotor centers, while its *veratroidin* stimulates the heart and depresses the spinal motor center; hence, it slows the pulse and reduces the blood-pressure. It is especially useful in pleurisy and sthenic pneumonia, and in nervous or hypertrophic overaction of the heart. Dose of fluid-extract, 1–5 min. (0.066–0.333 c.c.); of tincture, 1–5 min. (0.066–0.333 c.c.).
- verbal** (ver'bal) [L. *ver'bum*]. Consisting of words; affecting words or speech.
- verbascose** (ver-bas'kōs). A sugar derived from the roots of *Verbascum thapsus*.
- Verbascum** (ver-bas'kum) [L.]. A genus of scrophulariaceous plants; mullein. *V. thapsus*, common mullein, is demulcent, emollient, and stimulant. Dose of fluidextract, 10–20 min. (0.666–1.33 c.c.).
- Verbena** (ver-be'nah). A genus of herbs and shrubs. *V. hasla'ta*, blue vervain, is used in the treatment of epilepsy. Dose of fluidextract, 5–30 min. (0.333–2 c.c.).
- verbigeration** (ver'bij-er-a'shun) [L. *verbigera're* to chatter]. The insane repetition of meaningless words and sentences.
- verbomania** (ver-bo-ma'ne-ah) [L. *ver'ba* word + Gr. *μανία* madness]. Insane talkativeness.
- Verco's sign** (ver'kōz) [Sir. Joseph Verco, English physician]. See under *sign*.
- verdigris** (ver'dig-ris) [Fr., from L. *vir'ide* *a'ris* copper green]. A mixture of basic copper acetates: astringent.
- Verga's groove, ventricle** (ver'gahz) [Italian anatomist, 1811–1895]. See under *groove* and *ventricle*.
- vergence** (ver'jens). A movement of convergence, divergence, or sursumvergence of the eyes.
- Verheyen's stars** (ver-hi'eniz) [Philippe Verheyen, Flemish anatomist, 1648–1710]. See under *star*.
- Verhoeff's operation** (ver'hefz). See under *operation*.
- verin** (ve'rin). A substance, $C_{28}H_{45}NO_8$, from sabadilla.
- verjuice** (ver'jūs) [Fr. *verjus*: *verd* green + *jus* juice]. The juice of green or unripe grapes, etc.
- Vermale's operation** (ver-malz') [Raymond de Vermale, French surgeon of the eighteenth century]. See *operation*.
- vermetoid** (ver'met-oid). Worm-like.
- vermian** (ver'me-an). Pertaining to the vermis of the cerebellum.
- Vermicella** (ver-mis-el'ah) [L.]. A genus of venomous Australian serpents.
- vermicidal** (ver-mis-i'dal). Destructive to worms.
- vermicide** (ver'mis-id) [L. *ver'mis* worm + *ca'dere* to kill]. An anthelmintic drug or medicine destructive to intestinal animal parasites.
- vermicular** (ver-mik'u-lar) [L. *vermicula'ris*, from *ver'mis* worm]. Worm-like in shape or appearance.
- vermiculation** (ver-mik-u-la'shun) [L. *vermicula'tio*, from *ver'mis* worm]. Peristaltic or worm-like movements, as of the intestine: peristalsis.
- vermicule** (ver'mik-ul). A worm-like structure. See also *okinete*.
- vermiculose, vermiculous** (ver-mik-u-lōs, -lus). Worm-like; also wormy, infected with worms.
- vermiform** (ver'mif-orm) [L. *vermifor'mis*, from *ver'mis* worm + *for'ma* shape]. Shaped like a worm. See *appendix* and *process*.
- vermifugal** (ver-mif'u-gal) [L. *ver'mis* worm +

fuga're to drive away]. Expelling worms or intestinal animal parasites.

vermifuge (ver-mif-'ūj) [L. *ver'mis* worm + *fuga're* to expell]. 1. Having the power to expel worms. 2. A drug or remedy that expels worms or intestinal animal parasites. Among the chief vermifuges are *spigelia*, *chenopodium*, *granatum*, *kamala*, *kousso*, *brayera*, *male-fern*, and *santonica*. See *anthelmintic*.

vermijelli (ver-me-jel'e). A proprietary ointment for pediculosis.

vermilion (ver-mil-'yun) [L. *vermil'ium*]. Cinnabar, or mercuric sulphid, HgS : a red pigment.

vermin (ver-'min) [L. *ver'mis* worm]. An external animal parasite; animal ectoparasites collectively.

verminal (ver-'min-al). Pertaining or due to worms or vermin.

vermination (ver-min-a'shun) [L. *vermin'd'io*]. Infestation with worms or with other vermin.

verminosis (ver-min-o'sis) [L. *ver'mis* worm]. Infestation with worms.

verminous (ver-min-us) [L. *vermino'sus*]. Pertaining or due to worms.

vermis (ver-'mis). 1. Latin for *worm*. 2. The median lobe of the cerebellum.

vermix (ver-'miks). The vermiform appendix.

vermuth, vermuth (ver-'mooth) [Ger. *Wer'muth* wormwood]. A cordial or liqueur prepared from wine and aromatic herbs.

vernal (ver-'nal) [L. *verna'lis* of the spring]. 1. Pertaining to or occurring in the spring. 2. A trade name for diethylmalonylurea, a colorless, crystalline powder used as a hypnotic.

Vernes' test (vārnz) [A. *Vernes*, contemporary French physician]. See under *tests*.

Verneuil's canals, disease, neuroma, operation (ver-ne-āz') [Aristide August *Verneuil*, French surgeon, 1823-1895]. See under *canal, disease, neuroma, operation*.

vernier (ver-'ne-er) [from Pierre *Vernier*, French physicist, 1580-1637]. A finely graduated scale accessory to a more coarsely graduated one for measuring fractions of the divisions of the latter.

vernin (ver-'nin). A pentosid of adenin found in *Vicia* seedlings.

vernix caseosa (ver-'niks ka-se-o'sah) [L. "cheesy varnish"]. An unctuous substance which covers the skin of the fetus.

Vernonia anthelmin'tica (ver-no-'ne-ah). A plant called *somraj* in India: anthelmintic.

vernonin (ver-no-'nin). A cardiac glucosid, $C_{10}H_{24}O_7$, from *Vernonia ni'gri'licana*, an African plant, resembling digitalin in its action, but less toxic.

vérole nerveuse (va-ro'la ner-vus') [Fr.]. Special virulence in the nervous symptoms which accompany syphilis.

veronacetin (ver-on-as'e-tin). A proprietary hypnotic and sedative, containing sodium diethylbarbiturate, phenacetin, and codein phosphate.

veronal (ve-ro-'nal). See *barbital*. **v.-sodium, soluble v.**, the sodium salt of barbital: used like the latter.

Veronica (ve-ron-'ik-ah) [L.]. An extensive genus of scrophulariaceous plants; speedwell. *V. virgin'ica*, Culver's-physic, is a tall herb of North America and Asia: chologogue and cathartic.

veronidia (ve-ro-nid'e-ah). A proprietary hypnotic and antispasmodic.

verruca (ver-u-'kah, pl. *verru'ca* [L.]. A wart. See *wart*. **v. acumina'ta**, the fig-wart, moist, pointed, or venereal wart; a form of condyloma on or near the anus or the genitals, mostly of venereal origin, but not always so. Called also *cauliflower excrescence*. **v. car'nea**, a soft fleshy wart. **v. digita'ta**, a flat wart with finger-like excrescences growing from it. **v. filifor'mis**, a form known as filiform wart. **v. gla'bra**, a variety

known as smooth wart. **v. gy'ri hippocam'pi**, one of the wart-like elevations on the convex surface of the hippocampal gyrus. **v. men'strua**, a homeopathic preparation of the menses of a woman with warts. **v. molluscifor'mis**, condyloma. **v. necroge'nica**, a warty growth, occurring usually about the knuckles or other parts of the hands, of those who do dissection or postmortem work. It is a form of cutaneous tuberculosis. Called also *anatomic tubercle, dissection tubercle, postmortem wart, tuberculous verrucosa*, and *lupus verrucosus*. See *tubercle*. **v. perua'na**, **v. peruvia'na**, Peruvian wart; an infectious disease of the skin endemic in Peru. It is marked by an eruption over the face and extremities which develops into bleeding, warty tumors. **v. pla'na**, **v. seni'lis**, **v. seborrhoe'ica**, a flat, greasy wart, seen chiefly upon old or elderly persons. It is believed to be a kind of seborrhea. **v. sim'plex**, a wart. **v. vulga'ris**, a wart.

verruciform (ver-u'sif-orm) [L. *verru'ca* wart + *for'ma* form]. Resembling or shaped like a wart.

verrucose, verrucous (ver-u-kōs, ver-u'kus) [L. *verru'cosus*]. Warty; covered with warts.

verrucosis (ver-u-kō'sis). A condition marked by multiple warts.

verru'gas (ver-oo'gas) [Sp.]. Same as *verruca peruana*.

versicolor (ver-sik'o-lor) [L. *ver'tere* to turn + *color* color]. Variegated; changing color.

version (ver-'shun) [L. *ver'sio*]. The act of turning; especially the manual turning of the fetus in delivery. **abdominal v.**, version performed by external manipulation. Called also *external v. anopelvic v.*, that which is accomplished by manipulating the pelvis of the fetus by means of a finger passed into the rectum of the mother. **bipolar v.**, that which is effected by manipulating both poles of the fetus. **cephalic v.**, version which causes the fetal head to present. **combined v.**, a combination of external and internal version. **external v.**, that which is performed by outside manipulation. **forced v.**, *accouchement forcé*. **internal v.**, version performed by the hand introduced into the uterus. **pelvic v.**, that which is performed by manipulating the breech. **podalic v.**, version which causes the feet to present. **spontaneous v.**, version which occurs without artificial interference.

vertebra (ver'te-brah), pl. *vertebræ* [L.]. 1. Any one of the thirty-three bones of the spinal column. The vertebrae comprise seven *cervical*, twelve *dorsal*, five *lumbar*, five *sacral*, and four *coccygeal*. Each vertebra is composed of—(a) a *body*, or *centrum*, forming the main part of the spine; (b) four *articulating processes* (*zygapophyses*), by which it is joined to the next vertebra. These are sometimes

Typical vertebra (Green).

called *oblique processes*—the upper ones the *ascending oblique*, the lower, the *descending oblique*, processes. (c) A *spinous process* which projects directly backward, those of the different vertebrae forming, with their points, the ridge of the back. (d) Two *transverse processes*, which stand out at right angles, or laterally, from the body of the vertebra, and in the thoracic region articulate with the ribs. 2. By extension, any one of the segments of which the cranium and facial bones have been

assumed to be made up. **basilar v.**, the lowest or last of the lumbar vertebræ. **cervical v.**, the seven vertebræ of the neck. **coccygeal v.**, the rudimentary vertebræ of the coccyx. **cranial v.**, the segments of the skull and facial bones, by some regarded as modified vertebræ. **v. denta'ta**, the axis. **dorsal v.**, the eleven vertebræ which connect the ribs and form part of the posterior wall of the thorax. **false v.**, the segments of the sacrum and the coccyx. **lumbar v.**, the five vertebræ between the dorsal vertebræ and the sacrum. **v. mag'nium**, the sacrum. **odon-toid v.**, the axis. **v. prom'inens**, the seventh cervical vertebræ. **sacral v.**, the fused segments forming the sacrum. **sternal v.** Same as *sternebra*. **thoracic v.**, the dorsal vertebræ. **tricuspid v.**, the sixth cervical vertebræ of quadrupeds. **true v.**, the vertebræ which remain unfused through life.

vertebral (ver'te-bral) [L. *vertebra'lis*]. Of or pertaining to a vertebræ.

vertebrarium (ver-te-bra're-um) [L.]. The spinal column.

vertebrarterial (ver'teb-rah-r-te're-al). Pertaining to the vertebral artery.

Vertebrata (ver-te-bra'tah). A division of the animal kingdom comprising all animals that have a vertebral column, and including mammals, birds, reptiles, and fishes.

vertebrate (ver'te-brät) [L. *vertebra'tus*]. Having a vertebral column.

vertebrated (ver'te-bra-ted). Made up of joints resembling the vertebræ.

vertebrectomy (ver-te-brek'to-me) [*vertebra* + Gr. *ektomê* excision]. Excision of a vertebræ.

vertebro-arterial (ver'te-bro-ar-te're-al). Vertebrarterial.

vertebrochondral (ver'te-bro-kon'dral) [*verte-bral* + *chondral*]. Pertaining to a vertebræ and a costal cartilage. See *rib*.

vertebrocostal (ver'te-bro-kos'tal) [L. *vertebra* vertebræ + *cos'ta* rib]. Pertaining to a vertebræ and a rib. See *rib*.

vertebrodidymia (ver'te-bro-did-im'e-ah) [*vertebra* + Gr. *didymos* twin]. A twin monster united by the vertebræ.

vertebrodymus (ver-te-brod'im-us). A twin-monster united by the vertebræ.

vertebrofemoral (ver'te-bro-fem'or-al). Relating to the vertebræ and the femur.

vertebro-iliac (ver'te-bro-il'e-ak). Pertaining to the vertebræ and the ilium.

vertebromammary (ver'te-bro-mam'a-re). Pertaining to or extending between the vertebral and mammary aspects of the chest.

vertebrosacral (ver'te-bro-sa'kral). Pertaining to the vertebræ and the sacrum.

vertebrosternal (ver'te-bro-ster'nal). Pertaining to the vertebræ and the sternum.

vertex (ver'teks), pl. *ver'tices* [L.]. The summit or top; the crown of the head. **v. cor'dis**, the apex of the heart. **v. cor'næ**, the vertex of the cornea. **v. of a lens**, the point at which the axis intersects the surface. **v. presentation**. See *presentation*. **v. vesicæ**, the apex of the bladder.

vertical (ver'tik-al). 1. Perpendicular. 2. Relating to the vertex.

verticillate (ver-tis-il'ät) [L. *ver'tex* a whorl]. Arranged in the form of a whorl.

Verticillium graphii (ver-tis-il'e-um gra'fe-i). A mold sometimes occurring in otitis externa.

verticomenal (ver'tik-o-men'al). Pertaining to the vertex and the chin.

vertiginous (ver-tij'in-us) [L. *vertigino'sus*]. Pertaining to or affected with vertigo.

vertigo (ver'tig-o, properly ver-ti'go) [L. *verti'go*]. Dizziness; giddiness; disorder of the equilibrating sense, marked by a swimming in the

head; a sense of instability and of apparent rotatory movement of the body or of other objects. Vertigo may result from disease of the middle ear (Ménière's disease), from cardiac, gastric, or ocular disorders, from some peripheral irritations (as laryngeal vertigo), as a precursor of an epileptic fit, in hysteria, from toxemias (as Bright's disease), from organic brain disease, and from unrecognized causes (essential vertigo). **v. ab aù're læ'so**, auditory vertigo. **v. ab stom'acho læ'so**, stomachal vertigo. **arterio-sclerotic v.**, vertigo due to arteriosclerosis of the cerebral vessels. **auditory v.**, **aural v.**, that which is due to ear disease. **cardiac v.**, vertigo due to some chronic disease of the heart. **cardiovascular v.**, vertigo due to sclerosis of the blood-vessels and heart. **cerebral v.**, that which is due to some brain disease. **endemic paralytic v.**, Gerlier's disease. **epileptic v.**, that which attends or follows an epileptic attack. **v. e stom'acho læ'so**, vertigo due to chronic gastritis. **essential v.**, a vertigo, often severe, but of no discoverable cause; probably due to some disease or lesion in a brain center. **gastric v.**, a form associated with disease or disorder of the stomach. **height v.**, dizziness felt on looking down from a high location. **horizontal v.**, that which comes on when a person lies down. **hysteric v.**, vertigo associated with hysteric symptoms, often of a bizarre form. **kayak v.**, an affection occurring among Esquimaux and marked by fear of capsizing and drowning coming on while in the native canoe or kayak. **labyrinthine v.**, a form associated with disease of the labyrinth of the ear. **laryngeal v.**, spasm of the larynx, with vertigo and loss of consciousness. **lateral v.**, that which is caused by rapidly passing a row of similar objects, as a fence or series of pillars. **lithemic v.**, that which is associated with gout and lithemia. **mechanic v.**, vertigo due to long-continued turning or vibration of the body, as in sea-sickness. **neurasthenic v.**, a subjective form of vertiginous sensation associated with neurasthenia. **nocturnal v.**, a sensation of falling coming on just after going to sleep. **objective v.**, a form in which the objects seen by the patient seem to be moving around him. **ocular v.**, a form due to eye disease, especially to paralysis of or lack of balance in the eye muscles. **oleander v.**, a variety said to be caused by the administration of oleander. **organic v.**, vertigo which is due to brain disease or to locomotor ataxia. **paralyzing v.**, Gerlier's disease; a disease of farm-laborers, attended with pains in the head and neck, giddiness, and muscular paresis. **peripheral v.**, vertigo due to irritation in some part distant from the brain. **riders' v.**, a form of mechanic vertigo produced by riding in cars. **rotary v.**, **rotatory v.**, vertigo in which there is a definite feeling of rotation. **sense v.**, the vesicular rudiment of a sense organ in the embryo. **sham-movement v.**, vertigo attended by a sensation as if objects were circling around the body. **smokers' v.**, vertigo occurring as a result of excessive smoking, and generally in persons past middle life. **special-sense v.**, aural or ocular vertigo; also that which occurs in waltzing, swinging, swimming, or sailing. **stomachal v.**, vertigo due to arrest of digestion and distention of the stomach. **subjective v.**, that in which the patient seems to himself to be turning round and round. **systematic v.** Same as *rotary*. **v. toxemic v.**, **toxic v.**, a form of vertigo which results from poisoning, alcoholism, uremia, or lithemia. **vertical v.**, that which is caused by looking up or down at a distant object. **villous v.**, that which is caused by a functional derangement of the liver. **voltaic v.**, an inclination of the head toward the shoulder on the side of the positive pole when a galvanic current is applied to the vestibular fibers of the eighth nerve.

verumontanitis (ve''ru-mon-tan-i'tis). Inflammation of the verumontanum.

verumontanum (ve''ru-mon-ta-num) [L. "mountain ridge"]. A rounded projection on the floor of the prostatic portion of the urethra. Called also *caput gallinaginis*.

vervain (ver-vān). See *Verbena*.

Ves. Abbreviation for *L. ves'ica*, the bladder.

vesalanium (ves-al-a'ne-um). Any one of several sesamoid bones; one on the outer border of the foot between the cuboid and fifth metatarsal bone, and one (sometimes more) in the tendon of origin of the gastrocnemius muscle.

Vesalius's foramen, ligament, vein, etc. (ves-a'le-us) [Andreas *Vesalius* (André Wesal), Belgian anatomist and physician, 1514-1564, the most eminent anatomist of the sixteenth century. His great work on anatomy is entitled "De Corporis Humane Fabrica Libri Septem" or "Seven Books on the Structure of the Human Body"]. See *foramen, ligament, vein*, etc.

vesalvin (ves-al'vin). A trade name for urotropin.

vesania (ve-sa'ne-ah) [L.]. Strict insanity with neither coma nor pyrexia.

vesanic (ve-san'ik). Pertaining to strict or pure insanity. **v. type**. See *type*.

vesculan (ves'ku-lan). A proprietary antiflat remedy.

Vesic. Abbreviation for *L. vesic'ula*, *vesicato'rium*, a blister.

vesica (ves-i'kah). Latin for *bladder*. **v. fel'lea** [B N A], the gall-bladder. **v. prostat'ica**, the sinus pularis. **v. urina'ria** [B N A], the urinary bladder.

vesical (ves'ik-al). Pertaining to the bladder.

vesicant (ves'ik-ant) [L. *vesi'ca* blister]. 1. Causing blisters; blistering. 2. A blistering drug or agent.

vesication (ves-ik-a'shun). 1. The process of blistering. 2. A blistered spot or surface.

vesicator (ves'ik-at-or-e) [L. *vesica're* to blister]. Causing vesication; blistering.

vesicle (ves'ik-l) [L. *vesic'ula*, dim. of *vesi'ca* bladder]. 1. A small bladder or sac containing liquid. 2. A small blister; a small circumscribed elevation of the epidermis containing a serous liquid. **acoustic v.**, auditory vesicle. **air-v.**, an air-cell, vacuole, or sacculus of the lung tissue. **allantoic v.**, the internal hollow portion of the allantois. **amnio-cardiac v.**, congenital splits in the mesoderm of the early embryo representing the paired primordia of the pericardial sac and the heart. **archoplasmic v.**, a sac developed from the attraction-sphere of a spermatid and growing into the sheath of the tail of the spermatozoon. **Ascherson's v's**, small vesicles formed by shaking together oil and liquid albumin. They consist of drops of oil inclosed in a layer of albumin. **auditory v.**, the epiblastic expansion which becomes the membranous labyrinth. **Baer's v.**, the ovule. **blastodermic v.**, the sac formed by the blastoderm. See *blastoderm*. **cephalic v.**, **cerebral v.**, the embryonic expansion of the neural canal whence the brain is formed. **compound v.**, a vesicle on the skin containing more than one chamber. **encephalic v's**, the cerebral vesicles. **germinal v.**, the nucleus of an ovum. **graafian v.**, the structure which holds the ovum while still within the ovary. **lens-v.**, a vesicle formed from the lens-pit of the embryo and developing into the crystalline lens. Called also *lens-sac*. **Malpighi's v's**, the alveoli of the lungs. **Naboth's v's**. See *Naboth's follicles*, under *follicle*. **ocular v.** Same as *optic v.* **olfactory v.**, the vesicle in the embryo which later forms the olfactory bulb and tract. **ophthalmic v.** Same as *ocular v.* **optic v.**, a process of the cerebral vesicle whence the pericarp parts of the eye are formed. **otic v.** See *auditory v.* **pituitary v.**, the embryonic structure which develops into

the pituitary body. **prostatic v.**, the sinus pularis. **Purkinje's v.**, the germinal vesicle. **seminal v.**, either one of the two reservoirs for the semen. **simple v.**, a vesicle on the skin having only a single chamber. **umbilical v.**, that part of the yolk-sac which is outside the body of the embryo, being joined with it by means of the umbilical or omphalomesenteric duct.

vesico-abdominal (ves'ik-o-ab-dom'in-al). Pertaining to the abdomen and the urinary bladder.

vesicocavernous (ves'ik-o-kav'er-nus) [*vesical* + *cavernous*]. Both vesicular and cavernous.

vesicocele (ves'ik-o-sēl) [L. *vesi'ca* bladder + Gr. *κήλη* hernia]. Hernial protrusion of the bladder.

vesicocervical (ves'ik-o-ser'vik-al) [L. *vesi'ca* bladder + *cer'vix* neck]. Pertaining to the bladder and the cervix uteri.

vesicoclysis (ves-ik-ok'lis-is) [L. *vesi'ca* bladder + Gr. *κλύσις* washing]. The injection of a fluid into the bladder.

vesicofixation (ves'ik-o-fiks-a'shun) [L. *vesi'ca* bladder + *fixation*]. 1. The stitching of the uterus to the bladder. 2. The surgical fixation of the bladder; cystopexy.

vesicoprostatic (ves'ik-o-pros-tat'ik). Pertaining to the bladder and the prostate.

vesicopubic (ves'ik-o-pu'bik). Pertaining to the bladder and the pubes. **v. ligament**, a ligament extending from the urinary bladder to the pubis. **v. muscles**. See *muscles, table of*.

vesicorectal (ves'ik-o-rek'tal). Pertaining to the bladder and the rectum.

vesicosigmoid (ves'ik-o-sig'moid). Pertaining to the bladder and sigmoid flexure.

vesicosigmoidostomy (ves'ik-o-sig-moi-dos'to-me) [L. *vesi'ca* bladder + *sigmoid flexure* + Gr. *στόμα* mouth]. The operation of making a permanent communication between the bladder and sigmoid flexure.

vesicospinal (ves'ik-o-spi'nal). Pertaining to the bladder and the spine.

vesicotomy (ves-ik-to'f-me) [L. *vesi'ca* bladder + Gr. *τέμνειν* to cut]. A surgical incision or cutting into the bladder; cystotomy.

vesico-umbilical (ves'ik-o-um-bil'ik-al). Pertaining to the umbilicus and the bladder. **v. ligaments**, the peritoneal folds extending from the bladder to the umbilicus. The central one covers the urachus; the others inclose the remains of the hypogastric arteries.

vesico-urachal (ves'ik-o-u-rak'al). Pertaining to the bladder and the urachus.

vesico-ureteral (ves'ik-o-u-re'ter-al). Pertaining to the bladder and the ureter.

vesico-urethral (ves'ik-o-u-re'thr'al). Pertaining to the bladder and the urethra.

vesico-uterine (ves'ik-o-u-ter'in). Of or pertaining to the bladder and the uterus. **v. folds**, **v. ligaments**, two peritoneal folds extending from the bladder to the cervix uteri. **v. pouch**, a pouch of peritoneum between the uterus and the bladder.

vesico-utero vaginal (ves'ik-o-u'ter-o-vaj'in-al). Pertaining to or joining the bladder, uterus, and vagina.

vesicovaginal (ves'ik-o-vaj'in-al). Pertaining to the bladder and vagina.

vesicovaginorectal (ves'ik-o-vaj'in-o-rek'tal). Pertaining to the bladder, vagina, and rectum, as, *vesicovaginorectal fistula*.

vesicula (ves-ik'u-lah), pl. *vesic'ulae*. Latin for *vesicle*. **v. fel'lis**, the gall-bladder. **v. germinati'va**, the germinal vesicle. See *vesicle*. **v. graaf'ia**, a graafian vesicle. See *vesicle*. **v. nabo'thi**, Naboth's follicles. See *follicle*. **v. opthal'mica** [B N A], the optic vesicle. **v. prolif'era**, secondary or daughter cysts produced by budding from a cysticercus cyst. **v. prostat'-**

ica, the sinus pularis. **v. semina'lis** [B N A], the seminal vesicles. **v. sero'sa**, the false amnion. See *amnion*.

vesicular (ves-ik'u-lar) [L. *vesic'ula* a little bladder].
1. Composed of or relating to small, sac-like bodies.
2. Pertaining to or made up of vesicles on the skin.

vesiculase (ves-ik'u-lās). A ferment from the prostate gland which coagulates semen.

vesiculated (ves-ik'u-la-ted) [L. *vesic'ula* a little bladder]. Made up of vesicles.

vesiculation (ves-ik-u-la'shun) [L. *vesic'ula* a little bladder]. The presence or formation of vesicles.

vesiculectomy (ves'ik-u-lek-to-me) [vesicle + Gr. *ἐκτομή* excision]. Excision of a vesicle, especially the seminal vesicle.

vesiculiform (ves-ik'u-li-form) [L. *vesic'ula* vesicle + *for'ma* form]. Shaped like a vesicle.

vesiculitis (ves'ik-u-li'tis) [L. *vesic'ula* vesicle + Gr. *-itis* inflammation]. Inflammation of a vesicle, especially of a seminal vesicle. **seminal v.**, inflammation of a seminal vesicle.

vesiculobronchial (ves-ik'u-lo-brong'ke-al). Both vesicular and bronchial. See *respiration*.

vesiculocavernous (ves-ik'u-lo-kav'er-nus). Both vesicular and cavernous. See *respiration*.

vesiculogram (ves-ik'u-lo-gram). A Roentgen ray picture of the seminal vesicles.

vesiculography (ves-ik-u-log'raf-e). Radiography of the seminal vesicles.

vesiculopapular (ves-ik'u-lo-pap'u-lar). Consisting of vesicles and papules.

vesiculopustular (ves-ik'u-lo-pus'tu-lar). Marked by the presence of vesicles and pustules.

vesiculose (ves-ik'u-lös). Vesicular.

vesiculotomy (ves-ik-u-lot'o-me) [L. *vesic'ula* vesicle + Gr. *τομή* a cut]. The operation of cutting into a vesicle. **seminal v.**, the operation of exposing and opening the seminal vesicles.

vesiculotubular (ves-ik'u-lo-tu'bu-lar). Having both a vesicular and a tubular quality.

vesiculotympanic (ves-ik'u-lo-tim-pan'ik). Having both a vesicular and a tympanic quality.

vesipyrin (ves-ip-i'r'in). Same as *spiroform*.

Vespa crabro (ves'pah kra'bro). A common wasp of Europe; also its homeopathic preparation.

vespajus (ves-pa'jus). Suppurative inflammation of the hairy part of the scalp.

vessel (ves'el). Any canal for carrying a fluid, such as the blood or lymph. **absorbent v's**, the lymphatics and lacteals, and the capillaries and minute veins of the stomach and intestine. **bile v.**, one of the vessels in the liver which conduct bile. **blood-v.**, one of the vessels conveying the blood, and comprising the arteries, veins, and capillaries. **chyliferous v's**, lacteal vessels; absorbent vessels transporting chyle from the intestinal villi to the thoracic duct. **collateral v.**, a branch of an artery extending parallel to the artery from which it is given off. **hemorrhoidal v's**, varicose veins of the rectum. **Jungbluth's v's**, certain nutrient vessels of early embryonic life situated beneath the amnion. **lacteal v's**. See *chyliferous v's*. **lymph-v.**, **lymphatic v.**, one of the channels by which the lymph is conveyed. **nutrient v's**, the vessels that supply the interior of the bones.

vessicon, vessignon (ves'ik-non, ves'en-yon) [Fr.]. A tumor within the synovial membrane of a joint, especially of the hock of a horse. Called also *wind-gall*.

vestibular (ves-tib'u-lar). Pertaining to a vestibule. **v. glands**, the glands of the vestibule of the vagina, including the glands of Bartholin and the perirethral glands.

vestibule (ves'tib-ül) [L. *vestib'ulum*]. The oval cavity of the internal ear, forming the approach to the cochlea. See *ear*. **v. of the aorta**, a small

space within the left ventricle at the root of the aorta. **v. of the ear**, a cavity at the entrance to the cochlea within the internal ear. **Gibson's v.**, the vestibule of the aorta. **v. of the larynx**, the portion of the laryngeal cavity above the vocal cords. **v. of the mouth**, the part of the mouth exterior to the teeth. **v. of the nose**, the anterior part of the nostrils. **v. of the pharynx**, the fauces, or the oropharynx. **Sibson's v.**, vestibule of the aorta. **v. of the vagina**, **v. of the vulva**, the space below the clitoris and between the nymphæ.

vestibulotomy (ves-tib-u-lot'o-me) [vestibule + Gr. *τομή* a cutting]. Surgical opening of the vestibule of the inner ear.

vestibulo-urethral (ves-tib'u-lo-u-re'thral). Pertaining to the vestibule of the vulva and to the urethra.

vestibulum (ves-tib'u-lum). Latin for *vestibule*. **v. bur'sæ omental'is** [B N A], the upper part of the omental bursa. **v. laryn'gis**. See *vestibule of the larynx*. **v. na'si**, vestibule of the nose. **v. o'ris**, the vestibule of the mouth. **v. vaginæ** [B N A], vestibule of the vagina.

vestige (ves'tij) [L. *vestig'ium*]. A rudimentary or degenerative part which either in the embryo or in some other species or organism is well developed.

vestigial (ves-tij'e-al). Of the nature of a vestige, trace, or relic; rudimentary.

vestigium (ves-tij'e-um). Vestige.

vestosol (ves'to-sol). A formaldehyd ointment used as a disinfectant and deodorant.

vesuvium (ve-su'vin). Bismarck brown.

vesypin (ves'ip-in). Acetylsalol.

veta (va'tah) [Sp.]. Mountain-sickness of the Andes.

veterinarian (vet'er-in-a're-an). One who practices veterinary medicine.

veterinary (vet'er-in-a-re) [L. *veterina'rius*]. 1. Pertaining to domestic animals and their diseases. 2. A veterinarian.

vetol (ve'tol). A proprietary remedy for sexual impotence in animals.

V. f. Abbreviation for *field of vision*.

via (vi'ah), pl *vi'æ* [L.]. A way or passage. **v. naturales**, the natural passages of the body.

viability (vi-ab-il-it'e). Ability to live after birth.

viable (vi'ab-l). Capable of living outside of the uterus: said of a fetus that has reached such a stage of development that it can live outside of the uterus.

vial (vi'al) [Gr. *φιάλη*]. A small bottle or phial.

vib. Abbreviation for *vibration*.

vibex, vibix (vi'beks, vi'biks), pl. *vi'ices* [L.]. A narrow linear mark or streak; a linear subcutaneous effusion of blood.

vibratile (vi'brat-il) [L. *vibrat'ilis*]. Having an oscillatory motion; swaying or moving to and fro.

vibration (vi-bra'shun) [L. *vibra'tio*, from *vibra're* to shake]. 1. A rapid movement to and fro; oscillation. 2. The shaking of the body as a therapeutic measure. 3. A form of massage. **photo-electric v.**, a change in the position of the visual cells, and a series of photo-electric movements in the rods and cones under the influence of light.

vibrative (vi'brat-iv). A consonantal sound like that of *r*, produced by so forcing the breath that the margins of a narrow portion of the respiratory canal are made to vibrate, the nasal cavity being shut off.

vibratode (vi'bra-töd). The instrument or appliance at the end of a vibratory appliance by which the vibrations are applied to the body.

vibrator (vi-bra'tor). An instrument used in the mechanic treatment of disease.

vibratory (vi'brat-or-e) [L. *vibrato'rius*]. Vibrating or causing vibration. **v. cicatrix**, a cicatrix

which vibrates with the pulse, the respiration, or the voice.

Vibrio (vib're-o), pl. *vibrio'nes* [L.]. A genus of the family *Spirillaceæ* in the form of short curved rods, motile by means of one, two, or three polar flagellæ. **V. aquatilis**, a species resembling the spirillum of cholera: derived from river water. **V. aureus**, a species from the air and mud of sewers: in immotile, polymorphous filaments; it forms a golden-yellow pigment. **V. berolinen'sis**, a species from the river water of Berlin, resembling the cholera spirillum. **V. cholerae asiaticæ**, a small, curved, motile, Gram-negative organism found in the rice-water stools of cholera cases and believed to be the cause of the disease. **V. danubicus**, a saprophytic species from water. **V. desulfuricans**, a zymogenic species from pit water. **V. fetus**, an organism found in the placenta and fetal membranes in cases of infectious abortion in cattle and thought to be the cause of the abortion. **V. finckleri**. See *V. proteus*. **V. flavescens**, a species from sewer-mud and air, like *V. aureus*, but producing a greenish-yellow pigment. **V. flavus**, a species from the air and mud of sewers, like *V. aureus*, but forming an ochraceous pigment. **V. gindha**, a species in long curved rods found in water and pathogenic for guinea-pigs. **V. kegalen'sis**, a species resembling *V. cholera*, but not subject to agglutination by cholera serum. **V. linguælis**, a form much resembling the cholera spirillum from mice inoculated with the coating of the tongue: toxic, but said not to be pathogenic. **V. maszau'ah**, a pathogenic organism from the defections of a local epidemic at Massowah resembling cholera: it is much like the cholera bacillus, but has four flagella and is more pathogenic. **V. metchnikovii**, a species closely resembling the germ of Asiatic cholera, from a kind of chicken cholera; actively motile: it causes a deadly septicæmia. **V. mil'leri**, a species from carious teeth. **V. nasalis**, a form in non-motile, curved rods from the buccal cavity and nasal mucus: pathogenic to animals. **V. paracholerae**, *Vibrio gindha*. **Pasteur's v.**, the organism of malignant edema. **V. proteus**, the Finkler-Prior vibrio, from feces, in motile, curved rods, less curved than the cholera spirillum; actively pathogenic: its cultures produce cadaverin. **V. saprophiles**, a species in three forms (I, II, and III) from sewer-mud, etc.; actively motile, not pathogenic. **V. schuykillen'sis**, a spirillum from the water of the Schuykill, at Philadelphia; closely related to *V. metchnikovii*. **V. septicus**, vibron septicæ. **V. tyro'genus**, a species resembling the comma vibrio found in cheese.

vibron septique (ve-bre-on' sep-têk'). Pasteur's name for a Gram-positive anaerobic organism found by him in the edematous tissue of an animal inoculated with putrid flesh. It has been found in cases of gaseous gangrene in new wounds. See *Clostridium septique*.

vibrissæ (vi-bris'se) [L.]. The hairs within the nostrils; also the whiskers of a cat.

vibrolode (vi'bro-löd). Same as *vibratode*.

vibromasseur (vib'ro-mahs-ür) [Fr.]. An instrument used in vibratory massage for diseases of the ear.

vibrometer (vi-brom'et-er) [L. *vi'bro* to quiver + *me'trum* measure]. A device used in the treatment of deafness due to deposits of plastic material or inspissated mucus: it acts by producing vibrations which tend to break up adhesions.

vibrophone (vib'ro-fôn) [L. *vi'bro* to quiver + Gr. *φωνή* sound]. An instrument similar to a vibrometer, and used for the same purpose.

vibrotherapeutics (vi'bro-ther-ap-u'tiks) [L. *vi'bro* to shake + *therapeutics*]. The therapeutic use of vibratory appliances.

viburnin (vi-bur'nin). An extract from *viburnum* used in uterine affections.

Viburnum (vi-bur'num) [L.]. A genus of caprifoliaceous trees and shrubs. **V. op'ulus**, or cranberry tree, affords *cramp-bark*, which is antispasmodic, and is used in asthma, hysteria, and dysmenorrhea. Dose of fluidextract, $\frac{1}{2}$ -1 fl.dr. (2-4 c.c.). **V. prunifolium**, black haw, is used mainly in uterine diseases, as dysmenorrhea, menstrual colic, etc. Dose of fluidextract, $\frac{1}{2}$ -1 fl.dr. (2-4 c.c.); of extract, 8 gr. (0.5 gm.).

vibutero (vi-bu'ter-o). A preparation of *viburnum* and saw-palmetto: used as a uterine tonic.

vicarious (vi-ka're-us) [L. *vica'rius*]. Acting in the place of another or of something else; also occurring in an abnormal situation, as, *vicarious menstruation*.

vice (vis) [L. *vi'cium*]. A blemish, defect, or imperfection.

vicho (ve'tsho). A vernacular Peruvian name for dysentery; the protrusion of the rectum being attributed to the presence of an insect (*vicho*).

Vichy water (ve'she). A mineral water from a spring at Vichy, in France; used in rheumatism, diabetes, and in various gastrohepatic and hepatic disorders.

vicilin (vi'sil-in). A protein from lentils.

vicin (vi'sin). A white crystalline alkaloid, $C_{10}H_{16}N_4O_8$, found in *Vicia sativa* and other species of vetch. It is a mononucleosid and on hydrolysis yields divicin and glucose.

vicious (vish'us) [L. *viti'o'sus*]. Faulty or defective; malformed.

vicocœa (vi-ko'ko-ah). A preparation of malt, kola, and cacao.

Vicq d'Azyr's bundle, etc. (vik daz-är) [Félix Vicq d'Azyr, a French anatomist, 1748-1794]. See *bundle*, etc.

Victoria blue (vik-to're-ah). A blue stain, phenyltetramethyltri-amido-alphanaphthyl diphenylcarbinol hydrochlorid, used in the examination of histological specimens. **V. orange**, a salt of dinitrocresol, a stain used in histology.

victorium (vik-to're-um) [after Queen *Victoria*]. A metallic earth-element discovered in 1898 by Sir W. Crookes. Symbol, Vi. Obsolete.

Vidal's operation (ve-dalz') [Auguste Théodore Vidal de Cassis, French surgeon, 1803-1856]. See *operation*.

Vidal's treatment (ve-dalz') [Emile Vidal, dermatologist in Paris, 1825-1893]. See *treatment*.

vidian (vid'e-an). Discovered by or named in honor of Guido or Guidi Vidius, Italian physician, 1500-1569. See *artery*, *canal*, *nerve*.

vieirin, **vierin** (ve-ä'r-in, vi-e'r-in). An aromatic, white, bitter substance from *Remijia velozii*, a tropical American tree: an antiperiodic. Dose, 1-3 gr. (0.066-0.2 gm.).

Vienna paste (ve-en'ah). See *paste*.

Vierordt's hemotachometer (fêr'orts) [Karl Vierordt, German clinician, 1818-1884]. See *hemotachometer*.

Vioussens's ansa, artery, ring, valve, etc. (ve-uh-sahz') [Raymond de Vioussens, French anatomist, 1641-1715]. See the nouns.

viferral (vi-fer'al). Hydronal.

vigilambulism (vij-il-am'bu-lizm). A state resembling somnambulism, but not occurring in sleep; double or multiple personality.

vigilance (vij'il-ans) [L. *vigilan'tia*]. Morbid wakefulness.

vigintinormal (vij-in-tin-or'mal) [L. *vigin'ti* twenty + *nor'ma* rule]. Having one-twentieth of what is normal.

Vignal's bacillus, cells (vin-yalz') [Guillaume Vignal, French physiologist of the nineteenth century]. See *bacillus* and *cell*.

vignin (vig'nin). A protein from the *coro-pea*.

vigoral (vig'or-al). A proprietary beef food-preparation.

Vigo's plaster (vī'gōz) [Giovanni di *Vigo*, Italian surgeon, 1460-1520]. See *plaster*.

Vigouroux's sign (vig-oo-rooz') [Auguste *Vigouroux*, a French neurologist of the 19th century]. See under *sign*.

Villard's button (ve-larz') [E. *Villard*, contemporary surgeon in Lyons]. See *button*.

Villarsia nymphæoides (vil-ar-ze-ah). An old-world gentianaceous plant: antiscorbutic.

Villemin's theory (vël-mahz') [Jean Antoine *Villemin*, French surgeon, 1827-1892]. See *theory*.

villi (vil'é) [L.]. The plural of *villus*.

villiferous (vil-if'er-us). Having or bearing villi.

villitis (vil-i'tis) [vil'us + Gr. -itis inflammation]. Inflammation of the villous tissue of the coronet and of the plantar substance of a horse's foot.

villoma, **villoma** (vil-o'mah, vil-e-o'mah) [villus + Gr. -oma tumor]. A villous tumor, chiefly of the rectum.

villous, **villous** (vil-ōs', vil'us) [L. *villo'sus*]. Shaggy, with soft hairs; covered with villi.

villositis (vil'o-si'tis) [L. *villo'sus* + Gr. -itis inflammation]. A bacterial disease characterized by alterations in the villositities of the placenta.

villosity (vil-ōs'it-e). 1. The condition of being covered with villi. 2. A villus.

villous (vil'us). See *villous*.

villus (vil'us), pl. *villi* [L.]. 1. A vascular chorionic tuft (*chorionic v.*). 2. A minute, club-shaped projection from the mucous membrane of the intestine (*intestinal v.*). It consists of a central axis of lacteals, capillaries, cellular tissue, and unstriated muscle, covered by a nascent membrane,

Villi: Mucous membrane of the jejunum magnified (schematic). (Testut.)

upon which is a layer of columnar epithelium. Its function is to absorb fat and other digestive products and to secrete mucus. **pleural v.**, one of the shaggy appendages of the pleura near the costomediastinal sinus. **synovial v.**, one of the thread-like processes of a synovial membrane.

vi-mal-dex (orange) (vi'mal-dex). A proprietary preparation having the antiscorbutic properties of orange juice.

Vin., **vin**. An abbreviation for L. *vinum*, wine.

Vinca minor (vin'kah mi'nor). An apocynaceous plant; lesser periwinkle; also its homeopathic preparation.

vincennite (vin'sen-it). A war gas mixture composed of hydrocyanic acid, stannic chlorid, arsenic trichlorid, and chloroform.

Vincent's angina, **bacillus**, **sign**, etc. (vin'sents) [H. *Vincent*, physician in Paris, born 1862]. See *angina*, *bacillus*, *sign*, etc.

vinchuca (vin-tshu'kah). *Lamprolaima infestans*.

vinculum (vin'ku-lum), pl. *vincula* [L.]. A band, frenum, or ligament. **v. linguae**, the frenum of the tongue. **vincula linguae cerebelli**, the lateral prolongations of the lingula of the cerebellum. **v. tendinum**. 1. Slender tendinous folds in the sheaths of the flexor tendons

of the fingers, connecting the flexor tendons with the phalanges. 2. The retinaculum tendinum.

vinegar (vin'e-gar) [Fr. *vinaigre* sour wine]. 1. A weak and impure dilution of acetic acid; especially a sour liquid consisting chiefly of acetic acid, formed by the fermentation of cider, wine, etc., or by the distillation of wood. 2. A medicinal preparation of dilute acetic acid. See under *aceticum*. **aromatic v.**, a refreshing and restorative preparation of alcohol, dilute acetic acid, and various aromatic oils. **cider-v.**, vinegar made of cider by acetous fermentation. **v. of lead**, solution of lead subacetate. **Marseilles' v.**, **thieves' v.** 1. An ancient medicine containing camphor, garlic, etc., formerly regarded as a prophylactic of sovereign quality. 2. Same as *aromatic v.* **wood-v.**, impure acetic acid obtained by the destructive distillation of wood.

vinegerone (vin-e-ger-o'ne). The whip-tailed scorpion, *Thelyphonus giganteus*, so called because it produces an irritating excretion which has an odor resembling vinegar.

vinic (vi'nik) [L. *vinum* wine]. Pertaining to wine.

vinolia (vi-no'le-ah). A proprietary toilet and healing preparation.

vinometer (vi-nom-et'er) [L. *vinum* wine + Gr. μέτρον measure]. An instrument for estimating the percentage of alcohol in wine.

vinopyrin (vi-no-pi'rin). A proprietary bitartrate of paraphenetidin, used as an antipyretic. Dose, 8-15 gr. (0.5-1 gm.).

vinous (vi'nus) [L. *vinosus*, from *vinum* wine]. Pertaining to, or containing, wine.

vinum (vi'nūm), gen. *vinī*. Latin for *wine*. **v. antimonii**, wine of antimony; a liquid made from 4 gm. of antimony and potassium tartrate, 65 c.c. of boiling distilled water, 150 c.c. of alcohol, and a sufficient quantity of white wine to make 1000 c.c. It is a diaphoretic or expectorant, and in infantile cases is used as an emetic. Dose, 10-30 min. (0.6-2 c.c.); ½-2 fl.dr. (2-4 c.c.). **v. aromaticum**, aromatic wine; a liquid made from 1 part of lavender, 1 part of origanum, 1 part of peppermint, 1 part of rosemary, 1 part of sage, 1 part of wormwood, and a sufficient quantity of stronger white wine to make 100 parts. Used as an astringent and stimulating lotion in chancres, buboes, and indolent ulcers. **v. gadeomorrhui'næ**, wine of codfish-gall.

vinyl (vi'nīl). The univalent group, CH₂:CH-, from vinyl alcohol. **v. sulphid**, an odorous compound, (CH₂:CH)₂S, found in garlic.

vioform (vi'o-form). Iodochloroxyquinolin, C₉H₅-NOHCl; used as a substitute for iodoform.

Viola (vi'o-lah) [L.]. A genus of plants: the violets and pansies. **V. odorata**, a sweet-scented violet of Europe and Asia; also its homeopathic preparation. **V. tri'color** is emetic, and is useful in bronchitis and eczema. Dose of fluidextract, 2-10 min. (0.133-0.66 c.c.).

violescent (vi-o-les'ent). Somewhat violet in color.

violet (vi'o-let). 1. Same as *Viola*. 2. The hue seen in the most refracted end of the spectrum. **afridol v.**, a benzopurpurin dye with a urea linkage, CO[NH.C₆H₄N₂.(NH₂)C₆H₃(SO₃ONa)₂.OH]₂. **amethyst v.**, a tetra-ethyl-pheno-saf-ranin used in triple staining, (C₂H₅)₂N.C₆H₃N₂.Cl(C₆H₅).C₆H₃N(C₂H₅)₂. **v. 7 B or C**. Same as *crystal violet*. **chrom v.**, a tricarboxyl derivative of pararosaniline, COONa.C₆H₃(O)C(C₆H₃(OH).COONa)₂. **crystal v.**, **v. G**, a dye, hexa-methyl-pararosaniline, (CH₃)₂N(C₆H₄:C(C₆H₄N(C₂H₅)₂)). It is the most important constituent of both gentian and methyl violet and probably can be advantageously substituted for it. **gentian v.**, a mixture of methylated pararosanilins of which the most important are the hexa- and the penta-methyl-roosanilins. See *crystal violet*. It is bacteriostatic for Gram-positive bacteria. Dose for intravenous injection 5 mg. per kilo of body

ABDOMINAL AND THORACIC VISCERA, SHOWING THEIR RELATIVE POSITIONS: *A*, upper end of sternum; *B*, *Bx*, first pair of ribs; *C*, *Cx*, second pair of ribs; *D*, aorta, with left vagus and phrenic nerves crossing its transverse arch; *E*, root of pulmonary artery; *F*, right ventricle; *G*, right auricle; *H*, vena cava superior with right phrenic nerve on its outer border; *I*, *Ix*, right and left lungs collapsed; *K*, *Kx*, seventh pair of ribs; *L*, *Lx*, the diaphragm in section; *N*, the gall-bladder, with its duct to form the common bile-duct; the hepatic artery is seen superficial to the common duct; the portal vein is seen beneath it; the open orifices of the hepatic veins are seen on the cut surface of the liver; *O*, the stomach; *P*, inferior vena cava; *Q*, the celiac axis dividing into the gastric, splenic, and hepatic arteries; *R*, spleen; *S*, *Sx*, *Sxx*, the transverse colon, between which and the lower border of the stomach is seen the gastro-epiploic artery, formed by the splenic and hepatic arteries; *Sxxx*, ascending colon in the right iliac region; *T*, convolutions of the small intestine (MacLise).

weight; for direct application solutions from 1:500 to 1000. **hexamethyl v.**, crystal violet. **Hoffman's v.**, a mixture of dyes formed by the introduction of methyl or ethyl groups into the amino groups of fuchsin. **iodin v.** Same as *Hoffman's violet*. **iris v.** Same as *amethyst violet*. **Lauth's v.**, thionin. **methyl v.**, a mixture of tetra-, penta-, and hexa-methyl-pararosanol of which the hexa-methyl compound is most useful as a stain. See *crystal v.* **methylene v.**, one of the constituents of polychrome methylene blue, $(\text{CH}_3)_2\text{N} \cdot \text{C}_6\text{H}_4(\text{SN})\text{C}_6\text{H}_4\text{O}$. **neutral v.**, a dye resembling neutral red, but more violet in color, $(\text{CH}_3)_2\text{N} \cdot \text{C}_6\text{H}_3\text{N}_2 \cdot \text{C}_6\text{H}_2(\text{NH}_2\text{HCl}) \cdot \text{NH} \cdot \text{C}_6\text{H}_4\text{N}(\text{CH}_3)_2$. **Paris v.**, methyl violet. **pentamethyl v.**, methyl violet.

violin (vi'o-lin). The active principle of several species of violet: its properties are much like those of emetin.

violinists' cramp (vi-o-lin'ists). See *cramp*.

Vipera re'di (vi'per-ah) [L.]. The Italian viper; also a homeopathic preparation of its virus. **V. tor'va**, a European viper; also a homeopathic preparation of its virus.

Viperidae (vi-per'id-e). A family of snakes including the vipers and adders (*Vipreinae*), the rattlesnakes, copperheads, and water moccasins.

viperine (vi'per-in) [L. *viperi'nus*]. 1. Pertaining to a viper. 2. Virginia snake-root, *Aristolochia serpentaria*; also *A. officinalis*.

Vipoud's sign (ve-pawz') [contemporary French physician]. See under *sign*.

viraginity (vi-rä-jin'it-e) [L. *virä'go* a man-like woman]. The assumption of male characteristics by a woman.

viraltan (vi-ral'tan). Sodium methylaminobenzoyl-tetrazolate: antgonorrheic.

Virchow's angle, disease, line, etc. (fër'koes) [Rudolf *Virchow*, German pathologist, 1821-1902]. See *angle, disease, line*, etc.

virgin (vir'jin) [L. *vir'go*]. A woman or girl who has had no sexual intercourse.

virginal (vir'jin-al). Pertaining to a virgin or to virginity.

virginity (vir-jin'it-e) [L. *virgin'itas*]. Maidenhood; the condition of being a virgin.

viridin (vir-id'in). 1. An oily principle, $\text{C}_{12}\text{H}_{19}\text{N}$, distilled from bone oil and from coal-tar. 2. Same as *jervin*.

virile (vir'il) [L. *vir'ilis*]. Peculiar to men or to the male sex; procreative.

virilescence (vir-il-es'ens). The manifestation of male qualities in women of advanced age.

virilia (vi-ril'e-ah) [L.]. The male generative organs.

viriligen (vi-ril'ij-en). A proprietary preparation of extracts from the anterior pituitary, suprarenal cortex, lymph, brain, spinal cord, testis, and thyroid.

virilin (vi-ril'in). A preparation of yohimbin, strychnin, and glycerophosphates: used as an aphrodisiac.

virilism (vir'il-izm). 1. Masculinity; the development of masculine physical and mental traits in the female. 2. Hermaphroditism in which the subject is a female, but has male external genitals.

virility (vir-il'it-e) [L. *virili'tas*, from *vir* man]. The normal reproductive power in one of the male sex.

viripotent (vir-ip'o-tent) [L. *virip'otens*; *vir* man + *potens* able]. 1. Sexually mature: said of a male. 2. Marriageable or nubile: used of the female.

virisanol (vir-is-a'nol). A proprietary aphrodisiac remedy.

virogen (vi'ro-jen). A nerve food consisting of soluble milk protein and the glycerophosphates of lime, manganese, etc.

viroid (vi'roid). A general term for any biologic specific used in immunization.

virol (vi'rol). 1. A proprietary bone-marrow food and medicine. 2. A proprietary medicated meat-extract.

virone (vi'rön). A preparation of yohimbin and strychnin: used in sexual impotence.

virose, virous (vi'rös, vi'rus) [L. *vi'rosus*, from *vi'rus* poison]. Having poisonous qualities.

virtual (virt'u-al) [L. *virt'us* strength]. Appearing to be present, but not really so; having efficacy without a material substratum. See *focus*.

virucidal (vir-u-si'dal). Destructive of or inimical to virulence.

virulence (vir'u-lens) [L. *virulent'ia*, from *vi'rus* poison]. Extreme poisonousness or acrimony.

virulent (vir'u-lent) [L. *virulent'us*, from *vi'rus* poison]. Exceedingly noxious or deleterious.

viruliferous (vir-u-lif'er-us) [L. *vi'rus* poison + *ferre* to bear]. Conveying or producing a virus or infective germ.

virulin (vir'u-lin). A specific constituent of virulent bacilli which is capable of rendering avirulent strains of bacteria virulent.

virus (vi'rus) [L.]. A living virulent cause of disease as distinguished from a vaccine, which is attenuated or dead. **v. anima'tum**, a living animal poison. **attenuated v.**, a virus which has been rendered less pathogenic by repeated inoculation, by successive culture, or by other means. **Dany'sz's v.** See *ratin*. **dehumanized v.**, vaccine virus obtained by inoculating the heifer with virus from a human subject. **filtrable v.**, the virus of an infectious disease which is so small that it will pass through the pores of a Berkefeld or Chamberland filter (Löffler, 1893); such as the virus of dengue, foot-and-mouth disease, hog-cholera, poliomyelitis, rabies, trachoma, variola, and others.

v. fixé, fixed v., virus of rabies which has been rendered as strong as possible by successive inoculation into a series of rabbits, so that its incubation period for rabbits has become "fixed." **Haffkine's v.** See *Haffkine's vaccine*, under *vaccine*. **humanized v.**, vaccine lymph from the human subject. **Inclusion v.**, a virus in the vaginal secretion producing a conjunctivitis in the newborn. **organized v.**, a living pathogenic micro-organism. **rat v.** See *ratin*. **street v.**, the virus from an animal suffering from rabies naturally acquired. **unorganized v.**, any poisonous chemically developed within the body. **vaccine v.**, **v. vaccin'icum**, the pustules of vaccinia from healthy vaccinated animals rubbed up in a mortar and made into an emulsion with glycerin.

virusemia (vi-rus-e'me-ah) [*virus* + Gr. *ai'ma* blood]. The presence in the blood of a specific virus.

vis (vis), pl. *vi'res*. Latin for *force* or *energy*. **v. a fron'te**, a force that draws or attracts. **v. a ter'go**, any impelling power; a force that pushes or impels. **v. conserva'trix**, the natural power of the organism to resist injury and disease. **v. formati'va**, an energy that manifests itself in the formation of a new tissue to replace that which has been destroyed. **v. medica'trix natu'ræ**, the healing power of nature; the natural curative power inherent in the organism. **v. vi'tæ**, **v. vita'lis**, the vital force.

viscera (vis'er-ah). Plural of *viscus*. **abdominal v.**, the viscera contained in the abdominal cavity. **thoracic v.**, the viscera contained in the thoracic cavity.

viscerad (vis'er-ad). Toward the viscera.

visceral (vis'er-al) [L. *viscera'lis*, from *vis'cus* a viscus]. Pertaining to a viscus. **v. cleft**. See *cleft*.

visceralgia (vis'er-al'je-ah) [L. *vis'cus* viscus + Gr. *ä'lyos* pain]. Pain in the viscera.

visceralism (vis'er-al-izm). The opinion that the viscera are the principal seats of disease.

viscerimotor (vis'er-im-o'tor) [L. *vis'cus* viscus + *mo'tor* mover]. Conveying motor impulses to a viscus.

viscero-inhibitory (vis'er-o-in-hib'it-or-e). Inhibiting the essential movements of any viscus or organ.

visceromotor (vis'er-o-mo'tor). Concerned in the essential movements of the viscera.

visceroparietal (vis'er-o-par-i'et-al). Pertaining to the viscera and the abdominal wall.

visceroperitoneal (vis'er-o-per-it-o-ne'al). Pertaining to the viscera and the peritoneum.

visceropleural (vis'er-o-plu'ral). Pertaining to the viscera and the pleura.

visceroptosis (vis'er-op-to'sis) [L. *vis'cus* viscus + Gr. *πτῶσις* fall]. Same as *splanchnoptosis*.

viscerosensory (vis'er-o-sen'so-re). Pertaining to sensation in the viscera.

visceroskeletal (vis'er-o-skel'et-al). Pertaining to the visceral skeleton.

viscerosomatic (vis'er-o-so-mat'ik). Pertaining to the viscera and body.

viscerotrophic (vis'er-o-trof'ik). Trophic and dependent upon the viscera.

viscid (vis'id) [L. *vis'cidus*]. Clammy; glutinous or sticky.

viscidify (vis-id'it-e). The quality of being viscid.

viscin (vis'in) [L. *vis'cum* mistletoe]. A glutinous principle obtainable from mistletoe.

viscolan (vis'ko-lan). An ointment-base made from viscin, oils, fats, and resins.

viscometer (vis-kom'et-er). Same as *viscosimete r*.

viscometry (vis-kom'et-re). Same as *viscosimetry*.

viscose (vis'kōs). 1. A glutinous product of the viscous fermentation of dextrose or of invertin. 2. See *viscous*.

viscosimeter (vis-kos-im'et-er). An instrument for estimating the viscosity of the blood.

viscosimetry (vis-kos-im'et-re). The measurement and study of the viscosity of the blood.

viscous (vis-kos'it-e). The quality of being viscous.

viscous (vis'kus) [L. *visco'sus*]. Sticky or gummy; viscid.

Viscum (vis'kum) [L.]. A genus of plants. See *mistletoe*. **V. al'bum**, a homeopathic preparation of a European mistletoe.

viscus (vis'kus), pl. *vis'cera* [L.]. Any large interior organ in either of the four great cavities of the body, especially the abdomen.

visibility (vis-ib-il'it-e) [L. *visibil'itas*]. The quality of being visible.

visible (viz'ib-l) [L. *visib'ilis*]. Capable of being seen; perceptible by the sight.

visile (viz'il). Pertaining to vision; recalling most readily impression of vision.

vision (vish'un) [L. *vis'io*, *vid'ere* to see]. 1. The act or faculty of seeing; sight. 2. An apparition; a subjective appearance as of something seen which does not really exist. 3. Visual acuity; symbol. **V. achromatic v.**, vision marked by complete loss of the color sense; total color-blindness. **binocular v.**, the use of both eyes together without diplopia. **central v.**, that which is performed by the macula lutea. Called also *direct v.* **chromatic v.** Same as *chromatopsia*. **defective v.**, depraved **v.** Same as *dysopia*. **direct v.** See *central v.* **double v.** Same as *diplopia*. **facial v.**, the power of judging of the distance, direction, etc., of objects by the sensation felt in the skin of the face. **half-v.** Same as *hemianopia*. **halo v.** See *iridescent v.* **haplo-scopic v.**, stereoscopic vision. **indirect v.**, **peripheral v.**, that which is performed by the parts of the retina outside of the macula lutea. **iridescent v.**, vision in which a definite ring is

seen surrounding artificial lights, which thus become invested with a colored halo. Called also *halo v.* **multiple v.** Same as *polyopia*. **v. nuli**, the existence of scotomas in the field of vision of which the patient is not aware. **v. obscure**, the existence of scotomas in the field of vision of which the patient is conscious. **pseudo-scopic v.**, the reverse of stereoscopic vision: vision in which the object appears not as a solid body, but as a hollow one. **rainbow v.** Same as *iridescent v.* **shaft v.**, vision in which the field is narrow, as if the patient were looking through a tube. **solid v.**, **stereoscopic v.**, perception of the relief of objects or of their depth; that in which objects seen appear as solid objects, and not as flat pictures. **word-v.**, the special function of the general visual center.

viskolein (vis-ko'le-in). A proprietary antiseptic and antipyretic.

visual (vizh'u'al) [L. *visua'lis*, from *vid'ere* to see]. Pertaining to vision, or sight.

visualize (vizh'u'al-iz). To make visible.

visuo-auditory (vizh'u-o-aw'dit-or-e). Both visual and auditory; pertaining to the visual and auditory centers, or to sight and hearing.

visuognosis (vis'u-o-gno'sis) [L. *vis'us* sight + Gr. *γνῶσις* knowledge]. The recognition and interpretation of visual impressions.

visuometer (viz-u-om'et-er) [L. *vis'us* sight + *μέτρον* measure]. An instrument for measuring the range of vision.

visuopsychic (vizh'u-o-si'kik). Visual and psychic; a term applied to that area of the cerebral cortex concerned in the judgment of visual sensations.

visuosensory (vizh'u-o-sen'so-re). Pertaining to the perception of visual impressions.

visvit (vis'vit). A proprietary nutrient preparation for anemia, early tuberculosis, diabetes, etc.

vitafer (vi'taf-er). A proprietary tonic food containing the protein of milk and the glycerophosphates of calcium, magnesium, and sodium.

vitaglass (vi'tah-glas) [L. *vi'ta* life + *glass*]. A quartz-containing glass which transmits the ultra-violet portion of sunlight.

vitagraph (vi'tah-graf). A variety of chronophotograph.

vital (vi'tal) [L. *vita'lis*, from *vi'ta* life]. Pertaining to life.

vitaletiscope (vi-tal-et'is-kōp). A form of chronophotograph.

vitalin (vi'tal-in). A proprietary remedy said to be the same as boroglycerin.

Vitali's test (ve-tal'ēz) [Dioscoride *Vitali*, Italian physician, 1832-1917]. See under *tests*.

vitalism (vi'tal-izm) [L. *vi'ta* life]. The opinion that the bodily functions are produced by a distinct principle called the vital force.

vitalist (vi'tal-ist). A believer in vitalism.

vitality (vi'tal'it-e). 1. The life principle. 2. The condition of being alive.

vitalize (vi'tal-iz). To give life to.

vitalizon (vi-tal'iz-on). A tonic preparation of phosphorus, nux vomica, etc.

vitals (vi'talz). The parts and organs necessary to life.

vitamalt (vi'tah-mawlt). A proprietary preparation of malt.

vitamin, vitamine (vi'tam-in) [L. *vi'ta* life + *amin*]. One of a class of substances of unknown composition, existing in minute quantity in natural foods and necessary to normal nutrition and growth, absence of which from the diet produces deficiency diseases, such as beriberi, scurvy, rickets. There are five types of vitamins: one known as fat-soluble A, another as water-soluble B, a third as water-soluble C, a fourth vitamin D, and a fifth vitamin E or X. The first is concerned

mainly in growth, its deficiency causing a suspension of growth; its absence from the diet also is the specific cause of xerophthalmia and one of the factors in the causation of rachitis; it is most abundant in butter, fat, egg-yolk, cod-liver oil, and the fat of glandular organs; it is also widely distributed in the leaves of plants. It may be a sterol. See *biosterol*. The water-soluble B vitamin (also known as *antineuritic v.*) occurs in the bran layers of cereals, in vegetables, milk, eggs, liver, and pancreas, but is deficient in meats. Deficiency of this element in the diet results in beriberi. Water-soluble C prevents scurvy and is called *antiscorbutic v.* It is present in oranges, lemons, limes, and tomatoes. It has been obtained in a crystalline form from the juice of cabbages. The crystals seem to be "phenolic anthracene quinone" and they will prevent the onset of rickets in rats in daily doses of 2 mg. A fourth, *vitamin D*, is reported, which is not present in vegetable oils, but occurs in butter fat and especially in cod-liver oil, whose property is to regulate metabolism of bone. It thus is efficient in preventing or curing rickets and is called *antirachitic v.* A fifth vitamin, *vitamin X* or *vitamin E*, is believed to exist in certain foods, notably the wheat-germ, absence of which from the diet produces sterility. It is also known as *antisterility v.* It is predicted that a vitamin P, or antipellagra vitamin, will be discovered. Cf. *avitaminosis*.

vitapath (vi'tah-path). A vitapathic practitioner.

vitapathic (vi-tah-path'ik). Pertaining to vitapathy.

vitapathy (vi-tap'ath-e) [L. *vi'ta* life + Gr. *πάθος* disease]. A modern system of quack medicine.

vitascop (vi'tas-kōp) [L. *vi'ta* life + Gr. *σκοπεῖν* to view]. An instrument for use in the study of animal movements: it is of some service in diagnosis.

vitascopic (vi-tas-kop'ik). Pertaining to the vitascop.

vitasterol (vi-tah-ste'rol). A name proposed for vitamins which belong to the group of sterols. They are oil soluble, do not contain nitrogen, and are stable to the action of alkalis.

Vitel. Abbreviation for L. *vitell'us*, yolk.

vitellarium (vi-tel-a're-um). An accessory genital gland found in tapeworms which secretes the yolk or albumin for the fertilized egg. Called also *vitelline gland*.

vitellary (vi'tel-a-re). Pertaining to the vitellus, or yolk.

vitellicle (vi-tel'ik-l) [L. *vitell'us* yolk]. The yolk-sac.

vitellin (vi-tel'in) [L. *vitell'us* yolk]. A simple protein resembling a globulin in all respects except that it cannot be precipitated from its solution with sodium chlorid. It includes ordinary vitellin and crystallin. Ordinary vitellin (ovovitellin) is derived from the yolk of eggs, in which it exists in combination with lecithin.

vitelline (vi-tel'en) [L. *vitell'us* yolk]. Resembling or pertaining to the yolk of an egg or ovum.

vitellolutein (vit-el-o-lu'te-in) [L. *vitell'us* yolk + *lut'us* yellow]. A yellow pigment obtainable from lutein.

vitellorubin (vit-el-o-ru'bin) [L. *vitell'us* yolk + *rub'ere* red]. A reddish pigment obtainable from lutein.

vitellose (vi-tel'ōz). A form of proteose derived from vitellin.

vitellus (vi-tel'us) [L.]. The yolk of eggs or of an ovum.

Vi'tex pedunculo'sis. A plant used in India in the treatment of black-water fever.

vitiatin (vit-i'at-in). A compound sometimes occurring in the urine along with creatin and creatinin. It is a homologue of cholin.

viatiation (vish-e-a'shun) [L. *vitia'tio*]. Impairment of efficiency; the perversion of any process so as to render it faulty or ineffective.

vitiliginous (vit-il-i'j'en-us). Relating to or affected with vitiligo.

vitiligo (vit-il-i'go), pl. *vitilig'ines* [L.]. A skin disease attended with the formation of smooth, light-colored patches. It occurs in youth and adult life. Called also *piebald skin* and *leukoderma*. **v. cap'itis**, alopecia areata. **Celsius's v.**, alopecia areata. **v. i'ridis**, depigmentation of the iris.

vitiligoidea (vit-il-ig-oid'e-ah). Same as *xanthoma*.

Vitis (vi'tis) [L.]. A genus of plants including various species of grape or grape-vine. **V. car-no'sa**, an Asiatic species of grape: in India the seeds and roots are used in medicine. **V. lati-folia**, an East Indian grape-vine affording detergent, alterative, and soothing medicines. **V. vinifera**, a species affording most of the more valuable varieties of cultivated and wine-producing grapes.

vitium (vish'e-um), pl. *vi'tia*. [L.]. Fault, defect. **v. conformatio'nis**, malformation. **v. cor'dis**, an organic heart defect. **v. primæ for-matio'nis**, antenatal deformity.

vitiochemic (vi-to-kem'ik). Organic; pertaining to organic chemistry.

vitodynamic (vi'to-di-nam'ik). Same as *biodynamic*.

vitogen (vi'to-jen). A proprietary antiseptic: used like iodoform.

vitol (vi'tol). Vitamin.

Vit. ov. sol. Abbreviation for L. *vitel'lo o'vi solu'tas*, dissolved in yolk of egg.

vitreocapsulitis (vit're-o-kap-su-li'tis) [L. *vit'reus* glassy + *cap'sula* capsule + Gr. *-itis* inflammation]. Inflammation of the capsule inclosing the vitreous; hyalitis.

vitreodentin (vit're-o-den'tin) [L. *vit'reus* glassy + *dens* tooth]. An unusually hard and glass-like form of dentin.

vitreous (vit're-us) [L. *vit'reus* glassy]. 1. Glass-like or hyaline. 2. The vitreous body or humor; the semifluid, transparent substance which lies between the retina and the lens of the eye. **fluid v.** See *synchysis scintillans*.

vitreum (vit're-um). The vitreous body of the eye.

vitrina (vit-ri'nah). The vitreous body. **v. au'ris**, endolymph. **v. oc'uli**, the vitreous humor.

vitriol (vit're-ol) [L. *vitri'olum*]. Any crystalline sulphate. **blue v.**, copper sulphate or blue-stone, CuSO₄. **elixir of v.**, aromatic sulphuric acid. **green v.**, iron sulphate or copperas, Fe₂SO₄. **oil of v.**, sulphuric acid. **white v.**, zinc sulphate, ZnSO₄.

vitriolated (vit're-o-la-ted). Containing vitriol; containing sulphuric acid.

vitropression (vit-ro-presh'un) [L. *vit'rum* glass + *pressio*]. Production of anemia of the skin by pressing on it with a slip of glass in order to detect abnormal discolorations of the skin other than that produced by hyperemia.

vitrum (vit'rum). Latin for glass.

vitular, **vitulary**, **vituline** (vit'u-lar, vit'u-la-re, vit'u-lēn) [L. *vit'ulus* calf]. Pertaining to a calf.

vives (vivz). Chronic inflammation of the sub-maxillary glands of the horse.

vividiffusion (viv-e-dif-u'zhun) [L. *vi'vus* alive + *diffusio*]. Removal of diffusible substances from the circulating blood of living animals by dialysis, performed by the continuous passage of the blood from an artery through a system of tubes made of celloidin immersed in saline solution, and its return to a vein, thus yielding by dialysis certain of its constituents to the fluid surrounding the tubes.

vivification (viv'if-ik-a'shun) [L. *vivifica'tio*, from *vi'vus* living + *fa'cere* to make]. The conversion of lifeless into living protein matter in the process of assimilation.

viviparous (vi-vip-ar-us) [L. *vi'vus* alive + *pa'pere* to bring forth]. Bringing forth young alive; producing living young.

viviperception (viv'ē-per-sep'shun) [L. *vi'vus* alive + *perception*]. The study of the vital processes of the living organism.

vivisect (viv-is-ekt) [L. *vi'vum* living + *se'care* to cut]. To dissect while yet alive.

vivisection (viv-is-ek'shun) [see *vivisect*]. A dissection of or cutting operation upon a living animal.

vivisectionist (viv'ē-sek'shun-ist). One who practices or defends vivisection.

vivisector (viv-is-ek'tor). One who performs vivisection.

vivisectorium (viv-is-ek-to're-um). A place for the performance of vivisection.

vivosphere (vi'vo-sfēr) [L. *vi'vus* alive + *atmosphēre*]. The region between the atmosphere above and the petrosphere below in which life is found most abundantly.

Vlemminckx's solution (vlem'inks) [Jean François Vlemminckx, Belgian physician, 1800-1876]. See *solution*.

V. M. Abbreviation for *volt-meter*.

vocal (vo'kal) [L. *voca'tis*, from *vox* voice]. Pertaining to the voice. **v. cords**. See under *larynx*. **v. process**, a process of the arytenoid cartilage for attachment of the vocal cord.

vodka (vod'kah) [Russian]. A variety of whisky made in Russia.

Vogt's angle (fōgt) [Karl Vogt, a German naturalist and physiologist, 1817-1895]. See under *angle*.

Vogt's point (fōgt) [Paul Frederick Emmanuel Vogt, surgeon in Greifswald, 1847-1885]. See under *point*.

Vogt's syndrome (fōgts) [Cecile Vogt, contemporary German neurologist]. See under *syndrome*.

Vogt-Hueter point (fōgt-he'ter) [P. F. E. Vogt; Carl Hueter]. See *Vogt's point*, under *point*.

voice (vois) [L. *vox* voice]. A sound produced by the speech organs and uttered by the mouth.

amphoric v. Same as *cavernous v.* **cavernous v.**, a hollow sound heard on auscultation when the patient speaks. It indicates a cavity in the lung or a dilated bronchus. **eunuchoid v.**, a high falsetto voice in a man, resembling that of a eunuch or a woman. **whispered v.**, the transmission of a whisper to the auscultating ear, heard in pulmonary consolidation.

void (void). To cast out as waste matter.

Voigt's lines (voits) [Christian August Voigt, Austrian anatomist, 1809-1890]. See *line*.

Voilemier's point (vwal-me-az') [Léon Clémont Voilemier, French urologist]. See *point*.

Voit's nucleus (foits) [Carl von Voit, physiologist in Munich, 1831-1908]. See *nucleus*.

voix de polichinelle (vwah'deh-pol-ish-in-el') [Fr. "voice of Punch"]. A variety of egophony.

vola (vo'lah) [L.]. The sole or palm. **v. manus**, the palm of the hand. **v. pe'dis**, the sole of the foot.

volar (vo'lar) [L. *vola'ris*, from *vo'la* palm or sole]. Pertaining to the palm or sole.

volatile (vol'at-il) [L. *vola'tilis*, from *vola're* to fly]. Tending to evaporate rapidly. See *oil*.

volatilization (vol'at-il-iz-a'shun). The conversion into vapor or gas without chemic change.

volatilize (vol'at-il-iz). To convert into vapor.

volatilizer (vol'at-il-i-zer). An apparatus for producing volatilization.

volesan (vol'es-an). A proprietary preparation of

heroin, creosote carbonate, camphor, and balsam of tolu.

Volhard's solution (fōl'harts) [J. Volhard, German chemist, born 1834]. See under *solution*.

Volhynia fever (vol-hin'ē-ah) [Volhynia, a department of Russia]. See *trench fever*, under *fever*.

volition (vo-lish'un) [L. *vel'le* to will]. The act or power of willing.

volitional (vo-lish'un-al). Pertaining to the will.

Volkmann's canal, membrane, etc. (fōlk'-mahnz) [Alfred Wilhelm Volkman, German physiologist, 1800-1877]. See *canal, membrane*, etc.

Volkmann's deformity, splint, spoon (fōlk'-mahnz) [Richard von Volkman, German surgeon, 1830-1889]. See under *deformity, splint*, and *spoon*.

volley (vol'e). A rhythmic succession of muscular twitches artificially induced.

voisella (vol-sel'ah) [L.]. A forceps with hooked blades.

volt (vōlt) [after Alessandro Volta, Italian physiologist and physicist, 1745-1827]. The unit of electromotive force, being the force necessary to cause one ampere of current to flow against one ohm of resistance.

voltage (vōl'tāj). Electromotive force measured in volts.

voltagramme (vōl'tah-gram). A kind of faradic battery giving a nearly continuous current.

voltaic (vol'ta'ik). Pertaining to voltaism.

voltaism (vol'ta-izm). Same as *galvanism*.

voltaization (vol'ta-iz-a'shun). Continued or discontinuous electrization with a current of relatively large quantity under medium or feeble tension.

voltmeter (vol-tam'et-er) [volt + Gr. μέτρον measure]. An instrument for measuring the voltage of an electric current.

voltammeter (volt-am'e-ter). An instrument for measuring both volts and amperes.

voltampere (volt-am'pēr). The product of multiplying a volt by a milliamper.

voltmeter (vōlt'me-ter). An instrument for measuring electromotive force in volts.

Voltoini's disease, tube (vol-to-le'nēz) [Ferdic Edward Rudolf Voltoini, rhinologist and otologist in Breslau, 1819-1889]. See *disease and tube*.

volume, atomic. The quotient obtained by dividing the atomic weight of an element by its specific gravity in the solid condition.

volumebolometer (vōl'ūm-bo-lom'et-er). See *volumesphygmobolometer*.

volumenometer (vo-lu-men-om'et-er). Same as *volumometer*.

volumesphygmobolometer (vol'ūm-sfig-mo-bo-lom'et-er). Sahli apparatus for measuring the pulse volume. Called also *volumebolometer*.

volumetric (vol-u-met'rik) [volume + metric]. Pertaining to or accomplished by measurement in volumes. See *analysis and solution*.

volumination (vol-u-min-a'shun). The swelling of the bodies of bacteria produced by blood-serum. Normal serum produces a certain amount of swelling, but immune serum produces much more.

volumometer (vol-u-mom'et-er) [volume + Gr. μέτρον measure]. An instrument for measuring volume or changes in volume.

voluntal (vol'un-tal). Trichlor-ethyl-alcohol-urethane: used as a hypnotic in doses of 0.75 gm.

voluntary (vol'un-ta-re) [L. *volunt'as* will]. Accomplished in accordance with the will.

voluntomotory (vol'lun-to-mo'tor-e) [L. *volunt'as* will + *mo'tor* mover]. Subject to voluntary motor influence.

volupty (vo-lup'te) [L. *volup'tas* pleasure]. Sensual enjoyment.

volute (vo-lūt). Rolled up.

volutin (vo-lu'tin). Chromatin-like bodies found in great abundance in certain species of spirilla, especially *Spirillum volutans*.

volvulosis (vol-vu-lo'sis). Infestation with the worm *Oncoerca volvulus*, which produces cutaneous or subcutaneous fibrous tumors.

volvulus (vol'vu-lus) [L.]. Intestinal obstruction due to a knotting and twisting of the bowel.

vomer (vo'mer) [L. "plowshare"]. The bone which forms the lower and posterior portion of the septum of the nose.

vomerine (vo'mer-in). Of or pertaining to the vomer.

vomerobasilar (vo'mer-o-bas'il-ar). Pertaining to the vomer and to the basilar portion of the cranium.

vomeronasal (vo'mer-o-na'sal). Pertaining to the vomer and the nasal bone.

vomica (vom'ik-ah), pl. *vom'icæ* [L. "abscess"]. 1. The profuse and sudden expectoration of pus and putrescent matter. 2. An abnormal cavity in an organ, especially in the lung, caused by suppuration and the breaking down of tissue.

vomicose (vom'ik-ös). Full of ulcers; ulcerous.

vomit (vom'it) [L. *vomitare*]. 1. To cast up from the stomach by the mouth. 2. Matter cast up from the stomach; vomited matter. 3. An emetic. **Barcoo v.**, vomiting and nausea, with bulimia, affecting persons in southern Australia. **bilious v.**, vomited matter stained with bile. **black v.**, blackish matter consisting of blood which has been acted upon by the gastric juice, cast up from the stomach in yellow fever and other conditions in which blood collects in the stomach. **bloody v.**, vomit containing blood. **coffee-ground v.**, the bloody vomit of malignant disease of the stomach. It consists of broken-down blood mixed with stomach-contents.

vomiting (vom'it-ing). The forcible expulsion of the contents of the stomach through the mouth. **cyclic v.**, vomiting recurring at irregular intervals: called also *periodic v.* and *recurrent v.* **dry v.**, nausea with attempts at vomiting, but with the ejection of nothing but gas. **fecal v.**, stercoaceous vomiting. **hyperacid v.**, gastroynsis. **hysterical v.**, vomiting accompanying an attack of hysteria. **incoercible v.**, vomiting that cannot be controlled. **periodic v.** See *cyclic v.* **pernicious v.**, vomiting in pregnancy, so severe as to threaten the life of the patient. **v. of pregnancy**, pernicious vomiting. **recurrent v.** See *cyclic v.* **stercoaceous v.**, the vomiting of fecal matter. It is seen in intestinal obstruction, appendicitis, etc.

vomitive (vom'it-iv). Emetic.

vomito negro (vom'it-o na'gro) [Sp.]. Black vomit; also yellow fever.

vomitory (vom'it-or-e). An emetic.

vomituration (vom'it-u-rish'un). Repeated ineffectual attempts at vomiting; retching.

vomititus (vom'it-us) [L.]. Vomiting; also matter vomited. **v. cruentus**, bloody vomit. **v. matutinus**, the morning vomiting of chronic gastric catarrh.

von Bezold. See *Bezold*.

von Graefe's sign (von gra'fēz) [see *Graefe*]. See under *sign*.

von Haller. See *Haller*.

von Jaksch. See *Jaksch*.

von Langenbeck. See *Langenbeck*.

von Leyden. See *Leyden*.

von Mikulicz. See *Mikulicz*.

von Recklinghausen. See *Recklinghausen*.

von Wahl. See *Wahl*.

vonulo (von'u-lo). A disease of the bronchi occurring in west Africa, and marked by severe pains in the chest, usually under the sternum, and occasionally under the shoulder-blades.

Voorhees's bag (voor'ēz) [James Ditmars *Voorhees*, obstetrician in New York, born 1869]. See under *bag*.

vortex (vor'teks), pl. *vortices* [L. "whirl"]. A whorled arrangement of muscle-fibers in the heart. **v. coccyeus**, the spirally arranged hairs over the region of the coccyx. **v. cordis** [B N A]. See *vortex*. **v. lentis**, one of the spiral figures on the surface of the crystalline lens. **v. pilorum** [B N A], any spiral arrangement of hairs.

Vorticella (vor-tis-el'ah). A genus of ciliate protozoans, often found in feces, urine, nasal mucus, etc.

V. o. s. Abbreviation for *L. vitello ovi solutus*, dissolved in yolk of egg.

vogelin (vos'jel-in). A gelatinous product of the action of the hypochlorites on starch: a substitute for gelatin.

vox (voks), pl. *vo'ces*. Latin for *voice*. **v. cholericæ**, the peculiar suppressed voice of true cholera.

voyeur (voi-er'). A person who attains sexual gratification by looking at sexual objects.

V. S. An abbreviation for *volumetric solution*.

Vs. Abbreviation for *L. venesection*, venesection.

v. s. Abbreviation for *vibration seconds*, the unit of measurement of sound waves.

Vs. B. Abbreviation for *L. venesection bra'chii*, bleeding in the arm.

V. T. An abbreviation for *vacuum tuberculin*. See *tuberculin*.

vuerometer (vu-er-om-et'er) [Fr. *vue* sight + Gr. *μετρον* measure]. An instrument for measuring the distance of the eyes from each other.

vulcanite (vul'kan-it). Vulcanized caoutchouc or India-rubber.

vulgaris (vul-ga'ris) [L.]. Ordinary; common.

vulnerability (vul'ner-ab-il'it-e). Susceptibility to injury or to contagion.

vulneral (vul'ner-al). A proprietary antiseptic salve or unguent for wounds and ulcers.

vulnerant (vul'ner-ant). Administering a wound.

vulnerary (vul'ner-a-re) [L. *vulnerarius*, from *vulnus* wound]. 1. Pertaining to or healing wounds. 2. An agent that heals wounds. **Theodæus's v.**, vinegar, 240; alcohol, 75; dilute sulphuric acid, 40; honey, 80; distilled water, 30.

vulnerate (vul'ner-āt) [L. *vulnerare*]. To wound.

vulnus (vul'nus), pl. *vul'nera* [L.]. A wound or trauma.

Vulpian's atrophy, law (vul'pe-anz) [Edme Felix Alfred *Vulpian*, French physician, 1826-1887]. See *atrophy* and *law*.

vulpis fel (vul'pis fel). The bile or gall of the fox; also a homeopathic preparation of the same. **v. hep'ar**, the liver of the fox; also a homeopathic preparation of the same. **v. pul'mo**, the lung of a fox; also a homeopathic preparation of the same.

vulsella, vulsellum (vul-sel'ah, vul-sel'um) [L.]. Same as *volsella*.

valva (vul'vah) [L.]. The external part of the organs of generation of the female. **v. cer'ebri**, an opening into the third ventricle of the brain, below the anterior crus of the fornix. **v. clau'sa**, **v. connivens**, a valva in which the labia majora are plump and closed. **v. hi'ans**, gaping valva; a valva in which the labia majora are flaccid and gaping.

vulval, vulvar (vul'val, vul'var). Pertaining to the valva.

vulvismus (vul-viz'mus). Same as *vaginismus*.

vulvitis (vul-vi'tis) [valva + Gr. *-itis* inflammation]. Inflammation of the valva. **v. blennorrh'gica**, a mucopurulent discharge from the mucous membrane of the valva, usually resulting

from gonorrheal infection. **diphtheric v.**, **diphtheritic v.**, vulvitis with the formation of a false membrane. **follicular v.**, inflammation of the follicles of the vulva.

vulvocrrural (vul-vo-kru'ral). Pertaining to the vulva and the thigh.

vulvo-uterine (vul-vo-u'ter-in). Pertaining to the vulva and uterus.

vulvovaginal (vul-vo-vaj'in-al). Pertaining to the vulva and vagina.

vulvovaginitis (vul'vo-vaj-in-i'tis). Inflammation of the vulva and vagina, or of the vulvovaginal glands.

vuzin (vu'zin) [*Vouziers*, a town in northern France]. A derivative, iso-octyl-hydrocuprein, from the bark of *Remijia cuprea*: used as an antiseptic for wounds.

W

W. Chemical symbol for *tungsten*, *L. wolframium*; also abbreviation for *Wehnelt*, a unit of x-ray tube hardness.

wabain (wah-ba'in). A glucosid, $C_{39}H_{46}O_{12}$, from *wa'ba*, or *waba'io*, the root of *Carissa schimperi*, an apocynaceous tree. It is sometimes crystalline and sometimes amorphous: it is a heart stimulant and local anesthetic.

Wachendorf's membrane (vahk'en-dorfs) [Eberhard Jacob *Wachendorf*, German anatomist of the 18th century]. See under *membrane*.

Wachsmuth's mixture (yahks'moots) [Hans *Wachsmuth*, German neurologist, born 1872]. See under *mixture*.

wafer (wa'fer). A thin, double layer of dried paste to inclose a dose of medicine; also a flat vaginal suppository.

wagaga (wah-gag'ah). Periodic lymphangitis and abscess of the spermatic cord and epididymis. It is very common in Fiji, and is due to filariasis.

Wagner's corpuscles (vahg'nerz) [Rudolf *Wagner*, German physiologist, 1805-1864]. See *corpuscle*. **W's spot**, the germinal spot of an ovum.

Wagner's operation (vahg'nerz) [Wilhelm *Wagner*, German surgeon, 1848-1900]. See *operation*.

wagogo (wa-go'go). An African arrow-poison; the concrete juice of a tree of the genus *Euphorbia*: it much resembles wakamba.

Wagstaffe's fracture (wahg'stafz) [William *Wagstaffe*, English surgeon, 1843-1910]. See under *fracture*.

Wahlkamphia (wahl-kam'fe-ah). See *Vahlkamphia*.

Wahlenbergia (wahl-en-ber'je-ah). A genus of campanulaceous plants. *W. graminiflora*, of Europe, is said to be good in epilepsy; *W. linarioides*, of Chili, is used in colic.

Wahl's sign (vahlz') [Eduard von *Wahl*, German surgeon, 1833-1890]. See under *sign*.

wahoo (wah-hoo'). Same as *Euonymus atropurpureus*.

waist (wäst). That part of the body between the thorax and the hips.

wakamba (wa-kam'bah). An African arrow-poison.

wake-robin. Trillium.

Walcher's position (vahl'kerz) [Gustav Adolf *Walcher*, gynecologist in Stuttgart, born 1856]. See under *position*.

Waldeyer's glands, sulcus, etc. (vahl'di-erz) [Wilhelm von *Waldeyer*, anatomist in Berlin, 1836-1921]. See *gland, sulcus*, etc.

walk (wawk). See *gait*. **camel's w.** See *dromedary gait*, under *gait*. **kangaroo w.**, walking on all fours with the palms of the hands on the floor and the knees held as stiffly as possible; employed in the management of puerperal retroversions of the uterus.

wall (wawl). A parietal portion, as of the chest, abdomen or uterus; a *paries*. **cavity w.**, the wall which surrounds a cavity in a tooth. **germinal**

w., a ring-like thickening around the germinal disk consisting of the formative substance of the yolk. **parietal w.**, the outer or upper layer of the blastoderm, consisting of the epiblast and outer layer of the mesoblast. **periotic w.**, the wall of the otic vesicle. **splanchnic w.**, the inner layer of the blastoderm, composed of the hypoblast and the inner layer of the mesoblast. **subpulpal w.**, the bottom or floor of the pulp chamber. **tubal w.**, the anterior wall of the tympanum.

wallerian degeneration (wol'e-re-an) [Augustus Volney *Waller*, English physician, 1816-1870]. See *degeneration*. **w. law**. See *law*.

wall-eye (wawl'i). Leukoma of the cornea; also divergent strabismus.

walnut (wal'nut). Any tree or species of the genus *Juglans*: also its fruit. **black w.**, the tree *Juglans nigra*: the leaves are alternative and vermicifuge. **English w.**, **European w.**, the tree *Juglans regia*: its leaves are astringent. **white w.**, the tree *Juglans cinerea*, or butternut (*q. v.*).

Waltheria (wal-the're-ah). A genus of sterculiaceous trees of both hemispheres. Several species have medicinal properties.

Walther's duct, ligament, etc. (vahl'terz) [August Friedrich *Walther*, German anatomist, 1688-1746]. See *duct, ligament*.

wander-cell (won'der-sel). Same as *wandering cell*.

wandering (won'der-ing). Moving about freely; abnormally movable; too loosely attached. **w. cell**, a leukocyte. **w. rash**, geographic tongue. See *longue*.

wanklynize (wonk'lin-iz). To treat with Wanklyn's test, as in testing bread for alum.

war edema. See under *edema*.

waras, warras (wahr'as) [Indian]. A purplish powder derived from the seed-pods of *Flemingia grahamiana*, a shrub of Africa and southern Asia: used as a stain; also good against tapeworm and useful in skin diseases. Dose, 1-5 dr. (4-20 gm.); of tincture, 1 fl.oz. (30 c.c.).

warbles (war'bles). See *Hypoderma*.

Warburg's tincture (wahr'bergz) [Carl *Warburg*, Austrian physician, 19th century]. See *tincture*.

ward (ward). A large room in a hospital. **isolation w.**, a hospital ward for the isolation of persons suspected of being affected with an infectious disease. **probationary w.**, a ward of a hospital where patients are kept until it is ascertained whether or not they have a contagious disease. **psychopathic w.**, a ward in a general hospital for temporary reception of insane patients.

Wardrop's disease, operation (war'drops) [James *Wardrop*, English surgeon, 1782-1869]. See *disease and operation*.

Ward's paste (wardz) [Nathaniel Bagshaw *Ward*, London surgeon, born 1868]. Confection of black pepper.

warming plaster (warm'ing). See *plaster*.

warping (war'ping). Contagious abortion.

warras (wahr'as). See *waras*.

Warren's fat-columns (war'enz) [John Collins Warren, Boston surgeon, 1778-1856]. See *fat-columns*, under *column*.

wart (wart) [L. *verru'ca*]. An elevation of the skin, more rarely of the mucous membrane, formed by hypertrophy of the papillae. See also *verruca*. **anatomic w.** Same as *dissection tubercle*. See *tubercle*. **fig-w., moist w., pointed w.** See *venereal w.* **fugitive w.,** a form seen on the hands of young persons and generally not persistent. **necrogenic w., veruca necrogenica.** **Peruvian w.** See *veruca peruana*. **postmortem w.** Same as *veruca necrogenica*. See *tubercle*. **soot-w.,** chimney-sweeps' cancer (or epithelioma) of the scrotum. **telangiectatic w.** See *angiokeratoma*. **tuberculous w.,** tuberculosis of the skin leading to the development of warts, chiefly upon the hands, and occurring principally in childhood. **venereal w.,** a reddish, pointed elevation growing upon the genitals or the anus, and caused by infection from the secretions of the parts around it. It is usually moist, and is also known as *moist w., pointed w., fig-w., verruca acuminata, and pointed condyloma*. **vitreous w.,** any one of a set of small, roundish, transparent masses on the posterior surface of the cornea, near the border of Descemet's membrane.

warty (war'te). Covered with warts; resembling warts.

wash (wash). A lotion. **black w.** (*lo'tio ni'gra*), a lotion of calomel, 64 gr., and lime-water (*li'quor cal'cis*), 16 fl.oz.: used in treating syphilitic sores. **red w.,** a weak solution of zinc sulphate containing compound tincture of lavender. **yellow w.** (*lo'tio fla'va*), mercuric bichlorid (corrosive sublimate), 24 gr., in lime-water (*li'quor cal'cis*), 6 fl.oz.

wash-bottle. 1. A bottle having two tubes through the cork, and so arranged that blowing into one will force a stream of water from the other: used in washing chemic materials. 2. A bottle containing some washing fluid, through which gases are passed for the purpose of freeing them from impurities.

wash-leather skin. See *skin*.

washerwomen's itch (wash-er-wum'enz). See *itch*.

washing-soda (wash'ing). See *sodium carbonate*.

Wasielowska (was-e-el-ew'ske-ah). A form of amebæ which acquire and lose flagella. *W. gru'beri* has been obtained in cultures from diarrhetic stools.

Waskia (was'ke-ah). A name for the genus *Embadomonas*.

wasp (wosp) [L. *ves'pa*]. Any stinging hymenopterous insect of the family *Ves'pida*, of which the genus *Ves'pa* is the type. Wasp-venom is employed in homeopathic practice. See *Vespa*.

Wassermann's reaction or test (vas'er-mahnz) [August Paul von Wassermann, bacteriologist in Berlin, 1866-1925]. See under *reaction* and *tests*.

Wassermann-fast. Showing a positive Wassermann reaction despite antisyphilitic treatment.

waste (wäst). 1. Gradual loss, decay, or diminution of bulk. 2. Useless and effete material, unfit for further use within the organism. 3. To pine away or dwindle. **phonetic w. of the breath,** a too rapid expiratory act, due to paralysis of a lateral crico-arytenoid muscle.

waster (wäs'ter). An ox or cow affected with tuberculosis.

wasting palsy (wäs'ting). Progressive muscular atrophy. See *atrophy*.

watchmakers' cramp (watsh'ma-kerz). See *cramp*.

water (wah'ter). 1. A tasteless, inodorous liquid, (H₂O)_n, present in all organic tissues and in many other substances. It freezes at 32° F. (0° C.) and boils at 212° F. (100° C.), and is used as the standard of specific gravity and of specific heat. 2.

An aqueous pharmaceutical preparation. See *aqua*. **acidulous w.,** a water containing carbonic acid in solution. **aërated w.,** water containing any gas in solution. **Æsculap w.,** a saline aperient water from a spring in Kelenföld, Budapest. **alkaline w.,** a water containing bicarbonate of lithium, calcium, sodium, or potassium. **Apenta w.,** a natural aperient water from springs near Budapest, in Hungary. **Apollinaris w.,** an effervescent table-water from Germany. It contains sodium carbonate and carbonic acid. **Arabella w.,** a saline aperient water containing magnesium sulphate and sodium sulphate. **artificial sea w.,** sodium chlorid, 7 gm.; magnesium chlorid, 1 gm.; magnesium sulphate, 0.4 gm.; potassium sulphate, 0.25 gm.; calcium chlorid, 0.1 gm.; potassium nitrate, 0.25 gm.; calcium sulphate, 0.25 gm.; and peptone, 2.5 gm., in water, 250 c.c. Filter and sterilize as a bacteriologic culture-medium. **w. on the brain,** hydrocephalus. **calcic w.,** a water containing calcium salts. **capillary w.,** the water contained in the soil above the water table of the ground water. **Carbana w.,** a purgative and alterative natural water. **carbolic acid w.** See *aqua phenolata*. **carbonated w., carbonic w.,** water which has been charged with carbon dioxide. **Carlsbad w.,** a saline water from springs at Carlsbad in Bohemia; used in affections of the stomach, intestines, and liver, in gout, diabetes, etc. **chalybeate w.,** a water containing iron salts. **w. on the chest,** hydrothorax. **chloroformed w.,** a saturated aqueous solution of chloroform. **cologne w.,** a solution of various fragrant oils, such as bergamot, orange flower, lemon, lavender, and rosemary in alcohol to which acetic ether is added. Called also *eau de cologne* and *spiritus odoratus*. **Con-trexéville w.,** an alkaline water from the Vosges in France. It contains free carbonic acid gas. **w. of crystallization,** that which is an ingredient of many salts, imparting to them a crystalline form. **distilled w.,** water purified by distillation. **Dunham's peptone w.** See *peptone water*, under *culture-medium*. **emanation w.,** water rendered radio-active by contact with a radio-active substance. **w.-equivalent,** a number representing the specific heat of a quantity of water equal in weight to the body of an animal. It is the number produced by multiplying the weight of the animal by its specific heat. **fish w.,** an extract of fish used in preparing certain bacteriologic culture-media; fish flesh (herring, mackerel, or cod), 500 gm.; sodium chlorid, 26.5 gm.; potassium chlorid, 0.75 gm., and magnesium chlorid, 3.25 gm., in water, 500 c.c. Raise slowly to the boiling-point, filter, and sterilize. **Florida w.,** a perfume made from 4 oz. of oil of bergamot, 2 oz. of compound tincture of benzoin, and 1 oz. of alcohol. **Franz-Josef w.,** a saline aperient water from a spring in Hungary, useful in constipation, hepatic congestion, and duodenal catarrh. **Friedrichshall w.,** a saline aperient water containing, besides magnesium and sodium sulphates, magnesium and sodium chlorids. **w.-glass,** a solution of sodium silicate. **ground w.,** the water which lies in the depth of soils being carried along under ground over impervious strata. The upper border of the ground water is known as the water table. **hard w.,** water that contains salts of calcium or magnesium, which resist the action of soap, so that it does not readily form lather. **Hiss's serum dextrose w.** See *serum dextrose water*. **Hunyadi János w.** [after Hunyadi János, or John Corvinus (died 1456)], a purgative saline water from springs in Hungary. **Javel w.,** a solution of potassium hypochlorite. **Johannis w.,** a table-water from Zollhaus station in Germany. **Kissingen w.,** a saline laxative and tonic water from Kissingen, in Bavaria. **La Bourboule w.,** a mildly arsenical water from France: used in cachexia, anemia, and chlorosis. **lead w.,** liquor plumbi subacetatis dilutus. **Levico w.,** an arsenical

water from a spring near Trieste in South Tyrol. Dose, a tablespoonful, gradually increased. **Marienbad w.**, a mildly laxative water from the springs of Marienbad. **mineral w.**, a water containing mineral salts in solution in sufficient quantity to give it special properties and taste. **Pasteur's yeast w.** See *yeast water*. **peptone w.** See *peptone water*, under *culture-medium*. **phenolated w.** See *aqua phenolata*. **potable w.**, water that is fit to drink. **Pullna w.**, a bitter aperient water from Bohemia. **Rubinat w.**, a Spanish mineral water containing sodium sulphate and small amounts of potassium, calcium, and magnesium sulphates. It has aperient properties. **St. Galmier w.**, a natural table-water from the Province of Loire, France. **saline w.**, a water which contains neutral salts. **Schwalbach w.**, a chalybeate water, used in anemia. **Selters w.**, **seltzer w.**, an effervescent mineral water occurring in springs at Selters in Prussia. It contains sodium carbonate, sodium chlorid, and certain sulphates. An artificial preparation resembling the natural water is made. **serum w.**, a mixture of 1 part of blood-serum and 3 parts of distilled water: used in preparing bacteriologic culture-media. **serum dextrose w.**, serum water containing 1 per cent. of dextrose and 5 per cent. of litmus solution. **soft w.**, water that contains little or no mineral matter. **toast-w.**, water in which toasted bread has been soaked: used as a drink for patients suffering with fever. **Vichy w.**, a mineral water from Vichy, in France: a diuretic: useful in rheumatism, diabetes, and chronic gastro-enteritis and hepatic disorders. **yeast w.**, a nutritive fluid made by boiling 75 gm. of compressed yeast in 1 liter of water.

water-bath. An apparatus for heating a substance in a vessel which is held in another vessel containing water.

water-bed. A rubber mattress filled with water.

water-bite. See *trench foot*, under *foot*.

water-borne. Propagated by contaminated drinking-water: said of diseases.

water-brain. A disease of sheep marked by staggering.

water-brash. Pyrosis.

water-braxy. Intestinal inflammation in sheep, with hemorrhage into the peritoneal cavity

water-choke. Laryngeal spasm caused by fluid entering between the true and false vocal cords.

water-cure. Hydrotherapy.

water-farcy. Inflammation of the lymphatics of a horse's leg.

water-glass. See under *glass*.

water-gurgle test. See under *tests*.

water-hammer pulse. See under *pulse*.

water-soluble B. One of two classes of vitamins contained in food and concerned in inducing growth. See *vitamin*.

water-wheel murmur. See *bruit de moulin*.

waters (wah'terz). A popular name for the liquor amnii.

Watkins' operation (wat'kinz) [Thomas James Watkins, gynecologist in Chicago, 1863-1925]. See *operation*.

Watsonius watsoni. A pear-shaped nematode found in a case of diarrhea in Africa. Called also *Amphistoma watsoni*.

watt (wot) [after James Watt, 1736-1810]. The unit of electric activity; the amount of pressure developed by one volt of potential with one ampere of current.

wattmeter (wot'me-ter). An instrument for measuring electric activity in watts.

wave (wāv). A uniformly advancing disturbance in which the parts moved undergo a double oscillation. **anacrotic w.**, **anadicrotic w.**, a sphygmographic wave showing a double indentation on the

ascending wave. **arterial w.**, a wave in the phlebogram of the jugular vein, due to a shock transmitted to the vein by a pulsation of the carotid artery. **catacrotic w.**, **catadicrotic w.**, a pulse wave showing a double expansion on the down stroke of the sphygmogram. **contraction w.**, the wave of progression of the contraction in a muscle from the point of stimulation; also the graphic representation of a contracting muscle. **dicrotic w.** 1. The second or smaller ascending wave in the descending line of the sphygmogram. 2. Same as *recoil-w.* **electromagnetic w's**, the entire series of ethereal waves which are similar in character, and which move with the velocity of light, but which vary enormously in wave-length. The unbroken series is known from the hertzian waves used in radio transmission which may be miles in length (one mile equals 1.6×10^{-6} cm.) through heat and light, the ultraviolet, Roentgen rays, and the gamma rays of radium to the cosmic rays of Millikan, the wave-length of which may be as short as 0.0004 of an Angström unit (4×10^{-12} cm.). **Erb's w's**, undulations in a muscle stimulated by a moderately powerful constant current: sometimes seen in myotonia congenita. **excitation w.**, an electric wave flowing from a muscle just previous to its contraction. **hertzian w's**, electromagnetic waves resembling light-waves, but having greater wave-length; they are used in wireless telegraphy. **w-length**, the distance between consecutive corresponding points in a monofrequent wave train. **light-w's**, the waves in the ether which produce sensations in the retina. See *light*. **longitudinal w.**, one in which the oscillatory motion is parallel to the direction of propagation of the wave. **menstrual w.**, the pelvic congestion preceding the appearance of the menses, culminating in the flow, and gradually passing away after the cessation of the flow. **w. number.** See under *number*. **oscillation w.**, a secondary pulse wave due to the inertia of the vessel wall. **outflow remainder w.**, **peridicrotic w.** Same as *overflow-w.* **overflow-w.**, the part of the descending line of the sphygmographic wave which intervenes between the apex and the dicrotic wave, and corresponds to the overflow of the ventricles. **P w.**, the first upward deflection in the electrocardiogram. See *electrocardiogram*. **papillary w.**, **percussion w.**, the chief ascending wave of a sphygmographic tracing. **phrenic w.** See *diaphragm phenomenon*, under *phenomenon*. **predicrotic w.**, a small rise in the pulse wave preceding the dicrotic wave. **pulse w.**, the elevation of the pulse felt by the finger or shown graphically in the curve recorded by the sphygmograph. **Q w.**, the upward wave in the electrocardiogram representing the contraction of the ventricles. See *electrocardiogram*. **recoil-w.**, the second of the two principal waves of a dicrotic pulse, due to the reflected impulse of the closure of the aortic valves. **respiratory w.**, a wave in the curve of blood-pressure, rising during inspiration and falling during expiration. **Stephenson w.** Same as *menstrual w.* So called from its discoverer, William Stephenson. **stimulus w.**, the wave which passes along a muscle as a result of a stimulus applied at a certain point. **w-theory**, the theory that light, heat, and electricity are due to vibrations in a hypothetical substance—the ether—which pervades all space and penetrates all substances. Called also *undulatory theory*. **tidal w.**, the sphygmographic wave next after the percussion-wave; the second elevation of the sphygmographic tracing between the percussion wave and the dicrotic elevation. It is believed to be caused by the afflux of blood in systole. **transverse w.**, one in which the oscillatory motion is perpendicular to the direction of propagation of the wave. **Traube-Hering w's**, rhythmic rises and falls in the arterial pressure, due to rhythmic activity of the vasoconstrictor center. **tricrotic w.**, a third wave in the sphygmographic curve in addition to

the tidal and dirotic waves, occurring during systole. **vasomotor w.**, a fluctuation in the quantity of blood supplied to some part. **ventricular w.**, the part of the tracing of the venous pulse between the auricular and ventricular depressions.

wavy respiration (wa've). See *respiration*.

wax (waks) [L. *cera*]. Any one of a series of plastic substances deposited by insects or obtained from plants. They are esters of various fatty acids with higher, usually monohydric alcohols. The wax of pharmacy is principally *beeswax*, the material of which honey-comb is made. It consists chiefly of cerin and myrcin. It is used in making ointments, cerates, etc. In its natural state it is yellow (yellow w.), but in bleaching it becomes white (white w.). See *cera*. **bayberry w.** See *bayberry tallow*. **bone-w.** See *Mosetig-Moorhof bone-w.*

carnauba w., a wax largely obtained from *Copernicia cerifera*, a palm of South America. **Chinese w.**, a hard white wax of insect origin, procured from *Fraxinus chinensis*, a tree of China; also a similar wax from *Ligustrum madra*. **ear-w.** See *cerumen*. **earth w.** See *ceresin*. **grave w.** See *adipocere*. **Horsley's w.**, a mixture of wax, oil, and carbolic acid: used for stopping small bone cavities and for controlling bleeding from them. **Japan w.**, a wax from the fruit of *Myrica cerifera* and other species of the same genus. **Mosetig-Moorhof bone-w.**, a preparation for filling sterile bone cavities. It consists of equal parts of spermaceti and oil of sesame, which are sterilized in a water-bath. To 60 parts of this is added 40 parts of iodoform. **myrtle w.** See *bayberry tallow*. **ocuba w.**, a wax obtained from *Myristica ocuba*, a South American tree.

palm-w. Same as *carnauba w.*; also a wax from *Ceroxylon andicola*, a South American palm.

vegetable w., a waxy substance resembling beeswax, derived from various vegetable sources.

waxy (waks'e). Resembling wax. See *cast, degeneration, kidney, liver, etc.*

wean (wēn). To cause an infant to cease from taking food by sucking, and to take it in the ordinary way.

weavers' bottom (we'verz). Chronic inflammation of a bursa on the tuberosity of the ischium, caused by pressure: sometimes occurring in weavers.

weazand (we'zand). The trachea or wind-pipe.

webbed fingers, toes (webd). See *finger, toe*.

w. penis. See *penis palmatus*.

weber (web'er). Same as *coulomb*.

Weber's corpuscles, glands, organ (va'berz) [Moritz Ignatz Weber, German anatomist, 1795-1875]. See *corpuscle, gland, and organ*.

Weber's douche (va'berz) [Theodor Weber, German physician, 1820-1914]. A nasal douche.

Weber's experiment, law, paradox, syndrome, test (web'erz) [Ernst Heinrich Weber, German anatomist and physiologist, 1795-1878]. See the nouns.

Weber's test (va'berz) [Friedrich Eugen Weber, German otologist, 1832-1891]. See under *tests*.

Webster's operation (web'sterz) [John Clarence Webster, gynecologist in Chicago, born 1863]. See *operation*.

Webster's test (web'sterz) [John Webster, London chemist, 1878-1927]. See under *tests*.

weed. 1. An unsightly or useless plant. 2. Lymphangitis of animals. **puke w.** *Lobelia*. **smart w.** *Polygonum hydropiper*. **squaw w.**, *Eupatorium urticifolium*.

Weeks's bacillus (weeks) [John Elmer Weeks, New York ophthalmologist, born 1853]. Koch-Weeks bacillus. See *bacillus*.

weeping eczema (we'ping). See *eczema*. **w. sinew.** See *ganglion* (2d def.).

W. E. F. Abbreviation for *war emergency formula*, designating alternative formulæ for British Phar. preparations containing glycerin and sugar.

Wegner's disease, sign (wig'nerz) [Fredericus Rudolphus Georgius Wegner, German pathologist, born 1843]. See *disease and sign*.

Weichardt's antikenotoxin (vi'kardts) [Wolfgang Weichardt, German pathologist]. See *antikenotoxin*.

Weichselbaum's coccus (vik'sel-bowmz) [Anton Weichselbaum, Austrian pathologist, 1845-1920]. The *Diplococcus intracellularis*.

Weidel's test (vi'delz). See under *tests*.

Weigert's method or stain (wig'ertz) [Karl Weigert, German pathologist, 1843-1904]. See *stains, table of*.

weight (wät). Heaviness; the degree to which a body is drawn toward the earth by gravity.

atomic w., the weight of an atom of a substance as compared with the weight of an atom of oxygen which is taken as 16. **combining w.**, the relative weight, compared with that of hydrogen (which is considered as 1), of an element that enters into combination with other elements.

molecular w., the weight of a molecule of a substance as compared with that of hydrogen.

weights and measures. See *table*, pp. 1330-1337.

Weil's disease, syndrome (wilz) [Adolf Weil, physician in Wiesbaden, 1848-1916]. See under *disease and syndrome*.

Weil's test (wilz) [Richard Weil, New York physician, 1876-1917]. See under *tests*.

Weil-Felix bacillus, reaction (vil-fa'lix) [Edmund Weil, German physician in Prague, 1880-1922; Arthur Felix, Prague bacteriologist, born 1887]. See under *bacillus and reaction*.

Weill's sign (vêlz) [Edmund Weill, French pediatrician, 1859-1925]. See under *sign*.

Weinmannia (win-man'e-ah). A genus of saxifragaceous plants with an astringent medicinal bark.

Weinstein's test (wîn'stînz) [Julius William Weinstein, contemporary physician in New York]. The tryptophan test. See under *tests*.

Weir Mitchell treatment (wēr-mit'shel) [see *Mitchell*]. See *treatment*.

Weir's operation (wêrz) [Robert Fulton Weir, New York surgeon, 1838-1927]. Appendicostomy.

Weisbach's angle (vis'bahks) [Albin Weisbach, Austrian anthropologist of 19th century]. See under *angle*.

weismannism (wis'man-izm) [August Weismann, German biologist, 1834-1914]. The doctrine of the non-inheritance of acquired characters.

Weiss's reflex, sign (vis) [Nathan Weiss, physician in Vienna]. See *reflex and sign*.

Weiss's stain (vis'ez) [Leonhard Weiss, contemporary German physician]. See *stain*.

Weissmann's bundle (wis'mahnz). See under *bundle*.

Weiss's test (vis'ez) [Moriz Weiss, contemporary German physician]. See *Moriz-Weiss test*, under *tests*.

Weitbrecht's cartilage, foramen, ligament, etc. (vi'tbrekt) [Josias Weitbrecht, German anatomist in St. Petersburg, 1702-1747]. See *cartilage, foramen, ligament, etc.*

Welander's treatment, ulcer (va'lan-derz) [Edvard Wilhelm Welander, physician in Stockholm, 1840-1917]. See under *treatment and ulcer*.

Welch's bacillus, stain (welsh-ez) [William Henry Welch, pathologist in Baltimore, born 1850]. See *bacillus and stain*.

Wells's facies (welz) [Sir Thomas Spencer Wells, an English gynecologist, 1818-1897]. See under *facies*.

weltmerism (welt'mer-izm) [named from Sidney A. Weltmer]. A system of suggestive treatment aiming to bring the body and mind into harmony.

wen (wēn). A sebaceous cyst.

TABLES OF WEIGHTS AND MEASURES.

MEASURES OF MASS

AVOIRDUPOIS WEIGHT

Grains.	Drams.	Ounces.	Pounds.	Metric equivalents, grams.

Wender's test (ven'derz) [Neumann's *Wender*, Austrian chemist]. See under *tests*.

Wenzell's test (wen'zelz) [William Theodore *Wenzell*, American physician, born 1829]. See under *tests*.

Werdnig-Hoffmann paralysis or type (verd'nig-hof-man) [Guido *Werdnig*, Austrian neurologist; Ernst *Hoffmann*, German neurologist, born 1868]. See *paralysis*.

Werlhof's disease (verl'höfs) [Paul Gottlieb *Werlhof*, German physician, 1699-1767]. See *purpura hemorrhagica*.

Wernekinck's commissure (ver'na-kinks) [Friedrich Christian Gregor *Wernekinck*, German anatomist, 1798-1835]. See *commissure*.

Wernicke's fissure, sign, etc. (ver'nik-ēz) [Carl *Wernicke*, German alienist, 1848-1905]. See *fissure, sign, etc.*

Wertheim's ointment (ver'timz) [Gustav *Wertheim*, physician in Vienna, 1822-1888]. See *ointment*.

Wertheim's operation (ver'timz) [Ernst *Wertheim*, gynecologist in Vienna, 1864-1920]. See under *operation*.

Westberg's disease, space (vest'bergz) [Friedrich *Westberg*, German physician of the nineteenth century]. See *disease and space*.

Westphal's contraction, nucleus, sign (west'fals) [Karl Friedrich Otto *Westphal*, German alienist, 1833-1890; Alexander Karl Otto *Westphal*, born 1862]. See *contraction, nucleus, sign*.

wet-brain (wet'brān). A moist and edematous state of the brain due to alcoholism; incorrectly called acute serous (or alcoholic) meningitis.

wet-cup (wet'kup). A cupping-glass to be used after scarification.

wet-nurse (wet'nurs). A nurse who gives suck to her charge.

wet-pack (wet-pak'). The wrapping of a patient in wet sheets to reduce temperature.

wet-scald. Eczema in sheep.

Wetzel's test (vet'selz) [Georg *Wetzel*, German physician, born 1871]. See under *tests*.

Weyl's test (wälz) [Theodor *Weyl*, German chemist, 1851-1913]. See under *tests*.

whalebone (hwal'bön). A horny substance from the mouths of various whales, especially *Balaena mysticetus*. It is used in making probangs and other articles used in surgery.

wharl (hwarl). A rattling or uvular utterance of the r-sound.

Wharton's duct, jelly (hwar'tunz) [Thomas *Wharton*, English physician and anatomist, 1610-1673]. See *duct and jelly*.

whartonitis (hwar-ton-i'tis). Inflammation of Wharton's duct.

wheel (hwel). A white or pinkish elevation or ridge on the skin, as in urticaria or after the stroke of a whip.

Wheatstone's bridge (whet'stönz) [Charles *Wheatstone*, English physicist, 1802-1875]. See under *bridge*.

Wheelhouse's operation (hwel'howz-ez) [Claudius Galen *Wheelhouse*, English surgeon of the 19th century]. See *urethrolomy*.

wheeze (hwēz). A sound made by suddenly forcing the breath through the glottis. **asthmatoïd w.**,

a sound similar to the wheezing heard when the ear is placed close to the mouth of an asthmatic; heard in cases of foreign body in the trachea or bronchus. Called also *Jackson's sign*.

wheezing (hwe'zing). Difficult breathing attended with a whistling sound.

whelk (hwe'lk). A wheal; also a protuberance on the face: seen especially upon the faces of hard drinkers.

whetstone crystals (hwe't'stōn). Crystals of xanthin in the urine.

whettle-bones (hwe't'el-bōnz). The dorsal vertebrae.

whew (hwā). The thin serum of milk remaining after the curd and cream have been removed.

alum-w., a whey prepared by boiling milk with a piece of alum and removing the curd by straining.

w-cure, the treatment of disease by the administration of whey.

litmus w., whey colored with litmus to a deep purplish-red color.

Petruschky's litmus w. See *litmus whey*.

wine-w., a preparation of milk coagulated with white wine, strained from the curd, and sweetened with sugar.

whewn (hwān). A proprietary nutrient and stimulating drink prepared from sterilized whey.

whiff, oral (hwif). Drummond's sign. See under *sign*.

whin (hwin). See *Ulex*.

whip-worm (hwip'werm). See *Trichocephalus dispar*.

whirl-bone (whirl'bōn). 1. The patella, rotula, or knee-cap. 2. The head of the femur.

whiskers. See *Thamnidium*.

whisky, whiskey (hwi's'ke). An alcoholic liquor distilled from barley, rye, maize, wheat, or potatoes; spiritus frumenti.

whisper (hwi's'per). A soft, low, sibilant breathing sound produced by the unvoiced passage of the breath through the glottis.

whispered bronchophony (hwi's'perd). See *bronchophony*.

whispering pectoriloquy (hwi's'per-ing). See *pectoriloquy*.

whistle, Galton's (hwi's'el). A metallic whistle used in testing the sense of hearing.

Sahli's w., a sound resembling whistling heard in the abdomen and caused by flatus passing an intestinal stenosis.

white scours. See under *scours*.

white-leg. Phlegmasia alba dolens.

white-pocks, white-pox. See *amaas*.

whitecomb (hwi't'kōm). See *comb disease*, under *disease*.

Whitehead's operation (hwi't'hedz) [Walter Whitehead, English surgeon, 1840-1913]. See under *operation*.

White's disease (hwitz) [James C. White, dermatologist in Boston, 1833-1916]. Keratosis follicularis.

White's operation (hwitz) [J. William White, Philadelphia surgeon, 1850-1916]. See *operation*.

whites (hwitz). Same as *leukorrhœa*.

whiting (hwi'ting). A commercial form of calcium carbonate.

whitlow (hwi't'lo). A felon, panaris, or paronychia. See *paronychia*.

melanotic w., a malignant disease of the nail-bed characterized by the formation of melanotic tissue about the nail border and under the nail; melanoblastoma of the nail-bed.

Whitmore's disease or fever (hwi't'mōrz) [Major Whitmore, of the Indian Medical Service]. See under *disease*.

whoop (hoop). The sonorous and convulsive inspiration of whooping-cough.

whooping-cough (hoop'ing-kawf). Pertussis; an infectious disease characterized by catarrh of the respiratory tract and peculiar paroxysms of cough,

ending in a prolonged crowing or whooping respiration. After an incubation period of about two weeks the *catarrhal stage* begins, with slight fever, sneezing, running at the nose, and a dry cough. In a week or two the *paroxysmal stage* begins, with the characteristic paroxysmal cough. This consists of a deep inspiration, followed by a series of quick, short coughs, continuing until the air is expelled from the lungs. During the paroxysm the face becomes cyanosed, the eyes injected, and the veins distended. The cough frequently induces vomiting, and, in severe cases, epistaxis or other hemorrhage. The close of the paroxysm is marked by a long-drawn, shrill, whooping inspiration, due to spasmodic closure of the glottis. The number of paroxysms varies from ten or twelve to forty or fifty in twenty-four hours. This stage lasts from three to four weeks, and is followed by the *stage of decline*, during which the paroxysms grow less frequent and less violent, and finally cease. The disease is most frequently met in children, is much more prevalent in cold weather, and is very contagious, the virus being apparently associated with the sputum. The disease is apt to be complicated with catarrhal pneumonia, pulmonary collapse, emphysema, convulsions, and hemorrhages into the eye, ear, or brain, and severe cases are sometimes followed by chronic bronchitis, tuberculosis, or nephritis.

whorl. See *vortex*.

Whytt's disease (hwits) [Robert Whytt, Scotch physician, 1714-1766]. Acute hydrocephalus.

Wichmann's asthma (vik'mahnz) [Johann Ernst Wichmann, German physician, 1740-1802]. Laryngismus stridulus.

Wickersheimer's fluid (wik'er-shi-merz) [J. Wickersheimer, anatomist in Berlin, 1832-1896]. See *fluid*.

Widal reaction or test (ve-dal') [Fernand Widal, physician in Paris, born 1862]. See under *tests*.

Widal-Abrami disease (ve'dal-ab-rah'me). Acquired hemolytic jaundice.

wiggler (wig'ler). The larva of a mosquito.

Wildbolz reaction (vill'bolts) [H. Wildbolz, Swiss urologist, born 1873]. See *reaction*.

Wilder's sign (wil'derz) [William Hamilton Wilder, ophthalmologist in Chicago, born 1860]. See under *sign*.

Wilder's ear (vil'der-moots) [Hermann A. Wildermuth, alienist in Stuttgart, born 1852]. See under *ear*.

Wilde's cord, incision (wildz) [Sir William Robert Wilde, Irish surgeon, 1810-1896]. See *cord, incision*, etc.

wild-mint (wild'mint). A fragrant North American plant, *Men'tha canadensis*, resembling pennyroyal in its odor and properties.

Wilkinson's ointment (wil'kin-sonz) [J. H. Wilkinson, English physician of the nineteenth century]. See *ointment*.

Wilks's disease (wilks) [Sir Samuel Wilks, English physician, 1824-1911]. See under *disease*.

Willan's lepra (wil'aniz) [Robert Willan, English physician, 1757-1812]. Psoriasis.

Willems's treatment. See under *treatment*.

Willia (wil'e-ah). A genus of fungi. *W. anomala* is parasitic in man.

Williams's tracheal tone (wil'yamz) [Charles Williams, English physician, 1838-1889]. See *Williams's sign*, under *sign*.

Williamson's sign (wil'yam-sunz) [Oliver K. Williamson, contemporary London physician]. See under *sign*.

Williamson's test (wil'yam-sunz) [Richard Thomas Williamson, contemporary English physician]. See under *tests*.

Willis's circle, cords (wil'is) [Thomas Willis, English anatomist and physician, 1621-1675]. See *circle, cord*.

willow (wil'ō). Any tree or species of the genus *Salix*: the bark is tonic and antiperiodic, containing salicin.

Wilms's tumor (vilms) [Max *Wilms*, German surgeon, 1867-1918]. Embryoma of the kidney.

Wilson's disease (wil'sunz) [Samuel Alex. Kinnear *Wilson*, English physician]. Progressive lenticular degeneration. See under *degeneration*.

Wilson's disease [William James Erasmus *Wilson*, English dermatologist, 1809-1884]. See *disease*.

Wilson's muscle [James *Wilson*, English surgeon, about 1800]. See *muscle*.

Winckel's disease (vin'kelz) [Franz Ch. W. von *Winckel*, gynecologist in Munich, 1837-1911]. See *disease*.

Winckler's tests (wink'lerz). See under *tests*.

wind, broken. Dyspnea, often paroxysmal, in the horse, sometimes associated with heart disease.

windage (win'dāj). A supposed lesion caused by missiles which do not really strike.

windgall (win'gawl). A soft swelling in the region of the fetlock-joint of a horse.

winding (win'ding). Any part of an electric circuit which is coiled.

windlass, Spanish (wind'las). An improvised tourniquet consisting of a handkerchief tied around a part and twisted by a stick passed under it.

window (win'do). See *fenestra*.

windpipe (wind'pīp). The trachea.

wind-puff (wind'puf). A swelling just above the fetlock-joint of a horse, caused by a collection of synovial fluid between the tendons of the leg.

wind-stroke (wind'strōk). Acute spinal paralysis of a horse.

wind-sucking. See *cribbing*.

wine (win) [L. *vinum*]. 1. Fermented grape-juice; an alcoholic stimulant containing, according to the variety, from 6 to 22 per cent. of alcohol. 2. A solution of medicine in wine. See under *vinum*. **red w.**, a wine of dark color, such as Bordeaux, claret, and especially port. **w. of Vickers**, formerly used as a restorative medicine. **white w.**, wine of a light color, like Madeira, Burgundy, sherry, Rhine wine, or champagne.

wineglass (win'glas). A measure nearly equal to two fluidounces.

wing (wing). Same as *ala*. **w's of Ingrassias**, the wings of the sphenoid bone. **w's of the nose**. See *ala nasi*. **w's of the sphenoid**, the laterally projecting processes of the sphenoid bone. The *great wings* lie between the petrous and squamous portions of the temporal bone behind, and the parietal, malar, and frontal bones in front. The *lesser wings* articulate with the frontal bone and cover the back part of the orbit.

Winiwarter's operation (vin'e-var-terz) [Alexander von *Winiwarter*, German surgeon, born 1848]. See under *operation*.

Winslow's foramen, ligament, pouch, stars, etc. (wins'lōz) [Jacob Beningnus *Winslow*, anatomist in Paris, 1669-1760]. See *foramen, ligament, pouch, stars*, etc.

winterberry. *Prinos*.

Winterbottom's symptom (win'ter-bot-umz) [Thomas *Winterbottom*, American physician of the 19th century]. See under *symptom*.

wintergreen (win'ter-grēn). Same as *Gaultheria*.

Winternitz's sound, test (vin'ter-nits-ez) [Wilhelm *Winternitz*, physician in Vienna, 1835-1917]. See under *sound and tests*.

Wintrich's sign (win'triks) [Anton *Wintrich*, German physician, 1812-1882]. See *sign*.

wireworm (wir'worm). A worm, *Hæmonchus contortus*, which infests the intestines of sheep and other ruminants in Argentina.

wiring (wir'ing). The fastening of pieces of broken bone by means of wire sutures.

Wirsung's canal (vēr'soongz) [Christoph *Wirsung*, German physician, died 1643]. See *canal*.

wisdom-tooth (wiz'dum-tūth). The last molar tooth on either side of each jaw.

wismol (wis'mol). A proprietary dressing powder.

wistarin (wis'tar-in). A crystallizable and poisonous glucosid from *Wistaria chinensis*.

witch-hazel (witsh-ha'zl). Same as *Hamamelis*.

Withania somnifera (with-a'ne-ah). A plant recommended as a hypnotic: it is nearly related to *Atropa belladonna*.

withers (with'erz). The top of the shoulders of the horse. **fistulous w.**, fistula of the withers.

Witte's peptone (vit'ez). See under *peptone*.

Witzelsucht (vit'sel-zukt) [Ger.]. A mental condition marked by the making of poor jokes and puns and the telling of stories without a point to them, at which the patient is himself intensely amused.

W. L. Abbreviation for *wave-length*.

Wladimiroff's operation (vlad-im-er'ofs). See *operation*.

Wohlfahrtia (völ-fahr'te-ah). A genus of flies.

W. magnifica, a flesh fly. Its maggots may be found in human feces. **W. meigenii**, **W. vig'il**, species which produces cutaneous myiasis in man in the United States.

Wohlgemuth's test (völ'ge-moots) [Julius *Wohlgemuth*, contemporary German physician]. See under *tests*.

Wollez's disease (vwah'lāz) [Eugène Joseph *Wollez*, French physician, 1811-1882]. See under *disease*.

Wolfe's graft [John Reisberg *Wolfe*, Scotch ophthalmologist of nineteenth century]. See *graft*.

Wolff-Eisner reaction (volf-is'ner) [Alfred *Wolff-Eisner*, contemporary physician in Berlin]. See *reaction*.

Wolff's law (volfs) [Julius *Wolff*, German anatomist, 1836-1902]. See under *law*.

wolffian (woolf'fe-an). Described by Kaspar Friedrich *Wolff*, a German anatomist and embryologist, 1733-1794. **w. body**. See under *body*. **w. cyst**. See under *cyst*. **w. duct**. See under *duct*.

Wölfler's operation, sign, suture (vel'flerz) [Anton *Wölfler*, surgeon in Prague, born 1850]. See *operation, sign, suture*.

wolfraimium (wolf-ra'me-um). See *tungsten*.

wolf's-bane (wolfs'bān). 1. Same as *aconite*. 2. A poisonous asclepiadaceous plant, *Periploca graeca*: formerly used in medicine.

Wollaston's doublet (wool'as-tonz) [William Hyde *Wollaston*, English physician, 1766-1828]. See *doublet*.

womb (woom). Same as *uterus*.

wood-alcohol (wuhd-al'ko-hol). Same as *methyl alcohol*.

wood, Brazil (wuhd). The wood of the tree *Casalpinia echinata*, which furnishes the crystalline dye *brasilin*. **bitter w.**, Quassia. **log w.**, *Hæmatoxylum*. **pepper w.**, *Xanthoxylum clava-herculis*. **sandal w.** See *sandalwood*. **yellow w.**, *Morus tinctoria*.

Woodbridge treatment (wuhd'brij) [John Eliot *Woodbridge*, American physician, 1845-1901]. See *treatment*.

wooden tongue (wud'en). Actinomycosis of cattle.

wood-flour (wuhd'flōr). A very fine saw-dust used in surgical dressings.

wood-naphtha (wuhd-naf'thah). A hydrocarbon mixture distilled from wood.

wood-oil (wuhd'oil). Same as *gur'jun balsam*.

wood-pulp (wuhd'pulp). A material used in making paper: highly recommended for use in making surgeons' splints.

wood-rat. Rats of the genus *Neotoma*. They are hosts to *Lamus protracta*.

wood-tar (wuhd'tahr). See under *tar*.

wood-wool (wuhd'wuhl). A wood-fiber fabric for surgeons' and obstetricians' wadding, sheets, napkins, etc.

Woodyatt's pump (wood'yats) [Rollin Turner Woodyatt, American physician, born 1878]. See under *pump*.

wool (wuhl) [L. *la'na*]. The hair of sheep and lambs; lambs' wool is used in surgery. **w.-fat**, lanolin or agnina; a yellow, fatty substance, the prepared suint, or yolk, of sheep's wool. It is used as an emollient and as a basis for ointments. *Hydrous w.-fat* contains 30 per cent. of water, and is used for the same purposes. **gut w.**, catgut torn into shreds: used as a packing in cavities to arrest bleeding.

woolsorters' disease (wool'sor-terz). See *anthrax*.

woorali, woorara (woo'ral-e, woo-rah'rah). Same as *curare*.

word-blindness. See *aphasia*.

word-center. See *center*.

word-deafness. See *deafness*.

word-salad. The meaningless, jumbled speech characteristic of catatonia.

worm (werm) [L. *ver'mis*]. 1. Any small creeping animal made up of rings or joints. 2. In medical literature, a helminth; an animal endoparasite.

w.-abscess, an abscess caused by worms, or one containing worms. **beef-w.**, a burrowing parasite, *Dermatobia noxialis*, of tropical America. It infests man and domestic animals. **bilharzia w.** See *Schistosoma*. **bladder-w.**, a cysticercus; bladder-worms exist in various parenchymatous tissues of a host; being then transferred to the stomach of another host, they develop into tape-worms. **cayor w.**, *Ochromyia*. **w. of the cerebellum**. See *vermis* and *postvermis*. **eel w.** See *Ascaris*. **eye w.**, *Filaria loa*. **w.-fever**, a fever of young children, believed to be due to worms.

flat w. See *Platyhelminthes*. **flake-w.** See *flake*. **guinea-w.** See *Dracunculus medinensis*.

hook w. See *hookworm*. **inferior w. of the cerebellum**. See *postvermis*. **macaco w.**, the larvæ of *Dermatobia noxialis*. **meal w.** See *Asopia farinalis*. **Medina w.** See *Dracunculus medinensis*. **mosquito w.**, the maggot of *Dermatobia*. **palisade w.** See *Strongylus equinus*.

pin-w., **seat-w.** See *Oxyuris*. **round-w.** See *Ascaris*. **screw-w.**, the larvæ of *Cochliomyia macellaria*, q. v. **spiny-headed w.** See *Acanthocephala*. **stomach w.**, a small, thread-like worm, *Strongylus contortus*, infesting the fourth stomach of sheep, and producing weakness, wasting, and death. **tape-w.** See *tape-worm*. **w.-tea**, compound infusion of spigelia: a preparation of 240 gr. each of spigelia and manna, 120 gr. of senna, 60 gr. of fennel, and 16 fl.oz. of boiling water. Dose, 1-5 fl.oz. (30-150 c.c.). Called also *pink* and *senna*. **thorn-headed w.** See *Acanthocephala*. **thread-w.** See *Oxyuris* and *Trichocephalus*. **tongue w.** See *Lingualula* and *Porocephalus*. **trichina w.** See *Trichina*. **whip-w.** See *Trichocephalus*. **w. wood**, Absinthium.

wormian bones (wer'me-an) [Olaus Worm, Danish anatomist, 1588-1654]. See *bone*.

Wormley's test (worm'lēz) [Theodore G. Wormley, Philadelphia chemist, 1826-1897]. See under *tests*.

Worm-Müller's test (worm-mel'erz) [Jacob Worm-Müller, Norwegian physician, 1834-1889]. See under *tests*.

wormseed (werm'sēd). See *Chenopodium* and *santonica*. **American w.**, *Chenopodium ambrosioides*. **Russian w.**, *Artemisia maritima*.

wormwood (werm'wood). See *absinthium*.

worsted test. See *Holmgren's test*, under *tests*.

Woulfe's bottle (woolf'fēz) [Peter Woulfe, English chemist, 1727-1803]. A three-necked bottle used for washing gases or for saturating liquids with a gas.

wound (woond) [L. *vul'nus*]. Any external surface of continuity of an internal or external surface

caused by violence; a traumatism. **aseptic w.**, one which is not infected with pathogenic germs. **contused w.**, one made by a blunt instrument. **dissection w.**, a septic wound acquired in dissecting. **gunshot w.**, a wound produced by a projectile from a gun. **incised w.**, one caused by a cutting instrument. **lacerated w.**, one in which the tissues are torn. **open w.**, one that has a free outward opening. **penetrating w.**, one that lays open an important cavity of the body. **poisoned w.**, one into which septic matter has been introduced. **punctured w.**, one made by a pointed instrument. **septic w.**, one that is infected with pathogenic germs. **seton w.**, a perforating wound, the entrance and exit of which are on the same side of the part. **subcutaneous w.**, one in which there is only a very small opening in the skin.

woundwort (woond'wert). The hedge-nettle; a European labiate plant, *Silphium arven'sis*, sparingly naturalized in the United States.

W. P. Abbreviation for *working point*.

W. r. Abbreviation for *Wassermann reaction*.

wreath, daughter- (rēth). The daughter-star as viewed from its surface.

Wreden's sign (wra'denz) [Robert Robertovich Wreden, otologist in St. Petersburg, 1837-1893]. See *sign*.

Wright's method, solution (ritz) [Sir Almroth Edward Wright, English bacteriologist, born 1861]. Opsonic method. See *solution*.

Wright's stain (ritz) [James Homer Wright, pathologist in Boston, born 1869]. See under *stain*.

wrightin (ri'tin). Conessin.

Wrisberg's cartilage, nerve, etc. (ris'bergz) [Heinrich August Wrisberg, German anatomist, 1737-1808]. See *cartilage* and *nerves*, table of, etc.

wrist (rist). The carpus; the part that connects the forearm and hand. **w.-clonus**. See *clonus*.

Wrist-drop (Erichsen).

w.-drop, a paralysis of the extensor muscles of the hand and fingers.

writers' cramp (ri'terz). See *cramp*.

writing-hand (ri'ting). A peculiar position of the hand seen in paralysis agitans.

wry-neck (ri-nek'). See *torticollis*.

Wt. Abbreviation for *weight*.

Wucherer'ia bancrofti, **W. wucherer'ia**. See *Filaria bancrofti*.

Wunderlich's curve (voon'der-likz) [Carl Reinhold Wunderlich, German physician, 1815-1867]. See *curve*.

wurari (woo-rah're). See *curare* and *urare*.

wurras (wur'as). See *waras*.

Wuster's test (wus'terz). See under *tests*.

Wyeth's method, operation (y'eths) [John Allan Wyeth, surgeon in New York, 1845-1922]. See under *method* and *operation*.

Wyethia (y-e'the-ah). A genus of plants. **W. helenioi'des**, a composite-flowered herb of California; also a homeopathic preparation of same.

Wylie's drain, operation (y'lēz) [W. Gill Wylie, gynecologist in New York, 1848-1923]. See under *drain* and *operation*.

X

X. The homeopathic symbol for the decimal scale of potencies; the chemical symbol for *xenon*; abbreviation for *Kienboeck's unit* of x-ray dosage.

xanol (zan'ol). Sodiocaffein salicylate; used hypodermically as a cardiac tonic and diuretic.

xanthæmatin (zan-them'at-in). See *xanthematin*.

xanthalin (zan'thal-in) [Gr. *ξανθός* yellow]. An alkaloid, $C_{37}H_{30}N_2O_9$, from opium.

xanthamid (zan-tham'id). A white, crystalline substance, $C_2H_5O.CS.NH_2$, derivable from xanthic acid.

xanthate (zan'thāt). Any salt of xanthic acid.

xanthein (zan'the-in) [Gr. *ξανθός* yellow]. A yellow coloring-matter of plants, insoluble in alcohol, but soluble in water.

xanthelasma (zan-thel-az'mah) [Gr. *ξανθός* yellow + *ελασμα* plate]. Same as *xanthoma*.

xanthelasmaidea (zan'thel-as-moi'de-ah) [*xanthelasma* + Gr. *εἶδος* form]. A disease of infants characterized by the development of brownish wheals, occurring in crops, and followed by pigmentation. Called also *urticaria pigmentosa*.

xanthematin, **xanthæmatin** (zan-them'at-in) [Gr. *ξανθός* yellow + *hæmatin*]. A yellow, bitter substance derivable from hæmatin.

xanthene (zan'thēn). The compound, $(C_6H_4)_2(O).CH_2$, from which the xanthene dyes and indicators are derived.

xanthic (zan'thik) [Gr. *ξανθός* yellow]. 1. Yellow. 2. Pertaining to xanthin. **x. acid**. See under *acid*.

xanthin (zan'thin) [Gr. *ξανθός* yellow: named from the yellow color of its nitrate]. A white, amorphous base, 2:6, dioxypurin, $C_5H_4N_4O_2$, from most of the body tissues and fluids, urinary calculi, and certain plants. It is formed by the oxidation of hypoxanthin and may be oxidized to uric acid. It is insoluble in cold water, but freely soluble in dilute acid and alkaline solutions. It possesses stimulant properties to muscle tissue, especially that of the heart. **x. bases**, **x. bodies**. See *purin bases*, under *purin*. **dimethyl x.**, theobromin. **methyl x.**, heteroxanthin. **x.-oxidase**, an enzyme which oxidizes xanthin to uric acid. **trimethyl x.**, caffeine.

xanthin (zan'thin-in). A white, crystalline substance, $C_5H_3N_3O_2$, formed by heating ammonium thionurate.

xanthinoxidase (zan-thin-oks'id-ās). A ferment which oxidizes xanthin and hypoxanthin to uric acid.

xanthinuria (zan-thin-u're-ah) [*xanthin* + Gr. *οὖρον* urine]. Excess of xanthin in the urine.

Xanthium (zan'the-um) [L.; Gr. *ξανθιον*]. A genus of composite-flowered plants; clot-burs. **X. strumarium**, of the old and new worlds, is styptic, and is used for the bites of insects. Dose of fluidextract, 30-60 min. (2-4 c.c.). **X. spinosum** is a composite-flowered plant of the north temperate zone; also a homeopathic preparation of the same.

xanthochroia (zan-tho-kroi'ah) [Gr. *ξανθός* yellow + *χρoιά* skin]. Yellowish discoloration caused by changes in the pigimentary layer of the skin.

xanthochromia (zan'tho-kro'me-ah) [Gr. *ξανθός* yellow + *χρoμα* color]. Any yellowish discoloration, as of the skin or of the spinal fluid.

xanthochroös (zan-thok'ro-us) [Gr. *ξανθός* + *χρoos*]. Having a yellowish complexion.

Xanthochymus pictorius (zan-thok'him-us). An East Indian plant called *thakal*; it affords a purgative extract resembling gamboge.

xanthocreatin (zan-tho-kre'at-in). Xanthocreatinin.

xanthocreatinin (zan'tho-kre-at'in-in) [Gr. *ξανθός* yellow + *creatinin*]. A poisonous leukomain, $C_8H_{10}N_4O$, occurring in muscle tissue. It resembles creatinin, and appears in the form of yellow crystals. Its physiologic action is to produce depression, fatigue, diarrhea, and vomiting.

xanthocyropsia, **xanthocyanopsy** (zan'tho-si-an-op'se-ah, zan'tho-si-an-op-se) [Gr. *ξανθός* yellow + *κῡανος* blue + *ὄψις* vision]. Ability to discern yellow and blue tints, but not red or green.

xanthocystin (zan-tho-sis'tin) [Gr. *ξανθός* yellow + *κῡστις* bladder]. A substance found in tubercles from a dead body.

xanthoderm (zan'tho-derm) [Gr. *ξανθός* yellow + *δέρμα* skin]. A person belonging to a yellow race.

xanthoderma, **xanthodermia** (zan-tho-der'mah, zan-tho-der-me-ah) [Gr. *ξανθός* yellow + *δέρμα* skin]. A yellow coloration of the skin.

xanthodontous (zan-tho-don'tus) [Gr. *ξανθός* yellow + *ὀδούς* tooth]. Having yellowish teeth.

xanthogen (zan'tho-jen) [Gr. *ξανθός* yellow + *γεννᾶν* to produce]. A coloring-matter of vegetables, producing a yellow color with alkalis.

xanthogenic acid (zan-tho-jen'ik). Same as *xanthic acid*.

xanthoglobulin (zan-tho-glob'u-lin) [Gr. *ξανθός* yellow + *globulin*]. A yellow pigment from the liver and pancreas.

xanthokreatinin. See *xanthocreatinin*.

xanthokyanopy (zan'tho-ki-an'o-pe). Same as *xanthocyropsia*.

xanthoma (zan'tho'mah) [Gr. *ξανθός* yellow + *ωμα* tumor]. A disease attended with the formation of yellow, neoplastic growths upon the skin, especially that of the eyelids, without constitutional symptoms. The growths consist of flat patches or nodules, which are slightly raised above the surface, and vary in size from that of a pin's head to that of a bean. **x. diabetico-rum**, a skin disease associated with diabetes mellitus, and marked by the formation of reddish, solid patches, larger than those of xanthoma. The patches sometimes have a yellow spot at the top. **x. multiplex**, that which is distributed over the whole body, including the serous and mucous membranes. **x. palpebrarum**, xanthoma that affects the eyelids. **x. planum**, a disease attended with the formation of smooth, neoplastic plates in the skin. **x. tuberosum**, a disease attended with the formation of neoplastic nodules upon the skin, chiefly of the palms, soles, and extensor surfaces of the extremities. Called also *x. luberosum multiplex*.

xanthomatosis (zan-tho-mat-o'sis). The xanthomatous diathesis; also a form of fatty degeneration, like that seen in xanthoma, which contains cholesterol esters.

xanthone (zan'thōn). Same as *brometone*.

xanthophose (zan'tho-fōz) [Gr. *ξανθός* yellow + *φῶς* light]. Any yellow or yellowish phase.

xanthophyll (zan'tho-fil) [Gr. *ξανθός* yellow + *φύλλον* leaf]. The yellow coloring-matter of plants which is developed in the leaves in autumn.

xanthopia (zan-tho'pe-ah). Same as *xanthopsia*.

xanthopicrite (zan-tho-pik'rit). Same as *berberin*.

xanthoplasty (zan'tho-plas-te) [Gr. *ξανθός* yellow + *πλάσσειν* to form]. Same as *xanthoderma*.

xanthoproteic (zan'tho-pro-te'ik). Pertaining to xanthoprotein. **x. reaction** or **test**. See *Mulder's test*, under *tests*.

xanthoprotein (zan'tho-pro'te-in) [Gr. *ξανθός* yellow + *protein*]. An orange pigment produced by heating proteins with nitric acid.

xanthopsia (zan-thop'se-ah) [Gr. *ξανθός* yellow +

δψις vision]. A condition in which objects looked at appear yellow.

xanthopsin (zan-thop'sin) [Gr. *ξανθός* yellow + *δψις* vision]. Visual purple partially discolored or bleached by light; visual yellow.

xanthopsis (zan-thop'sis) [Gr. *ξανθός* yellow + *δψις* appearance]. A yellow pigment or pigmentation in cancers.

xanthopsydria (zan''thop-sid-ra'she-ah) [Gr. *ξανθός* yellow + *ψύδραξ* pustule]. The occurrence on the skin of small yellow pustules.

Xanthopsylla che'opis. The common rat flea of the tropics and widely distributed. It transmits bubonic plague.

xanthopuccin (zan-tho-puk'sin) [Gr. *ξανθός* yellow + *puccoon*, Algonquin name for plants used as pigments]. An alkaloid from *Hydrastis canadensis*.

Xanthorrhiza apiifolia (zan-thor-i'zah a-pe-if-o'-le-ah) [Gr. *ξανθός* yellow + *ρίζα* root]. A North American shrub, called yellowroot: the root and wood are bitter and tonic.

Xanthorrhoea (zan-tho-re'ah). See *acaroid resin*, under *resin*.

xanthosarcoma (zan''tho-sar-ko'mah). A sarcoma containing xanthoma cells.

xanthosis (zan-tho'sis) [Gr. *ξανθός* yellow]. A yellowish discoloration; degeneration with yellowish pigmentation. **x. diabetica**, a yellowish appearance of the skin of diabetics attributed to an excess of lipochromes in the blood. **x. of the septum nasi**, yellow pigmentation of the mucous membrane of the nose, due to degeneration of the blood after hemorrhage.

xanthous (zan'thus) [Gr. *ξανθός* yellow]. Yellow or yellowish.

xanthoxylene (zan-thoks'il-ēn). A clear, volatile oil, $C_{10}H_{16}$, from *Xanthoxylum alatum*, of southern Asia.

xanthoxylol (zan-thoks'il-in). 1. A crystallizable principle, $C_{10}H_{16}O$, from *Xanthoxylum piperitum*, or Japanese pepper. 2. A concentration prepared from the bark of *Xanthoxylum fraxinifolium*. Dose, 1-2 gr. (0.066-0.133 gm.).

Xanthoxylum (zan-thoks'il-um) [Gr. *ξανθός* yellow + *ξύλον* wood]. Prickly ash; a genus of rutaceous trees and shrubs, with a medicinal bark. The bark of *Xanthoxylum americanum*, or of *X. clava-herculis*, or prickly ash, contains *xanthoxylol*, and has stimulant, sialogogue, and antirheumatic properties. It is used as an emmenagogue and carminative. Dose of extract, 3-10 gr. (0.2-0.6 gm.); of fluidextract, 10-40 min. (0.6-2.5 c.c.).

xanthuria (zan-thu're-ah) [Gr. *ξανθός* yellow + *ουρον* urine]. Excess of xanthin in the urine.

xanthylic (zan-thil'ik). Pertaining to xanthin. **x. acid**, one of the nucleic acids.

xaxa (zaks'sah). A trade name for pure acetyl-salicylic acid.

xaxaquin (zaks'sak-win). Quinin acetylsalicylate, said to unite the action of quinin and salicylic acid: used in influenza, neuralgia, etc.

x-chromosome. See under *chromosome*.

x-disease. Mackenzie's name for a series of morbid symptoms of unknown origin, consisting of a feeling of general ill health, with sensitiveness to cold, dyspepsia, intestinal disorder, and disturbance of respiration and heart action.

xenembole (zen-em'bo-le) [Gr. *ξένος* foreign + *ἐμβολή* hurling]. The introduction of foreign substances into the system.

xenenthesia (zen-en-the'sis) [Gr. *ξένος* foreign, strange + *ἐνθεσις* putting on]. Same as *xenembole*.

xenodiagnosis (zen''o-di-ag-no'sis) [Gr. *ξένος* foreign + *diagnosis*]. Diagnosis by finding the causative organism in an animal infected from the patient.

xenodochia (zen-o-do'ke-ah) [Gr. *ξένος* stranger]. Medieval hospitals for poor and infirm pilgrims.

xenogenesis (zen-o-jen'es-is) [Gr. *ξένος* strange + *genesis*]. 1. Alternation of generation; heterogenesis. 2. The production of offspring unlike either parent.

xenogenous (zen-oj'en-us) [Gr. *ξένος* strange + *γεν-νᾶν* to produce]. 1. Caused by a foreign body, or originating outside the organism. 2. Formed or developed in the host: a term applied to toxins formed by the action of stimuli on the cells of the host.

xenomenia (zen-o-me'ne-ah) [Gr. *ξένος* strange + *μηναία* menses]. Vicarious menstruation.

xenon (zen'on) [Gr. *ξένος* strange]. An inert gaseous element found in the atmosphere; atomic weight, 130.2; symbol, Xe.

xenoparasite (zen-o-par'as-it) [Gr. *ξένος* host + *parasitē*]. A parasite of external origin; especially, one which develops pathogenicity on account of weakened resistance on the part of the host.

xenophobia (zen-o-fō'be-ah) [Gr. *ξένος* stranger + *φόβος* fear]. Dread of strangers.

xenophonia (zen-o-fō'ne-ah) [Gr. *ξένος* strange + *φωνή* voice]. Alteration of the accent and intonation of a person's speech.

xerophthalmia (zen-of-thal'me-ah) [Gr. *ξένος* strange + *ὀφθαλμία* ophthalmia]. Traumatic conjunctivitis.

Xenopsylla (zen-o-sil'ah). A genus of fleas. *X. astia*, a rat flea of India which does not seem to transmit plague. *X. brasiliensis*, a rat flea of southern India. *X. cheopis*, a rat flea of India and of the coast of the United States which transmits plague.

xeransis (ze-ran'sis) [Gr. *ξηρός* dry]. Drying up; loss of moisture.

xerantic (ze-ran'tik). Causing dryness; siccative.

xeraphium (ze-raf'e-um). A drying powder.

xerase (ze'rās). A preparation of dry yeast with sugar and nutritive salts: used in septic conditions of the female genital tract.

xerasia (ze-ra'se-ah) [Gr. *ξηρός* dry]. A disease of the hair in which it becomes dry and dusty.

xerium (ze're-um) [Gr. *ξηριον*]. A desiccative powder.

xerocollyrium (ze'ro-kol-ir'e-um) [Gr. *ξηρός* dry + *κολλῳριον* collyrium]. A dry collyrium; an eye-salve.

xeroderma (ze-ro-der'mah) [Gr. *ξηρός* dry + *δέρμα* skin]. A disease marked by roughness and dryness of the skin; especially a disease resembling ichthyosis, and marked by a dry, rough, discolored state of the skin, with the formation of a scaly desquamation. **x. of Kaposi**, a diffuse idiopathic atrophy of the skin. **x. pigmentosum**, a rare and equally fatal disease marked by brown spots and ulcers of the skin, with muscular and cutaneous atrophy and telangiectasis. It is also known as *atrophyoderma pigmentosum*, *Kaposi's disease*, and *melanosis lenticularis progressiva*.

xerodermatic (ze'ro-der-mat'ik). Pertaining to or of the nature of xeroderma.

xerodermia (ze-ro-der'me-ah) [Gr. *ξηρός* dry + *δέρμα* skin]. Same as *asteatosis*.

xeriform (ze'ro-form). A yellow, neutral powder derived from tribromophenol and bismuth, $(C_6H_2Br_3O)_2BiOH + Bi_2O_3$: useful in the treatment of wounds, abscesses, etc., and as an intestinal antiseptic. Dose, 5-8 gr. (0.333-0.518 gm.).

xeroma (ze-ro'mah) [Gr. *ξηρός* dry]. An abnormally dry condition of the conjunctiva; xerophthalmia.

xeromenia (ze-ro-me'ne-ah) [Gr. *ξηρός* dry + *μηναία* menses]. A condition in which the bodily symptoms of menstruation occur without any flow.

xeromycteria (ze-ro-mik-te're-ah) [Gr. *ξηρός* dry + *μυκτήρ* nose]. Dryness of the nasal mucous membrane.

xerophagia (ze-ro-fa'je-ah) [Gr. *ξηρός* dry + *φαγεῖν* to eat]. The eating of dry food.

- xerophagy** (ze-rof'ag-e). Xerophagia.
- xerophthalmia**, **xerophthalmus** (ze-rof-thal'-me-ah, ze-rof-thal'-mus) [Gr. ξηρός dry + ὀφθαλμία ophthalmia]. Conjunctivitis with atrophy and no liquid discharge, producing an abnormally dry and lusterless condition of the eyeball.
- xerosis** (ze-ro'sis) [Gr. ξήρωσις]. Abnormal dryness, as of the eye or skin. **x. parenchymatous**, xerophthalmia due to trachoma. **x. superficialis**, xerophthalmia due to exposure of the eyeball to the air.
- xerostomia** (ze-ro-sto'me-ah) [Gr. ξηρός dry + στόμα mouth]. Dryness of the mouth from lack of the normal secretion.
- xerotic** (ze-rof'ik). Characterized by xerosis or dryness.
- xerotocia** (ze-ro-to'se-ah) [Gr. ξηρός dry + τόκος labor]. Dry labor.
- xerotripsis** (ze-ro-trip'sis) [Gr. ξηρός dry + τρίψις friction]. Dry friction.
- Ximenia** (zi-me'ne-ah). A genus of African olaceous trees: the drupes of some species are edible and aromatic.
- x-ing**. Same as *radiography*.
- xinol** (zi'nol). See *zinol*.
- xiphin** (zif'in). A protamin from the sperm of the sword fish, *Xiphias gladius*.
- xiphisternal** (zif-is-ter'nal). Pertaining to the xiphisternum.
- xiphisternum** (zif-is-ter'nun) [Gr. ξίφος sword + στήρνον sternum]. The xiphoid cartilage.
- xiphocostal** (zif'o-kos'tal) [Gr. ξίφος sword + L. cost'a rib]. Pertaining to the xiphoid cartilage and the ribs.
- xiphodidymus** (zif-o-did'im-us). Xiphodymus.
- xiphodymus** (zi-fod'im-us) [Gr. ξίφος sword + δίδυμος twin]. Same as *xiphopagus*.
- xiphodynia** (zif-o-din'e-ah) [Gr. ξίφος sword + δόυν pain]. Pain in the xiphoid cartilage.
- xiphoid** (zi'foid) [Gr. ξίφος sword + εἶδος form]. Shaped like a sword. **x. cartilage** or **process**. See under *process*. **x. ligament**, the costoxiphoid ligament.
- xiphoiditis** (zi-foi-di'tis). Inflammation of the xiphoid process.
- xiphopagotomy** (zi-fop-ag-o'to-me) [*xiphopagus* + Gr. τομή a cut]. Surgical separation of the two individuals of a xiphopagus.
- xiphopagus** (zi-fop'ag-us) [Gr. ξίφος sword + πάγος fixed]. A double monster joined at the thorax and pelvis.
- xograph** (eks'o-graf). Same as *radiograph*.
- x-rays** (eks'rāz). See *Roentgen rays*, under *ray*.
- xylan** (zi'lan). One of the hemicelluloses.
- xylene** (zi-lēn') [Gr. ξύλον wood]. 1. Same as *xytol*. 2. A group of hydrocarbons of the benzene series.
- xylenein** (zi-le'nin). A poison like etherin, chloroformin, and benzenin, extractable by xylene from tubercle bacilli. Called also *xyleneobacillin*.
- xyleneobacillin** (zi-le'no-bas-il'in). See *xylenein*.
- xylenol** (zi'lēn-ol). Any one of a series of colorless, crystalline substances, (CH₃)₂C₆H₃OH, resembling phenol. **x. salicylate**, a white powder, OH-C₆H₄CO.O.C₆H₃(CH₃)₂: used as an antirheumatic in doses of 2-6 gr. (0.12-0.36 gm.).
- xylenol-salol** (zil'en-ol-sal'ol). Either one of three isomeric compounds (ortho-, meta-, and para-xylenol-salol): intestinal antiseptics.
- xyloidin** (zil'id-in). A compound, (CH₃)₂C₆H₃.NH₂, derived from dimethylanilin: used as a dye.
- xylobalsamum** (zi-lo-bal'sam-un) [Gr. ξυλοβάλα-σαμον]. The wood of the oriental balsam tree.
- Xylocarpus** (zi-lo-kar'pus). A genus of Asiatic meliaceous trees: said to afford stomachic remedies.
- xylocassia** (zi-lo-kash'e-ah) [Gr. ξυλοκασσία]. The wood of the cassia tree.
- xylochloral** (zi-lo-klor'al). A hypnotic derivative of xylose and chloral. Dose, 3-8 gr. (0.2-0.5 gm.).
- xylocinnamomum** (zil'lo-sin-am-o'mum). The wood of the cinnamon tree.
- xylogen** (zi'lo-jen). Lignin.
- xyloidin** (zi-loid'in) [Gr. ξύλον wood + εἶδος form]. A white, explosive substance, C₆H₅(NO₂)O₅, prepared from starch by the action of nitric acid.
- xytol** (zi'ol) [Gr. ξύλον wood]. Dimethylbenzene; an antiseptic hydrocarbon, C₆H₄(CH₃)₂, from methyl alcohol or coal-tar: used as a mouth-wash, and in microscopy as a solvent and clarifier. It is also used in syphilis. Dose, 15-20 min. (1-1.33 c.c.). **x. balsam**, Canada balsam dissolved in xytol. See *stains*, table of.
- xyloma** (zi-lo'mah) [Gr. ξύλον wood + -ωμα tumor]. A woody tumor on a tree or plant.
- xylonite** (zi'lo-nit) [Gr. ξύλον wood]. A substance which resembles celluloid manufactured from pyroxylin.
- xylosazone** (zi-lo'sa-zōn). The phenyl-osazone of xylose. It is isomeric with arabinosazone.
- xylose** (zi'lōs) [Gr. ξύλον wood]. A sugar, or pentose, CH₂OH(CHOH)₃CHO, obtained from beech-wood, jute, etc., and sometimes found in the urine.
- xylostein** (zi-lo'ste-in). A poisonous glucosid from the berry of *Lonicera xylos'teum*, a species of honeysuckle: purgative and emetic.
- xylostyptic ether** (zi-lo-stip'tik). Same as *collo-dium stypticum*.
- xylotherapy** (zi-lo-ther'ap-e) [Gr. ξύλον wood + θεραπεία treatment]. Medical treatment by the application of certain woods to the body.
- xylyl bromid**. See *benzyl bromid*.
- xylyl chlorid**. See *benzyl chlorid*.
- xylylene-diamin** (zi'lil-ēn-di-am'in). One of a group of compounds, C₆H₂(CH₂)₂(NH₂)₂: used in making dye-colors.
- xyol** (zi'ol). A proprietary soft soap containing formaldehyd.
- xyphoid** (zi'foid). See *xiphoid*.
- xyrospasm** (zi-ro-spazm) [Gr. ξύρον razor + spasm]. Shaving cramp.
- xyisma** (zis'mah) [Gr. ξυσμα]. A material, like bits of membrane, seen in the stools of diarrhea.
- xyster** (zis'ter) [Gr. ξυστήρ]. A surgeon's file or raspatory.
- xystos**, **xystus** (zis'tos, zis'tus) [Gr. ξυστός scraped]. Scraped lint.

Y

Y, Yt. Symbols for *yttrium*.

yabin (ya'bin). An amorphous alkaloid from yaba, the bark of *Andi'ra excel'sa*.

yadil (yad'il). A proprietary antiseptic trimethenal allylic carbide.

yahourth (yah'oort). Yogurt.

Yakimoff's test (yah-ke'fmo's). See under *tests*.

yam, wild (yam). See *Dioscorea*.

Y-angle. The angle between the radius fixus and a line joining the lambda and the inion.

yaourt (yah'oort) [Turk.]. Same as *yogurt*.

yard (yard). 1. A measure of three feet. See *weights and measures, table of*. 2. The penis.

y-sitting, sitting with the arms stretched out horizontally from the sides, a position assumed in receiving massage.

yarns of Holmgren (yarnz). Skeins of light green, purple, and red yarn, used in testing the color sense. See *Holmgren's test*, under *tests*.

yarrow (yar'o). See *Achillea*.

yatren (e-at'ren). Iodo-oxy-quinolin sulphonic acid; a quinin derivative used in treating wound infections, as a tissue stimulant, and in the treatment of amebic dysentery. **y-casein**, a mixture of yatren and casein: used for injection in non-specific protein therapy.

java-skin (yah'vah-skin). A kind of elephantiasis caused by the habitual use of kava.

yaw (yaw). A frambesial sore. **guinea-corn y.**, frambesia in which the lesions resemble a grain of maize. **mother-y.**, the largest and most persistent of a crop of frambesial sores. **ring-worm y.**, frambesia in which the lesions are circular.

yawey (yaw'e). Affected with yaws.

yawn (yawn). A deep, involuntary respiration made with the open mouth.

yawning (yawn'ing). Pandiculation; a deep, involuntary inspiration with the open mouth, often accompanied by the act of stretching one's self.

yaws (yaws). Same as *frambesia*. **bush y., forest y.**, a form of oriental sore in which the lesions consist of crust-capped nodules resembling yaws: caused by *Leishmania braziliensis*.

Yb. The symbol for *ytterbium*.

Y-bacillus. See *bacillus*.

Y-cartilage. See *cartilage*.

yeast (yēst). The common name for *Saccharomyces*, q. v. Yeasts are used for leavening bread, for producing alcoholic fermentation, and to some extent as remedial agents. Some yeasts are pathogenic for man. See *blastomycosis*. **beer-y., brewers' y.**, yeast produced by the *Saccharomycetes cerevisiae*, and obtained in the brewing of beer. It is used as an antiseptic and stimulant in typhoid fever, as a preventive of boils, and as an application to ulcers.

yeastone (yēst'ōn). The active principles of yeast in pill form.

yeki (ya'ke). The Japanese name for bubonic plague.

yelk (yelk). See *yolk*.

yellow (yel'o). One of the primary colors. **acid y.** Same as *fast y.* **acid y. D.** Same as *tropaeolin OO.* **acridinium y.** See under *acridinium*. **alizarin y.**, an indicator used in the determination of hydrogen-ion concentration with a P_H range of 10.7-12.1. **brilliant y.**, an indicator with a P_H range of 6-8. **canary y.**, auramin. **chrome y.**, lead chromate, $PbCrO_4$: used in stains and paints. **corallin y.**, the sodium salt of rosolic acid. **fast y.**, a yellow, acid azo dye: used in staining bone, $(N_2C_6H_4SO_3ONa)_2NH_2$. **y. fever**. See under *fever*. **imperial y.** Same as *aurantia*.

king's y., orpiment. **Manchester or Martius y.**, a poisonous, yellow, azo dye, $C_{10}H_5(NO_2)_2OH$: used as a stain and in the preparation of light filters. **metanil y.**, an indicator used in the determination of hydrogen-ion concentration. It has a P_H range of 1.2-2.3. **naphthol y.** Same as *Manchester y.* **y. nucleus**. See under *nucleus*. **Philadelphian y.** Same as *phosphin* (2d def.). **pyoktanin y.** Same as *auramin*. **visual y.**, visual purple that has been bleached by light; xanthopsin.

yellow cross. See *dichlorodiethyl sulfid*.

Yemen ulcer (yem'en). Same as *anamite ulcer*. See under *ulcer*.

yenomal (yen'o-mal). A proprietary remedy: said to be a coal-tar derivative.

Yeo's treatment (ye'fz) [Isaac Burney Yeo, London physician, 1835-1914]. See *treatment*.

yerba (yer'bah). Spanish for herb. **y. buena** (bwa'nah) [Sp. "good herb"], an aromatic labiate plant of California, *Micromeria chamisso'nis* (douglas'ii): carminative, anthelmintic, and antiscarrhal. Dose of fluidextract, $\frac{1}{2}$ -2 fl.dr. (2-8 c.c.). **y. de la golondrina** (da lah go-lon-dre'nah) [Sp.], a name given in Mexico, etc., to various plants of the genus *Euphorbia*: locally used as a remedy for snake-bite. **y. de mate** (da mah-ta). Same as *malé* or *Ilex paraguayensis*. **y. mansa** (man'sah). See *mansa*. **y. reuma** (ree-oo'mah), the plant *Frankenia grandifolia*, of California, Texas, etc. The leaves are astringent and are used in catarrhal affections. Dose of fluidextract, 10-20 min. (0.666-1.333 c.c.). **y. santa** (sahn'tah). Same as *Eriodictyon*.

yerbazin (yer'ba-zin). A syrupy aromatic preparation of yerba santa (*Eriodictyon glutinosum*).

yerbin (yer'bin). An alkaloid from *Ilex paraguayensis*, resembling caffeine.

yerli (yer'le). A fine quality of Turkey opium.

Yersin's serum [Alexander Yersin, French physician, born 1862]. See under *serum*.

yew. See *Taxus baccata*.

-yl [Gr. *ὕλη* matter or substance]. A suffix signifying a radical, particularly a univalent hydrocarbon radical.

ylang-ylang (e'lahng-e'lahng). A tree of the Malayan Islands, *Cananga odorata*: its flowers afford a fragrant volatile oil.

-ylene. A suffix used in chemistry to denote a bivalent hydrocarbon radical.

Y-ligament. The iliofemoral ligament. See *ligament*.

yochubio (yo-tshu'be-o). See *tsutsugamushi disease*, under *disease*.

yoghurt, yogurt (yog'hert). Bulgarian curdled milk: said to expel harmful intestinal bacteria.

yohimbenin (yo-him'ben-in). An alkaloid, $C_{26}H_{46}O_6N_2$, from yohimbé bark and leaves.

yohimbine (yo-him'bin). An alkaloid, $(C_{21}H_{26}N_2O_2)_2H_2O$, from a tree of West Africa called yohimbehoea, *Corynanthe yohimbe*. The hydrochlorate is said to be useful in functional impotence. Dose, $\frac{1}{12}$ - $\frac{1}{6}$ gr. (0.005-0.007 gm.) in water.

yohourt. Same as *yogurt*.

Yokagawa (yo-kah-gah'wah). Same as *Melagominus*.

yolk (yōk) [L. *vitel'lus*]. 1. The nutrient part of the ovum; especially the yellow portion of the egg of a bird. 2. Crude wool-fat or sebum. **accessory y.**, the nutritive yolk; the portion of the yolk that serves for the nutrition of the formative portion. **y.-cells, y.-granules**, the morphologic elements composing the yolk. **y.-cleavage**, segmentation of the vitellus. **y.-food**, the

nutritive part of the yolk of an ovum; deutero-plasm. **formative y.**, that part of the ovum whence the embryo is developed. **y.-sac.** Same as *umbilical vesicle*. See *vesicle*. **y.-skin**, the *vitelline membrane* (q. v.). **y.-space**, the space formed in the ovum by the shrinking of the vitellus from the *zona pellucida*. **y.-stalk**. Same as *umbilical duct*. See *duct*. **y. sweet clover**, *Melilotus*.

Young-Helmholtz theory (yung-helm'hölts) [Thomas Young, English physician, 1773-1829; H. L. F. Helmholtz, German physician, 1821-1894]. See *theory*.

Young's operation (yungz) [Hugh H. Young, Baltimore surgeon]. See under *operation*.

Young's rule (yungz) [Thomas Young, English physician, 1773-1829]. A rule for determining the proportion of an adult dose to give to a young child, consisting in adding 12 to the age and dividing by the age, which will give the denominator of a fraction whose numerator is 1. Thus, for a child

three years old, $\frac{3 + 12}{3} = 5$, so that the dose for the child is one-fifth of the adult dose.

yperite (i'per-ĭt). See *dichlorodiethyl sulfid*.

ypsiliform (ip-sil'if-orm) [Gr. *ὀψιλον* the letter *u* or *y*]. Y-shaped.

Y. s. Abbreviation for *yellow spot* of the retina.

ysyn (is'in). A proprietary food containing no iron and rich in milk-albumen.

ytterbium (it-er'be-um) [from *Ytterby*, in Sweden]. A very rare metal; symbol, Yb; atomic weight, 173.5.

yttrium (it're-um) [from *Ytterby*, in Sweden]. A very rare metal, allied to cerium; symbol, Yt; atomic weight, 89.33.

Yucca (yuk'ah). 1. A genus of liliaceous plants. The wood of some species is used for surgeons' splints. 2. A homeopathic preparation from the roots and leaves of *Y. filamentosa*, a diuretic species.

Yvon's test (e'vonz) [Paul Yvon, French physician, 1848-1913]. See under *tests*.

Yzquierdo's bacillus (iz-ke-er'döz) [Vicente Yzquierdo, histologist in Santiago, Chili]. See under *bacillus*.

Z

Z. Abbreviation for Ger. *Zuckung*, contraction.

z. Chemical symbol for *atomic number*.

zacatilla (zak'ah-tē'yah) [Sp.]. The choicest quality of cochineal.

zachun (zah-koon') [Arab.]. A fatty oil afforded by the bito tree, *Balanites aegyptiaca*. The edible drupes in their unripe state are purgative.

Zagla's ligament (zah'glahz). See under *ligament*.

Zahn's lines or ribs (zahnz). See *lines of Zahn*.

zakavasta (zak-av-as'tah). The Russian name for kephir grains.

Zaleski's test. See under *tests*.

Zambesi fever (zam-be'ze). See under *fever*.

Zambesi ulcer (zam-be'ze). See under *ulcer*.

zanaloin (zan-al'o-in). The aloin of Zanzibar aloes: said to be identical with socaloin.

Zander apparatus (zan'der) [Jonas Gustav Wilhelm Zander, Swedish physician, 1835-1920]. See *apparatus*.

Zang's space (zangs) [Christoph Bonifacius Zang, German surgeon, 1772-1835]. See under *space*.

zanol (za'no). Sodicafein salicylate, used as a heart tonic and diuretic.

zanthin (zan'thin). See *xanthin*.

zanzolin (zan'zo-lin). A proprietary insect powder containing pyrethrum flowers and valerian root.

zapon lac (za-pon'). A varnish of pyroxylin dissolved in amyl alcohol and amyl acetate.

Zappert's chamber (tsahp'erts) [Julius Zappert, physician in Vienna, born 1867]. A chamber for counting blood-corpuscles with the microscope.

zaranthan (zar-an'than) [Heb.]. A hardening of the breast.

Zaufal's sign (tsow'fahlz) [Emanuel Zaufal, Prague rhinologist, 1837-1910]. Saddle-nose.

Zea (ze'ah) [L.]. A genus of large grasses of which *Zea mays*, our ordinary corn or maize, is the only species. The stigmas and styles are diuretic, and have been used in cystitis, dropsy, and gonorrhea. Dose of fluidextract, 1 to 2 fl. dr. (4-8 c.c.).

zean (ze'an). An active diuretic used in disease of the mucous membranes. It is a fluidextract of maize silk.

zearin (ze'ar-in). A colorless substance, $C_{22}H_{38}O_4$, from various lichens.

zebromal (ze-bro'mal). A white, crystalline powder, dibrom cinnamic acid ethyl ester, $C_6H_5 \cdot CHBr \cdot CHBr \cdot CO \cdot O \cdot C_2H_5$: use and dose like that of sodium bromid.

zedoary (zed'o-a-re) [L. *zedoaria*]. The rhizome of *Curcuma zedoaria*, a plant of India, which resembles ginger. Dose, 8-30 gr. (0.5-2 gm.).

Zeeman effect (tse'man) [P. Zeeman, contemporary Dutch physicist]. See under *effect*.

zein (ze'in). A soft, yellowish protein obtainable from maize.

zeinolysis (ze-in-ol'is-is). The splitting up of zein by ferments in the blood.

zeinolitic (ze'in-o-lit'ik) [zein + Gr. *λύσις* solution]. Splitting up zein.

Zeisel's test (zis'lz). See under *tests*.

zeism, zeismus (ze'izm, ze-is'mus) [L. *ze'a* maize].

A skin disease said to be due to the too free use of maize as an article of food.

Zeissel's layer (tsi'selz). See under *layer*.

zeissian (zis'e-an). Named for or described by Zeiss. See *gland*, *stye*, etc.

zeist (ze'ist). One who believes that pellagra is caused by eating poisonous maize.

zeistic (ze-is'tik). Pertaining to maize. See *zeistic theory*, under *theory*.

Zeller's test (zel'ertz). See under *tests*.

zelotypia (ze-lo-tip'e-ah) [Gr. *ζῆλος* zeal + *τύπτειν* to strike]. Morbid or insane zeal; also insane jealousy.

zematol (zem'at-ol). A proprietary ointment of ichthyol, zinc oxid, and oil of betula.

zematone (zem'at-ōn). A powder for asthma containing various sedative agents.

Zenker's crystals, degeneration, paralysis, solution, etc. (zenk'erz) [Friedrich Albert Zenker, German pathologist, 1825-1898]. See *crystal*, *degeneration*, *paralysis*, *solution*, etc.

zenkerism (zen'ker-izm). Zenker's degeneration of muscular tissue. See under *degeneration*.

zenkerize (zen'ker-iz). To fix in Zenker's solution.

zenoleum (ze-no'le-um). A proprietary disinfectant preparation.

zeodoti (ze-od'o-te). A drug formerly used against flatulence.

zeolite (ze'o-lit). A hydrated double silicate; probably the active constituent in permutit.

zeoscope (ze'o-sköp) [Gr. ζέω to boil + σκοπεῖν to view]. An apparatus for determining the alcoholic strength of a liquid by means of its boiling-point.

zero (ze'ro) [Ital. "naught"]. The point on a thermometer-scale at which the graduation begins. The zero of the Centigrade and Réaumur thermometers is the melting-point of ice. That of the Fahrenheit scale is 32 degrees below the melting-point of ice. **absolute z.**, the supposed lowest possible temperature. It is 273.13 degrees below the centigrade zero. **limes z.** See *Lo dose*, under *dose*. **physiologic z.**, the temperature at which a thermal stimulus ceases to cause a sensation.

zerodone (ze'ro-dön). An apparatus for cooling the rectum by maintaining a circulation of a liquid at a low temperature.

zerumbet (ze-rum'bet) [East Indian]. A spice or drug, the dried rhizome of *Zingiber zerumbet*; now little used.

zest (zest). The oil in the rind of the orange or lemon.

zestocausis (zes-to-kaw'sis) [Gr. ζεστός boiling hot + καύσις burning]. The therapeutic application of a tube containing superheated steam.

zestocautery (zes-to-kaw'ter-e). A tube or appliance for use in making a zestocausis.

zibeth, zibet (zi'beth). A species of civet, *Viverra zibetha*, of southern Asia: it affords civet.

ziega (ze-a'gah). A kind of curd made by treating milk with rennet and afterward with acetic acid.

Ziegler's operation (zēg'lerz) [S. Louis Ziegler, ophthalmologist in Philadelphia, 1861-1925]. See under *operation*.

Ziehen's test (tsē'hen) [Theodor Ziehen, German neurologist, born 1862]. See under *tests*.

Ziehen-Oppenheim disease (tsē'hen-op'en-him) [Theodor Ziehen, German neurologist, born 1862; H. Oppenheim, German neurologist, born 1858]. Dystonia musculorum deformans.

Ziehl's method, solution (tsels) [Franz Ziehl, German bacteriologist, born 1857]. See *stains*, table of.

Ziemssen's motor points, treatment (zēm'-sen) [Hugo von Ziemssen, physician in Munich, 1829-1902]. See under *points and treatment*.

zimb (zimb). A fly of the genus *Pango'nia*, found in Abyssinia: exceedingly annoying to man and animals.

Zimmerlin's type (tsim'er-lin) [Franz Zimmerlin, Swiss physician of the nineteenth century]. See under *type*.

Zimmermann's arch, corpuscle (tsim'er-manz) [Karl Wilhelm Zimmermann, German histologist, born 1861]. See *arch and corpuscle*.

Zimmermann's decoction (tsim'er-manz). See under *decoction*.

zimphen, zimphene (zim'fen, fēn). Metaoxycyanocinnamate of sodium; a yellowish-white, crystalline substance, recommended as an antiseptic stimulant for gastric secretion in dyspepsia and gastro-intestinal atony. Dose, 5-10 gr. (0.333-0.666 gm.).

zinc (zink) [L. *zin'cum*]. A blue-white metal many of whose salts are medicinal and poisonous: symbol, Zn; atomic weight, 65.37; specific gravity, 6.9-7.2. Melted zinc, when poured into water, becomes granular in form (*granulated z.*), and its salts are poisonous, often, when absorbed by the system, producing a chronic poisoning resembling that caused by lead. **z. acetate**, a salt, $\text{Zn}(\text{C}_2\text{H}_3\text{O}_2)_2 + 3\text{H}_2\text{O}$, used locally in ear diseases, gonorrhea, etc., in a solution of 0.2 to 1 per cent. strength. **z. and mercury cyanid**, an antiseptic used in dressing wounds. Called also *z. mercuricyanid*. **z. and potassium cyanid**, $\text{K}_2\text{Zn}(\text{CN})_4$, used in neuralgia, gastralgia, epilepsy, and chorea. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ gr. (0.01-0.03 gm.). **z. borate** (*z. pyroborate*), a white powder, $\text{ZnB}_2\text{O}_7 + 7\text{H}_2\text{O}$; used

as an antiseptic application. **z. bromid** (*zin'ci bromidum*), ZnBr_2 ; used in epilepsy. Dose, 1-2 gr. (0.066-0.13 gm.). **z. calcium cyanid**, a salt in white crystals, $\text{ZnCa}(\text{CN})_6$, an antiseptic for wounds. **z. carbolate**, a white powder used as a surgical dusting-powder and antiseptic. **z. carbonat**, a salt, $2\text{ZnCO}_3 \cdot 3\text{Zn}(\text{OH})_2$; used as a dusting-powder or in the form of a cerate. *Calamine* is a native zinc carbonate, and is used like the ordinary carbonate in the form of an ointment (*Turner's cerate*). **z. chlorid** (*zin'ci chloridum*), a crystalline compound, ZnCl_2 ; used as an escharotic for cancer and ulcers, and in a weak solution as a disinfectant and astringent in vaginitis and throat inflammations. A 50 per cent. solution of zinc chlorid is used as a disinfectant and preservative under the name of *Burnett's disinfecting fluid*. **z. chrysophanate**, a red-brown powder: an antiseptic for external use. **z. cyanid**, a white compound, ZnCy_2 ; used in epilepsy, chorea, neuralgia, gastralgia, palpitation, and pain in the cardiac region. Dose, $\frac{1}{4}$ -1 gr. (0.016-0.065 gm.). **z. ferrocyanid**, $\text{Zn}_2\text{FeCy}_6 + 3\text{H}_2\text{O}$; used like zinc cyanid. Dose, 1-4 gr. (0.066-0.266 gm.). **z. gallate**. See *z. subgallate*. **z. gynocardate**, a yellow powder used in skin diseases. **z. ichthyol sulphonate**, a salt, $(\text{C}_{25}\text{H}_{30}\text{S}_2\text{O}_6)_2\text{H}_2\text{Zn}$; used in skin diseases. **z. iodate**, a salt, $\text{Zn}(\text{IO}_3)_2$; used externally. **z. iodid** (*zin'ci iodidum*), ZnI_2 , is used in chorea, scrofula, etc.: astringent and disinfectant. Dose, $\frac{1}{2}$ -2 gr. (0.032-0.13 gm.). **z. lactate**, a salt, $\text{Zn}(\text{C}_3\text{H}_5\text{O}_2)_2 + 3\text{H}_2\text{O}$; useful in epilepsy. Dose, 2-10 gr. (0.13-0.666 gm.). **z. mercuricyanid**, a white, insoluble powder, $\text{ZnHg}(\text{CN})_4$: a non-irritating antiseptic. **z. oleate** (*zin'ci oleatum*), a soap, $(\text{C}_{17}\text{H}_{33}\text{COO})_2\text{Zn}$; used in skin diseases. **z. oleostearate**, a semifluid oily substance prepared from zinc stearate and benzoated alcohol: used in intranasal and throat disorders. **z. oxid** (*zin'ci oxidum*), a white, amorphous salt, ZnO , known also as *z. white*. It is given in whooping-cough, asthma, epilepsy, diarrhea, phthisical night-sweats, etc., and is used in the form of a dusting-powder or ointment in intertrigo, eczema, ulcers, etc. Dose, 2-8 gr. (0.13-0.52 gm.). **z. permanganate**, a salt, $\text{Zn}(\text{MnO}_4)_2 + 6\text{H}_2\text{O}$, in violet crystals. It has antiseptic properties and is used in urethritis in 1:4000 solution. **z. peroxid**, an antiseptic dusting-powder. **z. phenolsulphonate**. Same as *z. sulphocarbolate*. **z. phosphid** (*zin'ci phosphidum*), a substance, Zn_3P_2 ; used like phosphorus in neuralgia, neurasthenia, sexual weakness, hysteria, amenorrhea, chlorosis, etc. Dose, $\frac{1}{20}$ - $\frac{1}{10}$ gr. (0.003-0.006 gm.). **z. salicylate**, a salt in colorless crystals, $(\text{C}_7\text{H}_5\text{O}_3)_2\text{Zn} + 3\text{H}_2\text{O}$; an antiseptic: used in skin diseases, etc. **z. soziodolate**, a salt, $(\text{C}_6\text{H}_5\text{I}_2(\text{OH})\text{SO}_3)_2\text{Zn} + 6\text{H}_2\text{O}$, occurring in colorless needles. **z. stearate**, a white, insoluble powder, $(\text{C}_{17}\text{H}_{33}\text{COO})_2\text{Zn}$; used in gonorrhea and in diseases of the nose. **z. subgallate**, a greenish-gray powder; an antiseptic: used internally and externally in internal and external disorders. Dose for night-sweats, etc., $\frac{1}{4}$ -4 gr. (0.03-0.25 gm.). **z. sulphanilate**. See *nizin*. **z. sulphate** (*zin'ci sulphas*), white vitriol, $\text{ZnSO}_4 + 7\text{H}_2\text{O}$, a colorless, crystalline substance with tonic, astringent, and emetic properties. It is used as an emetic in croup and in poisoning; as an internal astringent in diarrhea and dysentery, and externally as a caustic, and in a 1 per cent. solution in laryngitis, conjunctivitis, etc. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ gr. (0.016-0.032 gm.); emetic dose, 10-30 gr. (0.66-2 gm.). **z. sulphite**, a white, crystalline salt, $\text{ZnSO}_3 \cdot 2\text{H}_2\text{O}$; used in preparing antiseptic bandages. **z. sulphocarbolate**, a colorless, crystalline salt, $(\text{OH} \cdot \text{C}_6\text{H}_4 \cdot \text{SO}_3)_2\text{Zn} \cdot 8\text{H}_2\text{O}$; used in antiseptic washes. **z. sulphoichthyolate**, used mainly in skin diseases. Dose, $\frac{1}{4}$ -1 gr. (0.033-0.066 gm.). **z. sulphhydrate**, a white, unstable salt, $\text{Zn}(\text{SH})_2$; antiseptic: used in skin diseases, externally and internally. Dose, $\frac{1}{4}$ -2 gr. (0.03-0.13 gm.). **z. valerianate** (*zin'ci*

- valeria'nas*), $(C_4H_9COO)_2Zn + 2H_2O$: useful in neuralgia, epilepsy, hysteria, etc. Dose, 1-2 gr. (0.066-0.133 gm.).
- zincalism** (zink'al-izm). Chronic zinc poisoning.
- zincative** (zink'at-iv). Electrically negative, *i. e.*, like the zinc in a Daniell cell.
- zinciferous** (zink-if'er-us). Containing zinc.
- zincocochin** (zin-ko-ke'no). Zinc oxyquinolin sulphate, used as a vulnerary and antiseptic dusting-powder.
- zincoid** (zing'koid) [L. *zincum* + Gr. *είδος* form]. The platinum (or other metallic) plate which is connected with a copper plate in the voltaic circuit. It is called *zincoid* because it takes the place of the zinc in the voltaic circuit.
- zincopyrin** (zing-ko-pi'rin). A double salt of zinc chlorid and phenyldimethylpyrazolon, $(C_{11}H_{13}N_2O)_2ZnCl_2$: used like zinc chlorid, but is less caustic and less toxic.
- zinc-perhydrol** (zink-per-hi'drol). A combination of zinc and perhydrol, used as an antiseptic and astringent for wounds.
- zincporoplast** (zink-po'ro-plast). A plastic preparation for applying to a wound, over which it forms a firm protecting covering.
- zincum** (zing'kum). Latin for *zinc*.
- zingiber** (zin'jib-er). Latin for *ginger*.
- Zinn's central artery** (zinz) [Johann Gottfried Zinn, German naturalist, 1727-1759]. See *central artery of the retina, in arteries, table of*. **Z.'s circlet** or **corona**. Same as *circulus arteriosus halleri*. **Z.'s ligament**. See *ligament*. **Z.'s membrane**. See *membrane*. **Z.'s tendon**. See *ligament*. **Z.'s zonule**. See *zonule*.
- zinol** (zi'no). A patented combination of 1 part zinc acetate and 4 parts aluminum naphthosulphonate, in powder or in tablets. Its aqueous solution is used in gonorrhea.
- ziratol** (zir'at-ol). A proprietary antiseptic and germicide.
- zirbus** (zir'bus). An old name for the omentum.
- zirconium** (zir-ko'ne-um). A rather rare metallic element; atomic weight, 90.6; symbol, Zr; atomic number, 40; chiefly obtained from a mineral called zircon. **z. oxid**, ZrO_2 , is used like bismuth for producing contrasts in x-ray work.
- Zittmann's decoction** (zit'manz) [Johann Friedrich Zittmann, German physician, 1671-1757]. The compound decoction of sarsaparilla.
- Zizia aurea** (ziz'e-ah aw're-ah). An umbelliferous plant called golden alexanders: believed to have the properties of *Smyr'nium*.
- Zizyphus vulgaris** (ziz'e-fus vul-ga'ris). Same as *jujube*. Another species, *Z. lo'tus*, of North Africa, affords an agreeable fruit called *nabbe* and *lotos*.
- Zn**. The symbol for *zinc*.
- znak** (tznahk) [Russ.]. A badge worn in Russia by members of the medical profession.
- ZnBr₂**. Zinc bromid.
- Zn(C₂H₃O₂)₂**. Zinc acetate.
- ZnCl₂**. Zinc chlorid.
- ZnCy₂**. Zinc cyanid
- ZnI₂**. Zinc iodid.
- ZnO**. Zinc oxid.
- ZnSO₄**. Zinc sulphate.
- zoamylin** (zo-am'il-in). Glycogen.
- zoanthropic** (zo-an-throp'ik). Pertaining to or of the nature of zoanthropy.
- zoanthropy** (zo-an'thro-pe) [Gr. ζῷον animal + ἀνθρώπος man]. The maniacal belief of a patient that he has become a beast.
- zoeoptroscope** (zo-e-op'tro-skōp) [Gr. ζῷή life + σκοπεῖν to view]. A variety of chronophotograph.
- zoescope** (zo'e-skōp) [Gr. ζῷή life + σκοπεῖν to view]. Stroboscope.
- zoetic** (zo-et'ik) [Gr. ζῷή life]. Pertaining to life.
- zoetrope** (zo'e-trōp) [Gr. ζῷή life + τροπεῖν to turn]. An apparatus which affords pictures of objects apparently moving as in life.
- zoiatria, zoiatrics** (zo-e-at're-ah, zo-e-at'riks) [Gr. ζῷον animal + ιατρεια healing]. Veterinary practice.
- zoic** (zo'ik) [Gr. ζωικός, from ζῷή life]. Pertaining to life or characterized by animal life.
- Zöllner's lines** (zel'nerz) [Friedrich Zöllner, Dutch physicist, 1834-1882]. See under *line*.
- zomakyn** (zo'mak-in). A proprietary analgesic, anodyne, and antipyretic medicine.
- zomidin** (zo'mid-in) [Gr. ζωμός broth]. A constituent of meat-extract.
- zomine** (zo'min). A proprietary meat juice for use in zomotherapy.
- zomol** (zo'mol). A proprietary preparation of meat-plasm.
- zomotherapy** (zo-mo-thre'ap-e) [Gr. ζωμός broth + θεραπεία]. The treatment of disease by muscle plasma, meat-juice, or by meat-diet.
- zona** (zo'nah) [L.]. 1. A girdle or belt. 2. Herpes zoster. See *zoster*. **z. arcua'ta**, the tunnel formed by the combined arches of Corti. **z. cartilagin'ea**, the limbus of the spiral lamina. **z. cilia'ris**, the ciliary processes taken together. **z. denticula'ta**, the inner zone of basilar membrane with the zona cartilaginea. **z. dermat'ica**, an elevation of thick skin around the tumor in spina bifida. **z. epithioserosa**, a mass of membranous tissue inside the zona dermatica. **z. facia'lis**, herpes zoster of the face. **z. fascicula'ta**, the central part of the cortex of a suprarenal capsule. **z. gangliona'ris**, a mass of ganglion tissue on the cochlear divisions of the auditory nerve. **z. glomerulo'sa**, the outermost of the layers of the cortex of the suprarenal capsule, having a net-like appearance on section. **z. granulo'sa**, discus proligerus. **z. ig'nea**, herpes zoster. **z. incer'ta**, a mixture of gray and white matter between Luys' body and the dorsal layer of white matter of the hypothalamus. **z. ophthalm'ica**, herpes of the ophthalmic nerve. **z. orbicula'ris** [B N A], the thick ring of capsular ligament around the acetabulum. **z. pectina'ta**, the outer part of the basilar membrane of the cochlea, running from the rods of Corti to the spiral ligament. **z. pellu'cida**, **z. radia'ta**, the innermost of the two lining membranes of the ovum. It is a thick layer traversed by radiating spores. Called also *oölemma*. **z. perfora'ta**, the inner portion of the membrana basilaris. **z. reticula'ris**, the inner layer of the cortex of a suprarenal capsule. **z. rolan'dica**, the postcentral and precentral convolutions. **z. serpigin'o'sa**, herpes zoster. **z. spongio'sa**, the tip of the posterior horn of gray matter of the spinal cord. **z. stria'ta**, zona pellucida. **z. tec'ta**, the part of the basilar membrane which lodges the organ of Corti. **z. tendino'sa**, a fibrous ring at the auriculoventricular opening of the heart. **z. transformans**, Turk's zone; the connective-tissue layer of the intestinal wall where bacteria penetrating from the intestine are destroyed. **z. vasculo'sa**, the medullary part of the basilar membrane which lodges the organ of Corti.
- zonæsthesia** (zōn-es-the'ze-ah). See *zonesthesia*.
- zonal** (zo'nal) [L. *zona'lis*]. Of the nature of a zone.
- zonary** (zo'nar-e). Shaped like a zone.
- zone** (zōn) [L. *zō'na*; Gr. ζώνη]. A girdle or belt. **abdominal z's**, the three zones into which the surface of the abdomen is divided by the subcostal and intertubercular lines. These regions are the *subcostal*, or that above the subcostal line, the *mesogastric*, or that between the subcostal and intertubercular lines, and the *hypogastric*, or that below the intertubercular line. **z. of alarm**, the upper internal portion of the supraspinous fossa, which represents the area of extreme projection of

the apex of the lung where the earliest signs of tuberculous infection are to be sought. **anelectrotonic z.** See *polar z.* **apical z.,** a narrow area along the gingivæ over the apices of the roots of the teeth. **arsenical z.,** a vesicular eruption caused by arsenic. **cervical z. 1.** The lowest quarter of the internal surface of the uterus. **2.** That third of the coronal zone of the teeth which is nearest the necks of the teeth. **Charcot's z's,** the hysterogenic zones. **comfort z.,** an indoor temperature between 13° and 21° C. (55°-70° F.) with a humidity of from 30 to 55 per cent. **contact-point z.,** the central third of the coronal zone of the teeth between the occlusal zone and the cervical zone. **cornuradicular z.,** the outer part of Burdach's column. **coronal z.,** the entire labial and buccal surface of the teeth. It is divided into three equal parts, the occlusal zone, the contact-point zone, and the cervical zone. **dolorogenic z.,** an area stimulation of which produces pain. **dorsal z. of His,** the smaller upper thickening of the dorsal embryonic spinal cord projecting into the central canal. From it are developed the cerebral hemispheres and optic thalami. **epileptogenic z., epileptogenous z.,** an area stimulation of which may bring on epileptic attacks. **erogenous z., erotogenic z.,** a portion of the body excitation of which produces erotic fancies or sensations. **extravital z.,** that part of the dioptric surfaces and media which is not capable of accurately focusing light. **gingival z.,** the zone extending along the gingivæ between the apical and cervical zone. **Head's z's,** areas of cutaneous sensitiveness associated with diseases of the viscera; called also *zones of hyperalgesia*. **z. of His,** the four thickenings which run the entire length of the medullary cord in the fetus. **hyperesthetic z.,** a region of the surface of the body marked by abnormal sensibility. **hypnogenous z.,** an area characterized by the fact that pressure upon it will induce sleep. **hypogastric z.** See under *abdominal z's.* **hysterogenic z.,** **hysterogenous z.,** a region of the body whereon pressure may elicit a hysteric attack. **inhibition z's,** dilutions at which no specific action is manifested though it may occur at lower or at higher dilutions of the serum. See *proagglutininoid z.* **intermediate z.,** that portion of the field of vision which lies between the fifteenth and forty-fifth concentric circles. **language z.,** the word-center of the cerebral cortex. **z. of large pyramids,** the deepest but one of the four zones in the cortex of the cerebrum. **latent z.,** that part of the cortex of the brain which exhibits no motor symptoms. **lenticular z.,** an area of the cerebrum bounded anteriorly by the white substance of the third frontal convolution, posteriorly by Wernicke's area, externally by the insula, and internally by the wall of the third ventricle. It comprises the external capsule, the lenticular and caudate nuclei, the anterior and posterior segments of the internal capsule, and the optic thalamus. **Lissauer's z., marginal z.,** a bridge of white substance between the apex of the dorsal horn and the periphery of the spinal cord. **median root z.,** the oval fasciculus. See *fasciculus*. **mesogastric z.** See under *abdominal z's.* **motor z.,** an area of the cortex of the brain which, when electrically stimulated, causes contraction of voluntary muscles. **neogenic z.,** the subcapsular layer of the kidney. **neutral z. of His,** a thickening of the dorsal portion of the embryonic spinal cord projecting into the central canal. **occlusal z.,** that third of the coronal zone of a tooth which is nearest the occlusal plane. **pellucid z.,** the zona pellucida. **peripolar z.,** the region around the polar zone. **placental z.,** the surface of the uterus to which the placenta is attached. **polar z.,** the region immediately around an electrode applied to the body. **z. of polymorphous cells,** the innermost or deepest of the four zones of the cerebral cortex. **proagglutininoid z.,** a lower dilution at which no

agglutination occurs though higher dilutions produce agglutination. **Rolando's z.,** the motor area of the cerebral cortex. **root z.,** that part of the white matter of the spinal cord which is connected with the anterior and posterior nerve-roots. **z. of small pyramids,** the layer next beneath the superficial zone in the cerebral cortex. **subcostal z.** See under *abdominal z's.* **superficial z.,** the outermost of the four layers of cortical cells of the cerebrum. **transition z., transitional z.,** the circle in the equator of the lens of the eye in which epithelial fibers are developed into lens-fibers. **vascular z.,** a region in the supramastoid fossa containing many foramina for the passage of blood-vessels. **visual z.,** the area around an optic axis in which there is practically no aberration. The extravital zone just outside of it is practically incapable of accurately focusing light. **Wernicke's z.** See *Wernicke's center*, under *center*. **Westphal's z.,** a zone of the dorsal column of the spinal cord in the lumbar region; said to contain the esodic fibers concerned in the patellar reflex. **z. of Zinn.** See *zonule of Zinn*.

zonesthesia, zonesthesia (zo-nes-the'-ze-ah) [Gr. ζώνη zone + αίσθησις sensation]. A sensation of constriction, as by a girdle.

zonifugal (zo-nif'-u-gal) [L. zō'na zone + fugere to flee]. Passing outward from any zone or region.

zonipetal (zo-nip'-et-al) [L. zō'na zone + petere to seek]. Passing from outside into any area or region.

zonula (zōn'-u-lah), pl. *zon'ulæ* [L.]. A little zone or zonule; especially the zonule of Zinn. **z. cilia'ris** [B N A], zonule of Zinn.

zonular (zōn'-u-lar). Pertaining to a zonule.

zonule (zōn'ul) [L. *zon'ula*]. A little zone or girdle. **z. of Zinn,** the suspensory ligament of the eye-lens, consisting of a ring-shaped series of fibers extending from the ciliary body to the equator of the lens. Called also *zone of Zinn*.

zonulitis (zōn-u-lit'is). Inflammation of the zonule of Zinn.

zoö-agglutinin (zo'o-ag-lu tin-in) [Gr. ζῶον animal + agglutinin]. A substance in animal poisons having the power of agglutinating red blood-corpuscles.

zoöamylon (zo-o-am'il-on) [Gr. ζῶον animal + ἄμυλον starch]. Animal starch; glycogen.

zoö-anaphylactogen (zo'o-an-af-il-ak'-to-jen). Zoösensitogen.

zoöbiology (zo'o'-bi-ol'-o-je) [Gr. ζῶον animal + βίος life + λόγος discourse]. The biology of animals.

zoöbiotism (zo-o-bi'-ot-izm) [Gr. ζῶον animal + βίος life]. Biotics.

zoöblast (zo'o-blast) [Gr. ζῶον animal + βλαστός germ]. An animal cell.

zoöchemic (zo-o-kem'ik). Pertaining to zoöchemistry.

zoöchemistry (zo-o-kem'is-tre) [Gr. ζῶον animal + chemistry]. The chemistry of the animal tissues.

zoöcyst (zo'o-sist). A protozoan cyst.

zoödermic (zo-o-der'mik) [Gr. ζῶον animal + δέρμα skin]. Performed with the skin of an animal; said of skin-grafting in which the grafts are from the skin of an animal. Cf. *dermatzoöplasty*.

zoödynamics (zo'o-di-nam'ik). Pertaining to zoö-dynamics.

zoödynamics (zo'o-di-nam'iks) [Gr. ζῶον animal + δύναμις power]. Animal physiology.

zoöerastia (zo'o-e-ras'te-ah) [Gr. ζῶον animal + ἐράστis lover]. Sexual intercourse with an animal.

zoögenesis (zo-o-jen'-es-is). Same as *zoögeny*.

zoögenous (zo-o-jen'-us) [Gr. ζῶον animal + γεννᾶν to produce]. 1. Acquired from animals. 2. Viviparous.

zoögeny (zo-o-jen'-e) [Gr. ζῶον animal + γεννᾶν to

- produce]. The production or generation of animals.
- zoogeography** (zo'-o-je-og'-raf-e) [Gr. ζῷον animal + *geography*]. The study of the distribution of animal life on the earth.
- zoöglea, zoöglea** (zo-o-gle'ah) [Gr. ζῷον animal + γλοιός sticky]. A colony of certain microbes embedded in a jelly-like matrix.
- zoögleic, zoögleic** (zo-o-gle'ik). Pertaining to or characterized by the presence of zoöglea.
- zoögonous** (zo-og'o-nus). Producing living animals.
- zoögony** (zo-o'-o-ne) [Gr. ζῷον animal + γονή offspring]. The production of animals.
- zoögraft** (zo-o-graft) [Gr. ζῷον animal + γράφω to write]. A graft of tissue from an animal; a zoöplastic graft.
- zoögrafting** (zo'o-graft-ing). The grafting of an animal tissue upon the human body.
- zoögraphy** (zo-og'-raf-e) [Gr. ζῷον animal + γράφω to write]. A treatise on animals.
- zoöid** (zo'oid) [Gr. ζῷον animal + εἶδος form]. 1. Resembling an animal. 2. An object or form which resembles an animal. 3. One of the individuals in a united colony of animals.
- zoölagia** (zo-o-lag'-ne-ah) [Gr. ζῷον animal + λαγνεία lust]. Sexual attraction toward animals.
- zoölak** (zo-o-lak). A proprietary milk-food preparation. Same as *matzoon*.
- zoölogy** (zo-ol'o-je) [Gr. ζῷον animal + λόγος discourse]. The biology of animals; the sum of what is known regarding animals. **experimental z.**, the study of animals by means of experiments performed upon them.
- zoönite** (zo'on-it). A cerebrospinal metamere.
- zoönomy** (zo-on'o-me) [Gr. ζῷον animal + νόμος law]. Same as *zoöbiology*.
- zoönosis** (zo-on'o-sis) [Gr. ζῷον animal + νόσος disease]. A disease produced by animal parasites.
- zoönosology** (zo'o'-no-sol'o-je) [Gr. ζῷον animal + *nology*]. The classification of diseases of animals.
- zoönotic** (zo-on-ot'ik). 1. Pertaining to zoönosis. 2. Due to animal parasites; said of certain diseases.
- zoöparasite** (zo-o-par'-as-it) [Gr. ζῷον animal + *parasite*]. Any animal parasite.
- zoöparasitic** (zo'o'-par-as-it'ik). Pertaining to or produced by animal parasites.
- zoöpathology** (zo-o-path-ol'o-je) [Gr. ζῷον animal + *pathology*]. Animal pathology; the study of the diseases of animals.
- zoöperal** (zo-op'er-al). Pertaining to zoöpery.
- zoöpery** (zo-op'er-e) [Gr. ζῷον animal + *πειράω* to experiment]. The performing of experiments on animals.
- zoöphagous** (zo-o-fag-us) [Gr. ζῷον animal + φαγῖν to eat]. Subsisting upon animal food.
- zoöpharmacology** (zo'o-far-mak-ol'o-je). Veterinary pharmacology.
- zoöpharmacy** (zo-o-far'-mas-e). Veterinary pharmacy.
- zoöphile** (zo'o-fil) [Gr. ζῷον animal + φιλεῖν to love]. An antivivisectionist.
- zoöphilism** (zo-öf'il-izm). 1. Fondness for animals; opposition to vivisection. 2. Feeding an animal. **erotic z.**, sexual pleasure experienced in the fondling of animals.
- zoöphobia** (zo-o-fö-be-ah) [Gr. ζῷον animal + φόβος fear]. The insane dread of animals.
- zoöphysiology** (zo-o'-fiz-e-ol'o-je) [Gr. ζῷον animal + *physiology*]. Animal physiology.
- zoöphyte** (zo'o-fit) [Gr. ζῷον animal + *φύτον* plant]. Any plant-like animal.
- zoöplasty** (zo'o-plas-te) [Gr. ζῷον animal + *πλάσσειν* to form]. The transplantation of tissue from an animal to man. Same as *zoögrafting*.
- zoöprecipitin** (zo-o-pre-sip'-it-in). A precipitin obtained by immunizing injections of protein substances of animal origin.
- zoöpsia** (zo-op'se-ah) [Gr. ζῷον animal + *ὄψις* vision]. A hallucination in which the patient thinks he sees animals.
- zoöpsychology** (zo-o-si-kol'o-je) [Gr. ζῷον animal + *psychology*]. Animal psychology. See *psychology*.
- zoöscopy** (zo-os'ko-pe) [Gr. ζῷον animal + σκοπεῖν to see]. Zoöpsia.
- zoösensitigen** (zo'o-sen-sit-in'o-jen) [Gr. ζῷον animal + *sensitigen*]. A protein substance of animal origin capable of producing anaphylaxis. Called also *zoö-anaphylacogen*.
- zoösis** (zo-o'sis) [Gr. ζῷον animal]. Any disease due to animal agents.
- zoösmosis** (zo-os-mö'sis) [Gr. ζωή life + *osmosis*]. The passage of living protoplasm from the blood-vessels into the tissues.
- zoösperm** (zo'o-sperm) [Gr. ζῷον animal + σπέρμα seed]. Same as *spermatozoön*.
- zoöspore** (zo'o-spör) [Gr. ζῷον animal + *spore*]. See *spore*.
- zoötechnics, zoötechny** (zo-o-tek'-niks, zo'o-tek-ne) [Gr. ζῷον animal + τέχνη art]. The art of breeding, keeping, and handling animals in domestication or captivity.
- zoötherapeutics, zoötherapy** (zo'o-ther-ap-u'-tiks, zo-o-ther-ap-e) [Gr. ζῷον animal + *θεραπεία* treatment]. Veterinary therapeutics.
- zoötomist** (zo-ot'o-mist). A dissector of animals.
- zoötomy** (zo-ot'o-me) [Gr. ζῷον animal + τέμνειν to cut]. The dissection or anatomy of animals.
- zoötoxin** (zo-o-toks'in) [Gr. ζῷον animal + *τόξιν* poisoning]. A toxin or poison of animal origin, such as the venoms of snakes, spiders, scorpions, and lizards, and the serum of eels and snakes.
- zoötrophic** (zo-o-trof'ik) [Gr. ζῷον animal + τροφή nutrition]. Pertaining to the nutrition of animals.
- zoötrophotoxism** (zo'o-trof-o-toks'izm) [Gr. ζῷον animal + τροφή nutrition + *τόξιν* poison]. Poisoning with animal food.
- zoöxanthin** (zo-oks-an'thin). A red pigment from the feathers of certain birds, as *Pharomacrus auriceps*, a trogon.
- Zopfius** (zop'fe-us). A genus of Bacteriaceæ. They are Gram-positive, motile long rods in evenly curved chains. They produce a proteus-like growth on culture-media and do not attack carbohydrates.
- zoster** (zos'ter) [Gr. ζώνη girdle]. Shingles, or herpes zoster, an acute inflammatory skin disease marked by the development of groups of vesicles on a reddish base, usually along the course of a cutaneous nerve. It is frequently attended by neuralgic pains. **z. auricularis, z. auris, z. o'iticus**, herpes zoster of the ear, due to herpetic inflammation of the geniculate ganglion of the facial nerve. **z. brachialis**, herpes zoster of the arm and forearm. **z. ophthalmicus**, herpes along the course of the ophthalmic nerve.
- Zostera marina** (zos'ter-ah mar-i'nah). Seawrack or eelgrass, a marine plant: has been recommended as an application for indolent tumors.
- zosteriform** (zos-ter'if-orm). Resembling herpes zoster.
- zosteroid** (zos'ter-oid). Resembling herpes zoster.
- Zouchlos' test** (zük'los). See under *tests*.
- Zr.** The chemic symbol for *zirconium*.
- Zsigmondy's gold number method** (sig-mon'-dez) [Richard Zsigmondy, chemist in Göttingen, the discoverer of the ultramicroscope]. Lange's test. See under *tests*.
- Zuckerkindl's body, convolution, organs, vein**, etc. (tsook'er-kan-dlz) [Emil Zuckerkindl, anatomist in Vienna, 1849-1910]. See under *body, convolution, organ, vein*, etc.
- zumo-anana** (zu'mo-an-ah'nah). A digestant tonic and stimulant prepared from the juice of pineapple.

zumoid (zu'moid) [Gr. ζύμη leaven + εἶδος form].

Any form that may be pathogenic.

Zwanc's pessary (zwanzk). See under *pessary*.

Zwenger's test. Same as *Liebermann's test*, under *tests*.

zwetschen-wasser (tswet-shen-vos'er) [Ger. "plum-water"]. A cordial or liquor prepared in Germany from prunes.

zwieback (zwe'bak). Pieces of bread made of rich dough and heated in the oven until they are deep yellow in color.

Zwischenkörper (zwish'en-ker-per). Same as *amboceptor*.

zygadenin (zi-gad'en-in). A crystalline alkaloid, $C_{38}H_{63}NO_{10}$, from *Zygadenus intermedius*.

zygal (zi'gal) [Gr. ζυγόν yoke]. Shaped like a yoke.

zygapophyseal (zi'gap-of-iz'e-al). Pertaining to a zygapophysis.

zygapophysis (zi-gap-of'is-is) [Gr. ζυγόν yoke + *apophysis*]. The articular process of a vertebra.

zygion (zi'e-on) [Gr. ζυγόν yoke]. A craniometric point at either end of the bregmatic diameter.

zygocyte (zi'go-sit). See *zygote*.

zygodactyly (zi-go-dak'til-e) [Gr. ζύγον yoke + δάκτυλον finger]. Syndactyly, especially of the second and third fingers or toes.

zygoite (zi'go-it). An organism formed by zygosis.

zygobialis (zi'go-la-be-a'lis). The zygomatic minor muscle.

zygoma (zi-go'mah) [Gr. ζύγωμα]. 1. [B N A] The arch formed by the zygomatic process of the temporal bone and by the malar bone. 2. The malar bone.

zygomatic (zi-go-mat'ik). Pertaining to the zygoma.

zygomatoco-auricularis (zi'go-mat'ik-o-aw-rik-u-la'ris). The attrahens aurem muscle.

zygomatofacial (zi-go-mat'ik-o-fa'shal). Relating to the zygoma and the face.

zygomatofrontal (zi-go-mat'ik-o-fron'tal). Pertaining to the zygoma and the frontal bones.

zygomatocomaxillary (zi-go-mat'ik-o-maks'il-a-re). Pertaining to the zygoma and the maxilla.

zygomatoco-orbital (zi-go-mat'ik-o-or'bit-al). Pertaining to the zygoma and the orbit.

zygomatocosphenoid (zi-go-mat'ik-o-sfe'noid). Pertaining to the zygoma and the sphenoid bone.

zygomatocotemporal (zi-go-mat'ik-o-tem'por-al). Relating to the zygoma and the temporal bone.

zygomatikus (zi-go-mat'ik-us). See *muscles*, *table of*.

zygomaxillare (zi-go-maks'il-ā-re) [L.]. A craniometric point at the lower end of the zygomatic suture.

zygomaxillary (zi-go-maks'il-a-re). Pertaining to the zygoma and the maxilla.

zygomycetes (zi'go-mi-se'tez). A group of phycomycetic fungi, including some of the molds.

zygon (zi'gon) [Gr. ζυγόν]. The bar or stem connecting the two branches of a zygal fissure.

zygoneure (zi'go-nūr) [Gr. ζυγόν yoke + νεῦρον nerve]. A nerve-cell connected with other nerve-cells.

zygoplast (zi'go-plast) [Gr. ζυγόν yoke + πλάσσειν to form]. A body connected with the nucleus and giving rise to the flagellum in certain protozoa.

zygosis (zi-go'sis) [Gr. "a joining"]. The sexual union of two unicellular organisms.

zygosperma (zi'go-sperm). Zygospore.

zygospore (zi'go-spōr) [Gr. ζυγόν yoke + *spore*]. A spore formed by the conjugation of two cells (gametes) which are morphologically identical and do not show any sexual differentiation. See *spore*.

zygote (zi'gōt). The cell resulting from the fusion of two gametes. Called also *zygocyte*. **duplex**

z., one formed by the union of germ cells each of which has some particular determinant. **multi-plex z.**, one formed by the union of germ cells neither of which possesses a determinant. **simple z.**, one formed by the union of germ cells one of which possesses a determinant.

zygotene (zi'go-tēn). Same as *amphitene*.

zygotoblast (zi-go'to-blast) [zygote + Gr. βλαστός germ]. Same as *sporozoite*.

zygotomere (zi-go'to-mēr) [zygote + Gr. μέρος part]. Same as *sporoblast*.

zylonite (zi'lon-it) [Gr. ξύλον wood]. A material not unlike celluloid: used to some extent in surgery and dentistry.

zymad (zi'mad). The organism of a zymotic or infectious disease.

zymase (zi'mās). 1. An enzyme. 2. A microzyme. 3. The intracellular enzyme of yeast by which alcoholic fermentation is produced; called also *Buchner's z.*

zymasis (zi'mas-is). The excretion of the active substance of yeast by hydraulic pressure.

zyme (zim) [Gr. ζύμος ferment]. A ferment; also a disease-producing ferment or virus that produces zymotic diseases.

zymeoid (zi'me-oid). A white, crystalline powder, a double borate salt containing 50 per cent. of oxygen: used in intestinal fermentation.

zymetology (zi-met-ol'o-je). Same as *zymology*.

zymic (zi'mik) [Gr. ζύμη leaven]. Pertaining to organized ferments.

zymin (zi'min). 1. A pancreatic extract prepared for therapeutic use. 2. Same as *zyme*.

zymocide (zi'mo-sid) [Gr. ζύμη leaven + L. *cædere* to kill]. A proprietary disinfectant remedy.

zymocyte (zi'mi-sit) [Gr. ζύμη leaven + κύτος cell]. An organism which causes fermentation.

zymoexcitator (zi-mo-eks'it-a-tor). Any substance which serves to convert zymogens into their enzymes. Cf. *kinase*.

zymoexciter (zi-mo-ek-si'ter). Zymoexcitator.

zymogen (zi'mo-jen) [Gr. ζύμη leaven + γεννάν to create]. Any substance which may give rise to a ferment; a substance existing in the secreting glands of the digestive system, which, though not itself a ferment, is split up into a ferment and a protein. Called also *proferment*. **lab-z.** See *lab-zymogen*.

zymogene (zi'mo-jēn). Any microbe which causes a fermentation.

zymogenic (zi-mo-jen'ik). 1. Causing a fermentation. 2. Pertaining to a fermentation.

zymogenous (zi-moj'en-us). Zymogenic.

zymogic (zi-moj'ik). Zymogenic.

zymohydrolysis (zi'mo-hi-drol'is-is). Same as *zymolysis*.

zymoid (zi'moid) [Gr. ζύμη leaven + εἶδος form]. 1. Any poison derived from a decaying tissue. 2. A ferment or enzyme which has lost its power of decomposing the substratum, but not its power of uniting with it.

zymoidin (zi-moid'in). A proprietary antiseptic powder for external use.

zymol (zi'mol). A dry yeast preparation.

zymolite (zi'mo-lit). Same as *substrate*.

zymologic (zi-mo-loj'ik). Pertaining to zymology.

zymologist (zi-mol'o-jist). A specialist in the science of zymology.

zymology (zi-mol'o-je) [Gr. ζύμη leaven + λόγος speech]. The sum of knowledge regarding fermentation.

zymolysis (zi-mol'is-is) [Gr. ζύμη leaven + λύσις solution]. Fermentation or digestion by means of an enzyme.

zymolytic (zi-mo-lit'ik) [Gr. ζύμος leaven + λύσις loosening]. Pertaining to or caused by zymolysis.

zymome (zi'mōm). Same as *microzyme*.

zymometer (zi-mom'et-er) [Gr. ζύμος leaven + μέτρον measure]. Same as *zymosimeter*.

zymonema (zi-mo-ne'mah). A form of yeast fungus.

zymonematosiis (zi'mo-nem-at-o'sis). Infestation with zymonema; blastomycosis.

zymophore, zymophorous (zi'mo-fōr, zi-mof'ōrus) [Gr. ζύμος leaven + φορέιν to bear]. Bearing the ferment: a term applied to the active part of an enzyme.

zymophyte (zi'mo-fit) [Gr. ζύμη leaven + φυτόν plant]. A bacterium that causes fermentation.

zymoplastic (zi-mo-plas'tik) [Gr. ζύμη leaven + πλάσσειν to form]. Ferment-forming. **z. substances.** See under *substance*.

zymoscope (zi'mo-skōp) [Gr. ζύμη leaven + σκοπεῖν to see]. An apparatus for determining the zymotic power of yeast.

zymose (zi'mōs). Invertin.

zymosimeter, zymosimeter (zi-mo-sim'et-er, zi-mo-se-om'et-er). An instrument for measuring the degree of fermentation.

zymosis (zi-mo'sis) [Gr. ζύμωσις, from ζυμᾶειν to ferment]. 1. Fermentation. 2. The development of any zymotic disease; the propagation and development of an infectious disease, known

by the growth of bacteria and their products. 3. Any infectious or contagious disease. **z. gastrica**, a condition marked by the formation of organic acids in the stomach, due to the action of yeasts.

zymosthenic (zi-mos-then'ik) [Gr. ζύμη leaven + σθένος strength]. Increasing the activity of an enzyme.

zymotechnic, zymotechnique (zi-mo-tek'nik). The study of fermentation.

zymotechny (zi-mo-tek'ne) [Gr. ζύμη leaven + τέχνη art]. Zymurgy.

zymotic (zi-mot'ik). 1. Caused by or pertaining to zymosis. 2. A zymotic disease.

zymotoid (zi'mo-toid). A proprietary preparation used as an antiseptic and germicide for affections of the skin and mucous membranes.

zymotoxic group (zi-mo-toks'ik). See *Ehrlich's side-chain theory*, under *theory*.

zymurgy (zi'mer-je) [Gr. ζύμη leaven + ἔργον work]. The art of brewing, distilling, and winemaking; the branch of chemistry that deals with the commercial application of fermentation.

Zz. Abbreviation for *L. zingiber*, ginger.

Z. Z.' Z." Increasing degrees of contraction.

POSOLOGIC AND THERAPEUTIC TABLE

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
<i>Absinthium, i.</i>	15-60 gr.	1-4	<i>Wormwood.</i> Anthelmintic and stomachic.
extractum.....	1-10 gr.	0.06-0.6	
fluidextractum.....	15-60 min.	1-4	
infusum.....	$\frac{1}{2}$ -1 fl.oz.	15-30	
oleum.....	1-2 min.	0.06-0.13	
<i>Acacia, c.</i>	ad lib.	<i>Gum arabic.</i> Demulcent, protective, vehicle. In inflammations of mucous membranes.
mucilago.....	ad lib.	
syrupus.....	ad lib.	<i>Antifebrin.</i> Antipyretic, analgesic, antispasmodic. Specially useful in headache and neuralgia. "Headache powder."
<i>Acetanilidum, i.</i>	5-10 gr.	0.3-0.6	
pulvis compositus.....	5-15 gr.	0.3-1.0	See <i>Chlorelone.</i>
<i>Acetone-chloroform</i>	
<i>Acetonum, i.</i>	5-15 min.	0.3-1.0	Chiefly used as a solvent for resins and fats. Also soporific and antirheumatic.
<i>Acetozone</i>	3-5 gr.	0.2-0.3	<i>Benzoyl peroxid.</i> External and internal antiseptic. Specially recommended in typhoid fever.
<i>Acetphenetidinum, i.</i>	5-10 gr.	0.3-0.6	<i>Acelphenetidim.</i> Analgesic, antispasmodic, antipyretic.
<i>Acetum, i.</i>	1-4 fl.dr.	4.0-16.0	<i>Vinegar.</i> Astringent, antiscorbutic, refrigerant.
aromaticum.....	Cooling application in fever.
opii.....	5-20 min.	0.3-1.3	Equivalent to <i>Laudanum.</i>
scillæ.....	5-30 min.	0.3-2.0	Expectorant, diuretic, emetic.
<i>Acetylannin</i>	See <i>Tannigen.</i>
<i>Acidum, i.</i>	An acid.
aceticum, <i>i.</i>	Caustic, vesicant, and rubefacient.
dilutum.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	Astringent and refrigerant.
glaciale.....	Caustic.
agaricum, <i>i.</i>	$\frac{1}{2}$ -1 gr.	0.01-0.03	Antihydrotic in phthisis.
arsenosum, <i>i.</i>	80-15 gr.	0.001-0.004	See <i>Arseni trioxidum.</i>
benzoicum, <i>i.</i>	5-30 gr.	0.3-2.0	Antiseptic and expectorant.
boricum, <i>i.</i>	5-20 gr.	0.3-1.3	<i>Boric acid.</i> External and internal antiseptic.
cacodylicum, <i>i.</i>	1-3 gr.	0.06-0.2	Same uses as <i>Arsenous acid.</i>
camphoricum, <i>i.</i>	10-30 gr.	0.6-2.0	Antihydrotic and antiseptic.
carbazoticum, <i>i.</i>	See <i>Picric acid.</i>
carbolicum, <i>i.</i>	1-3 min.	0.06-0.2	See <i>Phenol.</i>
chromicum, <i>i.</i>	Escharotic.
chrysophanicum, <i>i.</i>	See <i>Chrysarobinum.</i>
cinnamicum, <i>i.</i>	$\frac{1}{2}$ -1 gr.	0.015-0.04	Special remedy in tuberculosis.
citricum, <i>i.</i>	5-20 gr.	0.3-1.3	Antiscorbutic, astringent, and refrigerant.
syrupus.....	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	Astringent and hemostatic.
gallicum, <i>i.</i>	5-20 gr.	0.3-1.3	
hydriodicum dilutum...	$\frac{1}{2}$ -1 fl.dr.	1.0-4.0	Same as <i>Iodids.</i>
hydrobromicum dilutum	$\frac{1}{2}$ -2 fl.dr.	1.0-8.0	Same as <i>Bromids.</i>
hydrochloricum, <i>i.</i>	2-5 min.	0.13-0.3	Digestive, tonic, antiseptic.
dilutum.....	5-30 min.	0.3-2.0	<i>Dilute prussic acid.</i> Violent poison. In small doses antiemetic and cough sedative. Locally, anesthetic.
hydrocyanicum dilutum	1-3 min.	0.06-0.2	
hypophosphorosum dilutum.....	3-10 min.	0.2-0.6	Nerve tonic.
lacticum, <i>i.</i>	$\frac{1}{2}$ -1 fl.dr.	1.0-4.0	
muriaticum, <i>i.</i>	Antiseptic, refrigerant. Externally, caustic.
nitricum, <i>i.</i>	Externally	See <i>Acidum hydrochloricum.</i>
dilutum.....	5-30 min.	0.3-2.0	Caustic, corrosive poison.
nitrohydrochloricum...	1-5 min.	0.06-0.3	Alterative, tonic.
dilutum.....	5-20 min.	0.3-1.3	Hepatic stimulant, tonic.
oxalicum, <i>i.</i>	$\frac{1}{2}$ -1 gr.	0.008-0.016	Emmenagogue. Externally, antiseptic.
phosphoricum, <i>i.</i>	Rarely internally	
dilutum.....	10-60 min.	0.6-4.0	Tonic.
picricum, <i>i.</i>	Externally	One to 3 per cent. solution. Burns, erysipelas, chilblains, gonorrhea.
prussicum, <i>i.</i>	See <i>Acidum hydrocyanicum.</i>
pyrogallicum.....	Externally	<i>Pyrogallol.</i> Local stimulant in chronic skin diseases.
quinicum, <i>i.</i>	4-8 gr.	0.25-0.5	In gout and rheumatism.
salicylicum, <i>i.</i>	5-30 gr.	0.3-2.0	Antipyretic, antirheumatic, antiseptic.
sulphuricum, <i>i.</i>	Externally	Escharotic, corrosive poison.
aromaticum.....	5-20 min.	0.3-1.3	Astringent, antihydrotic, antidote in lead-poisoning.
dilutum.....	5-30 min.	0.3-2.0	Same as preceding.

POSOLOGIC AND THERAPEUTIC TABLE --(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Acidum sulphurosum, <i>i</i> ...	5-60 min.	0.3-4.0	Internally, antiseptic. Externally, parasiticide.
tannicum, <i>i</i>	5-15 gr.	0.3-1.0	Astringent in mucous discharges and hemorrhages.
glyceritum.....	10-60 min.	0.6-4.0	Locally, 5 to 10 per cent. solution.
suppositorium.....	3 gr. in each	0.2	
trochisci.....	1 gr. in each	0.00	
unguentum.....	Externally		
tartaricum, <i>i</i>	5-30 gr.	0.3-2.0	Refrigerant. Also used in making effervescing drinks and powders.
thymicum, <i>i</i>	5-10 gr.	0.3-0.6	Body present in thymus gland and pancreas. Used in gout.
trichloracetikum, <i>i</i>	Externally		Caustic, astringent, hemostatic.
valericum, <i>i</i>	1-5 min.	0.00-0.3	Antispasmodic for hysteria.
Aconitina, <i>a</i>	600-240 gr.	0.00011-0.00025	
oleatum.....	2 per cent.		Locally, in neuralgia. Dangerous on raw surfaces.
Aconitum, <i>i</i>	1-2 gr.	0.06-0.13	Heart sedative, febrifuge, antineuralgic.
extractum.....	½-½ gr.	0.01-0.03	Fever with rapid, strong pulse. In acute tonsillitis, pharyngitis, and pneumonia.
fluidextractum.....	½-2 min.	0.03-0.13	Internally and locally in neuralgia.
tinctura.....	3-10 min.	0.2-0.6	
Flemming's.....	½-2 min.	0.03-0.13	
Actæa racemosa.....			See <i>Cimicifuga</i> .
Actol.....	½ gr.	0.01	<i>Silver lactate</i> . Antiseptic, 1:200 to 1:1000 solution.
Adeps.....	ad lib.		<i>Lard</i> . Emollient.
lanæ.....			<i>Wool-fat</i> .
hydrosus.....			<i>Hydrous wool-fat</i> . 30 per cent. water.
Adnephrin.....			See <i>Adrenalin</i> .
Adonidin.....	16-½ gr.	0.004-0.016	
Adonis vernalis.....	3-6 gr.	0.2-0.4	<i>False hellebore</i> . Action like digitalis.
Adrenalin.....	5-30 min. (1:1000 solution)	0.3-2.0	Active principle of <i>suprarenal gland</i> . Used locally in hay-fever and as a hemostatic in operations on nose, eye, throat, etc., in solutions of 1:1000 to 1:10,000. Given by mouth in gastric bleeding; also used hypodermically or intravenously as a constrictor of vessels in shock.
Æsculus glabra, fluidextractum.....	3-6 min.	0.2-0.4	<i>Buckeye</i> . Chiefly for hemorrhoids.
hippocastanum, <i>i</i>			<i>Horse-chestnut</i> . Recommended as an emmenagogue; also in piles.
tinctura.....	10-20 min.	0.6-1.3	
Æther, <i>is</i>	10-60 min.	0.6-4.0	<i>Ether</i> . General anesthetic and antispasmodic; also diffusible stimulant.
aceticus.....	10-30 min.	0.6-2.0	Chiefly <i>ethyl acetate</i> . Antispasmodic and anodyne; also a flavor.
hydriodicum.....			See <i>Æthylis iodidum</i> .
hydrobromicum.....			See <i>Æthylis bromidum</i> .
nitrosus, spiritus.....	½-2 fl.dr.	1.0-8.0	<i>Sweet spirits of niter</i> . Mild febrifuge and diuretic.
spiritus compositus.....	½-1½ fl.dr.	2.0-6.0	<i>Hoffmann's anodyne</i> (ether, 325; ethereal oil, 25; alcohol, 625). Heart stimulant; also antispasmodic in gastralgia, asthma, and angina pectoris.
Æthylis bromidum, <i>i</i>			General anesthetic for short operations (1½-4 drams). Also local anesthetic.
carbamas, <i>atis</i>	10-60 gr.	0.6-4.0	<i>Urethan</i> . Hypnotic.
chloridum, <i>i</i>			General anesthetic for short operations (1-3 drams). Also local anesthetic.
iodidum, <i>i</i>	5 min.	0.3	Inhaled in asthma.
Agar-agar.....			<i>Japanese isinglass</i> . In making culture-media for bacteria.
Agaricin.....			See <i>Acidum agaricum</i> .
Agurin.....	5-15 gr.	0.3-1.0	<i>Theobromin sodium</i> and <i>sodium acetate</i> . Powerful diuretic.
Airol.....			<i>Bismuth oxyiodogallate</i> . Action resembles that of iodoform.
Alcohol, <i>is</i>			94.9 per cent. (vol.) ethyl alcohol.
absolutum.....			99 per cent. (vol.) ethyl alcohol.
amylicum.....			Impure form known as "fusel oil." Used as a solvent.
dilutum.....			48.9 per cent. (vol.) ethyl alcohol.
methylicum.....			<i>Wood alcohol</i> . Poison. May cause blindness if drunk or inhaled in large amounts.
Aletris, <i>i</i> , farinosa, <i>a</i>	5-10 gr.	0.3-0.6	<i>Star-grass</i> . Bitter tonic.
fluidextractum.....	5-30 min.	0.3-2.0	
Allium, <i>is</i>	½-2 dr.	2.0-8.0	<i>Garlic</i> . Expectorant and diuretic.
syrupus.....	1-4 dr.	4.0-16.0	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c	Action and Uses.
Allspice.....	See <i>Pimenta</i> .
Allyl sulphocarbamid.	$\frac{1}{2}$ –1 $\frac{1}{2}$ gr.	0.03–0.1	<i>Thiosinamin</i> . Used hypodermically and internally (10 per cent. hydro-alcoholic or glycerin-aqueous solution) as a solvent of scar tissue, in strictures, lupus, etc.
Almond.....	See <i>Amygdala</i> .
Aloe, <i>es</i>	2–6 gr.	0.13–0.4	<i>Aloes</i> . Cathartic, stomachic, and emmenagogue. To be avoided in acute hemorrhoids and inflammation of lower bowel. From six to twelve hours in acting.
et asafœtidæ pilulæ.....	1 to 5 pills	
et ferri pilulæ.....	1 to 4 pills	
et masticis pilulæ.....	1 to 3 pills	
et myrrhæ pilulæ.....	1 to 6 pills	
tinctura.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0	
extractum.....	$\frac{1}{2}$ –5 gr.	0.03–0.3	
pilulæ.....	1 to 4 pills	
purificata.....	2–6 gr.	0.13–0.4	
tinctura.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0	
vinum.....	1–2 fl.dr.	4.0–8.0	
Aloinum, <i>i</i>	$\frac{1}{2}$ –2 gr.	0.03–0.13	
Alphozone.....	3–5 gr.	0.2–0.3	<i>Succinyl peroxid</i> . Germicide and antiseptic. Used externally (1 per cent. solution or 10 per cent. dusting-powder) and internally.
Althæa, <i>æ</i>	ad lib.	<i>Marshmallow</i> . Demulcent in irritation of mucous membranes.
decoctum.....	ad lib.	
syropus.....	ad lib.	
Alumen, <i>inis</i>	5–30 gr.	0.3–2.0	<i>Alum</i> ; aluminum and potassium sulphate. Astringent, hemostatic, and emetic. Locally, 1 to 5 per cent. solution. Emetic dose, 1 to 2 drams.
exsiccatum.....	<i>Dried or burnt alum</i> . Caustic and astringent.
Aluminum, <i>i</i> , acetas.....	5–10 gr.	0.3–0.6	Astringent and antiseptic.
et ammonii sulphas.....	5–30 gr.	0.3–2.0	<i>Ammonia alum</i> . Used same as alum.
et potassii sulphas.....	5–30 gr.	0.3–2.0	See <i>Alumen</i> .
sulphas.....	Externally	
Amber.....	See <i>Succinum</i> .
Ambergris.....	5–20 gr.	0.3–1.3	Antispasmodic.
American agave.....	2 fl.oz.	60.0	Laxative and diuretic.
calumba.....	See <i>Frasera</i> .
hellebore.....	See <i>Veratrum</i> .
wormseed.....	See <i>Chenopodium</i> .
Ammoniacum, <i>i</i>	5–30 gr.	0.3–2.0	<i>Ammoniac</i> . Expectorant and rubefacient. Action somewhat like that of asafetida. Locally in glandular enlargements and inflamed joints.
cum hydrargyrum em- plastrum.....	Externally	
emplastrum.....	Externally	
emulsum.....	$\frac{1}{2}$ –1 fl.oz.	15.0–30.0	
Ammonia, aqua.....	5–30 min.	0.3–2.0	<i>Ammonia-water, spirit of hartshorn</i> . Internally, as a circulatory and respiratory stimulant and also antacid. Externally, as a rubefacient liniment in sprains, etc.
fortior.....	Externally	
linimentum.....	Externally	
spiritus.....	10–40 min.	0.6–2.6	
aromaticus.....	20–60 min.	1.3–4.0	
Ammonio-ferric alum.....	3–10 gr.	0.2–1.6	
Ammonium, <i>ii</i> , acetas liquor.....	1–4 fl.dr.	4.0–16.0	<i>Ferri et ammonii sulphas</i> . Styptic.
benzoas.....	5–15 gr.	0.3–1.0	<i>Spirit of Mindererus</i> . Mild febrifuge and diuretic in febrile conditions. The chlorid and carbonate are valuable expectorants. The bromid acts like potassium bromid; the iodid, like potassium iodid, and the salicylate like sodium salicylate. The sulphoichthyolate is known as ichthyol. The valerate is used as antispasmodic. The other salts are rarely employed.
bromidum.....	5–30 gr.	0.3–2.0	
carbonas.....	5–10 gr.	0.3–0.6	
chloridum.....	5–20 gr.	0.3–1.3	
fluoridum.....	$\frac{1}{4}$ – $\frac{1}{2}$ gr.	0.015–0.05	
hypophosphis.....	1–6 gr.	0.06–0.4	
iodidum.....	3–20 gr.	0.2–1.3	
phosphas.....	5–20 gr.	0.3–1.3	
picras.....	$\frac{1}{8}$ – $\frac{1}{2}$ gr.	0.008–0.1	
salicylas.....	5–30 gr.	0.3–2.0	
sulpho-ichthyolas.....	5–10 gr.	0.3–0.6	
valeras.....	1–8 gr.	0.06–0.5	
Amygdala, <i>æ</i> , amara.....	<i>Bitter almond</i> . The oil of bitter almond acts similarly to prussic acid.
aqua.....	2–4 fl.dr.	8.0–16.0	
oleum.....	$\frac{1}{4}$ – $\frac{1}{2}$ min.	0.016–0.03	
spiritus.....	5–20 min.	0.3–1.3	
dulcis.....	
emulsum.....	1–4 fl.dr.	4.0–16.0	<i>Sweet almond</i> . The meal of expressed cake is used in toilet powders. As it contains no starch, it is also used in bread for diabetics. The oil is a useful emollient.
oleum expressum.....	1–4 fl.dr.	4.0–16.0	
syropus.....	1–4 fl.dr.	4.0–16.0	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Amyleni hydras.....	$\frac{1}{4}$ - $1\frac{1}{2}$ fl.dr.	1.0-6.0	<i>Amylene hydrate</i> . Hypnotic, antispasmodic. Used in capsules.
Amylis nitris.....	1-5 min.	0.06-0.3	<i>Amyl nitrite</i> . Vasodilator and antispasmodic. Used chiefly by inhalation in angina pectoris, convulsions, asthma.
Amylum, <i>i</i>	ad lib.	<i>Starch</i> . Demulcent. Antidote in iodine poisoning.
iodidum.....	$\frac{1}{4}$ -4 dr.	2.0-16.0	
Anacardium, <i>ii</i> , occiden- tale.....	
oleum.....	2-10 min.	0.12-0.6	<i>Cashew-nut</i> . Oil used as local remedy in leprosy, ring-worm, corns; vermifuge internally.
Anacyclus pyrethrum....	See <i>Pyrethrum</i> .
Analgen.....	5-15 gr.	0.3-1.0	Antipyretic, analgesic, and antirheumatic, resembling phenacetin in action.
Analgesin.....	See <i>Antipyrina</i> .
Anamirta, <i>a</i> , paniculata tinctura.....	2-10 min.	0.12-0.6	<i>Fish-berries</i> , <i>Cocculus indicus</i> . Seeds contain picrotoxin, which combines action of strychnin and atropin. Used in nervous exhaustion, atony of stomach and bowel, night-sweats. Locally, tincture is used to destroy head lice.
Ananassa sativa.....	<i>Pineapple</i> . Juice digests albumins. Used locally in diphtheria.
Anemone pratensis.....	See <i>Pulsatilla</i> .
pulsatilla.....	See <i>Pulsatilla</i> .
Anemonin.....	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.016-0.05	Antispasmodic, emmenagogue. Alternative in catarrhal affections.
Anesthesin.....	1-10 gr.	0.03-0.6	Powerful local anesthetic in laryngeal tuberculosis, anal fissure, gastric ulcer, etc.
Anethum, <i>i</i> , feniculum....	See <i>Feniculum</i> .
Angelica, <i>a</i>	10-30 gr.	0.6-2.0	Stomachic and carminative.
Angustura, <i>a</i>	5-30 gr.	0.3-2.0	<i>Cusparia bark</i> . Gastro-intestinal tonic.
extractum.....	5-10 gr.	0.3-0.6	
infusum.....	$\frac{1}{2}$ -1 fl.oz.	15.0-33.0	
tinctura.....	1-2 fl.dr.	4.0-8.0	
Anhalonium, <i>i</i> , lewinii....	<i>Mescal buttons</i> . Contain <i>pellotinum</i> . Hypnotic and nerve sedative.
Anisum, <i>i</i>	10-30 gr.	0.6-2.0	<i>Anise</i> .
aqua.....	ad lib.	
oleum.....	1-5 min.	0.06-0.3	
spiritus.....	1-2 fl.dr.	4.0-8.0	Stomachic and carminative.
Anthemis, <i>dis</i>	15-60 gr.	1.0-4.0	<i>Chamomile</i> . Stomachic, antispasmodic, emmenagogue.
extractum.....	3-10 gr.	0.2 0.6	
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
infusum.....	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0	
Antifebrin.....	See <i>Acetanilidum</i> .
Antimonial powder.....	3-10 gr.	0.13 ² -0.65	<i>James' powder</i> . Diaphoretic in fevers.
Antimonium, <i>ii</i>	<i>Antimony</i> . Emetic, expectorant, heart sedative, and vesicant. At present chiefly used as an expectorant in acute bronchitis and laryngitis.
oxidum.....	2-4 gr.	0.13-0.26	<i>Tartar emetic</i> .
pilule composita.....	1 to 3 pills	
et potassii tartras.....	$\frac{1}{30}$ - $\frac{1}{2}$ gr.	0.002-0.03	
sulphuratum.....	1-20 gr.	0.06-1.3	
unguentum.....	Externally	
vinum.....	5-60 min.	0.3-4.0	
Antipyrina, <i>a</i>	5-15 gr.	0.3-1.0	<i>Antipyrin</i> , <i>phenazone</i> , <i>analgesin</i> . Antipyretic, analgesic in headache, neuralgia; antispasmodic in epilepsy and chorea. Locally styptic and antiseptic.
salicylas.....	8-30 gr.	0.5-2.0	Blood-serum of animals which have suffered removal of thyroid gland. Recommended in exophthalmic goiter.
Antithyroidin.....	8-75 min.	0.5-5.0	<i>Slavov's anti-anthrax serum</i> . Of definite value in anthrax.
Antitoxin, anthrax.....	30-40 c.c. subcutaneously, repeated in 24 hours if necessary. In severe cases 10 c.c. intravenously.	<i>Haffkine's preventive</i> has been used with success in India.
cholera.....	1 c.c., repeated in three or four days.	See <i>Serum antidiphthericum</i> .
diphtheria.....	On trial.
dysentery.....	20 c.c. and upward subcutaneously.	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Antitoxin, meningitis....	30-40 c.c. injected into spinal canal after withdrawal of an equal amount of cerebrospinal fluid, once a day, for several days.	<i>Antimeningococcic serum.</i> Of definite value in cerebrospinal meningitis.
plague, Yersin's serum.	20-40 c.c. as curative dose and 10 c.c. as a preventive.	Protection lasts about three months.
Haffkine's prophylactic fluid.....	3 c.c.	
Lustig's antiplague vaccine.....	7 c.c. intravenously.	<i>Antipneumonic serum.</i> Of doubtful utility.
pneumonia.....	20-30 c.c. subcutaneously thrice daily.	
septicemia.....	30 c.c. subcutaneously, repeated daily.	<i>Antistreptococcus serum.</i> Recommended in sepsis, ulcerative endocarditis, erysipelas, puerperal fever, and scarlet fever.
tetanus.....	30-100 c.c. subcutaneously, repeated every eight hours; 30 c.c. as a preventive.	Of much greater value as a preventive than as a curative remedy.
Antitussin.....	Externally	75 grains (5 gm.) by inunction in whooping-cough.
Antivenene.....	10-40 c.c. subcutaneously or intravenously.	<i>Calmelte's snake-venom antitoxin.</i>
Anusol.....	<i>Bismuthi iodo-resorcin sulphonas.</i> In suppositories for hemorrhoids.
Apiol.....	5-10 min.	0.3-0.6	An oily principle from <i>parsley</i> . Emmenagogue.
Apium petroselinum.....	1-2 dr.	4.0-8.0	<i>Parsley</i> . Emmenagogue, diuretic, carminative.
Apocodeina, <i>æ</i>	$\frac{1}{2}$ -1 gr.	0.02-0.065	Expectorant; subcutaneously, a laxative.
Apocynum, <i>i</i> , cannabinum	10-20 gr.	0.6-1.3	<i>Canadian hemp.</i> Heart stimulant, diuretic, and cathartic. Resembles digitalis in action, but more irritant.
decoctum.....	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	
fluidextractum.....	5-30 min.	0.3-2.0	Prompt emetic when given subcutaneously and expectorant by mouth.
tinctura.....	5-60 min.	0.3-4.0	
Apomorphinæ hydrochloridum, <i>i</i>	$\frac{1}{20}$ - $\frac{1}{2}$ gr.	0.003-0.008	Expectorant; subcutaneously, a laxative.
Aralia, <i>æ</i> , ginseng.....	$\frac{1}{2}$ -2 dr.	2.0-8.0	<i>Chinese ginseng.</i> Nerve sedative.
nudicaulis.....	30-60 gr.	2.0-4.0	<i>False sarsaparilla.</i> Alterative in rheumatism, syphilis, etc.
spinosa.....	30-60 gr.	2.0-4.0	<i>Prickly elder.</i> Alterative.
Araroba, <i>æ</i>	<i>Goa powder.</i> See <i>Chrysarobinum</i> .
Arbor vitæ.....	5-30 gr.	0.3-2.0	<i>Thuja occidentalis.</i> Alterative. Locally, irritant for warts and indolent ulcers.
fluidextractum.....	10-20 min.	0.6-1.3	Glucosid from uva-ursi. Diuretic.
Arbutin.....	1-10 gr.	0.065-0.65	See <i>Uva-ursi</i> .
Arctostaphylos uva-ursi.....	<i>Betel nut.</i> Vermifuge; contains arecofin.
Areca catechu.....	2-4 dr.	8.0-16.0	Used in 1 per cent. solution in the eye as a substitute for eserine.
Arecolinæ hydrobromidum.....	An aqueous solution of silver nitrate and ethylenediamin corresponding in strength to 10 per cent. solution of silver nitrate.
Argentamine.....	Externally	<i>Silver.</i> Internally, astringent and antiseptic. Externally, caustic, astringent, stimulant, and germicide.
Argentum, <i>i</i>	<i>Irol.</i> 1:10,000 to 1:4,000 solutions and 1 to 2 per cent. ointments.
citras.....	Locally	<i>Collargol, soluble silver.</i> Intravenously, 1 to 2 grains, or 1 dram of 15 per cent. ointment (ung. Cr���) by inunction in septic diseases.
colloidal.....	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.016-0.03	Sedative in epilepsy and chorea.
cyanidum.....	$\frac{1}{60}$ - $\frac{1}{20}$ gr.	0.001-0.003	<i>Tachiol.</i> Powerful antiseptic in 1:1000 to 1:100 solutions.
fluoridum.....	Externally	Alterative.
iodidum.....	$\frac{1}{20}$ - $\frac{1}{10}$ gr.	0.003-0.0065	<i>Actol.</i> Antiseptic in 1:1000 to 1:200 solutions.
lactas.....	Externally	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Argentum nitras.....	$\frac{1}{4}$ gr.	0.016-0.03	Antiseptic and astringent. Externally, caustic in pure form and astringent and antiseptic in solutions of from 5 to 30 grains to 1 ounce.
oxidum.....	$\frac{1}{2}$ gr.	0.03-0.13	Sedative in epilepsy and chorea.
Argyrol.....	A silver salt combined with albumin from wheat. Antiseptic and antgonorrhœic in 2 to 20 per cent. solutions.
Aristochin.....	2-15 gr.	0.13-1.0	<i>Diquinin carbonic ester</i> . Tasteless substitute for quinin.
Aristol.....	See <i>Thymolis iodidum</i> .
Arnica, α	5-20 gr.	0.3-1.3	<i>Leopard's-bane</i> . Alternative. Externally, stimulant in bruises, etc.
emplastrum
extractum.....	1-3 gr.	0.6-0.2
fluidextractum.....	5-10 min.	0.3-0.6
tinctura.....	5-20 min.	0.3-1.3
Arrhenal.....	$\frac{3}{4}$ gr.	0.025-0.2	Organic arsenic salt. Alternative. Used subcutaneously.
Arsenicum, i	<i>Arsenic</i> . Alternative, tonic, antimalarial.
bromidum.....	$\frac{30}{100}$ gr.	0.001-0.004	Chiefly in diabetes.
chloridum.....	$\frac{30}{100}$ gr.	0.001-0.004	Alternative.
et hydrargyri iodidi liq-
uoris.....	3-15 min.	0.2-1.0	<i>Donovan's solution</i> . Alternative.
iodidum.....	$\frac{30}{100}$ gr.	0.003-0.013	Alternative.
trioxidum.....	$\frac{30}{100}$ gr.	0.001-0.004	<i>Arsenous acid</i> ; while arsenic.
Artemisia, α , absinthium.	$\frac{1}{2}$ i dr.	1.0-4.0	<i>Absinth</i> . Stomachic, anthelmintic.
extractum.....	1-10 gr.	0.06-0.6
fluidextractum.....	15-60 min.	1.0-4.0
pauciflora.....	$\frac{1}{2}$ i dr.	1.0-4.0
Asafœtida, α	2-15 gr.	0.13-1.0	<i>Sanonica</i> , <i>Levant wormseed</i> . Contains san-
emulsum.....	$\frac{1}{2}$ i fl.oz.	15.0-30.0	tonin. Anthelmintic, emmenagogue.
pilulæ.....	2 to 5 pills	<i>Asafetida</i> . Antispasmodic in hysteria,
et aloes.....	2 to 4 pills	neurasthenia, etc. Expectorant; carmin-
tinctura.....	$\frac{1}{2}$ i dr.	2.0-4.0	ative for flatulence.
Asarum, i	10-30 gr.	0.6-2.0	<i>Wild ginger</i> . Carminative, diaphoretic,
tinctura.....	$\frac{1}{2}$ i fl.dr.	2.0-4.0	and diuretic.
Asclepias, δ is.....	15-60 gr.	1.0-4.0	<i>Pleurisy root</i> . Expectorant, diaphoretic,
fluidextractum.....	$\frac{1}{2}$ i fl.dr.	2.0-4.0	carminative.
incarnata.....	<i>White Indian hemp</i> . Diuretic.
tinctura.....	5-40 min.	0.3-2.5
Asparagin.....	1-2 gr.	0.065-0.13	<i>Althein</i> . From asparagus and marshmal-
Aspidium, i	$\frac{1}{2}$ 2 dr.	2.0-8.0	low. Diuretic.
oleoresina.....	$\frac{1}{2}$ i dr.	2.0-4.0	<i>Male-fern</i> ; <i>filix mas</i> . Vermifuge for tape-
Aspidosperma, δ is.....	15-30 gr.	1.0-2.0	worms.
extractum.....	2-8 gr.	0.13-0.5	<i>Quebracho</i> . Respiratory stimulant and an-
fluidextractum.....	15-30 min.	1.0-2.0	tispasmodic in various forms of asthma.
tinctura.....	1-4 fl.dr.	4.0-16.0
Aspidosperminæ sulphas..	$\frac{30}{100}$ gr.	0.001-0.002
Aspirin.....	5-15 gr.	0.3-1.0	<i>Acetylsalicylic acid</i> . Antirheumatic and
Atoxyl.....	$\frac{1}{2}$ 3 gr.	0.03-0.2	analgesic.
Atropina, α	$\frac{30}{100}$ gr.	0.0003-0.00065	<i>Sodium aminophenyl arsenate</i> . A relatively
methylbromid.....	$\frac{10}{100}$ gr.	0.006-0.012	non-toxic organic arsenic compound.
salicylas.....	$\frac{100}{100}$ gr.	0.00065-0.001	<i>Atropin</i> . Respiratory and circulatory
sulphas.....	$\frac{300}{100}$ gr.	0.0003-0.00065	stimulant, antisudorific, mydriatic.
valeras.....	$\frac{100}{100}$ gr.	0.00065-0.001
Aurantii amari cortex.....	$\frac{1}{2}$ 2 dr.	1.0-2.0	<i>Bitter orange-peel</i> . Aromatic bitter and
fluidextractum.....	10-30 min.	0.6-2.0	carminative.
tinctura.....	$\frac{1}{2}$ 2 fl.dr.	0.2-8.0
dulcis cortex.....	$\frac{1}{2}$ 3 dr.	1.0-2.0	<i>Sweet orange-peel</i> . Flavoring agent.
syrupus.....	ad lib.
tinctura.....	1-2 fl.dr.	4.0-8.0
florum syrupus.....	ad lib.
Aurum, i	<i>Gold</i> . Alternative in syphilis and nervous
bromidum.....	$\frac{10}{100}$ gr.	0.001-0.004	disorders.
chloridum.....	$\frac{30}{100}$ gr.	0.001-0.004
cyanidum.....	$\frac{30}{100}$ gr.	0.003-0.006
et sodii chloridum.....	$\frac{30}{100}$ gr.	0.002-0.008
Balsamum, i , gurjunæ.....	$\frac{1}{2}$ 2 fl.dr.	2.0-8.0	<i>Gurjun balsam</i> ; <i>wood oil</i> . Employed lo-
peruvianum.....	5-30 min.	0.3-2.0	cally in leprosy. Also internally as an
			expectorant.
			<i>Balsam of Peru</i> . Expectorant and urinary
			disinfectant. Used externally in indolent
			ulcers, scabies, ring-worm, and chilblains

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Balsamum toltutanum....	5-30 min.	0.3-2.0	<i>Balsam of tolu.</i> Expectorant and flavoring agent.
Baptisia, <i>æ</i> , tinctoria....	5-15 gr.	0.3-1.0	<i>Wild indigo.</i> Stimulant in scarlatina, typhoid fever, and dysentery. Cathartic.
tinctura.....	5-30 min.	0.3-2.0	See <i>Berberis</i> .
Barberry.....	Cardiac stimulant and alterative.
Barium, <i>i</i> , chloridum....	$\frac{1}{2}$ -1½ gr.	0.03-0.1	Alterative in syphilis; also depilatory.
sulphidum.....	$\frac{1}{2}$ -1 gr.	0.01-0.065	See <i>Liquor ferri et ammonii acetatis</i> under <i>Ferrum</i> .
Basham's mixture.....	See <i>Uva-ursi</i> .
Bearberry.....	Respiratory and circulatory stimulant, mydriatic; antispasmodic in asthma, irritable bladder, colic, and whooping-cough.
Belladonna, <i>æ</i> , folia....	$\frac{1}{2}$ -2 gr.	0.03-0.13	Arrests secretion of sweat, saliva, and milk. Locally, sedative.
emplastrum.....	Externally
extractum foliorum....	$\frac{1}{2}$ -½ gr.	0.016-0.03
fluidextractum radices..	1-5 min.	0.06-0.3
linimentum.....	Externally
radix.....	$\frac{1}{2}$ -2 gr.	0.03-0.13
tinctura.....	1-30 min.	0.06-2.0
unguentum.....	Externally
Benzanilid.....	3-12 gr.	0.2-0.8	Similar to acetanilid.
Benzinum, <i>i</i>	5-10 min.	0.3-0.6	<i>Benzin.</i> Internally in cough. Externally, for lice.
Benzoinum, <i>i</i>	5-30 gr.	0.3-2.0	<i>Benzoin.</i> Stimulant expectorant, diuretic, and antiseptic. Renders urine acid. Externally, dressing for small wounds.
tinctura.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	Intestinal antiseptic.
composita.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	See <i>Guaiacolis benzoas</i> .
Benzonaphthol.....	4-8 gr.	0.26-0.5	<i>Saccharin.</i> Substitute for sugar, especially in diabetes.
Benzosol.....	Bitter tonic and antiperiodic.
Benzosulphinidum, <i>i</i>	1-5 gr.	0.065-0.3
Berberinæ hydrochloridum	5-15 gr.	0.3-1.0
sulphas.....	5-15 gr.	0.3-1.0
Berberis, <i>dis</i>	15-30 gr.	1.0-2.0
fluidextractum.....	10-30 min.	0.6-2.0
Beta-eucain.....	See <i>Eucainæ hydrochloridum</i> .
Betanaphthol.....	3-10 gr.	0.2-0.6	Antiseptic and germicide; also vermifuge.
bismuth.....	5-30 gr.	0.3-2.0	<i>Orphol.</i> Antiseptic.
Betol.....	2-8 gr.	0.13-0.5	<i>Naphthosolol.</i> Antiseptic.
Biogen.....	5-15 gr.	0.3-1.0	<i>Magnesium peroxid.</i> Alterative.
Bismuthum, <i>i</i>	<i>Bismuth.</i> Protective, antacid, astringent, and feeble antiseptic. Especially useful in gastric and intestinal inflammation and diarrhea.
citras.....	1-3 gr.	0.06-0.2
et ammonii citras.....	1-5 gr.	0.06-0.3
oxidum.....	5-20 gr.	0.3-1.3
oxyiodidum.....	Externally
phosphas.....	3-8 gr.	0.2-0.5
subcarbonas.....	5-30 gr.	0.3-2.0
subgallas.....	5-30 gr.	0.3-2.0
subnitras.....	5-30 gr.	0.3-2.0
subsalicylas.....	5-30 gr.	0.3-2.0
tannas.....	5-30 gr.	0.3-2.0
Bismutose.....	30-60 gr.	2.0-4.0
Bitter almond.....	Composed of <i>bismuth</i> and <i>albumin</i> , containing 20 per cent. of former.
apple.....	See <i>Amygdala amara</i> .
candytuft.....	1-3 gr.	0.06-0.10	See <i>Colocynthis</i> .
orange-peel.....	In asthma.
sweet.....	See <i>Aurantii amari cortex</i> .
Blackberry.....	See <i>Dulcamara</i> .
Black cohosh.....	See <i>Rubus</i> .
draught.....	See <i>Cimicifuga</i> .
haw.....	See <i>Sennæ infusum compositus</i> .
hellebore.....	See <i>Viburnum prunifolium</i> .
snakeroot.....	See <i>Hellebore niger</i> .
wash.....	See <i>Cimicifuga</i> .
Blatta orientalis.....	3-5 gr.	0.2-0.3	<i>Lotio nigra</i> .
Blaud's pills.....	<i>Cockroach.</i> Diuretic.
Bloodroot.....	See <i>Ferri carbonatis pilula</i> .
Blue cohosh.....	See <i>Sanguinaria</i> .
flag.....	See <i>Caulophyllum</i> .
mass.....	See <i>Iris</i> .
pill.....	See <i>Hydrargyri massa</i> .
vitriol.....	See <i>Hydrargyri massa</i> .
Boldoa fragrans.....	1-3 gr.	0.065-0.2	See <i>Cupri sulphas</i> .
tinctura.....	10-20 min.	0.6-1.3	<i>Boldo.</i> Stomachic, diuretic, alterative.
Boneset.....
Bone-marrow.....	See <i>Eupatorium</i> .
Borax.....	See <i>Medulla ossium rubra</i> .
Bornyval.....	4-8 min.	0.25-0.5	See <i>Sodii boras</i> .
Brandy.....	2-4 dr.	8.0-16.0	<i>Borneol valerate.</i>
			See <i>Spiritus vini gallici</i> .

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Brayera, <i>æ</i>	2-8 dr.	8.0-32.0	<i>Cusso, koussou</i> . Anthelmintic.
Bromalbacid.....	5-10 gr.	0.3-0.6	Contains 6 per cent. of bromin. Antispasmodic.
Bromalin.....	10-30 gr.	0.6-2.0	Antispasmodic.
Brometone.....	5-10 gr.	0.3-0.6	Substitute for bromids.
Bromipin.....	10-60 gr.	0.6-4.0	Compound of bromin (33 per cent.) with sesame oil. Substitute for bromids.
Bromocoll.....	10-60 gr.	0.6-4.0	<i>Bromin-tannin-gelatin compound</i> . Substitute for bromids.
Bromoformum, <i>i</i>	$\frac{1}{2}$ -2 min.	0.03-0.13	<i>Bromoform</i> . Chiefly used as sedative in whooping-cough.
Bromol.....	See <i>Tribromphenol</i> .
Bromopyrin.....	5-20 gr.	0.3-1.3	<i>Antipyrin monobromid</i> .
Bromum, <i>i</i>	Externally	<i>Bromin</i> . Caustic and deodorant.
Bromural.....	5-10 gr.	0.3-0.6	<i>Bromin-urea compound</i> . Hypnotic.
Broom.....	See <i>Scoparius</i> .
Brown mixture.....	See <i>Glycyrrhiza mistura compositus</i> .
Brucina, <i>æ</i>	$\frac{1}{12}$ - $\frac{1}{2}$ gr.	0.005-0.03	<i>Brucin</i> . An alkaloid of nux vomica, resembling strychnin in action.
nitras.....	$\frac{1}{12}$ - $\frac{1}{2}$ gr.	0.005-0.03
sulphas.....	$\frac{1}{12}$ - $\frac{1}{2}$ gr.	0.005-0.03
Bryonia, <i>æ</i>	10-60 gr.	0.6-4.0	<i>Bryony</i> . Hydragogue cathartic, emmenagogue, vesicant.
fluidextractum.....	10-60 min.	0.6-4.0
tinctura.....	1-2 fl.dr.	4.0-8.0
Bryonin.....	$\frac{1}{8}$ - $\frac{1}{2}$ gr.	0.01-0.02
Buchu (indeclinable).....	15-30 gr.	1.0-2.0	<i>Buchu</i> . Diuretic and stimulant to genito-urinary tract.
fluidextractum.....	15-30 min.	1.0-2.0
infusum.....	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0
tinctura.....	1-2 fl.dr.	4.0-8.0
Buckthorn.....	See <i>Frangula</i> .
Burdock.....	See <i>Lappa</i> .
Burgundy pitch.....	See <i>Pix burgundica</i> .
Butternut.....	See <i>Juglans</i> .
Butyl-chloral hydras.....	5-20 gr.	0.3-1.3	<i>Croton-chloral hydrate</i> . Analgesic in neuralgia.
Cactus, <i>i</i> , grandiflorus, <i>i</i>	<i>Night-blooming cereus</i> . Heart tonic.
fluidextractum.....	5-20 min.	0.3-1.3
tinctura.....	5-30 min.	0.3-2.0
Cadmium, <i>ii</i>	<i>Cadmium</i> . Iodid in 10 per cent. ointment in scrofulous glands and inflamed joints.
iodidum.....	Externally	Salicylate or sulphate (1 per cent. lotion) as antiseptic and astringent in eye inflammation and gonorrhea. Sulphate also alternative.
salicylas.....	Externally	<i>Caffein</i> . Cardiac and respiratory stimulant and diuretic.
sulphas.....	$\frac{1}{12}$ - $\frac{1}{2}$ gr.	0.005-0.01
Caffeina, <i>æ</i>	1-3 gr.	0.06-0.2
citrate.....	2-10 gr.	0.13-0.6
effervescens.....	1-3 dr.	4.0-12.0
hydrobromid.....	$\frac{1}{2}$ -5 gr.	0.03-0.3
sodii benzoas.....	2-5 gr.	0.13-0.3
valeras.....	2-5 gr.	0.13-0.3
Cajuputi oleum.....	2-10 min.	0.13-0.6	<i>Cajuputi oil</i> . Rubefacient, carminative, and expectorant.
spiritus.....	5-20 min.	0.3-1.6	See <i>Physostigma</i> .
Calabar bean.....	<i>Calamine</i> . Impure zinc carbonate. Astringent and absorbent. Used in inflammatory skin diseases.
Calamina, <i>æ</i>	Externally	<i>Sweet flag</i> . Stomachic and carminative.
Calamus, <i>i</i>	15-60 gr.	1.0-4.0
extractum.....	2-8 gr.	0.13-0.5
fluidextractum.....	15-60 min.	1.0-4.0
infusum.....	1-2 fl.oz.	30.0-60.0
Calcium, <i>ii</i>	<i>Calcium</i> . Antacid and astringent. Used internally in acid dyspepsia and diarrhea.
bromidum.....	10-20 gr.	0.6-1.3	Chlorid internally in hemorrhage. Phosphate in nervous diseases and rickets.
carbonas præcipitatus.....	10-60 gr.	0.6-4.0	Hypophosphite in tuberculosis. Sulphite internally and externally as antiseptic.
chloridum.....	5-15 gr.	0.3-1.0	Sulphid prevents pus formation. Glycero-phosphate in nervous diseases.
glycerophosphas.....	3-10 gr.	0.2-0.6
hypophosphis.....	3-15 gr.	0.2-1.0
iodidum.....	1-5 gr.	0.06-0.3
lactas.....	1-15 gr.	0.06-1.0
lactophosphas.....	3-10 gr.	0.2-0.6
permanganas.....	1-2 gr.	0.06-0.13
peroxid.....	3-10 gr.	0.2-0.6
phosphas.....	5-20 gr.	0.3-1.3
saccharas.....	5-30 gr.	0.3-2.0
sulphidum.....	$\frac{1}{4}$ -1 gr.	0.016-0.06
sulphis.....	1-5 gr.	0.06-0.3
Calendula, <i>æ</i>	15-60 gr.	1.0-4.0	<i>Marigold</i> . Alterative, resolvent, febrifuge.
extractum.....	2-10 gr.	0.13-0.6	Tincture as an embrocation in sprains, etc.
fluidextractum.....	15-60 min.	1.0-4.0

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Calendula, tinctura.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	See <i>Hydrargyri chloridum mite.</i> <i>Columbo.</i> Bitter tonic for feeble digestion; non-astringent.
Calomel.....	
Calumba, <i>a.</i>	5-30 gr.	0.3-2.0	
extractum.....	1-10 gr.	0.06-0.6	
fluidextractum.....	5-30 min.	0.3-2.0	
infusum.....	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	<i>Lime.</i> Escharotic, depilatory, disinfectant. <i>Bleaching powder.</i> Disinfectant. <i>Carron oil.</i> For burns. <i>Lime-water.</i> An acid. <i>Crude calcium sulphid.</i> Depilatory. In- ternally, in pustular skin diseases. Used in diarrhea, rheumatism, and cyst- itis.
tinctura.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
Calx, <i>cis.</i>	
chlorata.....	
linimentum.....	Externally	
liquor.....	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0	<i>Gamboge.</i> Drastic cathartic. <i>Camphor.</i> Diffusible stimulant, antispas- modic, and carminative. Useful in chor- dee and genital irritation. Externally, in liniment as a rubefacient.
sulphurata.....	$\frac{1}{10}$ - $\frac{1}{2}$ gr.	0.006-0.03	
syrupus.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
Cambogia, <i>a.</i>	$\frac{1}{2}$ -5 gr.	0.03-0.3	
Camphora, <i>a.</i>	2-10 gr.	0.13-0.6	
aqua.....	1-8 fl.dr.	4.0-30.0	See <i>Erigeron.</i> Resin from <i>Cannabis indica.</i> A powder prepared from <i>Cannabis indica.</i> <i>Indian hemp; hashish.</i> Antispasmodic, an- tineuralgic, anodyne. Cough sedative in tuberculosis. Of value in migraine or sick headache.
ceratum.....	Externally	
linimentum.....	Externally	
monobromata.....	2-5 gr.	0.13-0.3	
oleum.....	1-5 min.	0.06-0.3	
spiritus.....	10-60 min.	0.6-4.0	<i>Cantharidal collodion.</i> 60 per cent. can- tharides. Principle of cantharides. Used hypoder- mically in tuberculosis. <i>Cantharides; Spanish fly.</i> Externally, pow- erful vesicant and counterirritant. In- ternally, the tincture is used as an em- menagogue, aphrodisiac, and genito-uri- nary stimulant.
Canada fleabane.....	
Cannabion.....	$\frac{1}{4}$ -1 gr.	0.016-0.06	
Cannabin tannas.....	2-10 gr.	0.13-0.6	
Cannabis, <i>is, indica, a.</i>	2-5 gr.	0.13-0.3	
extractum.....	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.016-0.03	<i>Cayenne pepper.</i> Stomachic in atony of stomach and dyspepsia of drunkards. Carminative. Locally as a gargle in sore throat, and externally as a rubefacient.
fluidextractum.....	3-5 min.	0.2-0.3	
tinctura.....	5-30 min.	0.3-2.0	
Cantharidatum, <i>i, collo-</i> <i>dium.</i>	Externally	
Cantharidin.....	$\frac{1}{1000}$ gr.	0.00004	
Cantharis, <i>idis.</i>	$\frac{1}{2}$ -1 gr.	0.01-0.06	See <i>Carum.</i> <i>Animal charcoal.</i> Absorbent. <i>Wood-charcoal.</i> Absorbent. Used inter- nally in flatulent dyspepsia and externally in dressings for foul ulcers. <i>Cardamom.</i> Stomachic and carminative. Useful in colic and as a flavoring agent.
ceratum.....	Externally	
emplastrum.....	Externally	
tinctura.....	1-5 min.	0.06-0.3	
Capsicum, <i>i.</i>	1-8 gr.	0.06-0.5	
emplastrum.....	Externally	Prepared from meat and iron. Vegetable digestant from <i>papaw.</i> Alkaloid from <i>Carica papaya.</i> Substitute for digitalis. See <i>Linimentum calcis</i> , under <i>Calx.</i> <i>Caraway.</i> Aromatic, carminative, flavor- ing agent.
extractum.....	$\frac{1}{2}$ -2 gr.	0.03-0.13	
fluidextractum.....	1-5 min.	0.06-0.3	
infusum.....	2-4 fl.dr.	8.0-16.0	
oleoresina.....	$\frac{1}{4}$ -1 min.	0.016-0.06	
tinctura.....	5-20 min.	0.3-1.3	See <i>Rhamnus purshiana.</i> <i>Cascarilla.</i> Stomachic in gastric and in- testinal atony.
et myrrhae.....	10-60 min.	0.6-4.0	
Caraway.....	
Carbo, <i>onis, animalis.</i>	10-40 gr.	0.6-2.6	
purificatus.....	10-40 gr.	0.6-2.6	
ligni.....	15-60 gr.	1.0-4.0	<i>Cloves.</i> Carminative, stomachic. Oil used locally in toothache.
Cardamomum, <i>i.</i>	5-20 gr.	0.3-1.3	
tinctura.....	1-2 fl.dr.	4.0-8.0	
composita.....	1-2 fl.dr.	4.0-8.0	
Carniferrin.....	8-15 gr.	0.5-1.0	
Caroid.....	3-10 gr.	0.2-0.6	<i>Purging cassia.</i> Cathartic. <i>Chestnut leaves.</i> Sedative and astringent in whooping-cough.
Carpaina, <i>a.</i>	$\frac{1}{30}$ - $\frac{1}{6}$ gr.	0.002-0.01	
Carron oil.....	
Carum, <i>i.</i>	10-30 gr.	0.6-2.0	
aqua.....	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	
oleum.....	1-6 min.	0.06-0.35	<i>Clones.</i> Carminative, stomachic. Oil used locally in toothache.
Caryophyllus, <i>i.</i>	5-15 gr.	0.3-1.0	
infusum.....	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	
oleum.....	1-5 min.	0.06-0.3	
Cascara sagrada.....	
Cascarilla, <i>a.</i>	15-30 gr.	1.0-2.0	<i>Cassia, a.</i> fistula..... Castanea..... fluidextractum.....
extractum.....	5-8 gr.	0.3-0.5	
infusum.....	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0	
tinctura.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
Cassia, <i>a.</i>	
fistula.....	1-2 dr.	4.0-8.0	<i>Chestnut leaves.</i> Sedative and astringent in whooping-cough.
Castanea.....	15-60 gr.	1.0-4.0	
fluidextractum.....	20-60 min.	1.3-4.0	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
<i>Castanea, infusum</i>	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	
Castor oil.....	See <i>Oleum ricini</i> .
Castoreum, <i>i</i>	10-30 gr.	0.6-2.0	Substance from preputial follicles of the beaver. Antispasmodic like musk.
tinctura.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
Cataplasma kaolini.....	Externally	Clay paste. Substitute for meal poultice.
Cataria, <i>a</i>	15-60 gr.	1.0-4.0	<i>Calnip</i> . Stomachic, carminative, sedative.
fluidextractum.....	1-2 fl.dr.	4.0-8.0	
Catechu (indeclinable)...	10-30 gr.	0.6-2.0	<i>Catechu</i> . Astringent. Replaced by <i>Gambir</i> in Pharmacopœia of 1900.
tinctura compositum...	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
trochisci.....	1 occasionally	
Caulophyllum, <i>i</i>	10-30 gr.	0.6-2.0	<i>Blue cohosh</i> . Uterine sedative.
extractum.....	2-5 gr.	0.13-0.3	
fluidextractum.....	10-30 min.	0.6-2.0	
tinctura.....	1-2 fl.dr.	4.0-8.0	
Cayenne pepper.....	See <i>Capsicum</i> .
Celery seeds.....	Seeds of <i>Apium graveolens</i> . Nerve sedative.
Cephaelin.....	15- $\frac{1}{2}$ gr.	0.005-0.01	Powerful emetic from <i>ipecac</i> .
Cera, <i>a</i> , alba, flava.....	Wax, white, yellow.
Ceratum, <i>i</i>	Externally	<i>Cerate</i> .
Cerevisiæ fermentum.....	$\frac{1}{2}$ -1 oz.	15.0-30.0	<i>Yeast</i> . Added to poultices for unhealthy wounds. Internally, in boils and diabetes.
Cerium, <i>i</i>	1-5 gr.	0.06-0.3	<i>Cerium</i> . Gastric sedative, especially in vomiting of pregnancy.
Cetaceum, <i>i</i>	Externally	<i>Spermaceti</i> .
ceratum.....	Externally	
Cetraria, <i>a</i>	$\frac{1}{2}$ -1 dr.	2.0-4.0	<i>Iceland-moss</i> . Demulcent in gastric, pulmonary inflammations.
decoctum.....	1-4 fl.oz.	30.0-120.0	
Chalk.....	See <i>Creta</i> .
Chamomile.....	See <i>Anthemis</i> .
Charcoal.....	See <i>Carbo</i> .
Chaulmoogra oil.....	See <i>Oleum gynecardiac</i> .
Chelidonium, <i>ii</i>	1-2 dr.	4.0-8.0	<i>Celandine</i> . Alterative, cathartic, expectorant, diaphoretic, and diuretic.
extractum.....	5-10 gr.	0.3-0.6	
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
infusum.....	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0	
Chelsea pensioner.....	1-2 dr.	4.0-8.0	Guaiac resin, 10; magnesium carbonate, 10; sulphur, 15; molasses, 60. Chronic rheumatism and gout.
Chenopodium, <i>ii</i>	15-30 gr.	1.0-2.0	<i>American wormseed</i> . Chiefly for worms.
fluidextractum.....	15-30 min.	1.0-2.0	
oleum.....	2-10 min.	0.13-0.6	
Cherry laurel.....	See <i>Laurocerasi folia</i> .
Chestnut leaves.....	See <i>Castanea</i> .
Chimaphila, <i>a</i>	15-60 gr.	1.0-4.0	<i>Pipsissewa</i> . Stimulant diuretic, almost equivalent to buchu.
extractum.....	3-10 gr.	0.2-0.6	
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
Chinoidinum, <i>i</i>	2-30 gr.	0.13-2.0	<i>Quinoidin</i> . Mixture of amorphous cinchona alkaloids.
Chinotropin.....	5-20 gr.	0.3-1.3	<i>Urotropin quinat</i> . Urinary disinfectant.
Chirata, <i>a</i>	15-30 gr.	1.0-2.0	<i>Chiretta</i> . Stomachic. Equivalent to gentian.
fluidextractum.....	15-30 min.	1.0-2.0	
tinctura.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
Chloralamid.....	See <i>Chloralformamidum</i> .
Chloralformamidum, <i>i</i>	15-30 gr.	1.0-2.0	<i>Chloralamid</i> . Somnifacient.
Chloralose.....	3-10 gr.	0.2-0.6	Somnifacient.
Chloralum, <i>i</i> , hydratum, <i>i</i> .	10-30 gr.	0.6-2.0	<i>Chloral hydrate</i> . Hypnotic and anticonvulsant.
camphoratum, <i>i</i>	<i>Camphorated chloral</i> . Valuable rubefacient application in muscular rheumatism and neuralgia.
Chloretone.....	5-15 gr.	0.3-1.0	<i>Chlorobutanol</i> . Somnifacient.
Chlori, aqua.....	1-2 fl.dr.	4.0-8.0	<i>Chlorin water</i> . Internal and external antiseptic.
Chlorodyne.....	5-15 min.	0.3-1.0	Solution of morphin, chloroform, cannabis indica, hydrocyanic acid, mint, and capsicum. Anodyne.
Chloroformum, <i>i</i>	2-20 min.	0.13-1.3	<i>Chloroform</i> . General anesthetic by inhalation. Internally, antispasmodic, carminative, and vermifuge. Externally, rubefacient.
aqua.....	1-4 fl.dr.	4.0-16.0	
elixir compositum.....	10-40 min.	0.6-2.6	
emulsum.....	1-4 fl.dr.	4.0-16.0	
linimentum.....	Externally	
spiritus.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
Chondrus, <i>i</i>	<i>Irish moss</i> . Demulcent.
Chrysarobinum, <i>i</i>	Externally	<i>Chrysarobin</i> . Externally as a stimulant and parasiticide in certain skin diseases. Also for hemorrhoids.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Cimicifuga, <i>æ</i>	5-30 gr.	0.3-2.0	<i>Black snakeroot</i> or <i>black cohosh</i> . Antispasmodic in chorea; antirheumatic and uterine stimulant.
extractum.....	1-8 gr.	0.06-0.5	
fluidextractum.....	5-30 min.	0.3-2.0	<i>Macrotin</i> (eclectic). Resin from cimicifuga. <i>Peruvian bark</i> . Antimalarial and bitter tonic. See also <i>Quinin</i> .
tinctura.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
Cimicifugin.....	1-5 gr.	0.06-0.3	
Cinchona, <i>æ</i>	10-60 gr.	0.6-4.0	
elixir.....	1-2 fl.dr.	4.0-8.0	
et ferri.....	1-2 fl.dr.	4.0-8.0	
et strychninae.....	1-2 fl.dr.	4.0-8.0	
pepsini et strychninae.....	1-2 fl.dr.	4.0-8.0	
extractum.....	5-15 gr.	0.3-1.0	
fluidextractum.....	15-60 min.	1.0-4.0	
infusum.....	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0	
rubra.....	10-60 gr.	0.6-4.0	
tinctura.....	1-2 fl.dr.	4.0-8.0	
compositum.....	1-2 fl.dr.	4.0-8.0	
Cinchonidina, <i>æ</i>	1-30 gr.	0.06-2.0	<i>Huxham's tincture</i> . <i>Cinchonidin</i> .
salicylas.....	5-30 gr.	0.3-2.0	
sulphas.....	5-30 gr.	0.3-2.0	
Cinchonina, <i>æ</i>	5-30 gr.	0.3-2.0	
bisulphas.....	5-30 gr.	0.3-2.0	
hydrochloridum.....	5-30 gr.	0.3-2.0	
salicylas.....	5-30 gr.	0.3-2.0	
sulphas.....	5-30 gr.	0.3-2.0	
Cinnamomum, <i>i</i>	5-30 gr.	0.3-2.0	<i>Cinnamon</i> . Aromatic, carminative, astringent, and flavoring agent.
aqua.....	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	
oleum.....	1-5 min.	0.06-0.3	
spiritus.....	5-30 min.	0.3-2.0	
tinctura.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
Citarin.....	15-30 gr.	1.0-2.0	Compound of formaldehyd and citric acid. Gout and rheumatism. See <i>Hydrargyri nitras unguentum</i> . See <i>Caryophyllus</i> .
Citrine ointment.....	
Cloves.....	
Coca, <i>æ</i>	15-60 gr.	1.0-4.0	<i>Coca leaves, erythroxylon</i> . Nerve stimulant. Chiefly useful in convalescence from acute diseases. Active principle, <i>cocain</i> .
fluidextractum.....	10-60 min.	0.6-4.0	
vinum.....	2-4 fl.dr.	8.0-16.0	
Cocaina, <i>æ</i>	$\frac{1}{4}$ -1 gr.	0.008-0.06	<i>Cocain</i> . Local anesthetic; circulatory, respiratory, and cerebral stimulant; anti-emetic and mydriatic.
hydrochlorid.....	$\frac{1}{4}$ -1 gr.	0.008-0.06	
oleatum.....	Externally	
Cocculus indicus.....	1-3 gr.	0.06-0.2	<i>Fish-berries</i> . Active principle, <i>picrotoxin</i> . Cerebrospinal and respiratory stimulant, resembling strychnin in action. Locally, for lice.
decoctum.....	1-2 fl.dr.	4.0-8.0	
tinctura.....	3-15 min.	0.2-1.0	
Coccus, <i>i</i>	1-15 gr.	0.06-1.0	<i>Cochineal</i> . Recommended as antispasmodic, but chiefly used as a coloring agent. See <i>Oleum theobromatis</i> .
tinctura.....	15-30 min.	1.0-2.0	<i>Codein</i> . An alkaloid of opium.
Cocoa-butter.....	
Codeina, <i>æ</i>	$\frac{1}{4}$ -2 gr.	0.016-0.13	
hydrochloridum.....	$\frac{1}{4}$ -2 gr.	0.016-0.13	
phosphas.....	$\frac{1}{4}$ -2 gr.	0.016-0.13	
sulphas.....	$\frac{1}{4}$ -2 gr.	0.016-0.13	
Cod-liver oil.....	See <i>Oleum morrhue</i> .
Colchicina, <i>æ</i>	$\frac{1}{10}$ - $\frac{1}{50}$ gr.	0.0005-0.0013	
salicylas.....	$\frac{1}{10}$ - $\frac{1}{50}$ gr.	0.0005-0.0013	
Colchicum, <i>i</i>	<i>Meadow saffron</i> . Alterative in gout and chronic rheumatism. Active principle, <i>colchicin</i> .
cormus.....	2-8 gr.	0.13-0.5	
extractum.....	$\frac{1}{2}$ -2 gr.	0.03-0.13	
semen.....	1-5 gr.	0.06-0.3	
fluidextractum.....	1-5 min.	0.06-0.3	
tinctura.....	10-40 min.	0.6-2.6	
vinum.....	10-40 min.	0.6-2.6	
Collodium, <i>i</i>	Externally	<i>Collodion</i> . An ether-alcohol solution of gun-cotton. Painted over excoriations, etc. <i>Blistering collodion</i> . <i>Flexible collodion</i> . <i>Styptic collodion</i> .
cantharidatum.....	Externally	
flexile.....	Externally	
stypticum.....	Externally	
Colocynthin.....	$\frac{1}{4}$ -1 gr.	0.008-0.016	
Colocynthis, <i>idis</i>	2-10 gr.	0.13-0.6	
extractum.....	$\frac{1}{2}$ -2 gr.	0.016-0.13	
compositum.....	5-15 gr.	0.3-1.0	<i>Colocynth; bitter apple</i> . Drastic cathartic, seldom used alone.
Coltsfoot.....	See <i>Tussilago</i> .
Columbin.....	$\frac{1}{4}$ -1 gr.	0.03-0.06	
Columbo.....	See <i>Calumba</i> .
Condurango.....	15-30 gr.	1.0-2.0	<i>Condurango</i> . Stomachic and supposed specific for gastric cancer.
fluidextractum.....	20-60 min.	1.3-4.0	Solution of potassium permanganate. Disinfectant.
Condy's fluid.....	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
<i>Conina, æ</i>	$\frac{1}{30}$ – $\frac{1}{10}$ gr.	0.0013–0.006	<i>Cicutin</i> . Liquid alkaloid of conium.
hydrobromidum.....	$\frac{30}{50}$ – $\frac{10}{10}$ gr.	0.0013–0.006	
<i>Conium, ii</i>	1–5 gr.	0.06–0.3	<i>Poison hemlock</i> . Sedative and antispasmodic in asthma, whooping-cough, mania, chorea, tetanus. Locally, in poultices to cancerous and other painful sores.
extractum.....	$\frac{1}{2}$ –2 gr.	0.03–0.13	<i>Lily-of-the-valley</i> . Heart stimulant and diuretic. Useful in cardiac dropsy
fluidextractum.....	1–5 min.	0.06–0.3	
tinctura.....	10–60 min.	0.6–4.0	
<i>Convallaria, æ</i>	2–10 gr.	0.13–0.6	
extractum.....	2–8 gr.	0.13–0.5	
fluidextractum.....	2–10 min.	0.13–0.6	
<i>Copaiba, æ</i>	10–60 min.	0.6–4.0	<i>Copaiba</i> or <i>copaiva</i> . Stimulant diuretic and urinary disinfectant in gonorrhea when discharge is purulent and in chronic cystitis. Also stimulant expectorant.
massa.....	15–60 gr.	1.0–4.0	See <i>Cuprum</i> .
oleum.....	5–15 min.	0.3–1.0	<i>Coriander</i> . Stomachic and carminative.
resina.....	5–15 gr.	0.3–1.0	
Copper.....	
<i>Coriandrum, i</i>	10–30 gr.	0.6–2.0	
fluidextractum.....	15–30 min.	1.0–2.0	
oleum.....	2–5 min.	0.13–0.3	
<i>Corn ergot</i>	See <i>Ustilago</i> .
silk.....	See <i>Zea mays</i> .
<i>Cornus, us, circinata, æ</i>	15–60 gr.	1.0–4.0	<i>Round-leaved dogwood</i> . Like dogwood.
fluidextractum.....	15–60 min.	1.0–4.0	
decoctum.....	1–2 fl.oz.	30.0–60.0	
<i>florida, æ</i>	15–60 gr.	1.0–4.0	
fluidextractum.....	15–60 min.	1.0–4.0	
Corrosive sublimate.....	
<i>Cotarnin hydrochloridum</i>	$\frac{1}{4}$ –4 gr.	0.016–0.25	See <i>Hydrargyri chloridum corrosivum</i> .
.....	<i>Stypticin</i> . Allied to hydrastinin. Useful hypodermically or by mouth in uterine hemorrhage.
phthalate.....	$\frac{1}{4}$ –4 gr.	0.016–0.25	<i>Styptol</i> . Same use as cotarnin.
<i>Coto</i>	5–10 gr.	0.3–0.6	<i>Coto bark</i> . Astringent in diarrhea, cholera, and night-sweats.
tinctura.....	10–30 min.	0.6–2.0	Bitter principle of coto.
<i>Cotoin</i>	$\frac{1}{2}$ –2 gr.	0.02–0.13	See <i>Gossypium</i> .
Cotton-root.....	See <i>Triticum repens</i> .
Couch-grass.....	See <i>Mucuna pruriens</i> .
Cowage.....	See <i>Viburnum opulus</i> .
Cramp-bark.....	See <i>Geranium</i> .
Cranesbill.....	See <i>Potassii bitartras</i> .
Cream of tartar.....	<i>Creosote, creasole</i> . Antiseptic and expectorant. Useful in tuberculosis with purulent sputum. Also of value in gastro-intestinal fermentation.
<i>Creosotum, i</i>	1–10 min. or more	0.06–0.6	<i>Creosotal</i> . Valuable expectorant.
aqua.....	1–4 fl.dr.	4.0–15.0	<i>Phosote</i> . Substitute for creosote.
carbonas.....	5–20 gr.	0.3–1.3	<i>Eosote</i> . Substitute for creosote.
phosphas.....	5–20 gr.	0.3–1.3	<i>Cresylic acid</i> . Mixture of cresols from coal-tar. More powerful disinfectant than phenol.
valeras.....	5–15 gr.	0.3–1.0	<i>Chalk</i> . Antacid and astringent. Used in gastric acidity and diarrhea. Also in tooth-powders.
Cresol.....	Externally	<i>Saffron</i> . Antispasmodic and sedative. Recommended to promote eruptions in measles.
<i>Creta, æ</i>	See <i>Butyl-chloral hydras</i> .
preparata.....	10–60 gr.	0.6–4.0	See <i>Oleum tiglii</i> .
mistura.....	2–6 fl.dr.	8.0–24.0	<i>Cubeb</i> . Stimulant diuretic in gonorrhea and cystitis. Stimulant expectorant in late stages of acute bronchitis.
<i>Crocus, i</i>	5–30 gr.	0.3–2.0	
tinctura.....	1–2 fl.dr.	4.0–8.0	
<i>Croton chloral</i>	
oil.....	
<i>Cubeba, æ</i>	15–60 gr.	1.0–4.0	
fluidextractum.....	15–60 min.	1.0–4.0	
oleoresina.....	5–20 min.	0.3–1.3	
oleum.....	5–20 min.	0.3–1.3	
trochisci.....	1 occasionally	
Culver's root.....	
Cuprol.....	Externally	
<i>Cuprum, i</i>	
acetas.....	$\frac{1}{2}$ – $\frac{1}{2}$ gr.	0.008–0.03	See <i>Leptandra</i> .
arsenis.....	$\frac{1}{120}$ – $\frac{1}{40}$ gr.	0.0005–0.0015	<i>Copper nucleinate</i> . Antiseptic and astringent, especially in eye diseases (10 per cent. solution).
sulphas.....	$\frac{1}{2}$ – $\frac{1}{2}$ gr.	0.008–0.03	<i>Copper</i> . Sulphate internally as astringent in diarrhea; as emetic (5 grains) and as antidote to phosphorus. Externally, caustic and stimulant. Arsenite used as internal antiseptic.
<i>Curare, i</i>	$\frac{1}{20}$ – $\frac{1}{2}$ gr.	0.0032–0.03	<i>Woorara</i> . Powerful nerve depressant. Occasionally given in tetanus and strychnin-poisoning.
<i>Curarina, æ</i>	$\frac{1}{400}$ – $\frac{1}{40}$ gr.	0.00016–0.0016	<i>Ladies'-slipper</i> . Antispasmodic. Similar to valerian.
<i>Cypripedium, ii</i>	15–30 gr.	1.0–2.0	
extractum.....	2–6 gr.	0.13–0.4	
fluidextractum.....	10–60 min.	1.0–2.0	
tinctura.....	1–2 fl.dr.	4.0–8.0	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Cystogen.....	5-10 gr.	0.3-0.6	<i>Hexamethylenamina</i> . Similar to urotropin.
Damiana, <i>æ</i>	15-60 gr.	1.0-4.0	<i>Damiana</i> . Tonic in sexual debility and nervous exhaustion.
extractum.....	2-10 gr.	0.13-0.6	
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
Dandelion.....			See <i>Taraxacum</i> .
Daturina, <i>æ</i>	$\frac{1}{120}$ - $\frac{1}{50}$ gr.	0.0005-0.001	Alkaloid of <i>stramonium</i> . Similar to atropin.
Delphina, <i>æ</i>	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.016-0.03	Alkaloid of <i>stavesacre</i> or <i>larkspur</i> . Action like that of aconitin. Used in asthma. Locally in ointment (5 per cent.) for neuralgia.
Dermatol.....			See <i>Bismuthi subgallas</i> .
Dextrose.....			<i>Starch</i> -, <i>corn</i> -, or <i>grape-sugar</i> .
Diabetin.....			See <i>Levulose</i> .
Digitalin.....	$\frac{1}{60}$ - $\frac{1}{30}$ gr.	0.001-0.002	Amorphous powder. Variable in strength.
cristallisée.....	$\frac{1}{240}$ - $\frac{1}{60}$ gr.	0.00025-0.001	<i>Nativelle's digitalin</i> . Impure digitoxin.
Digitalinum germanicum.....	$\frac{1}{60}$ - $\frac{1}{20}$ gr.	0.001-0.003	Mixture of <i>glucosids</i> . Suitable for hypodermic use.
Digitalis, <i>is</i>	$\frac{1}{2}$ -2 gr.	0.03-0.13	<i>Foxglove</i> . Heart tonic and diuretic. Renders pulse less frequent and more forcible.
extractum.....	$\frac{1}{8}$ - $\frac{1}{4}$ gr.	0.01-0.016	Useful in valvular disease, dilated heart, cardiac and renal dropsy; also palpitation and irregular action of heart.
fluidextractum.....	1-2 min.	0.06-0.13	
infusum.....	1-4 fl.dr.	4.0-16.0	
tinctura.....	5-20 min.	0.3-1.3	
Digitoxin.....	$\frac{1}{240}$ - $\frac{1}{24}$ gr.	0.00025-0.001	
Dimethylpiperazin tartrate			See <i>Lycetol</i> .
Dionin.....	$\frac{1}{4}$ gr.	0.016-0.06	<i>Ethylmorphin hydrochlorid</i> . Substitute for morphin; also locally (5 to 10 per cent. solution) in inflammatory eye diseases.
Diphtheria antitoxin.....			See <i>Serum antidiphthericum</i> .
Diuretin.....	5-15 gr.	0.3-1.0	<i>Theobromin sodium</i> and <i>sodium salicylate</i> . Powerful diuretic.
Dogwood.....			See <i>Cornus florida</i> .
Jamaica.....			See <i>Piscidia erythrina</i> .
Donovan's solution.....			See <i>Arseni et hydrargyri iodidi liquoris</i> .
Dormiol.....	5-50 min.	0.3-3.0	<i>Amylene-chloral</i> . Hypnotic.
Dover's powder.....			See <i>Ipecacuanha et opii pulvis</i> .
Drosera, <i>æ</i> , <i>rotundifolia</i>	3-15 gr.	0.2-1.0	<i>Sundew</i> . Expectorant in bronchitis and whooping-cough.
tinctura.....	5-10 min.	0.3-0.6	Similar in action to belladonna.
Duboisia myoporoides.....			Similar in action to hyoscin.
Duboisina sulphas.....	$\frac{1}{150}$ - $\frac{1}{60}$ gr.	0.0004-0.0013	<i>Bitter-sweet</i> . Sedative, alterative, diuretic.
Dulcamara, <i>æ</i>	$\frac{1}{4}$ dr.	2.0-4.0	
extractum.....	5-15 gr.	0.3-1.0	
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
infusum.....	1-2 fl.oz.	30.0-60.0	
Dunbar's serum.....			
Duotal.....			
Duotonol.....	5-10 gr.	0.3-0.6	
Easton's syrup.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	See <i>Pollantin</i> .
Elaterium, <i>i</i>	$\frac{1}{20}$ - $\frac{1}{2}$ gr.	0.003-0.008	See <i>Guaiacolis carbonas</i> .
trituriatio.....	$\frac{1}{2}$ -1 gr.	0.03-0.06	Mixture of <i>calcium</i> and <i>sodium glycerophosphate</i> . Nerve tonic.
Elaterium, <i>ii</i>	$\frac{1}{10}$ - $\frac{1}{2}$ gr.	0.006-0.03	<i>Syrup of iron phosphate with strychnin and quinin</i> . Tonic.
Elder.....			<i>Elaterium</i> . Powerful hydragogue cathartic. Useful in dropsy. Contains elaterin.
Elecampane.....			See <i>Sambucus</i> .
Emetin.....	$\frac{1}{30}$ - $\frac{1}{10}$ gr.	0.002-0.0065	See <i>Inula</i> .
Emetina, <i>æ</i>	$\frac{1}{120}$ - $\frac{1}{60}$ gr.	0.0005-0.001	Resinoid from <i>ipecac</i> . Emetic (1-1 $\frac{1}{2}$ grains); expectorant.
Empyroform.....	Externally		<i>Emetin</i> . Alkaloid of <i>ipecac</i> . Emetic ($\frac{1}{2}$ grain) and expectorant.
Eosote.....			Condensation product of <i>birch-tar</i> and <i>formaldehyd</i> . Substitute for tar.
Epicarin.....	Externally		See <i>Guaiacolis valeras</i> .
Epsom salts.....			Condensation product of <i>betanaphthol</i> and <i>resolic acid</i> . Used in 10 to 20 per cent. ointment in skin diseases.
Ergota, <i>æ</i>	10-60 gr.	0.6-4.0	See <i>Magnesi sulphas</i> .
extractum.....	2-10 gr.	0.13-0.6	<i>Ergot</i> . Constrictor of blood-vessels, hemostatic, emmenagogue, and parturient.
fluidextractum.....	15-60 min.	1.0-4.0	
vinum.....	1-3 fl.dr.	4.0-12.0	
Ergotin.....			
Erigeron, <i>fls</i>	1-2 dr.	4.0-8.0	Equivalent to <i>extractum ergotæ</i> .
oleum.....	5-10 min.	0.3-0.6	<i>Fleabane</i> . Stimulant, diuretic, hemostatic.
Eriodictyon, <i>yl</i>	$\frac{1}{2}$ -1 dr.	2.0-4.0	
elixir aromaticum.....	1-2 fl.dr.	4.0-8.0	
fluidextractum.....	15-60 min.	1.0-4.0	<i>Yerba santa</i> . Expectorant and tonic. Useful for disguising taste of quinin.
syrupus.....	1-2 fl.dr.	4.0-8.0	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Erythrol tetranitrate....	$\frac{1}{4}$ -1 gr.	0.03-0.06	<i>Erythrol nitrate</i> . Powerful vasodilator. Action like that of nitroglycerin, but more lasting. Explosive. Prescribed in chocolate tablets.
Erythrophloeinæ hydrochloridum.....	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.0016-0.0026	<i>Sassy bark</i> . Action like that of digitalis.
Erythrophloeum, <i>i</i>	Alkaloid used in dentistry to benumb dentin.
tinctura.....	5-10 min.	0.3-0.6	See <i>Coca</i> .
Erythroxylo.....	See <i>Physostigmina</i> .
Eserin.....	See <i>Æther</i> .
Æther.....	See <i>Æthylis bromidum</i> .
Æthyl bromid.....	See <i>Æthylis carbamas</i> .
carbamas.....	See <i>Æthylis chloridum</i> .
chlorid.....	See <i>Æthylis iodidum</i> .
iodid.....	<i>Beta-eucain</i> . Local anesthetic, less toxic than cocaine.
Eucainæ hydrochloridum.....	Externally	<i>Cineol</i> . Organic oxid from oil of eucalyptus.
Eucalyptol.....	5-15 min.	0.3-1.0	<i>Blue-gum tree</i> . Antiperiodic, expectorant, antiseptic.
Eucalyptus, <i>i</i>	15-60 gr.	1.0-4.0
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0
oleum.....	5-15 min.	0.3-1.0
Eudoxin.....	5-20 gr.	0.3-1.3	<i>Nosophen-bismuth</i> . Intestinal antiseptic and astringent.
Eugenol.....	1-5 min.	0.06-0.3	<i>Aromatic phenol</i> from clove oil. Antiseptic and local anesthetic.
Eumydrin.....	$\frac{1}{120}$ - $\frac{1}{80}$ gr.	0.0005-0.001	<i>Atropin methylnitrate</i> . Mydriatic, antispasmodic, antihydrotic. Less toxic than atropin. Locally, 0.5 to 1 per cent. solution.
Eunatrol.....	See <i>Sodii oleas</i> .
Euonymin.....	1-5 gr.	0.06-0.3
Euonymus, <i>i</i>	10-40 gr.	0.6-2.6	<i>Wahoo</i> . Cathartic, cholagogue, diuretic.
extractum.....	1-5 gr.	0.06-0.3
fluidextractum.....	10-30 min.	0.6-2.0
Eupatorium, <i>ii</i>	$\frac{1}{2}$ -1 dr.	2.0-4.0	<i>Boneset, thoroughwort</i> . Stomachic, diuretic, and diaphoretic. Similar to chamomile.
extractum.....	5-10 gr.	0.3-0.6
fluidextractum.....	15-60 min.	1.0-4.0
infusum.....	1-2 fl.oz.	30.0-60.0
Euphorbia, <i>æ</i> , corollata...	2-5 gr.	0.13-0.3	<i>Flowering spurge</i> . Used chiefly in whooping-cough, asthma, coryza, bronchial affections. Large doses emetic.
fluidextractum.....	5-30 min.	0.3-2.0	<i>Mandelic acid</i> , derivative of eucain. Mydriatic, evanescent action (2 to 10 per cent. solution).
Euphthalmin.....	Externally	<i>Quinin carbonic ether</i> . Substitute for quinin; milder, but less likely than the latter to cause cinchonism.
Euquinin.....	5-20 gr.	0.3-1.3	<i>Organic preparation of iodin</i> (28 per cent.). Substitute for iodoform. Antisyphilitic.
Euophen.....	$\frac{1}{2}$ -1 $\frac{1}{2}$ gr.	0.03-0.1	<i>Methyl-acetanilid</i> . Substitute for acetanilid.
Exalgin.....	2-5 gr.	0.13-0.3	<i>Oxyanthraquinon</i> derivative. Synthetic purgative.
Exodin.....	8-24 gr.	0.5-1.5	<i>Ox-gall</i> . Laxative and cholagogue.
Fel, <i>lis</i> , bovis.....	See <i>Feniculum</i> .
purificatum.....	5-15 gr.	0.3-1.0	Iron-albumin compound.
Fennel.....	Bismuth subnitrate, 180; acacia, 60; morphin hydrochlorid, 1. In coryza.
Ferratin.....	5-8 gr.	0.3-0.5
Ferrier's snuff.....	<i>Iron</i> . Chalybeate tonic in anemia. Astringent. Chlorid in erysipelas, and locally in sore throat. Solution of iron and ammonium acetate (Basham's mixture), diuretic. Iron oxid with magnesium oxid, antidote to arsenic. Iron sulphate (copperas), disinfectant and deodorant. Syrup of iron iodid, alterative and tonic. Iron subsulphate (Monse's salt) and solution of iron subsulphate (Monse's solution), styptic.
Ferripyrrin.....	3-8 gr.	0.2-0.5
Ferrum, <i>i</i>
acetas.....	1-5 gr.	0.06-0.3
albuminas.....	1-10 gr.	0.06-0.6
arsenas.....	$\frac{1}{16}$ - $\frac{1}{8}$ gr.	0.004-0.008
bromidum.....	2-5 gr.	0.13-0.3
cacodylas.....	$\frac{1}{2}$ -5 gr.	0.03-0.3
carbonatis massa.....	5-10 gr.	0.3-0.6
pilulæ.....	1 to 5 pills
saccharatus.....	1-10 gr.	0.06-0.6
chloridi liquor.....	3-10 min.	0.2-0.6
tinctura.....	10-30 min.	0.6-2.0
citras.....	1-5 gr.	0.06-0.3
et ammonii acetatis liquor.....	1-4 fl.dr.	4.0-16.0
citras.....	5-10 gr.	0.3-0.6
tartras.....	3-10 gr.	0.2-0.6

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines:	Dose for Adult.	Gm. or C.c.	Action and Uses.
Ferrum et potassii tar-			
tras.....	5-15 gr.	0.3-1.0	
quininæ citras.....	5-10 gr.	0.3-0.6	
solubilis.....	5-10 gr.	0.3-0.6	
strychninæ citras.....	1-5 gr.	0.06-0.3	
glycerophosphas.....	3-10 gr.	0.2-0.6	
hydroxido cum magnesi			
oxidum.....	4 fl.oz.	120.0	
hypophosphis.....	1-5 gr.	0.06-0.3	
iodidi pilulæ.....	1 or 2 pills		
saccharatum.....	1-5 gr.	0.06-0.3	
syrupus.....	5-30 min.	0.3-2.0	
lactas.....	1-5 gr.	0.06-0.3	
lactophosphas.....	1-5 gr.	0.06-0.3	
mistura composita.....	1-2 fl.dr.	4.0-8.0	
oxalas.....	1-5 gr.	0.06-0.3	
peptonatum.....	5-10 gr.	0.3-0.6	
phosphas solubilis.....	1-5 gr.	0.06-0.3	
pyrophosphas solubilis.....	1-5 gr.	0.06-0.3	
reductum.....	1-5 gr.	0.06-0.3	
saccharatum.....	5-20 gr.	0.3-1.3	
salicylas.....	3-10 gr.	0.2-0.6	
subsulphas liquor.....	3-10 min.	0.2-0.6	
succinas.....	10-30 gr.	0.6-2.0	
sulphas exsiccatum.....	1-5 gr.	0.06-0.3	
granulatum.....	1-5 gr.	0.06-0.3	
valeras.....	1-5 gr.	0.06-0.3	
vinum.....	1-2 fl.dr.	4.0-8.0	
amarum.....	1-2 fl.dr.	4.0-8.0	
Fersan.....	30-80 gr.	2.0-5.0	<i>Iron and phosphorus compound.</i>
Ferula sumbul.....	See <i>Sumbul</i> .
Fibrolysin.....	40 min.	2.4	<i>Modified thiosinamin.</i>
Ficus.....	ad lib.	<i>Fig.</i> Laxative.
Filicic acid.....	5-15 gr.	0.3-1.0	Active principle of <i>Aspidium</i> .
Filix, icis, mas.....	See <i>Aspidium</i> .
Fishberries.....	See <i>Cocculus indicus</i> .
Flaxseed.....	See <i>Linum</i> .
Fleabane.....	See <i>Erigeron</i> .
Foeniculum, i.....	10-30 gr.	0.6-2.0	<i>Fennel.</i> Aromatic and carminative.
aqua.....	ad lib.	
oleum.....	1-5 min.	0.06-0.3	
Formaldehydi liquor.....	Externally	37 per cent. aqueous solution of formalde-
Formaldehydum, i.....	hyd.
Formalin, Formol.....	<i>Formaldehyd.</i> Product of partial oxidation
Fowler's solution.....	of wood alcohol. Powerful disinfectant
Foxglove.....	and deodorant. Used locally (2 per cent.
Frangula, æ.....	$\frac{1}{2}$ -1 dr.	2.0-4.0	solution) as antihydrotic.
extractum.....	2-8 gr.	0.13-0.5	Brand name of solution of <i>formaldehyd</i> .
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	See <i>Potassii arsenitis liquor</i> .
Fraseria, æ.....	15-30 gr.	1.0-2.0	See <i>Digitalis</i> .
fluidextractum.....	20-60 min.	1.3-4.0	<i>Buckthorn.</i> Purgative.
Fraxinus ornus.....	
Fructose.....	<i>American colombo.</i> Bitter stomachic.
Fuchsin.....	$\frac{1}{2}$ -3 gr.	0.03-0.2	See <i>Manna</i> .
Fucus, i, vesiculosus, i.....	1-2 fl.dr.	4.0-8.0	See <i>Levulose</i> .
Fuller's earth.....	Externally	<i>Fuchsin.</i> Antiseptic, diuretic.
Galbanum, i.....	5-20 gr.	0.3-1.3	<i>Bladderwrack.</i> Recommended for obesity.
fluidextractum.....	20-60 min.	1.3-4.0	<i>China clay.</i> Native aluminum silicate.
pilulæ.....	1 to 5 pills		Absorbent powder.
Galla, æ.....	5-20 gr.	0.3-1.3	<i>Galbanum.</i> Expectorant and antispas-
tinctura.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	modic.
unguentum.....	Externally		<i>Nutgall.</i> Powerful local astringent. Oint-
Gambir (indeclinable).....	ment useful in hemorrhoids.
tinctura compositus.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	<i>Gambir.</i> Astringent resembling catechu.
trochisci.....	1 occasionally		Used in diarrhea.
Gamboge.....	See <i>Cambogia</i> .
Garlic.....	See <i>Allium</i> .
Gaultheria, æ.....	<i>Wintergreen.</i> Antiseptic, aromatic, and ac-
oleum.....	5-20 min.	0.3-1.3	tive antirheumatic. Oil is almost pure
spiritus.....	1-2 fl.dr.	4.0-8.0	methyl salicylate.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. of C.c.	Action and Uses.
Gelatinum, <i>i</i>	ad lib.	<i>Gelatin</i> . Blood coagulant in hemorrhage and aneurysm. Given by mouth or subcutaneously (2 per cent. solution), and by rectum (5 to 10 per cent. solution). For subcutaneous use must be sterilized, or tetanus may result.
glycerinatum.....	<i>Glycerinated gelatin</i> . Employed as a vehicle for suppositories.
Gelsemin.....	$\frac{1}{2}$ –1 gr.	0.008–0.03	Resinoid from <i>Gelsemium</i> .
Gelseminina, <i>a</i>	120–30 gr.	0.0005–0.002	Alkaloid from <i>Gelsemium</i> .
sulphas.....	120–30 gr.	0.0005–0.002	
Gelsemium, <i>ii</i>	2–10 gr.	0.13–0.6	
extractum.....	$\frac{1}{2}$ –4 gr.	0.03–0.25	
fluidextractum.....	2–10 min.	0.13–0.6	
tinctura.....	10–60 min.	0.6–4.0	
Gentiana, <i>a</i>	5–30 gr.	0.3–2.0	
extractum.....	2–10 gr.	0.13–0.6	
fluidextractum.....	5–30 min.	0.3–2.0	
infusum compositum.....	$\frac{1}{2}$ –1 fl.oz.	15.0–30.0	
tinctura composita.....	1–2 fl.dr.	4.0–8.0	
Geosote.....	See <i>Guaiacolis valeras</i> .
Geranium, <i>ii</i>	10–60 gr.	0.6–4.0	<i>Cranesbill</i> . Active astringent. Used in diarrhea.
extractum.....	1–5 gr.	0.06–0.3	
fluidextractum.....	10–60 min.	0.6–4.0	
Ginger.....	See <i>Zingiber</i> .
Ginseng.....	<i>Panax quinquefolium</i> . Demulcent.
Glandulæ suprarenales siccæ.....	1–5 gr.	0.06–0.3	<i>Suprarenal extract</i> . Suprarenal glands of sheep, dried and powdered. Powerful vasoconstrictor. Useful in hemorrhage, piles, coryza, and hay-fever. Internally as an alternative in Addison's disease, exophthalmic goiter, and rickets. See also <i>Adrenalin</i> .
thyroideæ siccæ.....	1–5 gr.	0.06–0.3	<i>Thyroid extract</i> . Thyroid glands of sheep, dried and powdered. Alternative in myxedema, obesity, goiter, and certain skin diseases.
Glauber's salts.....	See <i>Sodii sulphas</i> .
Glonoin.....	See <i>Glycerylis nitras</i> .
Glycerinum, <i>i</i> , supposito- ria.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0	<i>Glycerin</i> . Emollient, sweetening agent, and vehicle. By enema or suppository for constipation.
Glycerylis nitras.....	$\frac{1}{100}$ – $\frac{1}{20}$ gr.	0.00032–0.003	<i>Nitroglycerin</i> , <i>glonoin</i> , <i>trinitrin</i> . Powerful vasodilator and antispasmodic. Useful in high arterial tension, cardiac dyspnea, angina pectoris, asthma. Also recommended in hemorrhage from lungs.
spiritus.....	1–5 min.	0.06–0.3	<i>Licorice</i> . Demulcent, flavoring agent, expectorant, and vehicle. <i>Compound licorice powder</i> (senna, 5; glycyrrhiza, 6; sulphur, 2; fennel oil, and sugar) is a useful laxative. <i>Compound mixture</i> , <i>Brown mixture</i> (acacia, 3; ext. glycyrrh., 3; tinct. opii camph., 12; vin. antimon., 6; spt. ather. nit., 3; syrup, mucilag., and water, q. s. ad 100); vehicle for ammonium chlorid. Demulcent and expectorant.
Glycyrrhiza, <i>a</i>	15–60 gr.	1.0–4.0	<i>Glycyrrhizin</i> . Sweet principle of licorice.
elixir.....	1–2 fl.dr.	4.0–8.0	
aromaticus.....	1–2 fl.dr.	4.0–8.0	
et opii trochisci.....	1 occasionally		
extractum.....	15–30 gr.	1.0–2.0	
fluidextractum.....	$\frac{1}{2}$ –1 fl.dr.	2.0–4.0	
mistura compositus.....	1–4 fl.dr.	4.0–16.0	
pulvis compositus.....	$\frac{1}{2}$ –2 dr.	2.0–8.0	
syrupus.....	ad lib.		
Glycyrrhizinum, <i>i</i>	
ammoniatum, <i>i</i>	2–15 gr.	0.13–1.0	
Goa powder.....	See <i>Araroba</i> .
Gold.....	See <i>Aurum</i> .
Golden-rod.....	See <i>Solidago</i> .
Goldenseal.....	See <i>Hydrastis</i> .
Gomenol.....	4–8 min.	0.25–0.5	<i>Oleum melaleuca viridiflora</i> . Recommended in lung affections.
Gonoson.....	1–2 fl.dr.	4.0–8.0	<i>Liquor santal cum kava</i> . Recommended in gonorrhea.
Gossypium, <i>ii</i> , cortex.....	$\frac{1}{2}$ –2 dr.	2.0–8.0	<i>Cotton-root bark</i> . Emmenagogue, oxytocic, uterine hemostatic; similar to ergot.
radicis fluidextractum.....	$\frac{1}{2}$ –1 fl.dr.	2.0–4.0	
decoctum.....	1–2 fl.oz.	30.0–60.0	
Goulard's cerate.....	<i>Plumbi subacetatis ceratum</i> . See <i>Plumbum</i> .
extractum.....	See <i>Plumbi subacetatis liquor</i> .
Granatum, <i>i</i>	$\frac{1}{2}$ –2 dr.	2.0–8.0	<i>Pomegranate</i> . Vermifuge to tapeworms
fluidextractum.....	$\frac{1}{2}$ –1 fl.dr.	2.0–4.0	It contains pelletierin.
Gray powder.....	See <i>Hydrargyrum cum creta</i> .

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Griffith's mixture.....	See <i>Ferri mistura composita</i> .
Grindelia, <i>a</i>	15-60 gr.	1.0-4.0	<i>Grindelia</i> , gum plant. Expectorant and antispasmodic. Useful in asthma and bronchitis. Fluidextract diluted with 8 parts of water is very useful locally in rhus-poisoning.
extractum.....	5-10 gr.	0.3-0.6	
fluidextractum.....	15-60 min.	1.0-4.0	<i>Sodium pyrocatechin monoacetate</i> . Expectorant.
Guaiacetin.....	10-30 gr.	0.6-2.0	An important constituent of <i>creosote</i> . Antiseptic, expectorant. Locally, anodyne and antipyretic. Recommended internally in tuberculosis and purulent bronchitis.
Guaiacol, <i>ss</i>	2-10 min.	0.12-0.6	
benzoas.....	5-30 gr.	0.3-2.0	
carbonas.....	5-30 gr.	0.3-2.0	
cinnamas.....	5-15 gr.	0.3-1.0	
phosphas.....	5-15 gr.	0.3-1.0	
salicylas.....	5-20 gr.	0.3-1.3	
valeras.....	3-10 min.	0.2-0.6	
Guaiacol-salol.....	See <i>Guaiacol salicylas</i> .
Guaiacum, <i>i</i>	<i>Guaiac</i> . Alterative in chronic rheumatism and gout; emmenagogue. Useful in tonsillitis.
lignum.....	$\frac{1}{2}$ -1 dr.	2.0-4.0	
mistura.....	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	
resina.....	5-30 gr.	0.3-2.0	
tinctura.....	10-60 min.	0.6-4.0	
ammoniata.....	5-30 min.	0.3-2.0	
Guarana, <i>a</i>	15-60 gr.	1.0-4.0	Paste of crushed seeds of <i>Paullinia cupana</i> . A nerve stimulant, especially useful in headache. Contains caffeine.
elixir.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
fluidextractum.....	15-60 min.	1.0-4.0	See <i>Acacia</i> .
Gum arabic.....	See <i>Balsamum gurgune</i> .
Gurjun balsam.....	Used as a protective for small wounds and abrasions.
Gutta-percha, <i>a</i> , liquor...	Externally	<i>Chaulmoogra oil</i> . Used internally and externally in leprosy, psoriasis, and certain other skin diseases. Applied also in rheumatism.
Gynocardia oleum.....	5-15 min.	0.3-1.0	<i>Witch-hazel bark and leaves</i> . Recommended as a mild astringent in coryza, epistaxis, bleeding piles, etc.; also applied in bruises. Fluidextract used internally in varicose veins, hemorrhages.
Hamamelidis cortex.....	15-60 gr.	1.0-4.0	<i>American pennyroyal</i> . Carminative and emmenagogue.
agua.....	1-4 fl.dr.	4.0-16.0	
folia.....	15-60 gr.	1.0-4.0	
fluidextractum.....	20-60 min.	1.3-4.0	
Hedeoma, <i>a</i>	15-60 gr.	1.0-4.0	
infusum.....	1-2 fl.oz.	30.0-60.0	
oleum.....	2-10 min.	0.13-0.6	
Hedonal.....	10-30 gr.	0.6-2.0	Somnifacient, allied to urethan.
Helianthemum, <i>i</i>	5-30 gr.	0.3-2.0	<i>Frostwort</i> . Tonic, alterative, astringent.
extractum.....	1-5 gr.	0.06-0.3	
infusum.....	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	
Hellebore.....	See <i>Veratrum</i> .
Helmitol.....	$7\frac{1}{2}$ -15 gr.	0.5-1.0	Urinary disinfectant. Similar to hexamethylenamin or urotropin.
Helonias, <i>a</i> , dioica, <i>a</i>	1-2 dr.	4.0-8.0	<i>False unicorn root</i> . Recommended as an aphrodisiac; also employed as an abortifacient.
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	<i>Logwood</i> . Astringent in diarrhea. Imparts pink color to stools.
Hematoxylon.....	$\frac{1}{2}$ -1 dr.	2.0-4.0	
decoctum.....	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0	
extractum.....	5-20 gr.	0.3-1.3	
Hemlock.....	See <i>Conium</i> .
Hemogallol.....	4-8 gr.	0.25-0.5	Derivative of hemoglobin. Used in anemia.
Hemol.....	2-8 gr.	0.13-0.5	Derivative of hemoglobin. Used in anemia.
Hemp, Canadian.....	See <i>Apocynum</i> .
Indian.....	See <i>Cannabis indica</i> .
Henbane.....	See <i>Hyoscyamus</i> .
Heroin hydrochloridum...	$\frac{1}{24}$ - $\frac{1}{2}$ gr.	0.0025-0.005	<i>Diacetylmorphin hydrochlorid</i> . Useful in cough, dyspnea, and asthma.
Hexamethylenamina, <i>a</i> ...	5-15 gr.	0.3-1.0	<i>Ammonioformaldehyd</i> . Also known by various trade-names, such as <i>urotropin</i> , <i>cystogen</i> , <i>formin</i> , etc. Valuable as a urinary antiseptic.
Hoffmann's anodyne.....	See <i>Etheris spiritus compositus</i> .
Holocainæ hydrochloridum	Externally	<i>Holocain hydrochlorid</i> . Local anesthetic like cocain. Used in 1 per cent. solution.
Homatropina, <i>a</i>	$\frac{200}{100}$ gr.	0.00032-0.0013	<i>Homatropin</i> . Synthetic alkaloid. Mydriatic (1 per cent. solution), antispasmodic, antihydrotic.
hydrobromidum.....	$\frac{200}{100}$ gr.	0.00032-0.0013	
hydrochloridum.....	$\frac{200}{100}$ gr.	0.00032-0.0013	
salicylas.....	$\frac{200}{100}$ gr.	0.00032-0.0013	
sulphas.....	$\frac{200}{100}$ gr.	0.00032-0.0013	
Honey.....	See <i>Mel</i> .
Hopogan.....	See <i>Magnesi peroxidum</i> .

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Hops.....	ad lib.	See <i>Humulus</i> .
Hordeum, <i>z</i>	ad lib.	<i>Barley</i> . Demulcent.
decoctum.....	ad lib.	
Horehound.....	See <i>Marrubium</i> .
Horse-chestnut.....	See <i>Æsculus hippocastanum</i> .
Horse-nettle.....	See <i>Solanum carolinense</i> .
Humulus, <i>i</i>	$\frac{1}{2}$ –1 dr.	2.0–4.0	<i>Hops</i> . Bitter and sedative.
extractum.....	3–10 gr.	0.2–0.6	
fluidextractum.....	15–60 min.	1.0–4.0	
tinctura.....	1–2 fl.dr.	4.0–8.0	
Hydrangea, <i>a</i>	$\frac{1}{2}$ –1 dr.	2.0–4.0	<i>Hydrangea</i> . Sedative to urinary tract.
fluidextractum.....	$\frac{1}{2}$ –1 fl.dr.	2.0–4.0	
Hydrargyrum, <i>z</i>	
acetas, <i>atis</i>	$\frac{1}{10}$ – $\frac{1}{2}$ gr.	0.006–0.03	<i>Mercury acetate</i> .
ammoniatum, <i>z</i>	In ointment	<i>Ammoniated mercury</i> . White precipitate.
unguentum.....	Externally	
benzoas.....	$\frac{50}{32}$ – $\frac{10}{10}$ gr.	0.0013–0.006	
chloridum corrosivum..	$\frac{32}{10}$ gr.	0.002–0.006	<i>Corrosive sublimate, mercuric chlorid, mercury bichlorid</i> .
mite.....	$\frac{1}{10}$ –5 gr.	0.006–0.3	<i>Calomel, mild chlorid of mercury, mercurous chlorid</i> .
cum creta.....	1–10 gr.	0.065–0.65	<i>Mercury with chalk, gray powder</i> .
cyanidum.....	$\frac{3}{4}$ – $\frac{1}{2}$ gr.	0.002–0.008	
iodidum flavum.....	$\frac{1}{2}$ –1 gr.	0.01–0.06	<i>Mercury protiodid, yellow iodid of mercury</i> .
rubrum.....	$\frac{3}{4}$ – $\frac{1}{2}$ gr.	0.002–0.008	<i>Mercury biniodid, red iodid of mercury</i> .
lotio flava.....	Externally	<i>Yellow wash</i> .
nigra.....	Externally	<i>Black wash</i> .
massa.....	1–10 gr.	0.06–0.6	<i>Mass of mercury, blue mass, blue pill</i> .
nitras.....	<i>Mercuric nitrate</i> .
liquor.....	Caustic	<i>Acid solution of mercuric nitrate</i> .
unguentum.....	Externally	<i>Citrine ointment</i> .
oleatum.....	<i>Oleate of mercury (20 per cent.)</i> .
oxidum flavum.....	<i>Yellow oxid of mercury</i> .
unguentum.....	Externally	
rubrum.....	<i>Red oxid of mercury</i> .
unguentum.....	Externally	
salicylas.....	$\frac{1}{2}$ –1 gr.	0.02–0.06	<i>Mercury salicylate</i> .
subsulphas.....	2–5 gr. (emetic)	0.13–0.3	<i>Yellow mercuric sulphate, turpeth mineral</i> .
succinimidum.....	$\frac{1}{2}$ – $\frac{1}{4}$ gr.	0.01–0.015	
tannas.....	1–2 gr.	0.065–0.13	<i>Mercury tannate</i> .
unguentum.....	Externally	<i>Mercurial ointment (50 per cent.)</i> .
dilutum.....	Externally	<i>Dilute mercurial ointment, blue ointment (33 per cent.)</i> .
Hydrastin.....	$\frac{1}{2}$ –2 gr.	0.03–0.13	<i>Resinoid (eclectic)</i> .
Hydrastina, <i>a</i>	$\frac{1}{6}$ – $\frac{1}{2}$ gr.	0.008–0.03	<i>Alkaloid from hydrastin</i> . Locally as an alternative in vaginitis and urethritis. Internally as a uterine hemostatic.
Hydrastininæ hydrochloridum.....	$\frac{1}{2}$ – $\frac{1}{2}$ gr.	0.008–0.03	<i>Hydrastinin hydrochlorid</i> . Artificial alkaloid from hydrastina. Internal hemostatic, especially in uterine hemorrhage.
Hydrastis, <i>is</i>	$\frac{1}{2}$ –1 dr.	1.0–4.0	<i>Goldenseal, yellowroot</i> . Alternative, astringent, hemostatic, stomachic. In catarrh of mucous membrane.
fluidextractum.....	20–60 min.	1.3–4.0	
glyceritum.....	10 to 20 per cent. solution.	
tinctura.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0	
Hydrogenii dioxidi aqua..	$\frac{1}{2}$ –1 fl.dr.	2.0–4.0	<i>Solution of hydrogen dioxide (3 per cent. by weight)</i> . Non-poisonous antiseptic for mucous membranes and ulcerated surfaces. Rarely internally in gastric disturbances.
Hydroquinon.....	$\frac{1}{2}$ –5 gr.	0.03–0.3	<i>Hydroquinon, quinol</i> . Properties similar to those of resorcinol.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Hyoscine hydrobromid	$\frac{1}{200}$ — $\frac{1}{100}$ gr.	0.00032—0.00065	<i>Hyoscin hydrobromid.</i> An alkaloid from hyoscyamus, belladonna, and other solanaceous plants. Somnifacient, sedative, and anaphrodisiac.
Hyoscyamine hydrobromid	$\frac{1}{200}$ — $\frac{1}{100}$ gr.	0.00032—0.00065	<i>Hyoscyamin hydrobromid.</i> An alkaloid from hyoscyamus, belladonna, and other solanaceous plants. Properties similar to those of atropin.
Hyoscyamus, <i>i.</i>	2—10 gr.	0.13—0.65	<i>Hyoscyamus, henbane.</i> An antispasmodic in asthma, laryngeal spasm, colic, and irritable affections of the bladder.
extractum	$\frac{1}{2}$ —1 gr.	0.03—0.065	
fluidextractum	2—5 min.	0.12—0.3	
tinctura	5—60 min.	0.3—4.0	
Hypnol	10—15 gr.	0.6—1.0	Compound of chloral and antipyrin. Somnifacient.
Ichthalbin	5—30 gr.	0.3—2.0	<i>Ichthyol albuminate.</i> A substitute for ichthyol. Internally as an alterative.
Ichthargin	0.5 to 5 per cent. solution, externally.	<i>Ichthyol-silver.</i> Astringent and antiseptic.
Ichthoform	2—15 gr.	0.13—1.0	<i>Ichthyol-formaldehyd.</i> Chiefly as a vulnerary. Internally, as an antiseptic.
Ichthyocola, <i>a.</i>	3 dr. to 1 pint of water.	<i>Isinglass.</i> Swimming bladder of certain fish. Used in jelly and plasters.
Ichthyol, <i>is.</i>	5—30 gr.	0.3—2.0	<i>Ammonium sulpho-ichthyolate.</i> A distillate of bituminous shale of fish origin, containing 8 per cent. of sulphur. Locally in ointment or glycerin suspension (5 to 50 per cent.) as alterative in inflammatory affections of skin, glands, and joints and gynecologic diseases. Internally as an alterative in tuberculosis, rheumatism, etc.
Ignatia, <i>a.</i>	1—4 gr.	0.065—0.25	<i>Bean of St. Ignatia.</i> Similar to nux vomica.
extractum	$\frac{1}{2}$ — $\frac{1}{4}$ gr.	0.008—0.016	
tinctura	3—20 min.	0.2—1.3	
Ilex, paraguayensis	<i>Holly.</i>
Indian hemp	<i>Paraguay tea, maté.</i> Contains one-fourth as much caffeine as tea.
tobacco	See <i>Apocynum cannabinum.</i>
Indigo	$\frac{1}{4}$ —1 dr.	1.0—4.0	See <i>Lobelia.</i>
Ingluvin	5—15 gr.	0.3—1.0	Recommended as an antispasmodic.
Inula, <i>a.</i>	$\frac{1}{4}$ —1 dr.	1.0—4.0	A substitute for pepsin; said to be prepared from the gizzard of the fowl. Especially recommended in vomiting of pregnancy.
extractum	5—20 gr.	0.3—1.3	<i>Elecampane.</i> Contains <i>inulin</i> , allied to starch, and <i>helenin</i> . Useful in catarrhal affections of chest and bowel.
Iodin	See <i>Iodum.</i>
Iodipin	1—4 dr. (10 per cent.) by mouth.	4.0—16.0	<i>Iodinol.</i> An addition product (10 and 25 per cent.) of iodine and sesame oil. Substitute for iodides.
	$\frac{1}{2}$ —1 dr. (25 per cent.) hypodermically.	1.0—4.0	
Iodoformum, <i>i.</i>	$\frac{1}{2}$ —5 gr.	0.03—0.3	<i>Iodoform, triiodomethane.</i> Externally as an antiseptic, sedative, and alterative in venereal and other sores. In powder, pure or diluted. Internally, recommended as an alterative in phthisis.
Iodolum, <i>i.</i>	1—3 gr.	0.065—0.2	<i>Iodol, tetraiodopyrrol.</i> Substitute for iodoform, containing 89 per cent. of iodine.
Iodothyrim	5—10 gr.	0.3—0.6	The supposed active body in thyroid gland. Same uses as latter.
Iodum, <i>i.</i>	$\frac{1}{20}$ — $\frac{1}{10}$ gr.	0.003—0.006	<i>Iodin.</i> Alternative and antisyphilitic. Externally as a counterirritant in the form of tincture or ointment.
liquor compositus	<i>Lugol's solution</i> (iodine, 5; potassium iodide, 10; water, q. s. 100).
tinctura (Churchill)	1—5 min.	0.06—0.3	7 per cent. iodine.
decolorata	Externally	10½ per cent. iodine with potassium iodide.
unguentum	4 per cent.
Ipecacuanha, <i>a.</i>	$\frac{1}{2}$ —2 gr. expectorant	0.016—0.13	<i>Ipecac.</i> Expectorant, emetic, anti-emetic, stomachic, and antidiarrhetic. Contains <i>emetin</i> and <i>cephælin</i> .
	15—30 gr. emetic	1.0—2.0	
fluidextractum	$\frac{1}{2}$ —3 min.	0.03—0.12	
	15—30 min.	1.0—2.0	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
<i>Ipecacuanha pulvis et opii</i>	5-15 gr.	0.3-1.0	<i>Dover's powder.</i> Diaphoretic and anodyne.
<i>syrupus</i>	5-20 min.	0.3-1.3	
	1-4 fl.dr.	4.0-16.0	
<i>tinctura et opii</i>	5-15 min.	0.3-1.0	
<i>vinum</i>	5-15 min.	0.3-1.0	
<i>Iris, iridis</i>	10-20 gr.	0.05-1.3	<i>Blue-flag.</i> Cathartic and supposed cholagogue.
<i>extractum</i>	1-5 gr.	0.00-0.3	
<i>florentina</i>	<i>Orris root.</i> Chiefly for perfume.
<i>Irish moss</i>	See <i>Chondrus</i> .
<i>Iron</i>	See <i>Ferrum</i> .
<i>Isinglass</i>	See <i>Ichthyocolla</i> .
<i>Isopral</i>	10-30 gr.	0.6-2.0	<i>Trichlorisopropyl alcohol.</i> Crystalline substance, sparingly soluble in water. Somnifacient. Less toxic than chloral.
<i>Itrol</i>	See <i>Argenti citras</i> .
<i>Izal</i>	A proprietary name for an emulsion of cresols from coal-tar. Active disinfectant and germicide.
<i>Jaborandi</i>	See <i>Pilocarpus</i> .
<i>Jalapa, æ</i>	5-30 gr.	0.3-2.0	<i>Jalap.</i> Hydragogue, cathartic. Especially useful in dropsy. (<i>Jalap</i> , 35; potassium bitartrate, 65.)
<i>fluidextractum</i>	$\frac{1}{4}$ -1 fl.dr.	1.0-4.0	
<i>pulvis compositus</i>	20-60 gr.	1.3-4.0	
<i>resina</i>	1-5 gr.	0.065-0.3	
<i>tinctura compositus</i>	$\frac{1}{2}$ -1 fl.dr.	0.2-4.0	
<i>Jamaica dogwood</i>	See <i>Piscidia erythrina</i> .
<i>Jambul</i>	5-30 gr.	0.3-2.0	<i>Java plum.</i> Recommended as an alternative in diabetes.
<i>James' powder</i>	See <i>Antimonial powder</i> .
<i>Jamestown weed</i>	See <i>Stramonium</i> .
<i>Jasmin, yellow</i>	See <i>Gelsemium</i> .
<i>Jequirity</i>	<i>Jequiritol, Indian licorice.</i> Contains abrin. A 3 per cent. solution is used locally in chronic conjunctivitis.
<i>Jimson weed</i>	See <i>Stramonium</i> .
<i>Juglandin</i>	2-5 gr.	0.13-0.3	Extractive from <i>butternut</i> .
<i>Juglans, dis.</i>	$\frac{1}{2}$ -1 dr.	2.0-4.0	<i>Butternut.</i> Cathartic.
<i>extractum</i>	5-10 gr.	0.3-0.6	
<i>Juniperus, i</i>	15-60 gr.	1.0-4.0	<i>Juniper.</i> Diuretic.
<i>infusum</i>	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0	
<i>oleum</i>	5-15 min.	0.3-1.0	
<i>spiritus</i>	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
<i>compositus</i>	1-4 fl.dr.	4.0-16.0	
<i>Kamala, æ</i>	1-2 dr.	4.0-8.0	<i>Rottlera.</i> Vermifuge for tapeworm.
<i>fluidextractum</i>	1-2 fl.dr.	4.0-8.0	
<i>Kaolinum, i, cataplasma</i>	<i>Kaolin, aluminum silicate, pipe-clay, fullers' earth.</i> Mixed with glycerin, it is used for poultices.
<i>Kefir</i>	<i>Kumiss.</i>
<i>Keratin</i>	<i>Horn substance.</i> An ammoniacal or acetous solution is used to coat pills intended to pass into the bowel unchanged by the gastric juice.
<i>Kermes mineral</i>	See <i>Antimonium sulphuratum</i> .
<i>Kino (indeclinable)</i>	5-20 gr.	0.3-1.3	Contains 75 per cent. tannin. Astringent in diarrhea.
<i>tinctura</i>	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
<i>compositus</i>	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
<i>Kola, æ</i>	<i>Kola or kola nut.</i> Contains caffeine. Stimulant.
<i>tinctura</i>	20-60 min.	1.3-4.0	
<i>vinum</i>	4-8 fl.dr.	16.0-32.0	
<i>Koussou</i>	See <i>Brayera</i> .
<i>Krameria, æ</i>	5-30 gr.	0.3-2.0	<i>Rhatany.</i> Contains 20 per cent. tannin. Astringent.
<i>extractum</i>	5-10 gr.	0.3-0.6	
<i>fluidextractum</i>	5-30 min.	0.3-2.0	
<i>syrupus</i>	1-4 fl.dr.	4.0-16.0	
<i>tinctura</i>	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
<i>trochisci</i>	1 occasionally	
<i>Kryofin</i>	5-10 gr.	0.3-0.6	A phenetidin compound resembling phenacetin. Antineuralgic and antipyretic.
<i>Lactophenin</i>	5-15 gr.	0.3-1.0	
<i>Lactose</i>	<i>Lactyl-phenetidin.</i> Antineuralgic and antipyretic.
<i>Lactucarium, ii</i>	10-20 gr.	0.6-1.3	
<i>syrupus</i>	1-4 fl.dr.	4.0-16.0	See <i>Saccharum lactis</i> .
<i>tinctura</i>	20-60 min.	1.3-4.0	
<i>Ladies'-slipper</i>	<i>Juice of wild lettuce.</i> Mild sedative and anodyne.
<i>Lanolin</i>	See <i>Cypripedium</i> .
			See <i>Adeps lana</i> .

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Lappa, æ	$\frac{1}{2}$ –1 dr.	2.0–4.0	<i>Burdock</i> . Internally as an alterative in rheumatism, gout, chronic skin diseases; externally as a vulnerary.
extractum.....	5–20 gr.	0.3–1.3	See <i>Delphina</i> .
fluidextractum.....	$\frac{1}{2}$ –1 fl.dr.	2.0–4.0	See <i>Opii tinctura</i> , under <i>Opium</i> .
Larkspur	See <i>Opii vinum</i> , under <i>Opium</i> .
Laudanum	<i>Cherry-laurel leaves</i> (0.1 per cent. hydrocyanic acid).
Sydenham's	<i>Lavender</i> . Carminative in gastralgia, colic, etc., and flavoring agent.
Laurocerasi folia	3–15 gr.	0.2–1.0
aqua.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0
Lavandula, æ
oleum.....	1–5 min.	0.06–0.3
spiritus.....	20–60 min.	1.3–4.0
tinctura compositus.....	20–60 min.	1.3–4.0
Lead	See <i>Plumbum</i> .
Lecithin	1–2 gr.	0.065–0.13	Phosphorus constituent of nerve substance and yolk of egg. Recommended as a nerve tonic.
Lemon	See <i>Limon</i> .
Leptandra, æ	15–60 gr.	1.0–4.0	<i>Culver's root</i> . Active cathartic.
extractum.....	1–5 gr.	0.065–0.3
fluidextractum.....	10–60 min.	0.6–4.0
Leptandrin	$\frac{1}{4}$ –3 gr.	0.016–0.2	Resinoid (eclectic). Action like that of podophyllin.
Levant wormseed	See <i>Santonica</i> .
Levulose	1 ounce per day	30.0 per day	<i>Fruit-sugar, fructose, diabetin</i> . Substitute for cane-sugar in diabetes.
Levurin	$\frac{1}{2}$ –2 dr.	2.0–8.0	<i>Leuoretin</i> . Dehydrated yeast. Recommended for boils, other septic infections, and for diabetes.
Licorice	See <i>Glycyrrhiza</i> .
Lily-of-the-valley	See <i>Convallaria</i> .
Lime	See <i>Calx</i> .
Limon, æs	<i>Lemon</i> . Juice is refrigerant, antiscorbutic, and antirheumatic. Peel and juice, flavoring agents.
oleum.....	1–5 min.	0.06–0.3
spiritus.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0
syrupus.....	1–4 fl.dr.	4.0–16.0
Linum, i	<i>Linseed, flaxseed</i> . Demulcent. Used for poultices. Infusion for inflammatory conditions of genito-urinary and respiratory tracts.
farina.....	<i>Flaxseed meal</i> .
infusum compositum.....	$\frac{1}{2}$ –2 fl.oz.	15.0–60.0
oleum.....	$\frac{1}{2}$ –1 fl.oz.	15.0–30.0
Liparin	1–2 fl.dr.	4.0–8.0	<i>Olive oil</i> with 5 per cent. <i>oleic acid</i> . Substitute for cod-liver oil.
Listerin	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0	Proprietary preparation similar to <i>liquor antisepticus</i> .
Lithium, ii, benzoas	5–20 gr.	0.3–1.3	<i>Lithium</i> . The action of the lithium salts is very similar to that of the corresponding salts of potassium. The alkaline salts have been especially recommended in chronic rheumatism and gout.
bromidum.....	5–20 gr.	0.3–1.3
carbonas.....	5–10 gr.	0.3–0.6
citras.....	5–10 gr.	0.3–0.6
iodidum.....	3–10 gr.	0.2–0.6
salicylas.....	5–20 gr.	0.3–1.3
tartaras acidus.....	5–20 gr.	0.3–1.3
Lobelia, æ	1–3 gr. expectorant	0.065–0.2	<i>Lobelia, Indian tobacco</i> . Expectorant, antispasmodic, emetic. Especially useful in asthma.
fluidextractum.....	10–20 gr. emetic	0.6–1.3
tinctura.....	2–10 min.	0.13–0.6
.....	20–30 min.	1.3–2.0
.....	5–30 min.	0.3–2.0
.....	30–60 min.	2.0–4.0
Lobelin	$\frac{1}{2}$ –1 gr.	0.03–0.06	Impure resinoid (eclectic).
Lobelina sulphas	$\frac{1}{2}$ –1 gr.	0.01–0.06	Alkaloid of <i>lobelia</i> .
Logwood	See <i>Hematoxylon</i> .
Loretin	Externally	Iodin compound with properties like those of iodoform.
Losophan	Externally	Iodin compound containing 80 per cent. iodine. 1 or 2 per cent. solution in parasitic skin diseases.
Lugol's solution	See <i>Iodi liquor compositus</i> .
Lupulinum, i	5–15 gr.	0.3–1.0	<i>Lupulin</i> . A glandular powder from hops. Mild antispasmodic and soporific.
fluidextractum.....	5–30 min.	0.3–2.0
oleoresin.....	2–5 gr.	0.13–0.3
tinctura.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0
Lupulus	See <i>Humulus</i> .
Lycetol	5–20 gr.	0.3–1.3	<i>Dimethylpiperazin tartrate</i> . Recommended as a solvent of uric acid in gout.
Lycoperdon	Externally	<i>Puff-ball</i> . For surgical dressings and as a local hemostatic.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
<i>Lycopodium</i> , <i>ii</i> tinctura.....	5-20 gr. ¼-1 fl.dr.	0.3-1.3 1.0-4.0	<i>Lycopodium</i> , club-moss. Externally as a protective. Internally, recommended in dyspepsia and irritation of urinary organs. 50 per cent. solution of ethylene-ethenyl-diamin. Recommended in gout.
<i>Lysidin</i> bitartrate.....	10-30 min. 5-15 gr.	0.6-2.0 0.3-1.0	A liquid formaldehyd-potash soap.
<i>Lysoform</i>	Externally	<i>Mace</i> . Carminative. Similar to nutmeg.
<i>Macis</i> , <i>idis</i>	5-20 gr.	0.3-1.3	<i>Cimicifugin</i> (eclectic). Resin from cimicifuga. Antispasmodic, antirheumatic, uterine sedative.
<i>Macrotin</i>	½-2 gr.	0.03-0.13	See <i>Rubia</i> .
<i>Madder</i>	See <i>Morphine sulphas liquor</i> .
<i>Magendie's solution</i>	See <i>Magnesiæ oxidum</i> .
<i>Magnesia</i> , <i>a</i> magma..... ponderosa..... 1-4 fl.dr. 4.0-16.0	<i>Milk of magnesia</i> . Antacid and laxative.
<i>Magnesiæ oxidum</i> ponderosum..... peroxidum..... salicylas..... sulphas..... effervescens.....	½-2 dr. ½-2 dr. ½-1 dr. 10-30 gr. 1-6 dr. 1-8 dr.	1.0-8.0 1.0-8.0 1.0-4.0 0.6-2.0 4.0-24.0 4.0-32.0	See <i>Magnesiæ oxidum ponderosum</i> . Calcined magnesia. Heavy calcined magnesia.
<i>Magnesium</i> , <i>ii</i>	<i>Epsom salts</i> .
benzoas..... bromidum..... carbonas..... citras effervescens..... citratas liquoris..... glycerophosphas..... hypophosphis.....	5-15 gr. 10-20 gr. ½-2 dr. 1-2 dr. 6-12 fl.oz. 3-10 gr. 3-10 gr.	0.3-1.0 0.6-1.3 2.0-8.0 4.0-8.0 180.0-360.0 0.2-0.6 0.2-0.6	<i>Magnesium</i> . The oxid and carbonate are used as antacid laxatives. The citrate and sulphate are hydragogue purgatives. The latter is also useful in lead-poisoning and by intraspinal injection (15 min. of 25 per cent. solution for each 20 pounds of body weight) in tetanus. The glycerophosphate and hypophosphate are employed as tonics.
<i>Maidis stigmata</i> ustilago.....	See <i>Zea</i> . See <i>Ustilago maydis</i> .
<i>Malakin</i>	½-1 dr.	2.0-4.0	<i>Salicyl-paraphenetidin</i> . Rheumatism and neuralgia.
<i>Malefern</i>	See <i>Aspidium</i> .
<i>Maltum</i> , <i>i</i> extractum..... liquidum.....	1-2 dr. 1-4 dr. 1-4 fl.dr.	4.0-8.0 4.0-16.0 4.0-16.0	<i>Mall</i> . Dried, partially germinated barley. Digestant.
<i>Mandrake</i>	See <i>Podophyllum</i> .
<i>Manganum</i> , <i>i</i> carbonas..... citras..... dioxidum præcipitatum..... hypophosphis..... phosphas..... sulphas..... 5-20 gr. 1-5 gr. 3-10 gr. 1-10 gr. 1-5 gr. 1-10 gr. 0.3-1.3 0.06-0.3 0.2-0.6 0.06-0.6 0.06-0.3 0.06-0.6	<i>Manganese</i> . Recommended as an aid to iron in anemia; also used in amenorrhæa.
<i>Manna</i> , <i>a</i> Mannite..... Mannitol nitras..... Maranta, <i>a</i> Marigold..... Marrubium, <i>ii</i> extractum..... fluidextractum..... Marshmallow..... Mastiche, <i>es</i>	2-8 dr. 2-8 dr. 1-2 dr. ad lib. ½-1 dr. 5-10 gr. ½-1 fl.dr. 5-30 gr.	8.0-32.0 8.0-32.0 0.06-0.13 2.0-4.0 0.3-0.6 2.0-4.0 0.3-2.0	<i>Manna</i> . Laxative. <i>Manna sugar</i> . <i>Hexanitrin</i> . Similar to nitroglycerin. <i>Arrow-root</i> . Starchy food and demulcent. See <i>Calendula</i> . <i>Horehound</i> . Expectorant, stomachic, and diuretic.
<i>Maté</i>	See <i>Althæa</i> .
<i>Matico</i> (indeclinable)..... fluidextractum.....	15-60 gr. ¼-1 fl.dr.	1.0-4.0 1.0-4.0	<i>Mastic, resin mastic</i> . Corrective of aloes. Aromatic. See <i>Ilex Paraguayensis</i> .
<i>Matricaria</i> , <i>a</i> fluidextractum.....	1-4 dr. ½-1 fl.dr.	4.0-16.0 2.0-4.0	<i>Matico</i> . Used locally to arrest hemorrhage; internally as a stimulant diuretic in inflammatory diseases of urinary organs.
<i>May-apple</i>	<i>German chamomile</i> . Astringent, stomachic.
<i>Meadow saffron</i>	See <i>Podophyllum</i> .
<i>Medulla ossium rubra</i>	2-4 dr.	8.0-16.0	See <i>Colchicum</i> .
<i>Mel</i> , <i>lis</i>	ad lib.	<i>Bone-marrow</i> . Recommended in pernicious anemia.
depuratum..... rosæ.....	ad lib. ½-2 fl.dr. 2.0-8.0	<i>Honey</i> . Demulcent, laxative, and nutritive. <i>Clarified honey</i> .
<i>Melaleuca leucodendron</i>	<i>Honey of rose</i> .
<i>Melissa</i> , <i>a</i> infusum.....	½-1 dr. 1-2 fl.oz.	1.0-4.0 30.0-60.0	<i>Cajuput</i> . See under <i>Cajuputi</i> . <i>Balm</i> . Refreshing drink in fever.
<i>Menispermum</i> , <i>i</i> fluidextractum.....	½-1 dr. ½-1 fl.dr.	1.0-4.0 2.0-4.0	<i>Yellow parilla</i> , Canadian moonseed. Stomachic and alterative.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
<i>Mentha, æ, piperita, æ</i> ...	$\frac{1}{4}$ -1 dr.	1.0-4.0	<i>Peppermint</i> . Aromatic carminative and
aqua.....	1-8 fl.dr.	4.0-32.0	flavoring agent. Oil, externally, local
oleum.....	1-5 min.	0.06-0.3	anesthetic.
spiritus.....	10-40 min.	0.6-1.6	
viridis.....	$\frac{1}{4}$ -1 dr.	1.0-4.0	<i>Spearmint</i> . Same uses as peppermint.
aqua.....	1-8 fl.dr.	4.0-32.0	
oleum.....	1-5 min.	0.06-0.3	
spiritus.....	10-40 min.	0.6-1.6	<i>Peppermint camphor</i> . Locally as an anes-
Menthol.....	$\frac{1}{4}$ -2 gr.	0.03-0.13	thetic in headache, neuralgia, and prur-
			itus. Internally as a gastric seda-
			tative.
<i>Menyanthes trifoliata</i>	15-30 gr.	1.0-2.0	<i>Buckbean or bogbean</i> . Bitter tonic, em-
infusum.....	2-4 fl.oz.	60.0-120.0	menagogue, and vermifuge.
Mercuriol.....	$\frac{1}{4}$ -3 gr.	0.015-0.2	<i>Mercury nucleinate</i> . Internally in syphilis.
			Locally (0.5 to 5 per cent. solution) in
			gonorrhea and conjunctivitis.
Mercury.....			See <i>Hydrargyrum</i> .
Mesotan.....	Externally		Trade name of an ester of salicylic acid.
			Used locally diluted with 1 or 2 parts of
			olive oil.
Methyl alcohol.....			<i>Wood-alcohol</i> .
atropin bromid.....			See <i>Atropina methylbromidum</i> .
chloridum.....	Externally		<i>Methyl chlorid</i> . Used in liquid form as a
			local anesthetic.
morphin.....			See <i>Codeina</i> .
salicylas.....	10-30 min.	0.6-2.0	<i>Methyl salicylate</i> . Synthetic oil of winter-
			green. Internally and locally in rheu-
			matic conditions. Flavoring agent.
Methylene bichlorid.....			General anesthetic. Dangerous.
Methylene-blue.....			See <i>Methylthionina hydrochloridum</i> .
Methylthionina hydro-			
chloridum.....	1-6 gr.	0.06-0.4	<i>Methylene-blue</i> . Internally, urinary anti-
			septic in gonorrhea; antimalarial in place
			of quinin, and analgesic in neuralgic pain.
			It colors the urine blue.
Mezereum, <i>i</i>	1-10 gr.	0.06-0.6	<i>Mezereon</i> . Externally, irritant, like can-
fluidextractum.....	1-10 min.	0.06-0.6	tharides; internally, recommended as
unguentum.....	Externally		alternative in syphilis, chronic rheumatism,
			and skin diseases.
Mica, <i>æ, panis</i>			<i>Bread-crumbs</i> .
Milk-sugar.....			See <i>Saccharum lactis</i> .
Molasses.....			See <i>Syrupus juscus</i> .
Monkshood.....			See <i>Aconitum</i> .
Monsel's salt.....			See <i>Ferri subsulphas</i> .
solution.....			See <i>Ferri subsulphas liquor</i> , under <i>Ferrum</i> .
Mori succus.....	ad lib.		<i>Mulberry juice</i> . Laxative.
syrupus.....	ad lib.		
Morphina, <i>æ</i>	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.008-0.016	<i>Morphin</i> . Chief alkaloid of opium. Som-
acetas.....	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.008-0.016	nifacient, analgesic, and antispasmodic.
hydrochloridum.....	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.008-0.016	Less nauseating, constipating, and sudo-
sulphas.....	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.008-0.016	rigic in its effects than opium.
liquor.....	5-10 min.	0.3-0.6	<i>Magendie's solution</i> (4 per cent.).
pulvis compositus.....	5-10 gr.	0.3-0.6	<i>Tully's powder</i> (morph. sulph., 1.5; cam-
			phor, 32; licorice, 33; calc. carb., 33.5).
Moschus, <i>i</i>	5-15 gr.	0.3-1.0	<i>Musk</i> . General stimulant.
Moss, Irish.....			See <i>Chondrus</i> .
Mucuna, <i>æ, pruriens</i>	1-3 gr.	0.06-0.2	<i>Cowage</i> . Vermifuge for round-worms.
Mullein.....			See <i>Verbascum</i> .
Musk root.....			See <i>Sumbul</i> .
Mustard.....			See <i>Sinapis</i> .
Mydrasin.....			See <i>Atropina methylbromid</i> .
Myrcia, <i>æ</i>			<i>Bayberry</i> . Stimulant and perfume.
oleum.....			
spiritus.....			<i>Bay-rum</i> .
Myristica, <i>æ</i>	5-20 gr.	0.3-1.3	<i>Nutmeg</i> . Aromatic, carminative, stimu-
oleum.....	1-3 min.	0.06-0.2	lant.
spiritus.....	1-2 fl.dr.	4.0-8.0	
Myrrha, <i>æ</i>	5-30 gr.	0.3-2.0	<i>Myrrh</i> . Locally, much used in washes for
fluidextractum.....	5-30 min.	0.3-2.0	inflammatory conditions of mouth and
tinctura.....	10-60 min.	0.6-4.0	gums. Internally, recommended in bron-
			chitis, amenorrhea; also used as an ad-
			juvant to aloes and rhubarb in constipa-
			tion.
Myrtol.....	3-10 min.	0.2-0.6	Chief constituent of oil of myrtle. Expec-
			torant similar to eucalyptol.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Naphthalinum, <i>i</i>	1-5 gr.	0.06-0.3	<i>Naphthalin, tar camphor</i> . Externally, antiseptic and stimulant in skin diseases; internally, intestinal disinfectant and vermifuge.
Naphthol, benzo.....	3-10 gr.	0.2-0.6	<i>Benzonaphthol</i> . Same uses as naphthalin.
beta.....	3-10 gr.	0.2-0.6	<i>Betanaphthol</i> . Same uses as naphthalin.
Naphtho-salol.....	3-10 gr.	0.2-0.6	<i>Betol</i> . Antiseptic and antirheumatic.
Narceina, <i>a</i>	$\frac{1}{4}$ -1 gr.	0.008-0.06	<i>Narcein</i> . An alkaloid of opium. Soporific action less powerful than that of morphin.
Narcotina, <i>a</i>	1-3 gr.	0.06-0.2	An alkaloid of opium. Action like that of morphin, but weaker.
Nargol.....	Externally	Compound nucleinic acid with silver (10 per cent. silver). Substitute for silver nitrate.
Neat's-foot oil.....	See <i>Oleum bubulum</i> .
Nectandra, <i>a</i>	2-8 gr.	0.13-0.5	<i>Bebeeru bark</i> . Contains a bitter principle, berberin. Tonic and antiperiodic.
fluidextractum.....	5-20 min.	0.3-1.3	<i>Acetylpara-oxyphenyl-urethan</i> . Recommended as an antipyretic and antineuralgic.
Neurodin.....	5-15 gr.	0.3-1.0	<i>Bromodiethyl-acetamid</i> (40 per cent. bromin) Sedative and anticonvulsant.
Neuronal.....	10-20 gr.	0.6-1.3	<i>Nickel</i> .
Niccolum, <i>i</i>	<i>Nickel bromid</i> . Nerve sedative.
bromidum.....	2-8 gr.	0.13-0.5	<i>Nickel sulphate</i> . Astringent. Recommended in anemia.
sulphas.....	$\frac{1}{2}$ -2 gr.	0.03-0.13	<i>Nicotin</i> . Liquid alkaloid from tobacco. Recommended as an anticonvulsant.
Nicotina, <i>a</i>	$\frac{1}{4}$ -1 gr.	0.01-0.06	See <i>Cactus grandiflorus</i> .
Night-blooming cereus.....	See <i>Polassium nitras</i> .
Niter.....	See <i>Amylis nitris</i> .
Nitrite of amyl.....	See <i>Glycerylis nitras</i> .
Nitroglycerin.....	<i>Laughing-gas</i> . General anesthetic.
Nitrous oxid.....	Inhalation	<i>Tetraiodophenolphthalein</i> (60 per cent. iodin). Antiseptic. Iodoform substitute.
Nosophen.....	3-8 gr.	0.2-0.5	<i>Methylene-citrylsalicylic acid</i> . Recommended in rheumatic affections.
Novaspirin.....	10-20 gr.	0.6-1.3	Ester of benzoic acid. Substitute for cocain.
Novocain.....	$\frac{1}{4}$ -1 gr.	0.013-0.06	<i>Nucleol</i> . Compound of nucleinic acid obtained from yeast. Recommended in tuberculosis and other infections.
Nuclein.....	10-15 gr.	0.6-1.0	See <i>Galla</i> .
Nutgall.....	See <i>Myristica</i> .
Nutmeg.....	<i>Nux vomica, Quaker button</i> . Contains strychnin and brucin. Stimulates the respiratory center, the circulation, the digestive tract, and central nervous system. Toxic doses cause symptoms resembling those found in tetanus. Useful in atonic dyspepsia, constipation from intestinal atony, incontinence of urine from atony of the bladder, certain forms of paralysis, in emphysema and pneumonia, and in various forms of heart failure.
Nux, <i>cis, vomica, a</i>	$\frac{1}{4}$ -4 gr.	0.03-0.26	See <i>Quercus alba</i> .
extractum.....	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.008-0.03	<i>Ethereal oil</i> . An ethereal solution of a product of the distillation of alcohol and sulphuric acid.
fluidextractum.....	1-3 min.	0.06-0.2	<i>Oil of bitter almond</i> . Contains 2 to 4 per cent. of hydrocyanic acid. Equivalent to benzaldehyd.
tinctura.....	5-20 min.	0.3-1.3	<i>Oil of sweet almonds</i> .
Oak, white.....	<i>Oil of sweet birch</i> . Similar to oil of wintergreen and methyl salicylate. Antirheumatic.
Oleum æthereum.....	<i>Neat's-foot oil</i> . Obtained from the feet of the ox. Laxative and a substitute for cod-liver oil.
amygdalæ amaræ.....	$\frac{1}{4}$ - $\frac{1}{2}$ min.	0.016-0.03	<i>Oil of juniper tar</i> . Stimulant and antiparasitic in skin diseases.
expressum.....	1-6 fl.dr.	4.0-24.0	<i>Cajuput oil</i> . Rubefacient, carminative, and expectorant.
betulæ.....	5-20 min.	0.3-1.3	<i>Oil of American wormseed</i> . Vermifuge for round-worms.
bubulum.....	1-4 fl.dr.	4.0-16.0	<i>Gray oil</i> (mercury, 30; mercurial ointment, 2; vaselin oil, 50). Subcutaneously in syphilis.
cadinum.....	Externally	
cajuputi.....	1-10 min.	0.06-0.6	
chenopodii.....	1-10 min.	0.06-0.6	
cinereum.....	1-2 gr.	0.06-0.13	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
<i>Oleum crotonis</i>	See <i>Oleum tiglii</i> .
<i>erigerontis</i>	5-20 min.	0.3-1.3	<i>Oil of Canada fleabane</i> . Hemostatic and diuretic.
<i>gaultheriæ</i>	5-20 min.	0.3-1.3	<i>Oil of wintergreen</i> . Equivalent to methyl salicylate. Antirheumatic.
<i>gynocardia</i>	5-20 min.	0.3-1.3	<i>Chaulmoogra oil</i> . From seeds of <i>Gynocardia odorata</i> . Leprosy and chronic rheumatism.
<i>juniperi</i>	1-5 min.	0.06-0.3	<i>Oil of juniper berries</i> . Stimulant diuretic and carminative.
<i>lini</i>	1-4 fl.dr.	4.0-16.0	<i>Linseed oil</i> .
<i>morruæ</i>	1-4 fl.dr.	4.0-16.0	<i>Cod-liver oil</i> . Alternative and nutrient.
<i>neroli</i>	<i>Oil of orange flowers</i> .
<i>olivæ</i>	1-8 fl.dr.	4.0-32.0	<i>Olive oil</i> . Nutrient and laxative. Recommended for gall-stones and gastric hyperacidity.
<i>phosphoratum</i>	1-5 min.	0.06-0.3	<i>Phosphorated oil</i> , B. P. (1 per cent.). Tonic. It is recommended in rickets and scrofula.
<i>pici</i>	<i>Oil of lar</i> .
<i>pini pumilionis</i>	3-10 min.	0.2-0.6	<i>Oil of mountain pine</i> . Expectorant, chiefly by inhalation.
<i>sylvestris</i>	3-10 min.	0.2-0.6	<i>Oil of Scotch fir</i> . Expectorant, especially by inhalation.
<i>ricini</i>	1-4 fl.dr.	4.0-16.0	<i>Castor oil</i> . Cathartic.
<i>rosæ</i>	<i>Oil of rose</i> . For perfumes.
<i>rusci pyroligneum</i>	<i>Birch tar</i> . Externally in chronic skin diseases.
<i>rutæ</i>	1-5 min.	0.06-0.3	<i>Oil of rue</i> . Powerful irritant and abortifacient.
<i>sabinæ</i>	1-5 min.	0.06-0.3	<i>Oil of savine</i> . Powerful irritant and abortifacient.
<i>santali</i>	5-15 min.	0.3-1.0	<i>Oil of sandal-wood</i> . Expectorant, stimulant diuretic, and urinary antiseptic.
<i>sesami</i>	1-8 fl.dr.	4.0-32.0	<i>Sesame oil, benne oil</i> . Laxative, nutrient, emollient. Substitute for olive oil.
<i>sinapis volatile</i>	$\frac{1}{12}$ - $\frac{1}{4}$ min.	0.005-0.01	<i>Volatile oil of mustard</i> . Active rubefacient. Mainly externally.
<i>staphisagriæ</i>	Externally	<i>Oil of stavesacre seeds</i> . Externally for lice (1 to 8 of olive oil).
<i>succini</i>	1-5 min.	0.06-0.3	<i>Oil of amber</i> . Irritant, antispasmodic. Recommended especially for whooping-cough and hiccup.
<i>terebinthinæ</i>	Externally	<i>Oil of turpentine</i> . Rubefacient.
<i>rectificatum</i>	5-20 min.	0.3-1.3	<i>Rectified oil of turpentine</i> . Stimulant expectorant, diuretic; also vermifuge (4 dr.).
<i>theobromatis</i>	<i>Oil of theobroma, cacao-butter</i> . Emollient.
<i>tiglii</i>	$\frac{1}{2}$ -2 min.	0.03-0.12	<i>Croton oil</i> . Rubefacient and drastic cathartic.
<i>Opium, ii</i>	$\frac{1}{2}$ -2 gr.	0.03-0.13	<i>Opium</i> . inspissated juice of poppy. Contains morphin (9 per cent.), codein, narcotin, and narcein. Depresses the cerebrum and respiratory center, diminishes secretions, except that of skin, and lessens peristalsis. Valuable in relieving severe pain, producing sleep, allaying cough, and checking diarrhea; also of service in diabetes and for its calmative effect in internal hemorrhage.
<i>acetum</i>	5-20 min.	0.3-1.3	<i>Vinegar of opium, black drop</i> .
<i>extractum</i>	$\frac{1}{2}$ -1 gr.	0.016-0.06	
<i>granulatum</i>	$\frac{1}{2}$ -2 gr.	0.03-0.13	
<i>pilulæ</i>	1 or 2 pills	
<i>pulvis</i>	$\frac{1}{2}$ -2 gr.	0.03-0.13	
<i>tinctura</i>	5-20 min.	0.3-1.3	<i>Laudanum</i> .
<i>camphorata</i>	1-4 fl.dr.	4.0-16.0	<i>Paregoric</i> .
<i>deodorati</i>	5-20 min.	0.3-1.3	
<i>vinum</i>	5-20 min.	0.3-1.3	<i>Wine of opium, Sydenham's laudanum</i> .
<i>Orange-peel</i>	See <i>Aurantii cortex</i> .
<i>Orexin tannate</i>	4-8 gr.	0.26-0.5	Recommended as a stomachic.
<i>Orphol</i>	8-30 gr.	0.5-2.0	<i>Bismuth betanaphtholate</i> . Gastro-intestinal antiseptic and astringent.
<i>Orris root</i>	See <i>Iris florentina</i> .
<i>Orthoform</i>	1-3 gr.	0.06-0.2	An ester of benzoic acid. Local anesthetic. Internally in ulcer of stomach.
<i>Oubain</i>	$\frac{1}{1000}$ - $\frac{1}{200}$ gr.	0.00006-0.00026	Glucosid from <i>ouabaio wood</i> . Action like that of strophanthin.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Ovariin.....	3-6 gr.	0.2-0.4	Dried cows' ovaries. Alternative in disorders of ovaries.
Ovoferrin.....	2-4 fl.dr.	8.0-16.0	A protein preparation of iron.
Ox-gall.....	See <i>Fel bovis</i> .
Oxymel.....	1-2 fl.dr.	4.0-8.0	Honey, 8; acetic acid, 1; water, 1. Used in cough mixtures.
Palladii hydrochloridum..	5-10 min.	0.3-0.6	Palladium chlorid. Alternative in tuberculosis (3 per cent. solution).
Pancreatinum, i.....	5-10 gr.	0.3-0.6	Pancreatin. Mixture of ferments from pancreas. Digestant.
Pansy.....	See <i>Viola</i> .
Papain.....	2-5 gr.	0.13-0.3	Papayotin. Digestive principle of papaw. Digestant; locally, solvent of false membrane.
Paraform.....	Trioxymethylene, polymerized formaldehyd. When heated, yields formaldehyd.
Paraldehydum, i.....	$\frac{1}{2}$ -1 fl.dr.	0.2-4.0	Paraldehyd. Active somnifacient.
Paregoric.....	See <i>Opii tinctura camphorata</i> .
Pareira, a.....	$\frac{1}{2}$ -1 dr.	2.0-4.0	Pareira brava. Diuretic similar to buchu.
extractum.....	5-20 gr.	0.3-1.3	Inflammatory conditions of urinary organs.
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0
Paris green.....	Aceto-arsenite of copper.
Parsley.....	See <i>Apium petroselinum</i> .
Pearson's arsenical sol.....	A weak solution (1:600) of sodium arsenate.
Pelletierina, a.....	3-6 gr.	0.2-0.4	Pelletierin. Alkaloid of pomegranate root bark. Efficient remedy for tapeworm.
sulphas.....	5-8 gr.	0.3-0.5
tannas.....	5-8 gr.	0.3-0.5
Pellitory.....	See <i>Pyrethrum</i> .
Pennyroyal.....	See <i>Hedeoma</i> .
Pepo, nis.....	1-2 oz.	30.0-60.0	Pumpkin seeds. A remedy for tapeworm.
Pepper, red.....	See <i>Capsicum</i> .
Peppermint.....	See <i>Mentha piperita</i> .
Pepsinum, i.....	2-10 gr.	0.13-0.6	Pepsin. Ferment from stomach of pig. Digestant.
Peronin.....	$\frac{1}{2}$ - $\frac{1}{2}$ gr.	0.008-0.03	An artificial alkaloid prepared from morphin. A mild sedative and analgesic.
Peruvian bark.....	See <i>Cinchona</i> .
Petrogen.....	Externally	Trade name of a "modified" mineral oil. Vehicle.
Petrolatum, i.....	Externally	Petroleum jelly. Emollient.
album.....	White petroleum jelly.
liquidum.....	Externally	Liquid paraffin. Emollient spray and vehicle.
Phenacetin.....	5-10 gr.	0.3-0.6	Trade name of acetphenetidin. Analgesic and antipyretic.
Phenazon.....	See <i>Antipyrina</i> .
Phenocoll hydrochloridum	5-20 gr.	0.3-1.3	A derivative of acetphenetidin, with similar action.
Phenol.....	$\frac{1}{2}$ -3 gr.	0.03-0.2	Carbolic acid. Antiseptic, escharotic, local anesthetic.
Phenolphthalein.....	3-8 gr.	0.2-0.5	Laxative.
Phenyl acetamid.....	See <i>Acetanilidum</i> .
dihydroquinazolin.....	See <i>Orexin</i> .
hydrate.....	See <i>Phenol</i> .
methyl acetone.....	2-5 min.	0.12-0.3	Acetophenone, hyponone. Somnifacient.
salicylas.....	See <i>Salol</i> .
urethan.....	3-6 gr.	0.2-0.4	Euphorin. Antipyretic and analgesic.
Phosote.....	See <i>Creosoli phosphas</i> .
Phosphorus, i.....	$\frac{1}{150}$ - $\frac{1}{50}$ gr.	0.0004-0.0013	Phosphorus. Nerve tonic and reconstructive. Used in nervous prostration, impotence, rickets, etc.
Physostigma, atis.....	1-3 gr.	0.06-0.2	Calabar bean. It contains physostigmin or eserine. Contracts the pupil, depresses spinal cord, and stimulates intestinal peristalsis. Used locally in eye in glaucoma, and internally in spinal convulsions, obstinate constipation, and extreme flatulence.
extractum.....	$\frac{1}{8}$ - $\frac{1}{2}$ gr.	0.008-0.03
tinctura.....	5-20 min.	0.3-1.3
Physostigmina, a.....	$\frac{1}{100}$ - $\frac{1}{50}$ gr.	0.00065-0.0013	Physostigmin or eserine. As a myotic, 1 to 4 grains to the ounce.
salicylas.....	$\frac{1}{100}$ - $\frac{1}{50}$ gr.	0.00065-0.0013
sulphas.....	$\frac{1}{100}$ - $\frac{1}{50}$ gr.	0.00065-0.0013
Phytolacca, a.....	5-30 gr.	0.3-2.0	Poke. Alternative, cathartic, emetic.
fluidextractum radices.....	5-30 min.	0.3-2.0
Phytolaccin.....	1-5 gr.	0.065-0.3	Resinoid from <i>phytolacca</i> (eclectic).
Pichi.....	5-30 gr.	0.3-2.0	Pichi (<i>Fabiana imbricata</i>). Recommended in inflammation of urinary organs.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Picrotoxinum, <i>i</i>	100 $\frac{1}{30}$ gr.	0.0006-0.002	<i>Picrotoxin</i> . A neutral principle from fish-berries (<i>Cocculus indicus</i>). Recommended in night-sweats.
Pills, Asiatic.....	1 pill	<i>Arsenic trioxid</i> , $\frac{1}{18}$ gr. (0.005), with <i>black pepper</i> .
Baillie.....	1 pill	Mercurial pill, 2; digitalis leaves, $\frac{1}{2}$; squill, 1.
Blancard.....	1 or 2 pills	<i>Ferrous iodid</i> , 1 grain (0.06).
Blaud.....	1 to 3 pills	<i>Ferrous carbonate</i> , 1 grain (0.06).
blue.....	3-5 gr.	0.2-0.3	Pills of <i>blue mass</i> .
cathartic, vegetable.....	1 or 2 pills	Pills of <i>aloes and mastic</i> .
compound cathartic.....	1 or 2 pills	Calomel, 25; sulphurated antimony, 25; guaiac resin, 50; castor oil, 10.3.
Lady Webster's dinner.....	1 to 3 pills	<i>Pilocarpin</i> . An alkaloid from <i>pilocarpus</i> .
Plummer.....	4-8 gr.	0.25-0.5	Powerful diaphoretic and sialogogue.
Pilocarpina, <i>a</i>	$\frac{1}{8}$ - $\frac{1}{4}$ gr.	0.008-0.016	Used in Bright's disease with uremia and dropsy. In the eye it acts like eserine.
hydrochloridum.....	$\frac{1}{8}$ - $\frac{1}{4}$ gr.	0.008-0.016	<i>Jaborandi</i> . Contains pilocarpin.
nitras.....	$\frac{1}{8}$ - $\frac{1}{4}$ gr.	0.008-0.016	
Pilocarpus, <i>i</i>	15-30 gr.	1.0-2.0	
fluidextractum.....	15-30 min.	1.0-2.0	
infusum.....	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0	
Pimenta, <i>a</i>	10-30 gr.	0.6-2.0	
oleum.....	1-5 min.	0.06-0.3	
Pink root.....	See <i>Spigelia</i> .
Pinus canadensis.....	<i>Hemlock spruce</i> .
fluidextractum.....	10-60 min.	0.6-4.0	
oleum.....	1-10 min.	0.06-0.6	
pumilio.....	<i>Oil of the leaf</i> . Expectorant.
sylvestris.....	<i>Mountain pine</i> .
oleum.....	<i>Scotch fir or pine</i> . Wood yields common turpentine.
Piper, <i>is</i>	5-20 gr.	0.3-1.3	<i>Pine-needle oil</i> (unobtainable).
oleoresina.....	1-3 min.	0.06-0.2	<i>Black pepper</i> . Carminative.
Piperazin.....	5-20 gr.	0.3-1.3	
quinate.....	<i>Diethylene-diamin</i> . Is recommended in gout and as a solvent of uric acid.
Piperidin tartrate.....	10-15 gr.	0.6-1.0	See <i>Sidonal</i> .
Piperinum, <i>i</i>	1-10 gr.	0.06-0.6	This is a derivative of <i>piperin</i> . Recommended as a uric-acid solvent.
Pipsissewa.....	A neutral principle from <i>pepper</i> . Supposed antiperiodic.
Piscidia erythrina.....	$\frac{1}{2}$ -1 dr.	2.0-4.0	See <i>Chimaphila</i> .
fluidextractum.....	$\frac{1}{4}$ -1 fl.dr.	2.0-4.0	<i>Jamaica dogwood</i> . Nerve sedative for cough, asthma, in dysmenorrhea, etc.
Pituitary extract.....	3-5 gr.	0.2-0.3	<i>Extract of the pituitary gland</i> . Alterative in acromegaly.
Pix, <i>cis</i> , burgundica.....	Externally	<i>Burgundy pitch</i> .
canadensis.....	<i>Hemlock pitch</i> .
liquida.....	2-10 gr.	0.13-0.6	<i>Tar</i> . Externally, stimulant in skin diseases; internally, expectorant.
aqua.....	4-10 fl.oz.	120.0-300.0	
unguentum.....	Externally	
Plasmon.....	1-2 dr.	4.0-8.0	
Platini chloridum.....	$\frac{1}{8}$ - $\frac{1}{2}$ gr.	0.008-0.03	Soluble <i>milk albumin</i> (casein). Nutritive.
Pleurisy root.....	<i>Chlorid of platinum</i> . Alterative in syphilis and scrofula.
Plumbum, <i>i</i>	See <i>Asclepias</i> .
acetas.....	1-3 gr.	0.06-0.2	<i>Lead</i> . The acetate of lead is used internally as an astringent (diarrhea) and as a hemostatic. Externally, the acetate and subacetate are used in the form of lotions as protectives and sedatives. The iodid is used in ointment as an absorbent in inflammation of glands. The nitrate is an active caustic.
carbonas.....	Externally	<i>Sugar of lead</i> .
iodidum.....	Externally	
nitras.....	Externally	
oxidum.....	Externally	
subacetatis liquor.....	Externally	<i>Litharge</i> .
dilutum.....	Externally	<i>Goulard's extract</i> .
Podophyllin.....	See <i>Podophylli resina</i> , under <i>Podophyllum</i> .
Podophyllum, <i>i</i>	5-15 gr.	0.3-1.0	<i>Mandrake</i> , <i>May-apple</i> . Purgative.
fluidextractum.....	5-15 min.	0.3-1.0	
pilulæ belladonnæ et capsicum.....	1 or 2 pills	
resina.....	$\frac{1}{2}$ - $\frac{1}{4}$ gr.	0.005-0.03	<i>Podophyllin</i> .
Poison ivy.....	See <i>Rhus toxicodendron</i> .
oak.....	See <i>Rhus toxicodendron</i> .

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Poke.....			See <i>Phytolacca</i> .
Pollantin.....	Externally		Serum of horses treated with toxins from pollen of grasses, etc. Recommended locally to eyes and nostrils in hay-fever. In liquid and powder forms.
Polyvalent sera.....			Sera obtained by inoculating animals with several strains of a bacterium.
Pomegranate.....			See <i>Granatum</i> .
Port wine.....			See <i>Vinum portense</i> .
Potassa.....			See <i>Potassii hydroxidi</i> , under <i>Potassium</i> .
cum calce.....	Externally		<i>Vienna paste</i> . Caustic.
sulphurata.....	3-10 gr.	0.2-0.6	<i>Liver of sulphur</i> . Externally in bath or ointment, and also internally in chronic rheumatism and skin affections.
Potassium, <i>ii</i>			<i>Potassium</i> . The organic salts (acetate, citrate, bicarbonate, etc.) are used as diuretics in dropsy and kidney disease, as antacids in rheumatism, gout, and urinary calculi, and as diaphoretics. The chlorate is mainly used locally and internally in inflammatory conditions of mouth and throat. The bromid is used as a nerve sedative in hysteria, epilepsy, etc.; the nitrate, as a diuretic; the iodid, as an alternative in syphilis, gout, chronic inflammatory diseases, lead-poisoning, etc.; the arsenite (Fowler's solution) as a tonic and alternative, and the permanganate as a germicide, an antidote to morphin- and phosphorus-poisoning, and an emmenagogue.
acetis.....	5-60 gr.	0.3-4.0	
arsenitis liquor.....	1-10 min.	0.00-0.6	
bicarbonas.....	5-30 gr.	0.3-2.0	
bichromas.....	10-1 gr.	0.006-0.013	
bitartras.....	5-60 gr.	0.3-4.0	
borotartras.....	5-30 gr.	0.3-2.0	
bromidum.....	5-30 gr.	0.3-2.0	
carbonas.....	5-30 gr.	0.3-2.0	
chloras.....	2-10 gr.	0.13-0.6	
citras.....	5-60 gr.	0.3-4.0	
liquor.....	1-2 fl.oz.	15.0-60.0	
cyanidum.....	1-1 gr.	0.005-0.016	
et sodii tartras.....	1-4 dr.	4.0-16.0	
ferrocyanidum.....	5-15 gr.	0.3-1.0	
formas.....	1-3 gr.	0.016-0.2	
glycerophosphas.....	3-10 gr.	0.2-0.6	
hydroxidi.....	Externally		
liquor.....	5-20 min.	0.3-1.3	
hypophosphis.....	5-30 gr.	0.3-2.0	
iodidum.....	5-60 gr.	0.3-4.0	
nitras.....	5-20 gr.	0.3-1.3	
nitris.....	1-3 gr.	0.06-0.2	
permanganas.....	1-3 gr.	0.06-0.2	
sulphas.....	5-30 gr.	0.3-2.0	
tartras.....	5-60 gr.	0.3-4.0	
telluras.....	1-1 gr.	0.008-0.03	
Powder, acetanilid, compound.....	5-15 gr.	0.3-1.0	Acetanilid, 70; sod. bicarb., 20; caffein, 10. Antipyretic, analgesic.
bismuth, compound....	Locally		<i>Catarrh snuff</i> , <i>Ferrier's snuff</i> (bismuth subnitrate, 75; acacia, 25; morphin, 0.41).
chalk, compound.....	5-60 gr.	0.3-4.0	<i>Pulvis creta compositus</i> (chalk, 30; acacia, 20; sugar, 50). Antacid in diarrhea.
Dover's.....			See <i>Powder, ipecac and opium</i> .
ipecac and opium.....	5-15 gr.	0.3-1.0	<i>Dover's powder</i> (opium, 1; ipecac, 1; sugar of milk, 8). Diaphoretic and analgesic.
jalap, compound.....	20-60 gr.	1.3-4.0	<i>Pulvis jalapa compositus</i> (jalap, 35; potassium bitartrate, 65). Hydragogue cathartic.
licorice, compound....	1-2 dr.	2.0-8.0	<i>Pulvis glycyrrhiza compositus</i> (senna, 5; licorice, 6.5; washed sulphur, 2.2; oil of fennel, 1; sugar, 15). Laxative.
morphin, compound....	5-15 gr.	0.3-1.0	<i>Tully's powder</i> (morphin sulphate, 1.5; camphor, 32; licorice, 33; calcium carbonate, 33.5). Anodyne.
rhubarb, compound....	5-60 gr.	0.3-4.0	<i>Pulvis rhei compositus</i> , <i>Gregory's powder</i> (rhubarb, 2.5; magnesium oxid, 6.5; ginger, 1.0). Antacid, laxative, especially for children.
Seidlitz.....	1 set of 2 powders		<i>Pulvis effervescens compositus</i> (blue paper: Sodium bicarbonate, 2.6; sodium and potassium tartrate, 8.0. White paper: Tartaric acid, 2.3). Purgative.
Tully's.....			See <i>Powder, morphin, compound</i> .
Propional.....	3-10 gr.	0.2-0.6	<i>Dipropylbarbituric acid</i> . Homologue of veronal. Hypnotic.
Protargol.....	Externally		Compound of silver and albumin (8.3 per cent. silver). Locally, 0.5 to 10 per cent, solution in gonorrhea, vaginitis, ophthalmia, etc.
Prunus, <i>i</i> , virginiana, <i>a</i> ... infusum.....	1-1 dr. 1-1 fl.oz.	1.0-4.0 15.0-30.0	<i>Wild cherry</i> . Cough sedative.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Prunus syrupus	1-4 fl.dr.	4.0-16.0	<i>Potassium ferricyanid.</i> See <i>Acidum hydrocyanicum.</i> See <i>Lycoperdon.</i> <i>Anemone.</i> Chiefly employed in bronchitis, asthma, pertussis, and in dysmenorrhea. See <i>Pepo.</i> A product allied to antipyrin, with similar properties. <i>Pellitory.</i> Irritant, sialogogue. Recommended in rheumatism. A product obtained by distillation from coal-tar or bones. Chiefly used by inhalation in asthma. See <i>Acidum pyrogallicum.</i> <i>Soluble gum-cotton; collodion cotton.</i> <i>Quassia.</i> Bitter tonic; also by injection for seat-worms. See <i>Aspidosperma.</i> See <i>Stillingia.</i> <i>White oak.</i> Astringent. Chiefly as a local application in sore throat and leukorrhea. See <i>Ferrum reductum.</i> <i>Soap-bark.</i> Locally, in hair-washes; also used as a substitute for senega in bronchitis. See <i>Acidum quinicum.</i> <i>Quinidin sulphate.</i> An alkaloid of cinchona. Antimalarial. <i>Quinin.</i> Alkaloid of cinchona. Antimalarial, antipyretic; a bitter tonic. Soluble in four parts of water. <i>Urea-quinin.</i> See <i>Senecio.</i> <i>Pilewort or celandin.</i> Used in ointment and also as suppository for piles. <i>Eucalyptus gum.</i> Astringent in diarrhea and also for relaxed throats. <i>Pterocarpi lignum.</i> Used as coloring agent. <i>Resin, rosin, colophony.</i> From turpentine. Basilicon ointment. <i>Resorcin.</i> A benzol derivative allied to phenol. Antipyretic and antiseptic. See <i>Frangula.</i> <i>Cascara sagrada.</i> Cathartic. See <i>Krameria.</i> <i>Rhubarb.</i> Stomachic and cathartic. <i>Spiced syrup of rhubarb.</i>
Prussic acid	
Puff-ball	
Pulsatilla, <i>æ.</i>	
infusum	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	
tinctura	1-10 min.	0.06-0.6	
Pumpkin seed	
Pyramidon	5-8 gr.	0.3-0.5	
Pyrethrum, <i>i.</i>	$\frac{1}{2}$ -1 dr.	1.0-4.0	
tinctura	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
Pyridin	3-10 min.	0.2-0.6	
Pyrogallol	See <i>Acidum pyrogallicum.</i> <i>Soluble gum-cotton; collodion cotton.</i> <i>Quassia.</i> Bitter tonic; also by injection for seat-worms. See <i>Aspidosperma.</i> See <i>Stillingia.</i> <i>White oak.</i> Astringent. Chiefly as a local application in sore throat and leukorrhea. See <i>Ferrum reductum.</i> <i>Soap-bark.</i> Locally, in hair-washes; also used as a substitute for senega in bronchitis. See <i>Acidum quinicum.</i> <i>Quinidin sulphate.</i> An alkaloid of cinchona. Antimalarial. <i>Quinin.</i> Alkaloid of cinchona. Antimalarial, antipyretic; a bitter tonic. Soluble in four parts of water. <i>Urea-quinin.</i> See <i>Senecio.</i> <i>Pilewort or celandin.</i> Used in ointment and also as suppository for piles. <i>Eucalyptus gum.</i> Astringent in diarrhea and also for relaxed throats. <i>Pterocarpi lignum.</i> Used as coloring agent. <i>Resin, rosin, colophony.</i> From turpentine. Basilicon ointment. <i>Resorcin.</i> A benzol derivative allied to phenol. Antipyretic and antiseptic. See <i>Frangula.</i> <i>Cascara sagrada.</i> Cathartic. See <i>Krameria.</i> <i>Rhubarb.</i> Stomachic and cathartic. <i>Spiced syrup of rhubarb.</i>
Pyroxilin	
Quassia, <i>æ.</i>	$\frac{1}{2}$ -1 dr.	1.0-4.0	
extractum	1-3 gr.	0.06-0.2	
infusum	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0

Quebracho	
Queen's root	
Quercus, <i>us, alba.</i>	
decoctum	$\frac{1}{2}$ -1 fl.oz.	15.0-30.0	
fluidextractum	10-60 min.	0.6-4.0	
Quevenne's iron	See <i>Acidum quinicum.</i> <i>Quinidin sulphate.</i> An alkaloid of cinchona. Antimalarial. <i>Quinin.</i> Alkaloid of cinchona. Antimalarial, antipyretic; a bitter tonic. Soluble in four parts of water. <i>Urea-quinin.</i> See <i>Senecio.</i> <i>Pilewort or celandin.</i> Used in ointment and also as suppository for piles. <i>Eucalyptus gum.</i> Astringent in diarrhea and also for relaxed throats. <i>Pterocarpi lignum.</i> Used as coloring agent. <i>Resin, rosin, colophony.</i> From turpentine. Basilicon ointment. <i>Resorcin.</i> A benzol derivative allied to phenol. Antipyretic and antiseptic. See <i>Frangula.</i> <i>Cascara sagrada.</i> Cathartic. See <i>Krameria.</i> <i>Rhubarb.</i> Stomachic and cathartic. <i>Spiced syrup of rhubarb.</i>
Quillaia, <i>æ, saponaria.</i>	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
tinctura	
Quinic acid	
Quinidinæ sulphas	1-20 gr.	0.06-1.3	
Quinina, <i>æ.</i>	1-20 gr.	0.06-1.3	
arsenas	$1\frac{1}{2}$ - $\frac{1}{2}$ gr.	0.005-0.03	
bisulphas	1-20 gr.	0.06-1.3	
dihydrochloridum	1-20 gr.	0.06-1.3	
glycerophosphas	1-5 gr.	0.06-0.3	
hydrobromidum	1-20 gr.	0.06-1.3	
hydrochloridum	1-20 gr.	0.06-1.3	
hydrochloro-carbamidum	1-20 gr.	0.06-1.3	See <i>Acidum quinicum.</i> <i>Quinidin sulphate.</i> An alkaloid of cinchona. Antimalarial. <i>Quinin.</i> Alkaloid of cinchona. Antimalarial, antipyretic; a bitter tonic. Soluble in four parts of water. <i>Urea-quinin.</i> See <i>Senecio.</i> <i>Pilewort or celandin.</i> Used in ointment and also as suppository for piles. <i>Eucalyptus gum.</i> Astringent in diarrhea and also for relaxed throats. <i>Pterocarpi lignum.</i> Used as coloring agent. <i>Resin, rosin, colophony.</i> From turpentine. Basilicon ointment. <i>Resorcin.</i> A benzol derivative allied to phenol. Antipyretic and antiseptic. See <i>Frangula.</i> <i>Cascara sagrada.</i> Cathartic. See <i>Krameria.</i> <i>Rhubarb.</i> Stomachic and cathartic. <i>Spiced syrup of rhubarb.</i>
hypophosphis	1-5 gr.	0.06-0.3	
phosphas	1-10 gr.	0.06-0.6	
salicylas	1-10 gr.	0.06-0.6	
sulphas	1-20 gr.	0.06-1.3	
tannas	1-20 gr.	0.06-1.3	
valeras	1-10 gr.	0.06-0.6	
Ragwort	
Ranunculus, <i>i, ficaria.</i>	
Red gum	2-5 gr.	0.13-0.3	
saunders	
Resina, <i>æ.</i>	Externally	See <i>Acidum quinicum.</i> <i>Quinidin sulphate.</i> An alkaloid of cinchona. Antimalarial. <i>Quinin.</i> Alkaloid of cinchona. Antimalarial, antipyretic; a bitter tonic. Soluble in four parts of water. <i>Urea-quinin.</i> See <i>Senecio.</i> <i>Pilewort or celandin.</i> Used in ointment and also as suppository for piles. <i>Eucalyptus gum.</i> Astringent in diarrhea and also for relaxed throats. <i>Pterocarpi lignum.</i> Used as coloring agent. <i>Resin, rosin, colophony.</i> From turpentine. Basilicon ointment. <i>Resorcin.</i> A benzol derivative allied to phenol. Antipyretic and antiseptic. See <i>Frangula.</i> <i>Cascara sagrada.</i> Cathartic. See <i>Krameria.</i> <i>Rhubarb.</i> Stomachic and cathartic. <i>Spiced syrup of rhubarb.</i>
ceratum	Externally	
compositum	Externally	
Resorcinol, <i>is.</i>	1-5 gr.	0.06-0.3	
Rhamnus, <i>i, frangula.</i>	
purshiana, <i>æ.</i>	5-30 gr.	0.3-2.0	
elixir	1-3 fl.dr.	4.0-12.0	
extractum	1-5 gr.	0.06-0.3	
fluidextractum	5-30 min.	0.3-2.0	
Rhatany	
Rheum, <i>i.</i>	5-30 gr.	0.3-2.0	See <i>Acidum quinicum.</i> <i>Quinidin sulphate.</i> An alkaloid of cinchona. Antimalarial. <i>Quinin.</i> Alkaloid of cinchona. Antimalarial, antipyretic; a bitter tonic. Soluble in four parts of water. <i>Urea-quinin.</i> See <i>Senecio.</i> <i>Pilewort or celandin.</i> Used in ointment and also as suppository for piles. <i>Eucalyptus gum.</i> Astringent in diarrhea and also for relaxed throats. <i>Pterocarpi lignum.</i> Used as coloring agent. <i>Resin, rosin, colophony.</i> From turpentine. Basilicon ointment. <i>Resorcin.</i> A benzol derivative allied to phenol. Antipyretic and antiseptic. See <i>Frangula.</i> <i>Cascara sagrada.</i> Cathartic. See <i>Krameria.</i> <i>Rhubarb.</i> Stomachic and cathartic. <i>Spiced syrup of rhubarb.</i>
extractum	1-10 gr.	0.06-0.6	
fluidextractum	5-30 min.	0.3-2.0	
mistura et sodæ	1-4 fl.dr.	4.0-16.0	
pillulæ compositus	1 to 5 pills	
pulvis compositus	$\frac{1}{2}$ -1 dr.	2.0-4.0	
syrupus	1-4 fl.dr.	4.0-16.0	
aromaticum	1-4 fl.dr.	4.0-16.0	
tinctura	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
aromaticum	1-4 fl.dr.	4.0-16.0	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
<i>Rhus, rhois, glabra, æ.</i> . . .	$\frac{1}{2}$ -1 dr.	2.0-4.0	<i>Sumac.</i> Rich in tannin. Astringent.
fluidextractum.	$\frac{1}{4}$ -1 fl.dr.	2.0-4.0	
aromatica.	10-30 gr.	0.6-2.0	<i>Fragrant sumac.</i> Incontinence of urine.
fluidextractum.	5-30 min.	0.3-2.0	
toxicodendron.	1-5 gr.	0.06-0.3	<i>Poison oak, poison ivy.</i> Rheumatism, chronic skin diseases, incontinence of urine.
tinctura.	$\frac{1}{10}$ -1 min.	0.006-0.06	<i>Castor-oil bean.</i>
<i>Ricinus communis.</i>	See <i>Potassii et sodii tartras</i> , under <i>Potassium.</i>
<i>Rochelle salt.</i>	<i>Dried milk of thyroidectomized goats.</i> Exophthalmic goiter.
<i>Rodagen.</i>	75-150 gr. daily	5.0-10.0	<i>Red rose.</i> Feeble astringent. Chiefly used as a flavoring agent.
<i>Rosa, æ, gallica, aqua.</i> . . .	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0	
confectio.	$\frac{1}{2}$ -1 dr.	2.0-4.0	
fluidextractum.	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
mel.	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
<i>Rosæ syrupus.</i>	1-2 fl.dr.	4.0-8.0	
<i>Rosin.</i>	See <i>Resina.</i>
<i>Rosmarinus, i.</i>	<i>Rosemary.</i> Carminative. Mainly used as a scent.
oleum.	1-5 min.	0.06-0.3	See <i>Kamala.</i>
<i>Rottlera.</i>	<i>Madder.</i> Emmenagogue.
<i>Rubia tinctorum.</i>	$\frac{1}{4}$ -1 dr.	1.0-4.0	<i>Rubidium.</i> Salts of this metal act like the corresponding salts of potassium.
<i>Rubidium, i.</i>	
bromidum.	5-30 gr.	0.3-2.0	
iodidum.	5-20 gr.	0.3-1.3	
<i>Rubus, i.</i>	5-30 gr.	0.3-2.0	<i>Blackberry bark.</i> Astringent.
fluidextractum.	10-60 min.	0.6-4.0	
syrupus.	1-4 fl.dr.	4.0-16.0	
<i>Rue.</i>	See <i>Rula.</i>
<i>Rumex, ætis.</i>	$\frac{1}{2}$ -1 dr.	1.0-4.0	<i>Yellow dock.</i> Astringent and alterative.
extractum.	4-8 gr.	0.25-0.5	
fluidextractum.	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	
<i>Rumicin.</i>	1-3 gr.	0.06-0.2	
<i>Ruta, æ.</i>	5-20 gr.	0.3-1.3	<i>Rue.</i> Emmenagogue and powerful abortifacient.
oleum.	1-5 min.	0.06-0.3	<i>Cevadilla.</i> Source of veratrina.
<i>Sabadilla, æ.</i>	1-4 gr.	0.06-0.25	<i>Saw-palmetto fruit.</i> Diuretic, aphrodisiac, bronchial sedative.
<i>Sabal (indeclinable).</i>	10-60 gr.	0.6-4.0	<i>Savine.</i> Emmenagogue and active abortifacient.
fluidextractum.	10-30 min.	0.6-2.0	
<i>Sabina, æ.</i>	5-15 gr.	0.3-1.0	
fluidextractum.	5-15 min.	0.3-1.0	
oleum.	1-5 min.	0.06-0.3	
<i>Saccharin.</i>	$\frac{1}{2}$ -3 gr.	0.03-0.2	<i>Benzosulphinid, glusid.</i> A derivative of coal-tar. Used instead of sugar in diabetes.
<i>Saccharum, i.</i>	ad lib.	<i>Cane-sugar, sucrose.</i>
lactis.	ad lib.	<i>Milk-sugar, lactose.</i>
<i>Saffrolum, i.</i>	1-10 min.	0.06-0.6	<i>Saffrol.</i> Chief constituent of sassafras oil. Carminative.
<i>Saffron.</i>	See <i>Crocus.</i>
<i>Sage.</i>	See <i>Salvia.</i>
<i>Sal ammoniac.</i>	See <i>Ammonium chlorid.</i>
<i>Salicinum, i.</i>	5-30 gr.	0.3-2.0	<i>Salicin.</i> Glucosid from willow and poplar. Action of a mild salicylate. Antirheumatic.
<i>Salicylic acid.</i>	See <i>Acidum salicylicum.</i>
<i>Salipyrin.</i>	5-30 gr.	0.3-2.0	<i>Antipyrin salicylate.</i> Antirheumatic, analgesic.
<i>Salit.</i>	Externally	<i>Salicylic acid ester of borneol.</i> Antirheumatic.
<i>Salol.</i>	5-15 gr.	0.3-1.0	<i>Phenyl salicylate.</i> Antirheumatic, intestinal and urinary antiseptic.
<i>Salophen.</i>	5-15 gr.	0.3-1.0	<i>Acetamidosalol.</i> Antirheumatic.
<i>Saltpeter.</i>	See <i>Potassii nitras</i> , under <i>Potassium.</i>
<i>Salvia, æ.</i>	$\frac{1}{4}$ -1 dr.	1.0-4.0	<i>Sage.</i> Carminative, antihydrotic, astringent.
fluidextractum.	15-60 min.	1.0-4.0	
infusum.	1-2 fl.oz.	30.0-60.0	
<i>Sambucus, i.</i>	$\frac{1}{2}$ -1 dr.	2.0-4.0	<i>Elderberry flowers.</i> Alterative, diuretic.
fluidextractum.	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	Locally, for bruises and sores.
infusum.	$\frac{1}{2}$ -2 fl.oz.	15.0-60.0	
<i>Sandalwood.</i>	See <i>Santalum album.</i>
<i>Sanguinaria, æ.</i>	1-8 gr.	0.065-0.5	<i>Blood-root.</i> Expectorant, emetic, alterative.
fluidextractum.	1-5 min.	0.06-0.3	
tinctura.	5-60 min.	0.3-4.0	
<i>Sanguinarina, æ.</i>	$\frac{1}{12}$ - $\frac{1}{8}$ gr.	0.005-0.008	<i>White sandalwood.</i> Expectorant, urinary antiseptic, and diuretic.
<i>Santalum, i, album.</i>	See <i>Red sanders.</i>
oleum.	5-20 min.	0.3-1.3	<i>Levant or European wormseed.</i> Vermifuge.
rubrum.	
<i>Santonica, æ.</i>	$\frac{1}{4}$ -1 dr.	1.0-4.0	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Santoninum, <i>i</i>	$\frac{1}{2}$ –2 gr.	0.016–0.13	Neutral principle from <i>santonica</i> . Vermifuge for round-worms.
trochisci.....	1 to 4	Each $\frac{1}{2}$ gr. (0.03).
Santyl.....	24 min.	1.5	Salicylic ester of <i>santal oil</i> , the action of which it resembles.
Sapo, <i>onis</i>	<i>Castile soap</i> . Soap of olive oil and soda.
emplastrum.....	<i>Soap plaster</i> .
mollis.....	<i>Soft-soap, sapo viridis</i> . Soap of linseed oil and potassa.
linimentum.....	<i>Soap liniment</i> .
Saponins.....	Toxic glucosids from <i>sarsaparilla</i> , soap-bark, and other plants.
Sarsaparilla, <i>a</i>	$\frac{1}{2}$ –2 dr.	2.0–8.0	<i>Sarsaparilla</i> . Recommended as an alterative in syphilis, rheumatism, and cutaneous diseases.
decoctum compositus...	1–4 fl.oz.	30.0–120.0	
fluidextractum.....	$\frac{1}{2}$ –1 fl.dr.	2.0–4.0	
compositus.....	$\frac{1}{2}$ –1 fl.dr.	2.0–4.0	
syrupus compositus...	1–4 fl.dr.	4.0–16.0	
Sassafras (indeclinable)...	$\frac{1}{2}$ –2 dr.	2.0–8.0	<i>Sassafras</i> . Aromatic flavoring agent.
medulla.....	1–4 dr.	4.0–16.0	<i>Sassafras pith</i> . Demulcent.
oleum.....	1–5 min.	0.06–0.3	
Savin.....	See <i>Sabina</i> .
Saw-palmetto.....	See <i>Sabal</i> .
Scammonium, <i>i</i>	1–10 gr.	0.06–0.6	<i>Scammony</i> . Drastic cathartic.
resina.....	1–5 gr.	0.06–0.3	
Scilla, <i>a</i>	1–5 gr.	0.06–0.3	<i>Squill</i> . Heart stimulant like digitalis.
acetum.....	5–30 min.	0.3–2.0	Diuretic, expectorant, and emetic.
fluidextractum.....	1–5 min.	0.06–0.3	
syrupus.....	$\frac{1}{2}$ –1 fl.dr.	2.0–4.0	
compositus.....	5–60 min.	0.3–4.0	
tinctura.....	5–30 min.	0.3–2.0	
Scoparius, <i>ii</i>	15–30 gr.	1.0–2.0	<i>Broom</i> . Contains spartein. Diuretic in dropsy.
decoctum.....	1–2 fl.oz.	30.0–60.0	
fluidextractum.....	$\frac{1}{2}$ –1 fl.dr.	2.0–4.0	
Scopola, <i>a</i>	$\frac{1}{2}$ –1 gr.	0.03–0.06	<i>Scopola carnioica</i> . Has properties similar to those of belladonna.
extractum.....	$\frac{1}{2}$ –1 gr.	0.008–0.016	
fluidextractum.....	1–2 min.	0.06–0.12	
Scopolamin.....	Alkaloid of <i>scopola</i> . Identical with hyoscin.
Scutellaria, <i>a</i>	15–60 gr.	1.0–4.0	<i>Skullcap</i> . Antispasmodic and nerve sedative.
fluidextractum.....	15–60 min.	1.0–4.0	See <i>Fucus vesiculosus</i> .
Sea-wrack.....	See <i>Ergota</i> .
Secale cornutum.....	See <i>Powder, Seidlitz</i> .
Seidlitz powder.....	<i>Ragwort</i> . Emmenagogue. Amenorrhea and dysmenorrhea.
Senecio, <i>onis</i>	15–30 gr.	1.0–2.0	<i>Senega</i> . Expectorant, emetic.
fluidextractum.....	15–30 min.	1.0–2.0	
Senega, <i>a</i>	5–30 gr.	0.3–2.0	
fluidextractum.....	5–30 min.	0.3–2.0	
syrupus.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0	
Senna, <i>a</i>	$\frac{1}{2}$ –2 dr.	2.0–8.0	<i>Senna</i> . Purgative.
confectio.....	$\frac{1}{2}$ –2 dr.	2.0–8.0	
fluidextractum.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0	
infusum compositus...	1–4 fl.oz.	30.0–120.0	
syrupus.....	$\frac{1}{2}$ –4 fl.dr.	2.0–16.0	
Serpentaria, <i>a</i>	5–30 gr.	0.3–2.0	<i>Virginia snake-root</i> . Expectorant, diaphoretic, bitter tonic.
fluidextractum.....	5–30 min.	0.3–2.0	
tinctura.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0	
Serum antidiaphthericum..	<i>Diphtheria antitoxin</i> .
antimeningococcic.....	Curative dose, 3000–8000 units; prophylactic dose, 500–1000 units.
antipneumococcic.....	See <i>Antitoxin, meningitis</i> .
antistreptococcic.....	See <i>Antitoxin, pneumonia</i> .
Sesamum, <i>i</i>	See <i>Antitoxin, septicemia</i> .
oleum.....	$\frac{1}{2}$ –2 fl.oz.	15.0–60.0	<i>Benne</i> .
Sevum, <i>i</i>	Substitute for olive oil.
Sherry wine.....	<i>Suet</i> .
Sidonal.....	8–15 gr.	0.5–1.0	See <i>Vinum xericum</i> .
Silver.....	<i>Piperazin quinate</i> . In gout, uric-acid solvent.
Simaruba, <i>a</i> , officinalis...	5–30 gr.	1.0–2.0	See <i>Argemum</i> .
Simulo.....	20–30 gr.	1.3–2.0	<i>Mountain damson</i> . Bitter astringent. Diarrhea and dysentery.
Sinapis, <i>is</i> , alba.....	$\frac{1}{2}$ –2 dr.	2.0–8.0	<i>Capparis coriacea</i> . Antispasmodic in epilepsy and chorea.
nigra.....	$\frac{1}{2}$ –2 dr.	2.0–8.0	<i>White mustard</i> . Emetic.
oleum volatile.....	$\frac{1}{2}$ –1 min.	0.008–0.016	<i>Black mustard</i> . Counterirritant, emetic.
Slippery-elm bark.....	<i>Volatile oil of mustard</i> .
			See <i>Ulmus</i> .

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Smilax.....	See <i>Sarsaparilla</i> .
Soap.....	See <i>Sapo</i> .
Soap-tree bark.....	See <i>Quillaia</i> .
Soda, <i>ae</i>	<i>Caustic soda, sodium hydroxid.</i>
liquor chlorinatæ.....	10-30 min.	0.6-2.0	<i>Labarraque's solution.</i> Antiseptic.
Sodium, <i>i</i>	<i>Sodium.</i> The arsenate and cacodylate
acetat.....	10-30 gr.	0.6-2.0	have an action similar to but milder than
arsenas.....	$\frac{1}{10}$ gr.	0.003-0.008	that of arsenous acid. The bicarbonate
exsiccatus.....	$\frac{30}{16}$ gr.	0.002-0.004	is a valuable antacid. The cinnamate is
liquor.....	1-5 min.	0.06-0.3	antitubercular. The formate, glycerophosphate, and hypophosphite are tonic
benzoas.....	5-30 gr.	0.3-2.0	and are indicated in states of malnutrition.
bicarbonas.....	5-30 gr.	0.3-2.0	The nitrite has the action of nitroglycerin.
bisulphas.....	10-15 gr.	0.6-1.0	The salicylate is the most efficient remedy
bisulphis.....	5-15 gr.	0.3-1.0	in rheumatism. The phenol sulphionate
boras.....	5-20 gr.	0.3-1.3	(<i>sulphocarbolate</i>) and the thiosulphate
bromidum.....	5-30 gr.	0.3-2.0	(<i>hyposulphite</i>) are antiseptics. The phosphite and sulphate (<i>Glauber's salt</i>) are
cacodylas.....	$\frac{1}{2}$ gr.	0.03-0.13	cathartic. The tellurate has been recommended
carbonas.....	5-20 gr.	0.3-1.3	in night-sweats. For other salts
monohydras.....	2-6 gr.	0.13-0.4	see <i>Potassium</i> .
chloras.....	2-10 gr.	0.13-0.6	
chloridum.....	5-30 gr.	0.3-2.0	
cinnamas.....	$\frac{60}{16}$ gr.	0.001-0.016	
citras.....	5-30 gr.	0.3-2.0	
formas.....	$\frac{1}{3}$ gr.	0.01-0.2	
glycerophosphas.....	5-10 gr.	0.3-0.6	
glycholas.....	5-10 gr.	0.3-0.6	
hydroxidum.....	$\frac{1}{4}$ gr.	0.03-0.06	
liquor.....	5-20 min.	0.3-1.3	
hypophosphis.....	3-15 gr.	0.2-1.0	
hyposulphis.....	See <i>Sodium thiosulphas</i> .
iodidum.....	5-30 gr.	0.3-2.0	
lactas.....	5-10 gr.	0.3-0.6	
lygosinas.....	Locally	Germicide.
methylarsenas.....	$\frac{2}{3}$ gr.	0.025-0.2	<i>Disodium methylarsenate, arrhenal.</i>
nitras.....	5-20 gr.	0.2-1.3	
nitris.....	1-3 gr.	0.06-0.2	
oleas.....	2-5 gr.	0.13-0.3	
phenolsulphonas.....	5-15 gr.	0.3-1.0	<i>Sodium sulphocarbolate.</i>
phosphas.....	$\frac{1}{4}$ dr.	2.0-16.0	
effervescens.....	2-6 dr.	8.0-24.0	
exsiccatus.....	$\frac{1}{2}$ dr.	1.0-8.0	
liquor compositus.....	1-4 fl.dr.	4.0-16.0	
pyrophosphas.....	$\frac{1}{4}$ dr.	2.0-16.0	
salicylas.....	10-30 gr.	0.6-2.0	
santoninas.....	1-3 gr.	0.06-0.2	
succinas.....	3-5 gr.	0.2-0.3	
sulphanilis.....	5-15 gr.	0.3-1.0	
sulphas.....	1-6 dr.	4.0-24.0	
exsiccatus.....	$\frac{1}{3}$ dr.	2.0-12.0	
sulphis.....	5-20 gr.	0.3-1.3	
sulphocarbolas.....	See <i>Sodium phenolsulphonas</i> .
telluras.....	$\frac{1}{3}$ gr.	0.02-0.04	
theobromin acetat.....	5-15 gr.	0.3-1.0	<i>Agurin.</i> Powerful diuretic.
salicylas.....	5-15 gr.	0.3-1.0	<i>Diuretin.</i> Powerful diuretic.
thiosulphas.....	5-20 gr.	0.3-1.3	<i>Sodium hyposulphite.</i>
valeras.....	2-5 gr.	0.13-0.3	
vanadas.....	$\frac{60}{16}$ gr.	0.001-0.008	
Solanum, <i>i</i> , carolinense.....	
fluidextractum.....	$\frac{1}{4}$ -1 fl.dr.	1.0-4.0	<i>Horse-nettle.</i> Employed in epilepsy.
dulcamara.....	See <i>Dulcamara</i> .
Solidago, <i>inis</i>	20-40 gr.	1.3-2.6	<i>Golden-rod.</i> Carminative, diaphoretic.
fluidextractum.....	$\frac{1}{4}$ -1 fl.dr.	2.0-4.0	
Solution, Clemens'.....	1-6 min.	0.06-0.04	<i>Liquor potassii arsenatis et bromidi.</i> Anti-diabetic.
Dobell's.....	Solution of sodium borate compound.
Donovan's.....	See <i>Arseni et hydrargyri iodidi liquoris</i> .
Fowler's.....	See <i>Potassii arsenitis liquor</i> .
Labarraque's.....	See <i>Soda liquor chlorinata</i> , under <i>Soda</i> .
Lugol's.....	See <i>Iodi liquor compositus</i> , under <i>Iodium</i> .
Magendie's.....	See <i>Morphina liquor</i> , under <i>Morphina</i> .
Pearson's.....	See <i>Sodii arsenas liquor</i> , under <i>Sodium</i> .
Somatose.....	1-4 dr.	4.0-16.0	Albumoses from meat. Nutrient.
ferro.....	$\frac{1}{4}$ -1 dr.	2.0-4.0	
lacto.....	1-4 dr.	4.0-16.0	
Somnal.....	30-45 min.	2.0-3.0	<i>Ethylized chloralurethan.</i> A somnifacient.
Somnoform.....	Mixture of ethyl chlorid, 60; methyl chlorid, 35; ethyl bromid, 5. General anesthetic.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Spanish fly.....	See <i>Cantharis</i> .
Sparteinae sulphas.....	$\frac{3}{8}$ – $\frac{1}{4}$ gr..	0.008–0.016	Alkaloid of <i>scoparius</i> . Recommended as a cardiac stimulant and diuretic.
Spearmint.....	See <i>Mentha viridis</i> .
Spermaceti.....	See <i>Cetaceum</i> .
Spigelia, <i>æ</i>	$\frac{1}{4}$ –2 dr.	1.0–8.0	<i>Pink-root</i> . Vermifuge. Round-worms.
fluidextractum.....	$\frac{1}{4}$ –2 fl.dr.	1.0–8.0	
Spiritus, <i>us</i>	Spirit.
ætheris nitrosi.....	$\frac{1}{2}$ –2 fl. dr.	1.0–8.0	<i>Sweet spirit of niter</i> . Mild diaphoretic and diuretic.
frumenti.....	1–8 fl.dr.	4.0–32.0	<i>Whisky</i> .
vini gallici.....	1–8 fl.dr.	4.0–32.0	<i>Brandy</i> .
Squill.....	See <i>Scilla</i> .
Squirting cucumber.....	See <i>Elatarium</i> .
Staphisagria, <i>æ</i>	1–2 gr.	0.06–0.13	<i>Stavesacre, delphinium</i> . Chiefly externally for vermin.
oleum.....	1 to 6 or 12 of olive oil.
Stigmata maidis.....	See <i>Zea</i> .
Stillingia, <i>æ</i>	10–30 gr.	0.6–2.0	<i>Queen's root</i> . Cathartic, emetic, and alterative. Recommended in liver diseases, syphilis, and scrofula.
extractum.....	2–5 gr.	0.13–0.3	Extractive from <i>stillingia</i> .
fluidextractum.....	10–30 min.	0.6–2.0	See <i>Styrax</i> .
Stillingin.....	1–3 gr.	0.06–0.2	<i>Amylene hydrochlorid</i> . Local anesthetic like cocaine (4 per cent. solution).
Storax.....	<i>Stramonium, Jamestown weed</i> . Contains hyoscyamin and atropin. Action similar to that of belladonna.
Stovain.....	$\frac{1}{4}$ – $\frac{1}{2}$ gr.	0.03–0.1	
Stramonium, <i>ii</i>	1–3 gr.	0.06–0.2	
extractum.....	$\frac{1}{8}$ – $\frac{1}{2}$ gr.	0.01–0.03	
fluidextractum.....	1–5 min.	0.06–0.3	
tinctura.....	5–20 min.	0.3–1.3	
unguentum.....	Externally		
Strontium, <i>ii</i>	The strontium salts act much like the corresponding salts of sodium. They are comparatively unirritating to the stomach. The lactate has been especially recommended in albuminuria.
arsenis.....	$\frac{3}{10}$ – $\frac{1}{15}$ gr.	0.002–0.004	
bromidum.....	5–30 gr.	0.3–2.0	
carbonas.....	5–30 gr.	0.3–2.0	
iodidum.....	5–30 gr.	0.3–2.0	
lactas.....	5–30 gr.	0.3–2.0	
salicylas.....	5–20 gr.	0.3–1.3	
Strophanthin.....	$\frac{3}{100}$ – $\frac{1}{100}$ gr.	0.0002–0.0006	Glucosid of <i>strophanthus</i> .
Strophanthus, <i>i</i>	<i>Strophanthus</i> . Heart stimulant and diuretic. Action similar to that of digitalis.
extractum.....	$\frac{1}{4}$ –1 gr.	0.016–0.06	
tinctura.....	5–15 min.	0.3–1.0	
Strychnina, <i>æ</i>	$\frac{5}{100}$ – $\frac{1}{15}$ gr.	0.001–0.004	Alkaloid of <i>nux vomica</i> . See <i>Nux vomica</i> .
acetas.....	$\frac{5}{100}$ – $\frac{1}{15}$ gr.	0.001–0.004	
arsenas.....	$\frac{5}{100}$ – $\frac{1}{15}$ gr.	0.001–0.004	
glycerophosphas.....	$\frac{5}{100}$ – $\frac{1}{15}$ gr.	0.001–0.004	
hydrobromidum.....	$\frac{5}{100}$ – $\frac{1}{15}$ gr.	0.001–0.004	
hydrochloridum.....	$\frac{5}{100}$ – $\frac{1}{15}$ gr.	0.001–0.004	
hypophosphis.....	$\frac{5}{100}$ – $\frac{1}{15}$ gr.	0.001–0.004	
nitras.....	$\frac{5}{100}$ – $\frac{1}{15}$ gr.	0.001–0.004	
phosphas.....	$\frac{5}{100}$ – $\frac{1}{15}$ gr.	0.001–0.004	
sulphas.....	$\frac{5}{100}$ – $\frac{1}{15}$ gr.	0.001–0.004	
Stypticin hydrochloridum.....	$\frac{1}{4}$ – $\frac{1}{2}$ gr.	0.016–0.03	
Styptol.....	$\frac{3}{4}$ gr.	0.05	<i>Cotarnin hydrochlorid</i> . A derivative of narcotin (opium alkaloid) and allied to hydrastinin. Recommended in uterine hemorrhage.
Styracol.....	5–15 gr.	0.3–1.0	<i>Cotarnin phthalate</i> .
Styrax.....	10–30 gr.	0.6–2.0	<i>Guaiacol cinnamate</i> . Antitubercular.
Sublamin.....	15 min. (1 to 2 per cent. solution)	1.0 (1 to 2 per cent. solution)	<i>Storax</i> . Balsam from oriental sweet gum. Acts like copaiba.
Succinum, <i>i</i>	<i>Mercuric ethylenediamin sulphate</i> . Antisyphilitic intramuscularly. Externally antiseptic (1:5000 to 1:1000).
oleum.....	3–15 min.	0.2–1.0	<i>Amber</i> . Antispasmodic in whooping-cough-hiccup.
Succinyl peroxid.....	3–5 gr.	0.2–0.3	<i>Alphozone</i> . Internal and external antiseptic.
Sugar.....	See <i>Saccharum</i> .
fruit.....	See <i>Levulose</i> .
grape.....	See <i>Dextrose</i> .
Jead.....	See <i>Plumbi acetas</i> , under <i>Plumbum</i> .
manna.....	See <i>Mannite</i> .
milk.....	See <i>Saccharum lactis</i> .
Sulphonal.....	See <i>Sulphonmethanum</i> .
Sulphonethylmethanum.....	10–30 gr.	0.6–2.0	<i>Trional</i> . Somnifacient.
Sulphonmethanum.....	10–30 gr.	0.6–2.0	<i>Sulphonal</i> . Somnifacient.
Sulphur, <i>is</i>	$\frac{1}{2}$ –2 dr.	2.0–8.0	<i>Sulphur</i> . Parasiticide and stimulant for local use (5 to 10 per cent.) in skin diseases.
iodidum.....	1–4 gr.	0.06–0.25	Internally, laxative and alterative.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Sulphur lotum.....	$\frac{1}{2}$ -2 dr.	2.0-8.0	Washed sulphur.
præcipitatum.....	$\frac{1}{2}$ -2 dr.	2.0-8.0	Milk of sulphur.
sublimatum.....	$\frac{1}{2}$ -2 dr.	2.0-8.0	
unguentum.....	15 per cent. in benzoinated lard.
Sumac.....	See <i>Rhus glabra</i> .
Sumbul.....	5-20 gr.	0.3-1.3	Musk-root. Nerve sedative.
extractum.....	2-5 gr.	0.13-0.3	
tinctura.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
Suprarenal glands.....	See <i>Glandula suprarenales sicca</i> .
Suprarenalin.....	Similar to adrenalin.
Suprarenin.....	Similar to adrenalin.
Sweet-flag.....	See <i>Calamus</i> .
Sweet spirits of niter.....	See <i>Etheris nitrosi spiritus</i> , under <i>Ether</i> .
Syrupus fuscus.....	Molasses.
Tachiol.....	Silver fluorid. Antiseptic (1:500 to 1:1000).
Taka-diastase.....	1-5 gr.	0.06-0.3	Digestive ferment from fungus on bran. Recommended for dyspepsia with indigestion of starches.
Talcum, <i>i</i>	Externally	French chalk, soapstone, hydrous magnesium silicate.
Tamarindus, <i>i</i>	Preserved pulp of <i>Tamarindus indica</i> Laxative.
Tanacetum, <i>i</i>	$\frac{1}{4}$ -1 dr.	1.0-4.0	Tansy. Emmenagogue, abortifacient.
oleum.....	1-5 min.	0.06-0.3	
Tannalbin.....	15-60 gr.	1.0-4.0	Tannate of albumin. Astringent.
Tannigen.....	3-8 gr.	0.2-0.5	Acetic acid ester of tannin. Astringent.
Tannin.....	See <i>Acidum tannicum</i> .
Tannoform.....	3-10 gr.	0.2-0.6	Tannin-formaldehyd. Astringent, antiseptic, deodorant.
Tannopin.....	3-10 gr.	0.2-0.6	Hexamethylene-tetramin tannin. Astringent.
Tar.....	See <i>Pix liquida</i> .
Taraxacum, <i>i</i>	$\frac{1}{2}$ -2 dr.	2.0-8.0	Dandelion. Simple bitter stomachic.
extractum.....	5-20 gr.	0.3-1.3	
fluidextractum.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
Tartar emetic.....	See <i>Antimonii et potassii tartras</i> , under <i>Antimonium</i> .
Terebenum, <i>i</i>	5-15 min.	0.3-1.0	Terebene. A product of the action of sulphuric acid on oil of turpentine. Expecto- rant and stimulant diuretic.
Terebinthina, α , chia.....	5-10 gr.	0.3-0.6	Chian turpentine. Recommended for cancer.
linimentum.....	Externally	Turpentine. Expecto- rant, diuretic, vermi- fuge, antiseptic.
oleum.....	
rectificatus.....	5-240 min.	0.3-15.0	
Terpini hydras.....	2-15 gr.	0.13-1.0	Terpin hydrate. Derivative of oil of turpentine. Expecto- rant and diuretic.
Terpinol.....	2-5 min.	0.13-0.3	A product of the action of sulphuric acid on terpin. Expecto- rant and diuretic.
Tetramethylthionina	See <i>Methylene-blue</i> .
chloridum.....	Tetronal. Somnifacient.
Tetronal.....	10-20 gr.	0.6-1.3	Thallin acetate. Recommended for night- sweats.
Thallii acetas.....	1-3 gr.	0.06-0.2	Thallin sulphate. Antipyretic, antiseptic.
Thalline sulphas.....	3-5 gr.	0.2-0.3	Thapsia. Rubefacient.
Thapsia, α	Externally	See <i>Caffeina</i> .
Thein.....	Cacao, chocolate.
Theobroma, <i>atis</i>	Cacao-butter. Emollient.
oleum.....	Alkaloid of cacao, dimethylxanthin. Active diuretic.
Theobromina, α	5-10 gr.	0.3-0.6	Diuretin. Active diuretic.
sodii salicylas.....	5-15 gr.	0.3-1.0	Agurin. Active diuretic.
sodiosodic acetate.....	5-15 gr.	0.3-1.0	Synthetic theophyllin.
Theocin.....	3-0 gr.	0.2-0.4	An alkaloid from tea and coffee. Diuretic.
Theophyllin.....	3-6 gr.	0.2-0.4	A urethan derivative. Antipyretic.
Thermodin.....	5-15 gr.	0.3-1.0	Sodium salt of sulphonic acid. Resolvent, antipruritic.
Thigenol.....	3-10 gr.	0.2-0.6	Potassium guaiacol sulphonate. Ex- pectorant, antiseptic. Recommended for tuberculosis.
Thiocol.....	5-20 gr.	0.3-1.3	Basic bismuth diithiosalicylate. Substitute for iodoform.
Thioform.....	A derivative of volatile oil of mustard. Recommended to hasten absorption, cicatrices, and fibrous overgrowths. Used locally and internally.
Thiosinamin.....	$\frac{1}{2}$ -1 $\frac{1}{2}$ gr.	0.03-0.1	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Thorium, <i>ii</i>	Salts of this metal, which possess considerable radio-activity, have been recommended in ointment for various skin diseases.
Thoroughwort.....	See <i>Eupatorium</i> .
Thuja occidentalis.....	$\frac{1}{4}$ -1 dr.	1.0-4.0	<i>Arbor vitæ</i> . Alternative.
Thymol, <i>is</i>	1-30 gr.	0.06-2.0	Crystalline body from oil of thyme. Antiseptic vermifuge.
iodidum.....	See <i>Aristol</i> .
Thymus gland, desiccated.....	5-10 gr.	0.2-0.6	Recommended in exophthalmic goiter and states of defective nutrition.
Thyroid glands.....	See <i>Glandula thyroidea sicca</i> .
Tolutanum balsamum.....	5-30 gr.	0.3-2.0	<i>Balsam of tolu</i> . Expectorant.
Tolutanus syrupus.....	1-4 fl.dr.	4.0-16.0	
Tolypyrin.....	5-20 gr.	0.3-1.3	<i>Tolyantipyrin</i> . Antipyretic, antineuralgic.
Tragacantha, <i>e</i>	2-10 gr.	0.13-0.6	<i>Tragacanth</i> . Demulcent.
Traumaticin.....	Externally	<i>Solution of gutta-percha</i> .
Tribromophenol.....	$\frac{1}{2}$ -2 gr.	0.03-0.13	<i>Bromol</i> . Intestinal antiseptic.
Tricresol.....	Externally	Mixture of cresols. Surgical antiseptic (0.5 to 2 per cent. solution).
Trimethylamin solution.....	15-45 min.	1.0-3.0	<i>Propylamin solution</i> (10 per cent.). Antirheumatic.
Triferrin.....	5 gr.	0.3	<i>Iron paramucelinate</i> . Hematinic, tonic.
Trinitrin.....	See <i>Glycerilis nitrus</i> .
Trional.....	See <i>Sulphonethylmethanum</i> .
Trioxymethylene.....	See <i>Paraform</i> .
Triphenenin.....	5-10 gr.	0.3-0.6	A paraphenetidin derivative allied to phenacetin.
Triticum, <i>i</i>	1-2 dr.	4.0-8.0	<i>Dog or couch-grass</i> . Diuretic.
fluidextractum.....	1-2 fl.dr.	4.0-8.0	
Tropacocainæ hydrochloras.....	Locally	
Trypsin.....	5-20 gr.	0.3-1.3	A derivative of <i>trypsin</i> . Less poisonous than cocain. Local anesthetic (3 to 10 per cent. solution).
Tuberculin bacillen emulsion.....	$\frac{1}{10,000}$ -1000 mg.	A ferment of the pancreas which converts albumin into peptone. Digestant. Locally, in cancer.
new.....	$\frac{1}{1000}$ -20 mg.	"B. E." contains 5 mg. of pulverized dried bacilli in each cubic centimeter. Injections of tuberculin should be made at intervals of from three to six days, the dose being very gradually increased from the minimum to the maximum, reactions being carefully avoided.
old.....	$\frac{1}{1000}$ -1000 mg.	TR. A liquid containing 2 mg. of solid substance (tritured bacilli) per cubic centimeter.
Turpentine.....	TO. Soluble products of tubercle bacilli in glycerin. Specific remedy for tuberculosis.
Turpeth mineral.....	See <i>Terebinthina</i> .
Tussilago, <i>inis</i>	$\frac{1}{2}$ -1 dr.	2.0-4.0	See <i>Hydrargyri subsulphas</i> .
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	<i>Coldsfoot</i> . Expectorant, demulcent.
Ulmus, <i>i</i>	ad lib.	
mucilago.....	ad lib.	<i>Slippery-elm bark</i> . Demulcent. In irritation of urinary and respiratory passages.
Unguentum Credé.....	See <i>Collargol</i> .
Uranii nitras.....	$\frac{1}{2}$ -3 gr.	0.03-0.2	<i>Uranium nitrate</i> . Recommended in diabetes.
Urea.....	10-20 gr.	0.6-1.3	<i>Carbamid</i> . Diuretic; also recommended in tuberculosis.
quinin.....	5-15 gr.	0.3-1.0	<i>Quinin hydrochlorocarbamidum</i> . Antiperiodic. Used hypodermically.
Urethan.....	10-60 gr.	0.6-4.0	<i>Ethyl carbamate</i> . Somnifacient.
Urotropin.....	See <i>Hexamethylenamina</i> .
Ursal.....	10-30 gr.	0.6-2.0	Combination of urea and salicylic acid.
Ustilago, <i>inis</i> , maydis, <i>is</i>	$\frac{1}{2}$ -1 dr.	1.0-4.0	Gout, rheumatism.
fluidextractum.....	$\frac{1}{2}$ -1 fl.dr.	2.0-4.0	<i>Corn smut</i> , <i>corn ergot</i> . Action like that of ergot.
Uva, <i>e</i> , ursi.....	$\frac{1}{2}$ -1 dr.	1.0-4.0	<i>Bearberry leaves</i> . Stimulant diuretic in chronic inflammation of urinary tract.
extractum.....	5-15 gr.	0.3-1.0	
fluidextractum.....	$\frac{1}{4}$ -1 fl.dr.	1.0-4.0	
infusum.....	1-2 fl.oz.	30.0-60.0	
Valeriana, <i>e</i>	$\frac{1}{2}$ -1 dr.	1.0-4.0	
extractum.....	5-10 gr.	0.3-0.6	<i>Valerian</i> . Nerve sedative.
fluidextractum.....	15-60 min.	1.0-4.0	

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Valeriana tinctura.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
ammoniata.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
Validol.....	10-15 min.	0.6-1.0	<i>Menthol valerate.</i> Nerve sedative, carminative.
Valyl.....	4-8 min.	0.2-0.5	<i>Valeric acid, dimethylamin.</i> Nerve sedative, antineuralgic.
Vanilla, <i>æ</i>	5-20 gr.	0.3-1.3	<i>Vanilla.</i> Stimulant.
Vanillin.....	$\frac{1}{4}$ - $\frac{1}{2}$ gr.	0.016-0.03	
Vasogen.....	Externally	<i>Oxygenated vaselin.</i> An emollient.
Veratrina, <i>æ</i>	$\frac{1}{40}$ - $\frac{1}{30}$ gr.	0.0016-0.002	<i>Veratrin.</i> Mixture of alkaloids from sabbadilla seeds. Cardiac depressant and local analgesic.
oleatum.....	Externally	2 per cent.
unguentum.....	Externally	4 per cent.
Veratrum, <i>i.</i>	1-4 gr.	0.06-0.26	<i>Green or white hellebore.</i> Cardiac depressant, acting like aconite.
fluidextractum.....	1-3 min.	0.06-0.2	
tinctura.....	5-15 min.	0.3-1.0	
Verbascum, <i>i.</i>	$\frac{1}{4}$ -1 dr.	1.0-4.0	<i>Mullein.</i> Recommended in catarrh of respiratory and urinary passages.
Verdigris.....	$\frac{1}{8}$ - $\frac{1}{2}$ gr.	0.008-0.03	<i>Copper subacetate.</i> Astringent. Internally, in chlorosis.
Veroform.....	Externally	<i>Saponified solution of formaldehyd</i> (1-3 per cent. as disinfectant).
Viburnum, <i>i.</i> opulus.....	$\frac{1}{2}$ -2 dr.	2.0-8.0	<i>Cramp-bark.</i> Antispasmodic and uterine sedative.
fluidextractum.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	<i>Black haw.</i> Antispasmodic, uterine sedative. Dysmenorrhea, ovarian irritation, threatened abortion.
prunifolium.....	$\frac{1}{2}$ -2 dr.	2.0-8.0	
extractum.....	3-10 gr.	0.2-0.6	
fluidextractum.....	$\frac{1}{2}$ -2 fl.dr.	2.0-8.0	
Vinegar.....	See <i>Acetum.</i>
Vinum, <i>i.</i>	<i>Wine.</i>
album.....	<i>White wine</i> (8.5 to 15 per cent. by volume of alcohol).
antimonii.....	5-60 min.	0.3-4.0	<i>Wine of antimony.</i> Expectorant, emetic.
portense.....	<i>Port wine</i> (15 to 20 per cent. alcohol).
rubrum.....	<i>Red wine</i> (8.5 to 15 per cent. by volume of alcohol).
xericum.....	<i>Sherry wine</i> (15 to 20 per cent. alcohol).
Vioform.....	Externally	A quinolin derivative. Substitute for iodoform.
Viola, <i>æ</i>	10-30 gr.	0.6-2.0	<i>Violet.</i> Recommended as an expectorant and as an alterative in cancer.
syrupus.....	1-2 fl.dr.	4.0-8.0	See <i>Serpentaria.</i>
Virginia spakeroot.....	<i>Mistletoe.</i> Emetic, purgative.
Viscum album.....	See <i>Cupri sulphatis.</i>
Vitriol, blue.....	See <i>Acid, sulphuric.</i>
oil of.....	3-45 gr.	See <i>Zinci sulphas.</i>
white.....	See <i>Euonymus.</i>
Wahoo.....	<i>Tinctura anti-periodica.</i> Quinin with aloes, rhubarb, opium, and aromatics. Antimalarial and diaphoretic.
Warburg's tincture.....	2-4 fl.dr.	8.0-16.0	<i>Lotio nigra.</i> Prepared from calomel and lime-water.
Wash, black.....	Externally	<i>Lotio flava.</i> Prepared from corrosive sublimate and lime-water.
yellow.....	See <i>Cera.</i>
Wax.....	See <i>Spiritus frumenti.</i>
Whisky.....	See <i>Veratrum.</i>
White hellebore.....	See <i>Quercus alba.</i>
oak.....	See <i>Hydrargyri ammoniatum.</i>
precipitate.....	See <i>Prunus virginiana.</i>
Wild cherry.....	See <i>Grindelia robusta.</i>
sunflower.....	See <i>Gaultheria.</i>
Wintergreen.....	See <i>Hamamelis.</i>
Witch-hazel.....	See <i>Aconitum.</i>
Wolf'sbane.....	See <i>Balsamum gurgunæ.</i>
Wood oil.....	See <i>Adeps laneæ.</i>
Wool-fat.....	See <i>Curare.</i>
Wourara.....	Resinoid (eclectic).
Xanthoxylum.....	1-3 gr.	0.06-0.2	<i>Prickly ash.</i> Alterative, diaphoretic, sialogogue, carminative. Externally, counterirritant.
Xanthoxylum, <i>i.</i>	10-30 gr.	0.6-2.0	
extractum.....	3-10 gr.	0.2-0.6	
fluidextractum.....	10-30 min.	0.6-2.0	
Xeroform.....	3-45 gr.	0.2-3.0	<i>Bismuth tribromphenylate.</i> Internal and external antiseptic.
Xylol.....	5-15 min.	0.3-1.0	<i>Xylene, dimethylbenzene.</i> Antiseptic. Recommended in small-pox and respiratory diseases.

POSOLOGIC AND THERAPEUTIC TABLE—(Continued)

Medicines.	Dose for Adult.	Gm. or C.c.	Action and Uses.
Yeast.....	$\frac{1}{2}$ –1 fl.oz.	15.0–30.0	<i>Fermentum</i> . Recommended in boils and other infections and in diabetes.
Yellow dock.....	See <i>Rumex</i> .
jasmin.....	See <i>Gelsemium</i> .
wash.....	See <i>Wash, yellow</i> .
Yerba santa.....	See <i>Eriodictyon</i> .
Yohimbina hydrochloridum.....	$\frac{1}{20}$ – $\frac{1}{12}$ gr.	0.003–0.005	Alkaloid from <i>Yohimbe</i> bark. Recommended as an aphrodisiac in sexual impotence, etc.
Zea, <i>a.</i> , maydis.....	$\frac{1}{2}$ –2 dr.	2.0–8.0	<i>Corn silk</i> . Diuretic and sedative to urinary passages, cystitis, etc.
decoctum.....	1–2 fl.oz.	30.0–60.0	
fluidextractum.....	1–2 fl.dr.	4.0–8.0	
Zincum, <i>z.</i>	<i>Zinc</i> . The acetate is an astringent. The carbonate and oxid are used as protectives. The chlorid is caustic. The sulphate in large doses is an emetic; in small doses, an astringent. In solution of 0.5 to 2 per cent. much used in local catarrhs. The phosphid acts like phosphorus. The stearate is a vulnerary and antiseptic dusting-powder. The sulphocarbonate is an antiseptic. The valerate is an antispasmodic.
acetas.....	1–2 gr.	0.06–0.13	
bromidum.....	3–10 gr.	0.2–0.6	
carbonas præcipitatus.....	Externally		
chloridum.....	Externally		
cyanidum.....	$\frac{1}{15}$ – $\frac{1}{4}$ gr.	0.004–0.015	
hypophosphis.....	$\frac{1}{2}$ –2 gr.	0.03–0.13	
iodidum.....	$\frac{1}{2}$ –2 gr.	0.03–0.13	
oxidum.....	1–10 gr.	0.06–0.6	
phenolsulphonas.....	1–5 gr.	0.06–0.3	
phosphidum.....	$\frac{1}{20}$ – $\frac{1}{4}$ gr.	0.003–0.015	
salicylas.....	1–5 gr.	0.06–0.3	
stearas.....	Externally		
sulphas.....	10–20 gr. emetic	0.6–1.3	
sulphocarbonas.....	See <i>Zincum phenolsulphonas</i> .
valeras.....	1–3 gr.	0.06–0.2	
Zingiber, <i>is</i>	5–20 gr.	0.3–1.3	<i>Ginger</i> . Aromatic carminative, flavoring agent.
fluidextractum.....	5–20 min.	0.3–1.3	
oleoresina.....	$\frac{1}{2}$ –2 min.	0.03–0.13	
syrupus.....	$\frac{1}{2}$ –2 fl.dr.	2.0–8.0	
tinctura.....	20–60 min.	1.3–4.0
